We all know that business has been somewhat depressed for the past few months and I believe that all members of this association that have exhibits at this show arrived here with a feeling that but a very small business would be done and very little accomplished in an endeavor to market any new proposition. However, it seems that we all had something new "up our sleeve" and awaited the opening of the show to spring it on the trade. Our efforts along this line have been more than repaid by the interest our good friends, the dealers and jobbers, have given us.—**G. P. Doll, Treasurer and General Sales Manager, the Thos. J. Corcoran Lamp Co.**

Everything Is Fine.

At the show we met jobbers and dealers from the Atlantic to the Pacific coast and from the Gulf to Canada, and they all manifested a feeling that everything was fine. The western dealers and jobbers seem to have escaped the general depression of business that has been with us for the past 90 days. The eastern buyers told us that, although business conditions in general had been very poor in the past few months, they have taken a change and they believe that the show has verified their opinion that the peak of poor business in the East, as far as the dealers and jobbers are concerned, has passed.

The central and middle western dealers and jobbers who have, no doubt, felt this business depression more than either the eastern or western members, have left this show with a feeling that the spring business will more than offset the loss they have sustained during the past six months, although not looking forward to the same volume of business that was had at the early part of this year. With this feeling of optimism on the part of our friends from all parts of the country, we naturally look forward to the spring buying with great anticipation.—**D. M. Peck, President, H. & D. Co., Inc., Crawfordsville, Ind.**

Business Coming Back.

In my opinion business is coming back, for the trade is compelled to buy inasmuch as they have allowed their stock to run down awaiting the outcome of new prices. This show has verified my convictions that the jobbers and dealers are anxious to stock their shelves with the new lines. I therefore, look forward to the spring buying, which I believe will be very good.

Our success at the show has been very satisfactory and we will look forward to the show of 1921 when we can again renew acquaintance with both our dealer and jobber friends.—**E. W. Driemeyer, President, K. D. Lamp Co., Cincinnati, O.**

Conditions Are Going to Improve.

The general consensus of opinion is a pretty accurate way to judge conditions and this is that conditions are going to improve from now on and by January they will be back to normal.

It is true that the demand for standardized equipment will not be as great as the previous year, but this difference will be made up by the increased call for equipment already in use.

The economic readjustment we are going through now will automatically eliminate the inflation and finally pull the automotive industry out of the stagnant condition it has been in for the past few months.—**Mr. Bohackett, Kellogg Manufacturing Co., Rochester, N. Y.**

A Question of Readjustment.

I believe business will be good. It is just a question of readjustment. Without an exception every jobber I have talked to is very optimistic. It is true they are trying to reduce their stocks for inventory and, in a few instances, for capital, but on the whole they are all financially capable of stocking up for the coming season.

We have not received many orders, but

about one-third of the trade have called at our booth and have given assurance they will come back and see us after they look around the field.—**C. A. Albrecht, General Manager, K. W. Ignition Co., Cleveland, O.**

Believe Business Will Pick Up.

In my opinion our line will be stocked more heavily by the dealers and jobbers, which will stimulate business from now on. Those who called at our exhibit were all very optimistic, due to the fact that material and prices have been somewhat reduced, which allowed manufacturers to reduce their prices. The prices on our line, I believe, will prevail the next quarter, thereby safeguarding the jobber and dealer to the extent that they can now buy with a feeling that they will not stand to lose on their stock that is bought in the early spring market. This is the feeling that we have endeavored to create and it seems as if our efforts have been accomplished to the extent that our many friends have given us their undivided attention at the show. They have placed their confidence in us relative to the prices that will prevail during the spring buying.

With this feeling prevailing general business conditions should have a decided change within the next 30 days.—**J. Arthur Buhr, Secretary and Sales Manager, F. H. Lawson Co., Cincinnati, O.**

Prospects Good for 1921.

I can best answer your question regarding the business outlook for 1921 by referring to the fact that we went to considerable expense to have an attractive exhibit at the Automotive Equipment Show. We had our salesmen all on the job, and we see nothing in the present situation to warrant us in slackening our endeavors. To be sure at the present moment the volume of business is not as heavy as it has been during the past few months; the jobbers seem to be quite generally reducing their stocks, and from the conversations which I have had with jobbers from various parts of the country, I gather that the jobber is enjoying quite a normal turnover. If this be true, it will only be a very short time before their orders to the manufacturer will reach normal volume.

Fundamentally, I believe we are in a very sound position and prospects for a good volume of business in 1921 are very bright.—**F. R. Hall, President, the Northwestern Chemical Co., Marietta, O.**

Obtained Good Orders.

We have obtained enough business at the show to keep our plant busy on these orders for several months.

The replacement of parts will be greater than ever. This is due to the tremendous changing of owners and second hand car market. The general tendency of the jobber is toward a moderate priced merchandise.—**Ira Saks, Pennsylvania Piston Ring Co., Cleveland, O.**

1921 Will Be a Real Year.

The prospects for the year 1921 are brighter than any of our expectations and I look for a real year after the spring buying opens. We are naturally very optimistic inasmuch as during the entire show we did not come in contact with a dealer or jobber who had the least discouraging outlook for the business conditions of the coming year.

It has been generally agreed that an adjustment in general buying conditions were necessary and our dealer and jobber friends, as well as the manufacturers, are more than pleased that this depression, which was inevitable, came about when it did during the dull season in the automotive field. In a way the public will be benefited by this condition inasmuch as the jobber and dealer have had the opportunity and time to take inventory and they are eliminating their old stock which they were unable to move, and the spring will find them with a new line of stock on their shelves.

The show has proved a great success in every respect and the renewing of old friendships and meeting of new friends have brought about a closer relationship between the manufacturers, jobbers and dealers. I believe that 1921 will verify my opinion that it will be a real year.—**M. D. Campbell. Sales Manager, Perkins-Campbell Co., Cincinnati, O.**

Buying Public Has Called Off Strike.

It is certainly a temporary readjustment. It is obvious that cars are in operation and parts must be replaced. I believe the buying public were on strike due to the inflated prices and now that they are on a downward grade they have declared that the strike is off.—**E. T. Morrby, Vice President and Treasurer, Polson Rubber Co., Cleveland, O.**

Additions to Dort Motor Car Factory

During 1920 additions to the Dort Motor Car Co. at Flint, Mich., and the Gray-Dort Motor Co. at Chatham will amount to more than 500,000 square feet. The first unit of the new Dort plant at Flint is practically completed. This is on the 70-acre tract in the new industrial center. One mile of industrial track penetrates the property, which also is served by the Grand Trunk railway and soon will have the Pere Marquette as well. This first unit is reinforced concrete, three stories high, and consists of two wings, each 96 feet wide by 312 feet long, the ultimate length to be 516 feet. The two wings are connected by a glass covered court 60 feet wide, giving a first floor space at present of 252 by 312 feet.

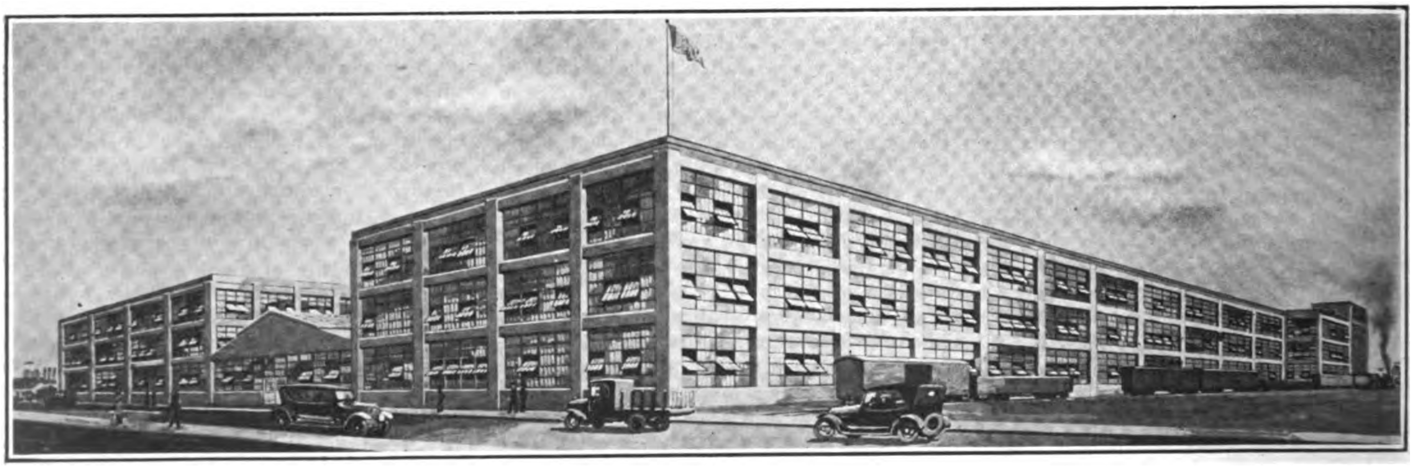
The structure is strictly modern, steel sah, sprinkler system, the latest type of lighting, heating and ventilating, and has four high-speed elevators. The latest type of machinery and equipment is being installed.

Also at Flint are the new service building, for the parts and service departments, four stories high, 40,000 square feet; a steel structure for final inspection, 7000 square feet; another steel structure for heat treating and riveting, 5000 square feet, and an additional warehouse, 30,000 square feet.

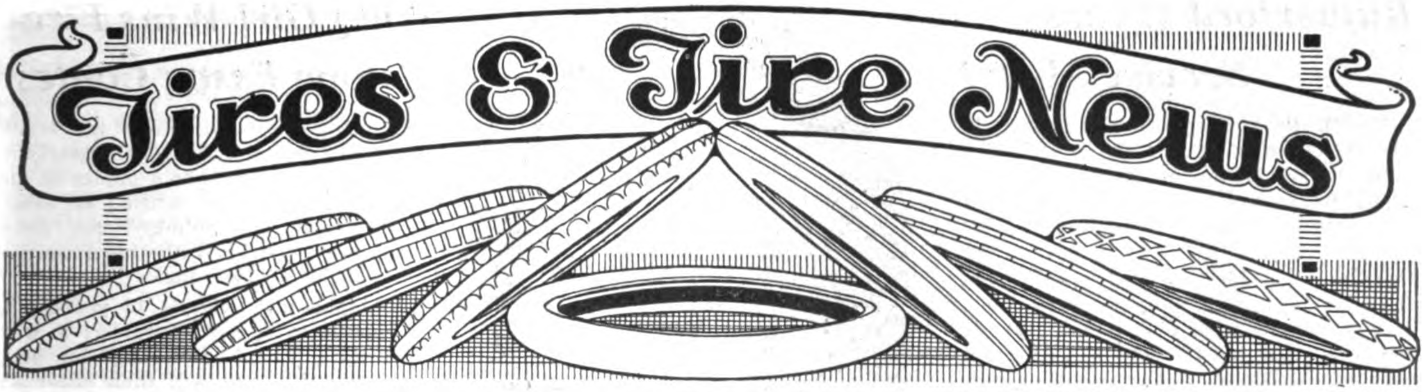
Many improvements have been made to the Lull Carriage Co.'s plant at Kalamazoo, Mich., taken over for the building of Dort bodies. A new power house, six dry kilns and a storehouse for dry lumber bring the working floor space up to 150,000 square feet.

Of importance to the trade is the announcement that William A. Henderson is manager of the body factory. Mr. Henderson is recognized as a leading body designer, was with Holbrook & Co. of New York and has designed bodies for the royalty of Europe and notable citizens of this country.

The Gray-Dort Motor Co. of Chatham, has added 275,000 square feet to the plant in that city, absorbing a vehicle company and erecting a number of units which make this one of the principal plants in Canada.



First Unit of New Dort Motor Car Plant at Flint, Mich.



Prices of Tires Drop 7½ to 15 Per Cent.

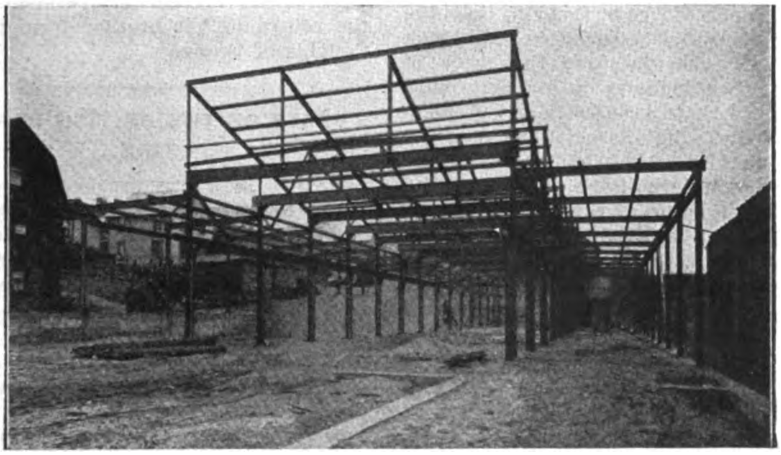
In line with many other products, tires have started to decrease in price. Cuts which range from five to 15 per cent. are announced by many concerns, and rumors are heard of factories that are planning to drop from 17½ to 20 per cent. before the first of the year. General market conditions, new low-price rubber and fabric and an enormous stock on hand are advanced as reasons for the changed prices, most of which go into immediate effect.

Goodyear prices have been cut from 7½ to 15 per cent. according to report, and the factory has started operating on a five-day basis of 52,000 tires weekly. The plant has recently been operating on a four-day schedule and has been shut down for a week while inventories were completed. It will also close during Christmas week, according to report.

Reduction in tire prices announced by the United States Rubber Co. range from 10 per cent. on large sized fabrics to 12½ for small tires. Tubes are cut 15 per cent. and solid tires 10. Cord tires have not lowered to any great extent. The company announces that its position in regard to crude rubber and other supplies is such that it can make the concessions. Goodrich tire prices have also showed substantial recession. Mason tires have made a general cut of 12½ per cent. and Fisk has reduced prices on fabric casings, ranging from 10 to 12½ per cent., while a smaller cut has been made on cords. The Miller Rubber Co. has made a substantial cut and Ajax has dropped from 7½ to 15 per cent., and it is generally understood that practically all other factories will follow suit.

CRUDE RUBBER SELLS AT NEW LOW FIGURE.

Crude rubber is selling at a new low price of 20 cents a pound. The price last year for the same quality was 50 cents a pound, and in 1913, a year of normal prices in practically every line, the same grade sold at $1 a pound. As a matter of fact the new price is stated as not especially attractive to the trade, as large stocks are carried by manufacturers, speculators, importers and jobbers, about all of which was bought at a higher market. It is reported that the new crop will be much smaller in size. Qualities will be held up to the present standard, but it is apparent that effort is being made by the planters to establish a new high price level within the year.



Addition to Plant of Akron Mold and Machine Co. in Process of Erection.

ADDITION TO AKRON RUBBER MOLD CO. WILL DOUBLE OUTPUT.

The accompanying illustration shows the addition to the plant of the Akron Rubber Mold & Machine Co., Akron, O., now in process of erection. Work is being hastened on this extension in order to provide needed additional production facility, the company being busy beyond its present capacity meeting the demands of the tire repair trade from export and domestic markets, as well as the requirements of tire factories for giant cord truck tire mold equipment. This addition, with new machinery, some of which has already been installed temporarily in the plant, will approximately double the present output of the company.

HAYWOOD TIRE SURGERY HAS INCORPORATED.

Miner Haywood, originator of "Haywood Tire Surgery," has just incorporated his business under the name of the Haywood Tire & Equipment Co. Mr. Haywood is president of the new concern, which is capitalized at $400,000. He started in the tire business 12 years ago with a poorly equipped repair shop and $1000.

Soon after launching this enterprise he realized that there was big room for improvement in vulcanizing machinery. Being of an inventive nature he began to design and experiment with machines especially adapted for individual tire repair shops. His idea was to perfect equipment capable of doing all kinds of ordinary repair work with the elimination of bulk and massive weight which characterized machines in general use in tire factories.

He finally succeeded in producing a machine that was light in weight, economical to install and capable of doing high class work. His next step involved manufacturing and marketing these new Haywood vulcanizers and tire repair accessories.

Miner Haywood.

That the machine was an unqualified success and his marketing plans sound, is best attested by the fact that from an original investment of $1000 the present Haywood plant has increased to its present proportions.

The main building covers two acres of ground and comprises floor space approximating 20,000 square feet. Housed in this edifice are the general offices, complete machine shops and a fully equipped tire repair school.

Rutherford Wears Service Medal

W. O. Rutherford, vice president in charge of sales of the B. F. Goodrich Rubber Co., is one of the youngest officials in the automotive industry and at the same time one of the oldest in point of service.

As proof of his extended work in the industry he now proudly wears a Goodrich 20-year service pin. He completed his 20th year this fall and was initiated into the Goodrich 20-Year-Service-Order with 38 other "new" 20-year veterans.

Mr. Rutherford worked up to his present position from the ranks, winning each promotion through sheer ability. He entered the Goodrich employ in 1900 in a minor position in the sales department. Later he was sent to Detroit to look after the company's interest in that city, and a year later was promoted to the position of manager of the company's Denver branch.

From the West Mr. Rutherford was called back to the central states and sent to Buffalo, where he had charge of affairs for eight years. In 1910 he was transferred to the home office at Akron, where he was made assistant to Vice President H. E. Raymond. By successive steps he advanced from that position to vice president in charge of sales.

Despite this long service record, Mr. Rutherford is still a young man. He registered in the last draft during the war and is still on the "near-side" of the 50 year mark.

W. O. Rutherford, Vice President in Charge of Sales, B. F. Goodrich Rubber Co.

RACINE TIRE HAS NEW SALES LOCATION.

The Racine Rubber Co. of New England has taken possession of its new sales and service station at 186 Brookline avenue, Boston, in the very heart of the motor district. The expansion of Racine tire interests in this territory in the past 12 months demanded a removal from the former location at 51 Chardon street, and in securing the new building President James S. Waddell provided for future expansion as well as present needs. A full and complete stock of fabric and cord tires as well as an abundance of inner tubes will be kept on hand.

HOOD CHANGES COMMON STOCK.

Stockholders of the Hood Rubber Co. have voted to change the common stock from $100 par value to shares of no par value. There is $5,000,000 common stock now outstanding and it is understood to be the intention of directors to declare a 100 per cent. stock dividend by issuing two shares of new stock. of no par value, for each existing $100 share. Last spring Hood Rubber paid a 66 2/3 per cent. common stock dividend. increasing the issued common stock from $3,000,000 to $5,000,000. The dividend rate was thereupon reduced from a $12 to an $8 annual basis. On the same comparative basis the new common stock would pay $4 a year.

GROWERS TO RAISE PRICE OF RUBBER.

It is reported from London that the Rubber Growers' association will take drastic steps to increase the price of rubber. The industry at present cultivates more than 3,000,000 acres of plantations, and the association controls about one-third of the holdings. Propaganda is being circulated in an effort to reduce the tapping of rubber trees by 25 per cent., and it is understood that the situation may assume an aspect of grave importance.

Victor Rubber Co., Springfield, O., has made 12½ to 15 per cent. price cut.

Miss Katherine F. Butterfield, Weiser, Ida., Winner of Firestone Ship-by-Truck Prize Essay.

Idaho Girl Wins Firestone Essay Contest

The Harvey S. Firestone university scholarship contest, in which nearly a quarter of a million school pupils of the nation participated, by writing an essay on the topic of "Ship-by-Truck Good Roads," was won by Katherine Flournoy Butterfield of Weiser, Ida.

The Idaho girl, who is 16 years old, has chosen to spend a year at a well known girls' school on the Hudson, near New York city, and will then enter an eastern university for a three-year course.

The more than 200,000 essays were winnowed down until but one from each state was placed before the final judges for decision. Members of the committee which made the awards of national prizes were Dr. C. D. Davis, United States Bureau of Education, chairman; Dr. Walton C. John, United States Bureau of Education; H. S. Fairbanks, United States Bureau of Public Roads, and Pyke Johnson, secretary of the highways committee of the National Automobile Chamber of Commerce.

Miss Butterfield is not without honor in her own home. During the war she won first prize for the best Liberty Loan essay and wrote a play which was produced—with the aid of 20 cousins—upon the return of her brother from the battlefields of France.

TESTS OF THE BRITISH RAPSON TIRE.

The following tests of the Rapson tire, manufactured by Rapson Automobile Patents, Ltd ., London, England, recently conducted under competent supervision, are of interest in this country.

The first test consisted of the reading of the temperatures taken after one lap at an average rate of 58¼ miles an hour, a comparison being made of the Rapson and an American tire. The respective temperature readings were 101 degrees. Fahrenheit, for the Rapson, and 124 degrees for the American.

Second test—After five laps at an average of just over 50 miles an hour, the thermometers showed, after a lapse of one minute, that the Rapson tire was 20 degrees cooler than the American. The final reading, taken some minutes later, was 144 degrees for the Rapson and 146 for the American.

Third test—The American tire was exchanged for a British tire taken off a spare wheel, consequently stone cold. The Rapson was still hot from previous tests, registering 140 degrees at the beginning of the five laps at an average speed of 55 miles an hour, which made up this test. The result was 147 degrees for the Rapson and 157 for the British tire.

At the completion of the run back to town the tests read 85 degrees for the Rapson and 98 for the American.

NEW SALES ORGANIZATION TO MARKET WELL KNOWN PRODUCTS.

Sales and selling organizations of the Sterling Tire Corporation and the Empire Rubber & Tire Co. have been taken over by the Rubber Corporation of America, which has been formed by New York banking interests. There have been no changes in the controlling interests of either of the companies, and all manufacturing remains separate and distinct as before.

The object in forming the new sales company was to increase efficiency and secure economy in branch operation; to maintain larger stocks of goods in centrally located warehouses; to consolidate advertising effort and to relieve the heads of the manufacturing departments of all details of selling and financing.

The general offices of the Rubber Corporation of America will be at 240 West 55th street, New York. Branches will be established in Boston, Philadelphia, Pittsburgh, Buffalo, Chicago, Kansas City, Atlanta and San Francisco. Sterling branches in most cities will become distributors for the new corporation.

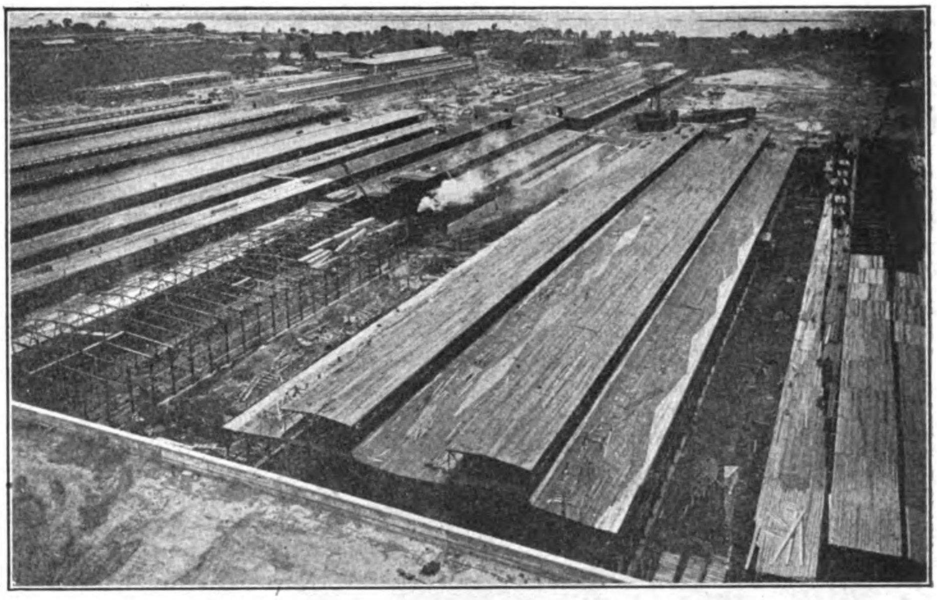
NEW ENGLAND TIRE AND RUBBER CO. STARTS PRODUCTION.

The Holyoke cord tire, a product of the recently organized New England Tire & Rubber Co., Holyoke, Mass., is now being manufactured in an outside factory, under the direction of John Kearns, president of the new company, and will be removed to the new plant as soon as that structure is completed. This company is capitalized at $3,000,000, half common and half preferred stock, and a large amount of the stock has already been subscribed for, it being said that present stockholders number more than 2000, who hold varying amounts.

The president, Mr. Kearns, was formerly vice president of the Fisk Rubber Co., has been connected with the Dunlop Rubber Co. of Australasia, Ltd., and at the present time is vice president and general manager of the Lee Tire and Rubber Co. Associated with him as vice president of the company is a son, E. J. Kearns, formerly with the same companies. C. S. Huntley, treasurer and general manager, was organizer of the Delion Tire & Rubber Co., and at the present time is president of the Midco Tire Co.

The board of directors is as follows, in addition to the foregoing:

W. C. Van Brunt, secretary, formerly a New York exporter and with the Hurlbert Motor Truck Co.; Joseph F. Ranger, treasurer Casper Ranger Co., Holyoke, Mass.; George K. Culp, who has been seven years with the United States Rubber Co., with the Mid-Continent Tire Manufacturing Co. and other concerns; T. F. Morris, formerly with the American Sugar Refining Co. and Keystone Watch Co.; F. W. Callahan, Springfield, Mass., ex-vice president of the Springfield Junior Chamber of Commerce and formerly manager of Weeks & Co.; J. Sidney Bernstein, attorney, New York.



General View of Factory Buildings Under Construction for Dunlop Tire & Rubber Corporation of America at Buffalo. Two Miles of Standard Track and Nine Miles of Narrow Gauge Railway Are in Use to Distribute Materials of All Kinds to Various Sections of the Site.

Immense Plant of Dunlop Tire Co. To Be Run by Niagara Falls

The stupendous job being performed by the nation's greatest hydroelectric plant, at Niagara Falls, is given new emphasis every time another great industrial enterprise is harnessed to it. One of the latest is the plant of the Dunlop Tire & Rubber Corporation of America, a $15,000,000 factory located a mile north of Buffalo. The manufacture of tires requires a great deal of power in any case—and claim is made that this particular company will soon be one of the largest in the field, with a production capacity which will compare favorably with that of the other large manufacturers in the industry.

A part of the power will come from Niagara Falls direct, the balance being furnished by the steam plant of the Buffalo General Electric Co.

The factory units cover 35 acres of actual floor space. The initial installation at the Dunlap plant will require a total of 253 electric motors in all sizes, having an aggregate rating of 16,500 horsepower. In addition there are 15 motor generator sets with a total capacity of 1260 horsepower, and nine synchronous converters of a total capacity of 990 kilowatts. Most of these will be constant speed alternating current motors, among them being 12 500-horsepower synchronous motors driving lines of masticating and mixing mills and 18 250-horsepower synchronous motors driving warming mills. The variable speed motors are driven by direct current, which is supplied from synchronous converters located in the distributing stations, of which there are eight, in the factory. The largest of the direct current motors are of 100-horsepower and 60-horsepower, driving rubber strip and tread calendars respectively The current comes to the plant at a tension of 12,000 volts and is received at a central sub-station of two stories, 85 by 110 feet in extent of ground plan, where it is reduced by the transformers to 2300 volts and then distributed through an underground cable system through seven sub-stations, each of which is 17 by 72 feet in extent and two stories high. Where alternating current is used, of course, there is merely a reduction of voltage through additional transformers, but in some of the sub-stations there will be converters to make the change to direct current.

Electric power is used to drive the air compressors furnishing the compressed air in the plant. Electric power is used in the operation of magneto clutches and brakes with which all the large lines of mills and rolls are equipped as a safety-first feature. Electricity further is responsible for the modern electric fire alarm system, telephone system and automatic call system by which superintendents and foremen can be located.

GOODLUCK CLOSES DEAL WITH CLIMAX.

The Goodluck Rubber Co., Buffalo, N. Y., has closed a deal with the Climax Rubber Co., Delaware, O., whereby the Goodluck company purchased for $2,500,000 the rights to manufacture Climax and Maxotires in New York state.

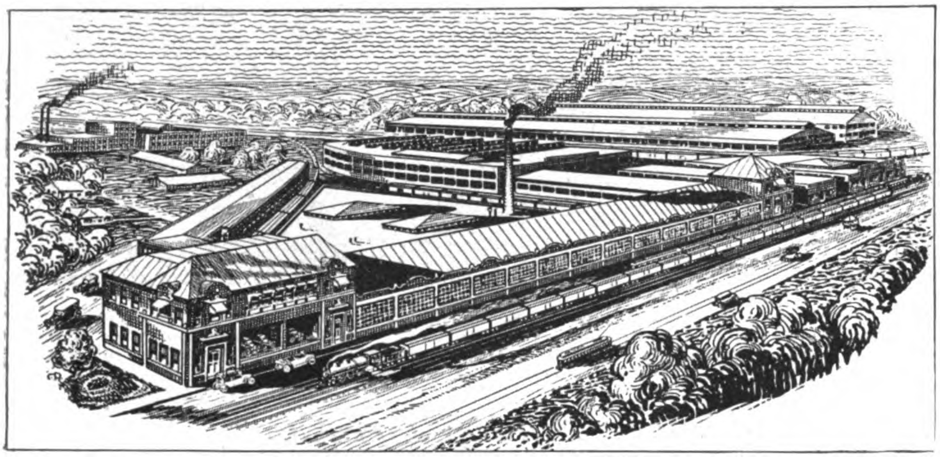
The Climax factory, recently acquired at Delaware, O., is to be expanded in the near future, it is announced by officials of the Climax company, and although the general offices will be at Delaware, Frank B. Wilson, publicity director, will maintain headquarters at Columbus.

It is understood that rights to manufacture Climax products in other sections of the country may also be allotted.

NOTES OF TRADE AND INDUSTRY

Lexington Holding Co. Formed

To keep pace with the rapid development of the automotive industry, Frank B. Ansted, president of the Lexington Motor Co., Connersville, Ind., and his associates, have organized the United States Automotive Corporation, a holding company, incorporated under the laws of Delaware.



New Plant of Hanson Motor Co. at Atlanta, Ga.

The new corporation has an authorized capital of $10,000,000 of preferred stock and 300,000 shares of no par value common stock, of which 100,000 shares are class A and 200,000 class B. The alliance will place under a single control and management several of the parts making plants which have contributed in the past to Lexington success as individual units allied with Lexington. Under the new plan these parts making plants are working with Lexington as a unit, and the movement is designed to guarantee to Lexington a control of sources of supplies and to make possible manufacturing economies.

Frank B. Ansted is the president of the United States Automotive Corporation; George W. Ansted, also president of the Ansted & Bush Milling Co. at Springfield, O.; Fred I. Barrows, also president of the Teetor-Hartley Motor Corporation at Hagerstown, Ind., and Emery Huston, vice president of Lexington Motor Co., are vice presidents. LeRoy A. Hanson, secretary and treasurer of the Lexington Motor Co., is secretary and assistant treasurer, and James M. Heron, secretary and treasurer of the Rex Manufacturing Co., is the treasurer of the new company.

The board of directors includes William B. Ansted, president of the Central Manufacturing Co.; John C. Moore, chief engineer of the Lexington; Charles C. Hull, president of the Rex Manufacturing Co.; Arthur A. Ansted, president of the Indiana Lamp Co.; Elmer J. Hess, former president of the Western Spring & Axle Co., and O. A. Eberhart, former governor of Minnesota and general coun-

LOCOMOBILE BOARD OF DIRECTORS ENLARGED.

At a meeting of the board of directors of the Locomobile Co. recently held the board was increased to 15 members by the addition of five men prominent in financial and industrial circles. The new directors are:

Capt. Marion McMillin, first vice president, Emerson, McMillin & Co., 120 Broadway, New York; A. P. Lathrop, president, American Light & Traction Co., 120 Broadway, New York; Charles Willard Young, counselor, Emerson, McMillin & Co., 120 Broadway, New York; R. L. Kinne, Utica, N. Y.; Herbert L. Dillon, Eastman, Dillon & Co., 71 Broadway, New York.

SPARKS-WITHINGTON ENLARGES.

Completion of two brick and concrete buildings at the Sparks-Withington plant, Jackson, Mich., enlarges the floor space 85 per cent.

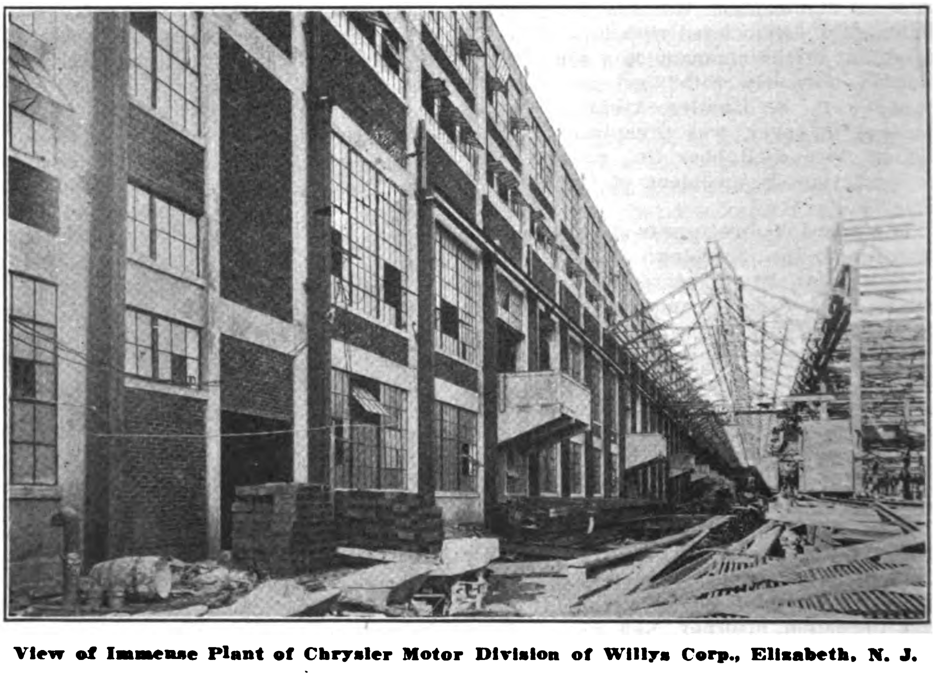
Chrysler Motor Plant at Elizabeth, N. J.

Owing to John N. Willys' interest in both companies, some confusion seems to exist in the trade concerning the operations of Willys-Overland and the Willys Corporation. These are two separate and distinct companies. The Willys-Overland Co., as heretofore, manufactures Overland and Willys-Knight cars at the company's plants at Toledo, O. The new plant, now rapidly nearing completion at Elizabeth, N. J., is the property of the Willys Corporation and will be known as the Chrysler Motor Co. Division of Willys Corporation. This will be devoted exclusively to the manufacture of the new Chrysler Six and production of these cars is scheduled for next spring.

Building operations at the Elizabeth plant are progressingly steadily and have reached huge proportions. The main assembly building, a four-story structure 1440 feet in length, is practically completed and ready for the installation of machinery. Structural iron work is up for other factory units and concrete work on the great shipping and receiving sheds was recently completed. It is claimed that the new plant will set aside all previous ideas in modern automotive manufacture and establish new standards in the handling of material and finished product.

BEAR-CAT'S NEW BRANCH.

Announcement is made that the Bear-Cat Products Co. of Oklahoma City, Okla., has just opened a city branch on North Robinson avenue. A. L. Lockhart is in charge, which is the fifth to be added to the chain, the others being located at New York, Chicago, Philadelphia and Houston, Tex.



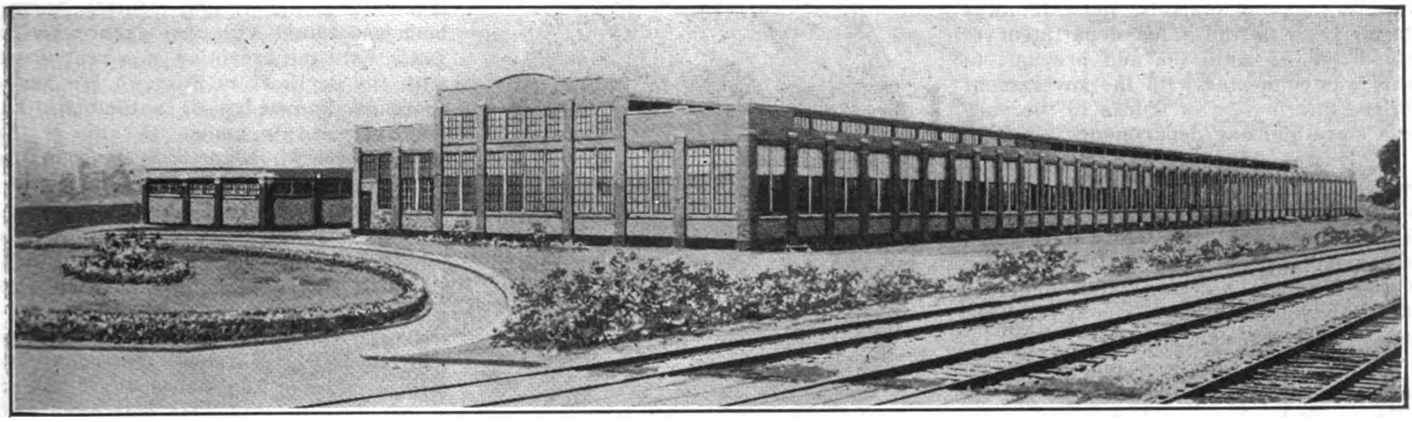
View of Immense Plant of Chrysler Motor Division of Willys Corp., Elizabeth, N. J.

Clark Equipment Co's New Axle Factory

The accompanying illustration shows the magnificent new plant which the Clark Equipment Co., Buchanan, Mich., is erecting at Battle Creek, Mich. This concern makes a complete line of internal gear drive truck axles, ranging in size from three-quarters of a ton to five-ton, and all sizes of steel disc wheels for solid and pneumatic truck tires.

Work on the new plant began March 1 and it will be entirely given over to the making of Clark motor axles and is designed to care for the anticipated increasing demand for this product for some time to come.

All sales, engineering, purchasing and general administration will be handled as before through the general offices at Buchanan. There will also be put into force at the Battle Creek plant the same progressive policies of plant management and profit sharing which have proved so valuable at Buchanan.



The Fine New Plant of the Clark Equipment Co., at Battle Creek, Mich., Which Is Nearing Completion and Will Be Used Exclusively for the Production of Truck Axles.

The plant's site comprises 23 acres, with a 4600-foot frontage on the main line of the Michigan Central railroad and a smaller frontage along the Grand Rapids and Interurban railroad. It is located on the extreme western side of the city. The manufacturing building is 99 feet by 440 feet and a warehouse parallel to it is 50 feet by 144 feet. The two buildings are connected by two closed passageways. A third building houses the power plant.

PISTON RING CO. APPOINTS NEW OFFICERS.

At a meeting of the board of directors of the American Hammered Piston Ring Co., held at Baltimore, Md., recently, announcement was made of the appointment of C. F. Hockley as president. Howard Bruce, chairman of the board of directors, and A. C. Bruce as vice president.

A. C. Bruce is assistant to the president of the Bartlett-Hayward Co., of which the American Hammered Piston Ring Co. is a subsidiary, and comes to his new position with an unusual successful record in the manufacturing field.

INSTALLS HEATERS AND SELLS OPEN CARS FOR WINTER.

The West can always be depended on to get around a difficulty and this fact is exemplified by the manner in which a Kansas City car distributor disposed of his entire stock of open cars during October. Prices were dropping in many lines, and automobile manufacturers had joined the procession to a great extent, but the dealer in question had no reason to expect a cut in the product handled by him, and was somewhat concerned as to just what the outcome would be. He had tied up a large sum of money in stock on hand, which consisted practically entirely of open cars. Selling conditions demanded closed models as well as lowered prices, and he was in a quandery. As a last resort he decided to install heaters in all the open cars on hand. He felt that this would end the bug-a-boo of cold weather for all time, and he was right. The heater-equipped cars sold well, and the last one was disposed of three days before the price was lowered. He intends to stock the heater, as he feels that it is a sales puller of merit, and from now on he will equip all cars with it.

OREGON DISTRIBUTORS FOR HARE'S.

C. R. Norton, Pacific coast manager for Hare's Motors, has announced that the distribution of all Hare's Motors products for the State of Oregon will be controlled by the Willemette Motors Co. of Portland. This is another step in establishing the distribution and service for the Locomobile, Mercer and Simplex cars and Riker truck in Northwest.

The Willemette Motors Co. has subscribed to the Hares' Motors service policy and owners of any of the company's products will receive the same service through the new dealer that they would get at any Hare's Motors organization in the country.

The net earnings of the Stewart-Warner Speedometer Corporation, Chicago, Ill., for the third quarter of the fiscal year, before taxes and dividends, were $801,278, the best showing for any quarter of this year.

Willys-Overland Features Time Payment

Through arrangements which the Willys-Overland Co., Toledo. O., has been fortunate enough to make, its dealers in all parts of the country will be able to finance the sale of its Overland and Willys-Knight cars on the time payment plan.

Statistics show that throughout the country 60 per cent. of all cars are sold on time. On the Pacific coast the percentage of cars sold on time runs as high as 90.

Surveys made by the great banking institutions, which have been organized to finance automobile sales exclusively, show that the motor car, especially the smaller, standard types of cars, have long since passed the luxury class and must now be considered a necessary part of every progressive community.

One survey made in 1919, from April to September, gives an idea of the class of buyers who are purchasing cars through the time payment plan. The average age of the purchaser was 35.9 years. His average monthly income was $277.81. The average monthly payment on his car was $60.16, and the average down payment 43.8 per cent.

The average real estate equity owned by purchasers was $7805, an indication that most of these buyers own their own homes and other property as well. The survey covered nearly 8000 purchasers in all parts of the country.

LINK BELT WATER SCREENS.

The Link-Belt Co., 910 South Michigan avenue, Chicago, Ill., recently published an illustrated and very attractive 24-page book covering its traveling water screens, which will be sent to anyone interested in the effective and economical screening of condensing water.

Surface condensers are easily clogged up by impurities contained in the water supply and very hard to clean. Clogged condenser tubes mean reduced efficiency of operation and other disadvantages that can be forestalled by the use of traveling screens.

Personal News of Industry and Trade

Blaha Available's Sales Manager

William F. Blaha has recently been promoted to the position of acting sales manager of the Available Truck Co., Chicago, Ill. Prior to this promotion he was manager of the Available Truck Co.'s advertising and sales promotion departments, which he will continue to supervise. Previous to his association with the Available Truck Co. he was chief of the copy department of the Coolidge Advertising Co., Des Moines, Ia. Mr. Blaha had been identified previous to his advertising agency connection with the automotive trade for a number of years as manager of the advertising and sales promotion departments of the Master Truck Co.

J. H. Kelly of the Parker Motor Truck Co. has resigned and will make his headquarters in Indianapolis, Ind. He was formerly with the sales department of the F. W. D. Auto Co. and previous to this was connected with the government in the distribution of trucks to the various state highway departments.

A. C. Russel is meeting with substantial success in developing the wholesale department of the Philadelphia branch of the Locomobile Co. He was carriage sales manager for Packard-Detroit when Oscar Coolican, now general manager of the Philadelphia branch, was at the head of that organization.

H. R. Rhodes has been appointed manager of the Wayne Bumper Co., Fort Wayne, Ind. He has had many years experience in advertising and selling, and was formerly connected with the Howe Lamp Manufacturing Co., Chicago, and the New Era Spring and Specialty Co., Grand Rapids, Mich.

Joseph G. Goldring, former director of purchasing for the King Tire Co. of New York, has resigned from that position and is doing business as a manufacturers' agent, being located at 250 West 54th street, New York. Mr. Goldring has had many years experience in the automotive business.

H. G. Kratzer has been appointed superintendent of the Kemp Machine Works, Muncie, Ind. He was recently released from government work, having served as special radio experimenter in the United States naval gun factory at Washington.

S. G. Doench, formerly publicity man for the Wainwright Engineering Co., Connersville, Ind., has purchased a factory in Cincinnati, O., which will be devoted to the manufacture of pistons, rings and pins. The business will be operated as the Engine Service Co.

F. Y. Spencer has been appointed advertising manager of the Corcoran Manufacturing Co., Cincinnati, O. Mr. Spencer was formerly with the Garvey-Anderson Advertising Agency of Cincinnati.

C. A. Taylor, formerly general sales manager of the Van Briggle Motor Device Co. of Indianapolis, Ind., has been appointed general sales manager of the Tractor Train Co. of Indiana. He has assumed his new duties at Connersville, Ind., where the main plant of the company is located, and has already outlined a prospective campaign for future business. Mr. Taylor is well known in automotive manufacturing and selling circles.

A. A. Brevaire, formerly technical engineer for the service department of the Pierce-Arrow Motor Car Co., has been appointed chief maintenance engineer of Hare's Motors, Inc. He brings a wealth of experience to his new position as he has been associated with some prominent manufacturers in the industry.

J. A. Young, Vice President and General Manager, Empire Axle Co., Maker of Worm-Drive Axles, Dunkirk, N. Y.

A. G. Maney has recently been appointed director of distribution of the Franklin Automobile Co., Syracuse, N. Y. This is a position which has just been created. Mr. Maney has been serving for some time as assistant to the president in connection with the merchandising end of the business over which he now has direct supervision. He had previously been associated with the Belleville Chemical Co., the Shaw Insulator Co. and the Wright-Martin Aircraft Corporation. He is a graduate of New York university.

Earle E. Devlin, formerly special representative and more recently assistant to the general sales manager of Hare's Motors, Inc., has been chosen to fill the position of office sales manager. He has been connected with the automotive industry since 1912, when he joined the Buick Motor Co., being located at the Philadelphia branch. Later he became general manager for the Bigelow-Willey Co. of Philadelphia, distributor for Paige motor cars, in that territory.

Brower at Boston as Bearings Manager

R. C. Brower has been appointed branch manager of the Boston office of the Bearings Service Co. He was formerly with this company and takes the place of L. H. Dodd. Prior to the organization of the Bearings Service Co. Mr. Brower was with the Hyatt Roller Bearing Co. He served as branch manager at Detroit, was later associated with the New York branch and was finally promoted to be eastern district manager. He then joined the forces of the Harrison Radiator Co. and was later assistant sales manager of the Clark Truck-Tractor Co.

W. J. Mattimore has been appointed advertising manager of the Maxwell-Chalmers Co. of Boston. He goes to the Maxwell-Chalmers interests from MacManus, Inc., advertising counsel, having been associated with that agency for 11 years, with the exception of a year spent with the A. E. F. in France. He has a thorough knowledge of automotive advertising and is known as one of the most successful advertising men in the western field.

W. O. Browne has been appointed general sales manager of the Southern Motor Manufacturing association, Houston, Tex. He comes to his new position with a wide experience in motor sales, having been connected in a prominent way with several of the larger concerns. He is a veteran of the World War, having volunteered in 1917. He will have general supervision of all sales of Ranger passenger cars, trucks, tractor-cultivators, trailers and commercial bodies.

Claude C. Smith has been made vice president of the Seelye-Brown advertising agency, according to recent announcement. It is said that few men in the country have a more accurate knowledge of publications than Mr. Smith. In addition to general supervision of the space buying department, Mr. Smith has charge of several of the more important accounts handled by the company.

Walter S. Bingham was recently appointed by the Arvac Manufacturing Co., Anderson, Ind., to represent it in Michigan, Wisconsin, Minnesota, Iowa, Illinois and Missouri. Mr. Bingham has been connected with the tractor industry in the northwest and has been in touch with the Arvac concern for a number of years.

N. D. Beaver has taken over the business of the Standard Motor Sales Co., Denver, Col., distributor of Standard trucks. Mr. Beaver will distribute Standard trucks in the states of New Mexico, Nebraska, Wyoming and Colorado.

C. C. Secrist, for nine years connected with the advertising department of the Universal Portland Cement Co., has been appointed sales manager of the Victor Manufacturing & Gasket Co.

Polhamus Heads Visible Pump Co.

Announcement has just been made that A. Z. Polhamus, former general manager of the S. F. Bowser Oil Tank and Pump Works, and for more than 30 years a well known figure in Fort Wayne manufacturing circles, has been named as president and general manager of the Visible Pump Works, a newly organized company with headquarters at New Haven, Ind.

Mr. Polhamus became associated with the S. F. Bowser Co. in February, 1891, and during his 25 years' career with that company served successively as superintendent of salesmen, sales manager, chairman of the executive board, general manager and secretary of the company. He has been closely identified with the oil tank and pump manufacturing industry, in which he has been eminently successful.

Since he severed connections with the Bowser company Mr. Polhamus has been president and general manager of the Polhamus company, which he organized for the manufacture of oil burners for use in connection with newspaper plant machinery. Mr. Polhamus was a close friend of the late August Bowser, whose genius just a short time before his death created the visible measuring pump. It is the late Mr. Bowser's patent which is being manufactured by the Visible Pump Co.

To Build Immediately.

The Visible Pump Works is now receiving bids for the construction work on the first unit of its big plant to be built at New Haven. This first machine shop unit will be under roof within the next 60 to 90 days.

Besides self-measuring pumps the Visible Pump Co. will also manufacture oil distributing systems. It has opened offices on the fourth floor of the Central building at Wayne and Harrison streets, but will eventually have its main office at its plant at New Haven.

The site for the new factory comprises eight acres just west of the interurban station at New Haven, between the interurban tracks and the Wabash and Nickel Plate tracks. In addition it will also be within easy access of the proposed industrial "belt line" which it is proposed to have connect various plants in the Fort Wayne factory district.

ROLLS-ROYCE MANUFACTURING CHASSIS.

With a personnel of 700 men, the Rolls-Royce Co. of America, located at Springfield, Mass., is turning out completed chassis, following plans announced some time ago. The price of the chassis has been fixed at $11,750 and, with body, the car will cost from $15,000 to $17,000, depending, of course, on the type of job furnished. The outlook for capacity production is said to be very good.

A. Z. Polhamus, President and General Manager, Visible Pump Works, New Haven, Ind.

UNIVERSAL PRODUCTS WILL INCREASE CAPITALIZATION.

Announcement is made of plans for an increase in capitalization of the Universal Products Co. of Sandusky, O., and Oshkosh, Wis., to $500,000. The plans include the purchase of the H. C. Doman Co. of Oshkosh, Wis., and the removal of the main offices from Sandusky to Oshkosh.

The new company will continue to manufacture the Universal Products electric lighting and power plants and the Doman marine engines, and will immediately go on an increased production schedule, made necessary by the large field organization developed during the last year.

The officers of the new company will be: President, L. E. Willson; vice president, R. K. Schriber; secretary, Charles H. Eichinger; treasurer, Louis Schriber.

NEW CONTINENTAL BRANCH AT SAN FRANCISCO.

Adding to its large chain of branch plants, the Continental Motor Auto Parts Co. has recently opened an office at San Francisco, of which Bruce Daniels, for some time connected with the Russell Seeds Advertising Co. of Indianapolis, has been appointed manager. Two car loads of shop machinery have been forwarded to the territory for local distribution.

PACKARD REAL ESTATE SALE.

The Packard Motor Car sales and service building, located at the junction of Flatbush and Eighth avenues and St. John's Place, and facing the main entrance to Prospect Park, Brooklyn, has been purchased by C. T. Silver, a well known automobile distributor.

Wheeler-Schebler Co. Enlarges Plant

In the face of what would seem to be general adverse business conditions, the Wheeler-Schebler Carburetor Co. reports its output as well above normal and has recently erected two new buildings and renovated the original plant. The largest of the new structures is a three-story building, which will be used to house the executive offices, tool room, shipping department, mill wright and stock room, and a large assembly room. The engineering department has been given added space and the laboratory has also undergone extensive alterations, all with a view to increasing the general efficiency. A new service building has been built to take care of the large business along this line and it is felt that the company is prepared to take care of any future increase in an efficient manner.

BOYCE MOTO-METERS TO BE BUILT ABROAD.

George H. Townsend, president, and E. V. Hennecke, sales manager, of the Moto-Meter Co., Inc., sailed recently for Southampton, England. They will visit England and France for the purpose of establishing branch factories which will produce Boyce Moto-Meters for the European market and will also make a survey of the general conditions affecting the future of the automobile trade in Great Britain and on the continent.

According to report there has for several years been a rapidly growing demand for Boyce Moto-Meters in every country where automobiles are used extensively, and this demand has now reached a point where it can hardly be supplied by the American company which, since its establishment in 1914, has outgrown two factories and is crowding the third. The plant at Long Island city has a production of 8000 Boyce Moto-Meters a day. There are already more than 3,000,000 in use upon passenger cars, trucks, tractors, aeroplanes and motor boats.

JOSEPH SCHWARTZ CO., INC., HAS NEW HOME.

The Joseph Schwartz Co., Inc., one of the oldest automobile agencies in New Orleans, has recently moved into its up-to-date show rooms in the remodeled Washington Artillery building. For many years the business was located on Baronne street, where a varied assortment of transportation units was handled, but increased activities and lack of floor space made a change necessary.

The interior finish and general plan of the structure makes it ideal for a show room, and the Schwartz Co. may well feel proud of its new home, which is one of the best in the South. The lines handled by the company at the present time are the Moon and Oakland cars and Selden truck.

EXPORT DEPARTMENT
W.

Touring Alliance Formed in Paris

An international alliance of motoring bodies, which is expected to do much to benefit tourists in foreign countries, is the outgrowth of a recent conference of touring organizations held in Paris. Organizations already connected with the movement are the Automobile Association and Motor union, the American Automobile association, the Touring Club of France, the Touring Club of Belgium, le Union Velocipedique de France, the Cyclist's Touring club and the Touring Club of Italy.

The work of the alliance will include the study and solution of questions relating to customs, international travel, international touring propaganda, international geography of touring, the publication in all allied countries of guide books, and reciprocal advantages to be enjoyed by the individual members of all the organizations in the alliance.

The headquarters will be at Brussels, the general secretary being M. Seaut, president of the Touring Club of Belgium.

LIBERTY EXPORTS REACH DISTANT PORTS.

The Liberty Motor Car Co. is one of those American manufacturers which report great gains in the export of automobiles during the last several months.

Liberty Six cars have been shipped, during the last few weeks, to a great many countries, including some of the most distant ports. The list includes shipments to Sweden, Holland, India, Brazil, the Argentine Republic, France, China, England, Italy and many parts of Latin America. Even mountainous Switzerland has just taken a shipment.

AUTOMOBILE EXPORTS MORE THAN DOUBLED.

Automobile exports for the first eight months of 1920 totaled $233.420.183, compared with $110,318,741 during the same period of 1919, and $74.882.901 in 1918. Since 1918 they have risen from 11th place to seventh, passing the unprecedented outgo of flour, leaf tobacco and leather.

SELLS AMERICAN CARS IN HANKOW, CHINA.

A recent communication from Vice Consul Richard R. Smith of Nanking, China, tells of the demonstration and sale of an American car which covered a total of more than 500 miles and was finally sold in Hankow. The car was demonstrated chiefly to the local officials and native gentry, who were greatly interested in its operation and price, and the salesman took several orders after making the sale. At Kaifengfu, the military governor of Honan not only opened negotiations for the purchase of a car, but announced that a road would be built from the north gate of Kaifengfu to the Yellow river, a distance of about 15 miles, to a good cart road which follows the river to Tsinanfu, the capital of Shantung. The governor proposes to establish a 'bus line between the two cities.

The representative who demonstrated the car expressed the opinion that motor cars and trucks can be operated at a substantial profit in China, and can successfully compete with native cars in carrying passengers and produce. Though the territory covered in the demonstration is not supplied with roads in the modern sense, and though the surface of the ancient cart roads is very rough, the demonstrator was convinced that the road beds were in fair condition, and that not much work would be required to adjust these highways to motor car traffic.

LONDON USES RUBBER FOR PAVING.

Heavy traffic conditions in London, with consequent wear on street surfaces has led to the experiment of using rubber covered paving blocks in different parts of the city. While tests are by no means completed, evidence is offered to show that its use is practical in certain sections of the city where traffic is not especially heavy.

AUTOMOBILES IN INDIA.

According to officials of the Goodyear Tire & Rubber Co.'s export department, a recent census showed that there are 6000 automobiles and 1300 motorcycles in the Bombay territory and an equal number in the Calcutta territory, India.

Industry Has Great Field Abroad

Alfred Reeves, general manager of the National Automobile Chamber of Commerce, is authority for the statement that America has one car to each 14 inhabitants, while the average for foreign countries is one to every 2840 persons. This fact, he said, indicates that the automobile industry's greatest future lies in foreign countries, where people are just beginning to realize the advantage of motor vehicles.

Our exports of cars and trucks, which represented eight per cent. of the value of all completely manufactured products shipped abroad, amounted to 139,875 vehicles, valued at $166,961,709; whereas those of all automotive products exceeded $220,000 during the past 12 months. Automobiles are now exported to more than 90 different countries of the world. Shipments are by no means limited to older European countries. Uruguay and China have been better purchasers of cars than France, while Argentina ranks higher than any of the older Scandinavian countries.

The intensive development of resources of most foreign countries depends primarily on transportation. South America, Asia, Africa, Australia and immense stretches of European Russia will require considerably increased transportation facilities if the products available in the inland sections are to be profitably marketed in parts distant from place of production.

TURKEY TO TRY TAXICABS.

A British automobile company, with a capital of $2.000.000, has been formed to operate in Turkey. Trucks, taxicabs and omnibuses will be used, and plans are already formed for a service station and repair shop to be located at Constantinople.

CAR MARKET IN GREECE.

Trade Commissioner George Wythe in a recent communication said that there is a market in Greece for high priced motor cars. There is no market, however, for trucks at present because of the surplus army trucks recently placed on sale.

New Policy Advocated for Foreign Trade

A new policy in foreign trade was advocated by automobile manufacturers in a recent conference held in New York. Although the export trade is said to show large gains since the signing of the armistice, it is felt that there should be a reduction in tariff schedules applying to American made cars. Treaty agreements as existing are declared to be unsatisfactory, and the conference drew up resolutions to present to Congress which, if acted on, will tend to make trade conditions more advantageous for increased car export.

J. F. Barry, press representative of the New York Commercial, said that in his opinion Mexico has settled down for an era of prosperity. He believes that the present government is pro-United States, and thinks that Mexico will eventually be a wealthy country through the exploitation of its barely touched oil supply.

Franklin Johnston, publisher of "The American Exporter," back from a recent trip to Europe, said that Great Britain is nearly back to normal on her exports and is reducing her indebtedness 3½ times as fast as the United States. He predicted great prosperity for France, and stated that this year's farm yield was exceptionally large, that the railroads were in splendid condition and that business in general showed decided permanent gains over any year since 1914.

South America will be a strong market for American trade in the opinion of T. S. Barbier, representative of the General Motors Export Co., and Brazil offers an exceptionally good field according to C. P. Lucas of the Motor and Accessory Manufacturers' association.

Mistakes made by American manufacturers in the past were discussed and methods were suggested to remedy them. The advantages of the Jones bill in guaranteeing fair treatment to American shippers and exporters was pointed out by R. A. Dean of the United States shipping board. The bill provides that the goods handled in American ships shall have preferential rail rates as against those handled in foreign bottoms. The shipping board has power to say when this shall go into effect, although there has not yet been any attempt to enforce the provision, and it is felt that such action may not be necessary as there seems to be a disposition on the part of foreign countries to recognize the United States as a power in the shipping world, and fair treatment appears to be assured. The general impression of future foreign business, as outlined by the different speakers, seemed to indicate good future foreign business, and manufacturers' representatives present at the conference were of the opinion that exports would continue to increase in no small volume.

Seventy-five to 90% of motors cars imported into China are American made.

FARMERS OWN 86 PER CENT. OF AUTOS IN MANITOBA.

Nearly 7000 more automobiles are owned in Manitoba this year than last. The number of licenses issued in the first six months was 34,596, against 27,862 last year. Forty-seven thousand, or 86 per cent., are owned by farmers.

A group of Americans being driven through Saskatchewan recently on an inspection of the Hudson Bay Co.'s lands, which are being closed out to farm settlers, passed 85 machines on a 25-mile stretch of road and not a single team of horses.

"Horses," explained a farmer paradoxically, "are one of the reasons for all of these automobiles. Profits from horse breeding give the farmers the money to purchase cars. Towns and cities buy the horses and farmers do their work with tractors, automobile trucks and machinery. The day of horseless agriculture seems not far distant."

CEYLON TO HAVE AUTO SHOW.

United States Consul Robert L. Keiser, stationed at Colombo, Ceylon, says that the people of that country have an impression that the highest grade American cars are those retailing at less than $2300, and suggests that manufacturers of the better class exhibit their cars at the Ceylon show, which will be held in January. It is his opinion that many of tne wealthy class in Ceylon would be glad to purchase expensive American-made cars, as automotive products from this country are received very favorably.

JAVA PROMISES GOOD BUSINESS.

While in 1918 there were but 36 automobiles imported into Java, it is estimated that the figures for the current year will total more than 4000, the greater number of which have been manufactured in America. Imports of trucks, accessories, parts has kept pace with cars.

Trade Opportunities in Foreign Field

Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce and its district and co-operative offices upon written request by opportunity number.

33,969—The representative of a firm in Australia is in the United States and desires to secure an agency for the sale of glass ware for electrical lighting, insulating switchboard material and automobile accessories. References.

33,843—The representative of a merchant in Haiti is in the United States and desires to secure an agency for the sale of electrical supplies, second-hand automobile tires and automobiles. References.

33,874—A commercial agent in Australia, with representative in America, desires to purchase motor cars, cut glass ware, furniture, silks for shirtings, silk hosiery and novelties. References.

33,965—A commercial agent in Serbia proposes to organize a trade bureau for the Balkans and to later open branches in Zagreb, Sofia, Bucharest and Piraeus, and maintain industrial exhibits and a warehouse for the promotion of the sale of American products, particularly agricultural implements, railroad equipment, industrial machinery, metal household utensils, electric motors and accessories, automobiles, food products, mining machinery, chemical products, oils and fats, leather and rubber goods, paper, textiles, fancy goods, etc. Reference.

33,966—A commercial representative in Australia desires to purchase or secure an agency for the sale of good quality hardware, enamel ware, cutlery, electro plate, electrical household devices, shoe factory and tanners' requisites and motor accessories. Quotations should be given f. o. b. New York, San Francisco or Vancouver. Payment to be cash against documents on arrival of shipment. References.

33,971—A commercial agency firm in Germany desires to be placed in communication with exporters with a view to securing their representation and import copper and other metals, fertilizers, paraffin, lubricating oils and greases, petrolatum, turpentine, illuminating oil, food stuffs, leaf and cut tobacco, rubber goods, pneumatic tubes and covers for automobiles, vulcanized fiber, shoes, cheap boots for working people, cheap working clothes, belting, mackintoshes, typewriters and supplies, sewing machines, automobile supplies, office supplies, dental supplies, building accessories and novelties, patented articles, etc.

33,847—A manufacturers' representative desires to secure an agency from manufacturers for the sale in Australian and New Zealand cities of hardware of all descriptions, automobile supplies and accessories, bath room fixtures, bright wire goods, builders' hardware, cutlery, watches and clocks, lawn mowers, mechanics' tools, scales, silver plated ware and wire cloth. References.

33,867—A commercial agent in Brazil is in the market for automobiles, trucks and rubber goods. Quotations should be given c. i. f. Brazilian port or f. o. b. American ports. Terms, 60 and 90 days drafts. Correspondence may be in English. References.

33,868—A commercial agent in Argentina desires to act as sole representative of firms distributing toys and first class small automobiles, one to three passengers. Correspondence may be in English, and references are offered.

33,838—An import and export agent in Jugoslavia desires to establish commercial relations with firms handling agricultural implements, railroad equipment, industrial machinery, metal household articles, electric motors and accessories, automobiles, food products, mining machinery, chemical products, oils, fats, leather and rubber goods, paper, textiles and fancy goods. Correspondence may be in English.

33,924—An importer in France desires an agency for metal goods, mechanical articles and automobile accessories. Correspondence should be in French. References.

33,926—A commercial agency in India desires to import various American products such as hardware and building materials, metals in plates and sheets, machinery, electrical goods, automobiles and motorcycles and accessories, house furnishing goods, piece goods, wearing apparel, watches and clocks and general merchandise. References.

33,935—An agency for Diesel and semi-Diesel motors, automobile tires and accessories is desired by a firm in France. References.

33,915—A commercial agent in France desires to represent firms trading in automobiles and automobile equipment and accessories.

33,888—A commercial agent in Brazil desires to represent American exporters of textiles, hardware, chemical and pharmaceutical preparations, electrical goods, automobiles and lubricating oils. Correspondence should be in Portuguese.

Objects and Benefits of Automotive Trade Associations

IN CONNECTION with the annual convention and show of the Automotive Equipment association in Chicago, the Accessory and Garage Journal obtained statements from a number of representative state and sectional organizations allied to the automotive industry and trade covering the benefits to be derived from affiliation with such bodies, business outlook and touching on the value of the national exhibition and convention as a stimulative to business.

The following are selected as typical of various sections of the country:

From Dale Brown, Secretary of the Automotive Association of the Cleveland, O., Chamber of Commerce.

Among the many benefits to be derived by our members are the following:

(a) Mutual acquaintance and understanding.

(b) Concerted action on local legislation.

(c) We carry a membership in the Ohio Automotive association for each of our members. This entitles us to participate in the activities of this organization, and particularly the use of the legislative service at our state capitol.

(d) The organization is divided into four divisions as follows: Electrical, truck, equipment and garage. These divisions meet periodically as the occasion requires to discuss those problems peculiar to their particular groups.

It is almost impossible at this time to express an opinion as to business conditions in this territory. But, in general, I believe that the outlook is optimistic, and that buying is fair. Conservatively, I would say that business conditions in the future will gradually become unrestricted, that money will become less tight and that as soon as the period of careful buying on the part of both the consumer and the retail dealer is past the manufacturer can once again increase his production to normal in cases where it is now below normal, which, of course, is especially true in our neighboring labor center, Akron.

I think the convention and exhibition at Chicago will be of great value to the business man because he will be thrown in contact with the business men in similar lines and over the entire assembly will pervade an atmosphere of mutual confidence and understanding which will tend to do away with the present straightened condition.

The Automotive Association of the Cleveland Chamber of Commerce has 125 members, and the scope of its operations territorially includes only Cuyahoga county in which Cleveland is situated. The officers of the association follow:

Chamber of Commerce: President, Alva Bradley; first vice president, Alexander C. Brown; second vice president, F. W. Ramsey; treasurer, Allard Smith; secretary, Munson Havens.

Automotive Association: President, J. L. Huston; first vice president, R. B. Clark; second vice president. B. F. Turner; treasurer, V. D. Atwood; secretary, Dale Brown.

From John C. O'Brien, General Manager Baltimore, Md., Automobile Dealers' Association.

The practical benefits of membership are numerous. During the past two years we have had hundreds of questions relative to excise taxes which have been a burden upon the various dealers and for which it seemed there was no intelligent method of determining what was and what was not taxable. Through our attorney and other organizations we have been able to straighten out a great many of these difficulties, not only saving the dealers considerable money, but getting rulings so that they would not be subject to penalties later on.

Our association was instrumental in having some very urgent legislation passed at our last session of the Legislature and at the same time our influence was felt very strongly when some unfavorable bill was reported. We can safely say that if it had not been for our efforts there would have been some legislation passed during the spring of 1920 which would have made it almost impossible for a great many of the dealers to continue in business.

Our association holds the automobile show and only those who are members of this organization can participate.

There are numerous other problems that are handled by us for the dealers, but the foregoing are simply examples of the scope of our activities.

There has been a noticeable slowing up in sales, both wholesale and retail, in this territory during the past few weeks. Some of the dealers report better business last month than for the preceding month, but others do not notice any material difference. However, they are optimistic of the future. The numerous price reductions in cars has not been the stimulant it was thought it would be; however, this may be attributed to the expected announcements of further reductions from time to time. It is the universal opinion of the dealers that business in general will be better during that period after election to Jan. 1, and beginning with Jan. 1, business should be on a good substantial basis.

The numerical strength of the Baltimore Automobile Dealers' association is 240, made up of three classes of membership: Active, which is composed entirely of automobile distributors and dealers; passive, which is composed of tire distributors, accessory dealers and those firms allied with the automobile industry. The third class of membership, associate, is made up of other executives, salesmen and other employees of the various firms comprising the first two classes of membership

The organization covers the city of Baltimore and immediate vicinity. However, it is the intention to get out into the state and ultimately bring the dealers in under one state organization.

From R. E. Lee, Secretary-Manager, Motor Trade Association of St. Louis.

The St. Louis association has been in existence 14 years and has brought the accessory dealers of St. Louis into close friendly cooperation.

Business conditions have improved materially beginning Oct. 1, and feeling in this part of the West is that we will be back to normal by or before Jan. 1. It is believed that the coming season will be active from a business standpoint, on the theory that buying of all kinds has been delayed and that needs of consumers and dealers will be urgent next season.

I strongly believe in the value of the convention and exhibition of the Automotive Equipment association in Chicago, and can predict a large attendance from the St. Louis territory.

The operations of the Motor Accessory Trade Association of St. Louis are confined to St. Louis and St. Louis county.

Officers: President, Phil H. Brockman, De Luxe Automobile Co.; vice president, George Weber, Weber Implement & Auto Co.; treasurer, W. L. Johnson, Johnson Automobile Co.; secretary, Robert E. Lee, editor of the Auto Review.

From A. J. Knapp, Secretary of the Iowa Motor Trades Bureau, Inc.

The bureau promotes harmony and better business relations between motor trades men, through county unit organizations which affiliate with the state bureau; promotes the study of costs and accountancy; surveys the credit situation, one result being the adoption of a strictly cash basis by several units; promotes power farming and motor truck demonstrations; introduces just measures before the state legislature and prevents the passage of adverse legislation; promotes hard surface road building.

In the writer's opinion, general business conditions in Iowa have improved; the crop production, state-wide, in the principal crops, this year far exceeds the 10-year average; the credit situation, except in isolated sections, seems better, in fact has been getting better in the last 30 days. Passenger car and motor truck sales took a decided slump generally in June, with little change noticeable until September. Announcement of decreased prices by some manufacturers of automobiles has a tendency to slow up sales in all lines. General reports in other lines of merchandising indicate that the public expects lower prices and are not generally purchasing in excess of absolute need. The American public is noted for buying generously on a rising or top market, as it is also noted for sitting tight on a declining market.

The writer believes that the sale of motor cars and trucks will not be especially good or will not reach normal, at least in Iowa, until the early spring of 1921. If the factories producing automobiles and trucks make such reductions within the next few months, as they anticipate making for the first six months of 1921, and assure the public that no further reduction will be made, or that if it is made during that period, the buyers will be protected, we see no reason why buying should not return to normal or a little better. We feel justified in making this forecast, basing our belief on the fact that the farmer's inability to market his 1919 crops made it necessary for the banks to extend credit to him. Railway transportation apparently is better and the tremendous 1920 crop, plus the unmarketed 1919 crops, will bring back to Iowa a sufficient amount of money to repay the loans, leaving a fine balance, which should speed up general buying. From every possible angle, we see no cause for alarm, although it is not the time for men with wishbones in place of backbones to start in the motor trades business. The past six months and the coming winter will act like an X ray on many of the men now in the business, because it will show how many of them have more wishbone than backbone. The automotive industry is the greatest business on earth. The motor truck and the motor car are absolutely necessary to the economical well being of the nation; real men of the business realize this and as a consequence have been and are laying a foundation for a future stable business of real merchandising.

Basing his estimate on the caliper of the business men affiliated with the Automotive Equipment association with whom he has come in contact, as typical of the rank and file of the membership of that organization, the writer believes that the convention and exhibition are certainly worth while.

The Iowa Motor Trades Bureau is only a year and a half old and is the only organization of motor trades in the state. Its numerical strength is 1450 concerns, not individuals, and its scope is state wide.

The officials are as follows: President, G. V. Orr, Waterloo; vice president, F. D. Farmer, Council Bluffs; treasurer, George W. Jones, Des Moines; secretary, A. J. Knapp, Shops building, Des Moines.

From E. F. Taylor, Secretary of the Richmond, Va., Automotive Trade Association.

This association, while organized primarily for the benefit of local dealers, is affiliated with both state and national organizations. Some of the benefits derived from membership are for handling uniform license and proper traffic laws, business efficiency, cooperation between dealers, protection against unjust taxation and strict attention to upbuilding the business of automotive dealers.

Conditions in this line for the past 60 days locally, as well as over Virginia and North Carolina, have been unfavorable. Are reliably informed that many dealers are considerably overstocked with cars and trucks and tightness of money, presidential election, also several crops being held for higher prices, are considered the principle reasons. The trade, to a large extent, is optimistic and is anticipating considerable improvement probably within at least 30 days. The reason for this prognostication is that election will be over, these few crops will probably be marketed and dealers' stocks, particularly accessories and supplies, will be depleted to such a point that will necessitate their replenishing. As far as we can observe there are as many automobiles, in fact more operating, but owing to reduction in price of cars, consumers are inclined towards the belief that everything will drop; hence, are waiting until something develops.

The numerical strength of the Richmond Automotive Trade Association, Inc., is 75. The officials are as follows:

President, J. A. Kline; vice president, W. C. Wells; secretary, E. F. Taylor; treasurer, W. B. Bayliss.

From Charles S. Backes, Secretary and Manager of the Intermountain Trades Association.

The practical benefits from membership covered several different departments of service. Our legal department is constantly securing rulings on tax matters before the Internal Revenue Department. We have carried a case to the Supreme court, which has definitely settled the tax on solvent credits and have also secured a ruling with reference to the taxing of automotive vehicles in the hands of the dealers as well as the purchasers. We are constantly taking up trade matters covering the entire automotive trade field with the idea that our membership must maintain clean and attractive places of business and that, as an organization, our members must give the public a square deal.

Business conditions generally throughout the territory have been quiet for the last six months. Recent reports from distributors indicate a better feeling and that there will be some activity in all lines for the balance of this year..

As to a forecast of the business for the coming season will say that we do not look for a very large increase. This is due to the fact that a very large portion of our territory is devoted to the raising of dry land grains. Crop failures among these people for the past two or three years have not given them any surplus and it will take at least another year before they can liquidate the losses caused by crop failures. The irrigated sections of our territory are producing a splendid crop and there will be considerable activity and an increase in business in these districts each year.

A convention of this type of the Automotive Equipment association and an exhibition of the merchandise involved always produces splendid results. It gives an opportunity for an exchange of ideas and a discussion of basic policies which will benefit the trade as a whole.

The name of the Intermountain Automotive Trades association has just been changed from "Intermountain Automotive Dealers' Association." The present membership is 125 and this is expected to be increased to 250 within the next two months. The association covers the states of Idaho, Utah, Western Wyoming and Eastern Nevada. It is affiliated with the National Automobile Dealers' association. The officials are as follows:

President, Russel Richards, Salt Lake City, Utah; vice president, R. G. Bills, Blackfoot, Ida.; treasurer, Archie Browning, Salt Lake City, Utah; secretary and manager, Charles C. Backes, Salt Lake City, Utah; director, W. J. Witherspoon, Kemmerer, Wyo.; counsel, Hamilton Gardner and S. J. Quinney, Salt Lake City, Utah.

From President Hirsig of the Nashville Automobile Trade Association.

Our association has successfully put on four automobile shows, in which only members could participate. Through the efforts of our association a great deal of constructive legislation has been passed, and objectionable legislation has been defeated. During the four or five years that our association has been in existence the ethics of the trade has gradually improved. There exists today a friendly and cooperative spirit among the members of the association that never existed before, the forming of the association, and could not possibly exist at this time were it not for the association that has brought it about.

The automobile business in Nashville, as in practically every other center, during the past 60 days, passed through a period of light sales, and comparatively little business, but it is the general opinion of the dealers that for the past week or two conditions have started to improve, and we are all looking forward to an easing up in the money market, and a gradual increase in business, which will soon bring it back to normal. In the meantime it is the writer's opinion that buying will be rather conservative, but that all dealers will buy a sufficient amount to meet their needs, and take care of their trade as usual. Regardless of what effect the convention has, it is the writer's opinion that after the presidential election, business will gradually improve and will soon be back to normal.

The Nashville Automobile Trade association has a membership of 86 automobile dealers, tire dealers, garage men, accessory jobbers and other allied trades doing business in the city of Nashville.

AUTO THIEF PLAYS NEW TRICK.

The automobile thief has little chance against the new locking devices that have been developed to safeguard the car, but there is a taxi driver who operates in New York who is willnig to admit that the modern thief is versatile. The thief who so ably demonstrated this ability came into a service station near the Bronx one night and asked to hire a limousine to be used at a wedding. He was provided with one of the more expensive sort, which was driven by a chauffeur in livery. The first stop was at a home in the residential section, where a young woman joined the party. The driver began to have suspicions that the wedding was a runaway affair, but he was much too well trained to betray any curiosity. The next place at which he was ordered to stop was at an exclusive apartment house near 88th street. Here he was ordered to go and help a porter with a trunk. Suspecting nothing he obeyed. After arguing with an East Indian elevator man who could speak little English, he came back for more explicit instructions. The big limousine, the man and the maid were gone.

AUTOS DISPLACING JINRICKSHAS.

The jinricksha has always been the jitney 'bus of China. For years beyond reckoning the native coolie has trudged along with his two-wheeled carryall, never dreaming of competition. And now comes the inevitable change. The automobile threatens to entirely displace the picturesque native conveyance for all time.

Rice is scarce among the coolies in China. Clothing is skimpy, but high in price, but the 'ricksha operator has been able to get them from the small profits made with his little cart, and as a result has been happy.

Now all this is changing. Rattling, rushing, "fire-devils" on four wheels are efficiently putting the native conveyances out of the running. A wail from those who see their means of livelihood being taken away is ascending to Confucious.

But even he, traditionally all powerful, cannot help the situation. The jitney 'bus is daily getting a better hold on the traffic, and bids fair to crowd the 'ricksha entirely out of business in a few years.

MODERN SEDAN MAKES LUXURIOUS BUSINESS OFFICE.

Since the manufacture of the automobile became practical, there have been many and various uses to which the machine has been put. That it has taken the place of the horse is generally conceded. The household supplies are delivered by the strong, rugged truck, the tired business man gets relaxation from the smooth running touring car, and life is one long, sweet dream for the farmer who uses his machine to churn butter, harvest grain, saw wood and even to milk the cows. Many a life has been saved by the auto dashing along at railroad speed to carry the doctor on his errand of mercy, and of late years he who died was not considered properly buried unless he had an automobile funeral.

Now comes the report that sedans are being utilized for offices, the idea first being suggested by brokers who could not get office space in the crowded market district of New York. It is solemnly avowed that a great many sedans are bought to be used as offices, the purely motoring element not entering wholly into consideration at the time of purchase. It certainly seems as though the sedan, with its silent running motor, luxuriant upholstery and wind, rain and storm proof qualities, would make an ideal office in certain lines of business, and one can readily believe the enthusiastic statement of a broker who said that he had more business in his sedan than he had ever transacted in an office.

Accessory and Parts Exhibitors at National Shows

JUDGING from present indications, all records for the number of parts and accessory makers exhibiting at the coming national automobile shows at New York City, Jan. 8-15, and Chicago, Jan. 29-Feb. 4, are scheduled to be broken. Figures made public by the Motor and Accessory Manufacturers' association indicate that a larger number of parts and unit makers than ever before will take space. Applications have been received by the association from 120 manufacturers for the New York passenger car show, and from 102 manufacturers for the Chicago passenger car show. Altogether, 129 members of the association are scheduled to exhibit.

The following members of the association have been assigned space:

AT BOTH SHOWS.

Able Mfg. Co., Inc., San Francisco, Cal., able combination locks.

Acme Die-Casting Corp., Brooklyn, N. Y., die castings.

American Bosch Magneto Corp., Springfield, Mass., Bosch magnetos, lighting, starting and ignition systems.

American Chain Co., Inc., Bridgeport, Conn., tire chains, jacks, cotter pins, tire lock chains, etc.

American Hammered Piston Ring Co., The, Baltimore, Md., American hammered piston rings.

The Anchor Top & Body Co., Cincinnati, O., automobile tops.

Anderson Electric & Equipment Co., Chicago, Ill., "Autoreelite" windshield spotlight, garage lighting portables.

Apollo Magneto Corp., Kingston, N. Y., high-tension magnetos.

Armstrong Cork Co., Pittsburgh, Pa., cork gaskets and washers, linoleum and cork carpet.

Asch & Co., Inc., New York city, flower vases, belt hinges, locking devices.

Atlas Crucible Steel Co., Dunkirk, N. Y., alloy steel and tool steels used in automobile parts.

Becker Bros., Chicago, Ill., brushes for automobile starting motors, lighting generators and magnetos.

Black & Decker Mfg. Co., The, Baltimore, Md., electric air compressors, electric valve grinders, portable electric drills.

Blackledge Mfg. Co., Chicago, Ill., shock absorbers.

Brown-Lipe Gear Co., Syracuse, N. Y., automobile transmissions, clutches and controls.

Bunting Brass & Bronze Co., The, Toledo, O., bronzed backed babbitt lined bearings and finished bronze bushings and bearings.

Byrne Kingston & Co., Kokomo, Ind., carburetors.

Champion Ignition Co., Flint, Mich., A C spark plugs.

Champion Mfg. Co., Chicago, Ill., gasoline gauge, oil cups, velograph, screws and radiator caps.

Clark Equipment Co., Buchanan, Mich., axles and steel wheels.

Continental Motor Corp., Detroit, Mich., gasoline engines.

Corcoran Mfg. Co., The, Cincinnati, O., automobile radiators and fenders.

C. Cowles & Co., New Haven, Conn., auto hardware accessories, trimmings, etc.

The Wm. Cramp & Sons Ship & Engine Bldg., Co., Philadelphia, Pa., brass and bronze castings, ingots, welding rods, etc.

Derf Mfg. Co., Inc., The, New York city, Derf spark plugs.

Detroit Pressed Steel Co., Detroit, Mich., disteel wheels.

Doehler Die Casting Co., Brooklyn, N. Y., die castings and bearings.

Duplex Rim Device Co., Chicago, Ill., Duplex rim devices (rim tools).

E. A. Laboratories, Inc., Brooklyn, N. Y., warning signals.

Eclipse Machine Co., Elmira, N. Y., Eclipse Bendix drive parts.

Eisemann Magneto Corp., Brooklyn, N. Y., Eisemann magnetos.

Electric Storage Battery Co., The, Chicago, Ill., storage batteries and accessories.

Essenkay Products Co., Chicago, Ill., "Essenkay Tire Filler" and "Auto Mayer Visors."

Fulton Co., The, Knoxville, Tenn., thermostats, regulators and accessories.

Gabriel Manufacturing Co., Cleveland, O., Gabriel rebound snubbers and windshield cleaners.

Gemco Mfg. Co., Milwaukee, Wis., automobile bumpers and accessories.

General Electric Co., Schenectady, N. Y., rectifiers, lamps, Fabroil gears.

Giant Grip Mfg. Co., Oshkosh, Wis., Giant grip traction equipment.

Gould Storage Battery Co., New York city, storage batteries and parts.

Gray & Davis, Inc., Boston, Mass., lighting and starting systems.

Edward V. Hartford, Inc., New York city, Hartford shock absorbers, Hartford jacks, Hartford bumpers.

Robert H. Hassler, Inc., Indianapolis, Ind., Hassler shock absorbers.

Indiana Lamp Co., Connersville, Ind., automobile lamps.

Iron City Products Co., Pittsburgh, Pa., Rees automobile jacks.

Johnson Automobile Lock Co., Chicago, Ill., Johnson automobile locks.

Wm. R. Johnston Mfg. Co., Chicago, Ill., accessories.

The K. P. Products Co., Inc., New York city, rim tools, heaters, governors, pumps, carburetors, etc.

Kokomo Electric Co., Kokomo, Ind., magnetos, coil plugs, etc.

Lane Bros. Co., Poughkeepsie, N. Y., automobile jacks.

L. Lawrence & Co., New York city, piston rings, pins and scored cylinder process.

Longdin-Brugger Co., Fond du Lac, Wis., "Close-Tite" top for Ford cars.

McAvoy Mfg. Co., Chicago, Ill., aluminum curtain lights and other die-cast specialties.

McQuay-Norris Mfg. Co., St. Louis, Mo., piston rings.

Macbeth-Evans Glass Co., Pittsburgh, Pa., automobile headlight lenses.

Merchant & Evans Co., Philadelphia, Pa., automobile clutches, universal joints, oiling systems, grease cups.

Metal Stamping Co., Long Island City, N. Y., automobile accessories.

Midwest Engine Co., Indianapolis, Ind., engines.

National Carbon Co., Inc., Cleveland, O., accessories.

National Seal Co., Inc., Brooklyn, N. Y., automobile door locks.

New York Coil Co., New York city, automobile ignition devices.

No-Leak-O Piston Ring Co., Baltimore, Md., No-Leak-O piston rings.

The Pantasote Co., New York city, automobile top, upholstery and slip cover materials.

The Perfection Heater & Mfg. Co., Cleveland, O., perfection motor car heaters.

William E. Pratt Mfg. Co., Chicago, Ill., automobile truck and garage jacks, pumps, malleable iron castings and accessories.

The Prest-O-Lite Co., Inc., New York city, electric storage batteries for starting and lighting.

Rajah Auto Supply Co., Bloomfield, N. J., Rajah spark plugs, terminals, etc.

Rex Manufacturing Co., Connersville, Ind., Rex all-seasons tops for passenger automobiles

A. Schrader's Son, Inc., Brooklyn, N. Y., tire valves and accessories and tire pressure gauges.

Sewell Cushion Wheel Co., Detroit, Mich., Sewell cushion wheels.

The Simms Magneto Co., East Orange, N. J., Simms magnetos, dynamos, starting motors.

The Sparks-Withington Co., Jackson, Mich., Sparton horns, fans, radiators and fuel feeders.

Splitdorf Electrical Co., Newark, N. J., ignition accessories, etc.

The Stemco Engineering Co., Dayton, O., Cole visible gasoline gauges.

Stewart-Warner Speedometer Corp., Chicago, Ill., speedometers, vacuum tanks, warning signals, auto guards, searchlights, carburetors.

Stromberg Motor Deviees Co., Chicago, Ill., carburetors.

Tonneau Shield Co., Inc., New York city, J. H. tonneau or rear seat shields.

Trexler Co., The, Philadelphia, Pa., rim tools, jacks, valve compressors.

The United States Air Compressor Co., Cleveland, O., garage air compressors and accessories.

U. S. Light & Heat Corp., Niagara Falls, N. Y., U. S. L. storage batteries.

U. S. E. Corp., New York city, U. S. E. shock absorbers, spring bumpers, radiator shutters.

Vacuum Oil Co., New York city, lubricating oils and greases.

Van Sicklen Speedometer Co., Elgin, Ill., speedometers, truck odometers, tachometers.

Veeder Mfg. Co., Hartford, Conn., hub odometers, counters, tachometers, fine die castings.

Waltham Watch Co., Waltham, Mass., automotive speedometers, clocks and timepieces.

Waukesha Motor Co., Waukesha, Wis., motors.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., battery charging outfit, etc.

Westinghouse Union Battery Co., Swissvale, Pa., Westinghouse storage batteries.

Wheeler-Schebler Carburetor Co., Indianapolis, Ind., Schebler carburetors.

The S. S. White Dental Mfg. Co., New York city, flexible shafting and casing.

Willard Storage Battery Co., Cleveland, O., electric storage batteries.

Wire Wheel Corp. of America, Buffalo, N. Y., wire wheels.

Woodworth Mfg. Corp. Div. of Consolidated Utilities Corp., Niagara Falls, N. Y., automobile accessories.

Zenith Carburetor Co., Detroit, Mich., carburetors and carburetor parts.

NEW YORK SHOW ONLY.

Atwater Kent Mfg. Co., Philadelphia, Pa., starting, lighting and ignition equipment.

Breeze Mfg. Co., Newark, N. J., flexible metal hose tubing and accessories.

Brown-Lipe-Chapin Co., Syracuse, N. Y., differentials, drive gears and pinions.

Edward G. Budd Mfg. Co., Philadelphia, Pa., automobile bodies and stamping.

Budd Wheel Corp., Philadelphia, Pa., wire wheels and steel disc wheels.

The English & Mersick Co., New Haven, Conn., body hardware and automobile accessories.

Kales Stamping Co., Detroit, Mich., "Hindview" auto mirrors and automobile stampings.

Kelso Mfg. Co., Trenton, N. J., asbestos friction fabrics, brake lining, clutch lining.

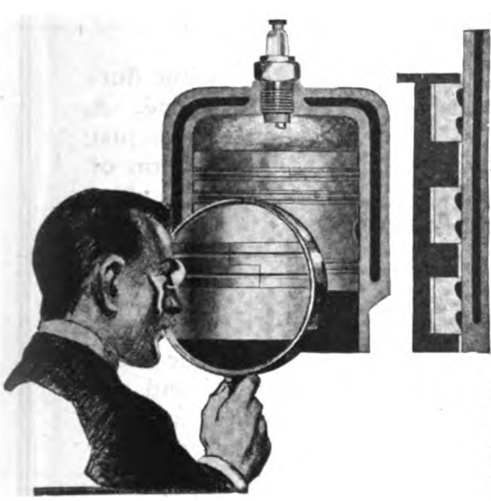
Klaxon Co., Newark, N. J., Klaxon warning signals.

Lauraine Magneto Co., Inc., Long Island City, N. Y., magnetos, generators, starters, ignition, lighting and starting apparatus.

Light Mfg. & Foundry Co., Pottstown, Pa., aluminum, brass and bronze castings, die castings, automobile motors and transmissions.

"PEP-CO" PISTON RING ANNOUNCED IN UNIQUE WAY.

"Instant Pep-Co," a piston ring for which various refinements are claimed, was recently presented to the trade in a novel manner. Regulation birth cards, of the type frequently sent out by proud parents, were mailed to the trade, and occasioned a favorable amount of notice. The cards are of three-part design, handsomely finished in blue and white, and are tied at the top with a knot of "baby-blue" ribbon. The reader is told that the piston ring has been in preparation for eight months and the date of delivery is also noted.



The ring is a step cut type and it has two grooves cut in it that are shaped to have a wiping effect and prevent lubricant passing to compression chamber, yet thoroughly distribute it on cylinder wall.

SHARPE ELECTRIC RADIATOR HEATER.

The Sharpe electric radiator heater is a practical electrical device which attaches to the bottom of the radiator on the inside just above the sediment tank. It is connected by a heavy duplex cord to a standard attachment plug, which is rigdly clamped to the outside of the radiator shell. Current is furnished through a lamp cord which is attached to an ordinary house wiring socket. When the car is standing the current is snapped on as though one were lighting a lamp, and the water is thus kept hot, regardless of the temperature of the garage. It is obvious that automobiles equipped with this device start easily at all times without priming or warming up, and users are recommending it highly. It is manufactured by Sharpe Electric Appliance Co., Detroit, Mich. Price, $12.

PLATE XXXVI

SERVICE STATION WITH MODERN FACILITIES

One-Story Structure Which Would Accommodate Both Passenger Cars and Motor Trucks—Ample Provision Has Been Made for Storage Purposes.

IN PRESENTING the accompanying lay out an endeavor is made to illustrate how closely connected are the garage (or storage compartment) and the service division. The service station must be so established that it will have every facility essential to serving customers efficiently and there must be means for economical administration. Ever increasing progress demands that service stations be modern in every respect, as well as being ample in size for storage purposes, so that owners of cars may have their repairs done in the shortest time possible and afforded expert attention and high grade workmanship and supplied the best qualities of material. Therefore, it is absolutely necessary that a place be fully equipped to meet these demands if the term "service" is to be used. A judicious expenditure of money will usually provide many splendid facilities that will make the service station much more valuable to the management.

Building Dimensions.

The size of the building shown here is 80 by 180 feet, designed to face on a main street. The elevation has been treated to a degree where it would add greatly to the general appearance of any locality. It is of the one-story type, the entire structure being devoted to automobile vehicles and their accessories.

In the center is found an office for the transaction of general business, with doors leading to the garage department and show room; also an entrance door from the street. Adjoining the office is the show room, which is large enough in size to hold two or three cars and permit the installation of cases for the display of accessories.

Repair Department.

Directly to the rear will be found the general repair department, with large work benches and a pit for working underneath large cars; also a tool closet in one corner. Close to the repair shop is entrance into the machine shop, the heart of a service station. This department should be equipped to handle everything that is to be expected of an automobile repair shop. On either side of the forging department are storage areas, one for pleasure cars, the other for motor trucks. The motor truck storage will be found on the right, while opposite on the left and covering an equal area, is located the passenger car space.

The few columns that have been used are so spaced as to allow the greatest ease possible during inside manouvering for a position in line. A boiler room is reached by a flight of stairs just outside of the machine shop, as the location of the boiler would be underneath the machine shop and toilet. A toilet and a wash room have been provided, suitable to the needs of a shop of this size.

General Construction.

General construction would be of the slow burning mill type, which has been found extremely satisfactory for buildings such as this, where there is always a great fire hazard. The foundation would be of concrete, sufficient in size and depth to carry all loads placed upon it. Provision can be made at the beginning for future expansion, and, at a very small cost over the original figure, a foundation can be laid for two or three stories, if so desired.

Brick constitutes the super-structure, with terra cotta for trim. Owing to the numerous kinds of bricks and the nearness of them to different localities, no particular make is suggested here, but we do recommend that a brick of a hard nature be used, as the harder the brick the less absorption of water, therefore eliminating excess dampness due to use of a poor product.

Other Details.

Terra cotta may be of a glazed or dull finish, or concrete stone may be used for trimming instead. Granolithic floors are provided, drained as shown, and laid on a bed of five inches under concrete, the finished floor being one inch of a mixture of 1-1.

Windows are of the metal sash type with wired glass, complying with the fire laws of different districts.

The roof is of plank supported by steel girders and wood purlins. A five-ply tar and gravel roof is advised, this having been found to give excellent results in many instances.

The drainage of the roof should be given careful consideration, the roof sloping at least one-half inch to the foot. Lead flashing should be used throughout. For heating, steam wall radiation is advised.

The approximate cost would be $20,000.

For any further details regarding such a structure, write to the Architectural Department of this publication.

Dealers who are not selling Peerless Radiators should investigate this wonderful replacement business. Ask your jobber or address Dept. 5.

DOUGHTY STORM-KING WINDSHIELD CLEANER.

The Doughty Manufacturing Co., 273-279 Lafayette street, New York city, has placed on the market a seasonable accessory to the motor car which should add measurably to comfort and safety in winter travelling. This is the Doughty Storm-King electric windshield cleaner, which is designed to keep the surface of the windshield clear automatically at all times and under all conditions, whether it be mist, rain, sleet or snow.

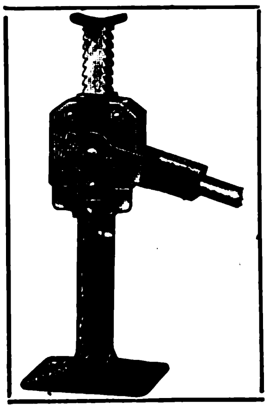
The Storm-King cleaner is driven by a powerful little stationary motor, which continues travelling back and forth across the windshield, insuring clear vision, not only for a limited space, but across the entire length. It cleans the windshield both inside and outside, is of all metal construction and simple in design with no frictional parts; hence there is no wear and tear or expense of upkeep and when once applied needs no further attention. It comprises a one-inch square metal tube, housing a chain drive proportionately small. geared to a small stationary electric motor solidly fastened at one end and all self-contained, lead wires for connection to the starting and lighting battery, and clamps at either end for fastening at the inside to the top of the windshield. Its total weight is 5½ pounds, and the current consumption off the battery is 1½ amperes, or equal to that of one side lamp. The switch for turning current on and off is built in the motor, making no connection necessary. It is operated from any starting and lighting circuit or by five dry-cell batteries.

To apply the Storm-King cleaner, all it is necessary to do is screw the two clamps on top of the windshield, no mechanical skill being required. It is furnished in any desired length in nickel or japanned black finish.

It is claimed that the waste due to unimproved roads is $500,000,000 a year.

Mobilift, a New All-Steel Jack

MOBILIFT, a new electrically spot welded all-steel jack, is claimed to be the fastest working hand lift jack yet offered to the trade. It raises one inch with every complete up and down movement of the handle, weighs but five pounds and has a lifting capacity of 2000 pounds. Constructed of heavy sheet steel and equipped with a telescope handle, it occupies little space and appears to be of convenient design. The manufacturer guarantees its service for two years and that it will live up to the claims made for it.



It is manufactured by the National Jack Co., Cincinnati, O. The price list is $5.

The officials of the National Jack Co. are as follows: President, George H. Frederick; secretary, J. Ray Frederick; treasurer, D. M. Frederick; sales manager, F. E. Backmeier.

The company is capitalized at $50,000 and the registered trade mark is "Mobilift."

EBONITE FOR TRANSMISSIONS.

The Bayerson Oil Works, Erie. Pa., has been manufacturing for several years a lubricant for transmission and differential gears under the trade name of "Ebonite for Transmissions." The name is derived from the color, which is extremely dark.

One of the features of the product is the long string or oil shreds which make up the body. This, the manufacturer states, is due entirely to the exclusive process used. Nothing but pure oil enters into the composition of Ebonite.

Some years ago the company began an exhaustive campaign to find a lubricant which would be a specific for the purpose, and to get away from the common place and more or less mediocre oils and mixtures of oils and greases, etc., which had been adapted to the purpose of transmissions for the reason that there was nothing better to use.

The body of Ebonite is claimed to have almost everlasting wearing qualities, and the density of the oil shreds are such that their cushioning qualities are developed to such a degree that noise of operation is practically eliminated, and there is no possibility of wear or friction at points of contact, as the Ebonite is claimed to be held at these points by its peculiar physical makeup

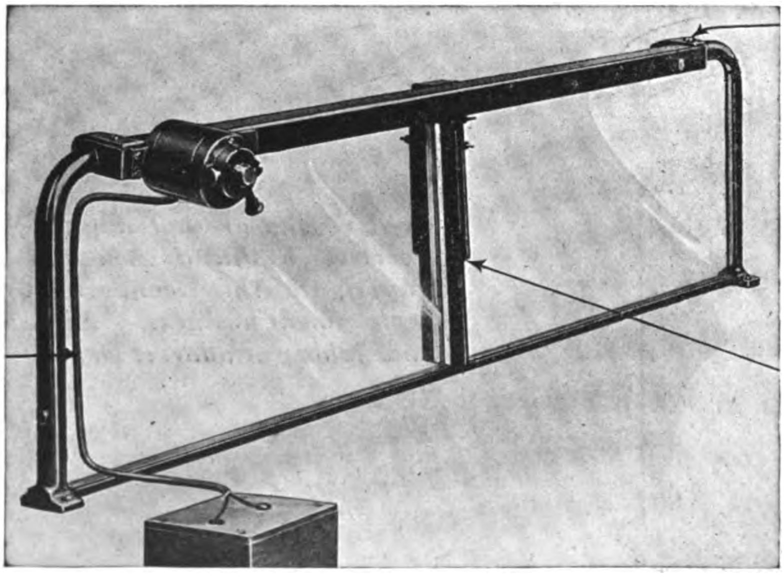
NOTHING EQ L TO
EBONITE
FOR TRANSMI IONS
MANUFACTURE BY
BAYERSON OIL ORKS
ERIE, P

and consistency so that the gears are never for an instant without this cushion protection, or exposed.

The transmission case need be but part full of Ebonite, it is stated, as the long string acts as a conveyor and is picked up and wrapped over and around every part of mechanism. Ebonite also has a good cold test, it is stated, and will not channel or harden to a degree to impair its use in low temperatures.

The company has testimonials of superiority from some of the largest concerns in the country and has had recently to install new equipment to take care of the increased business.

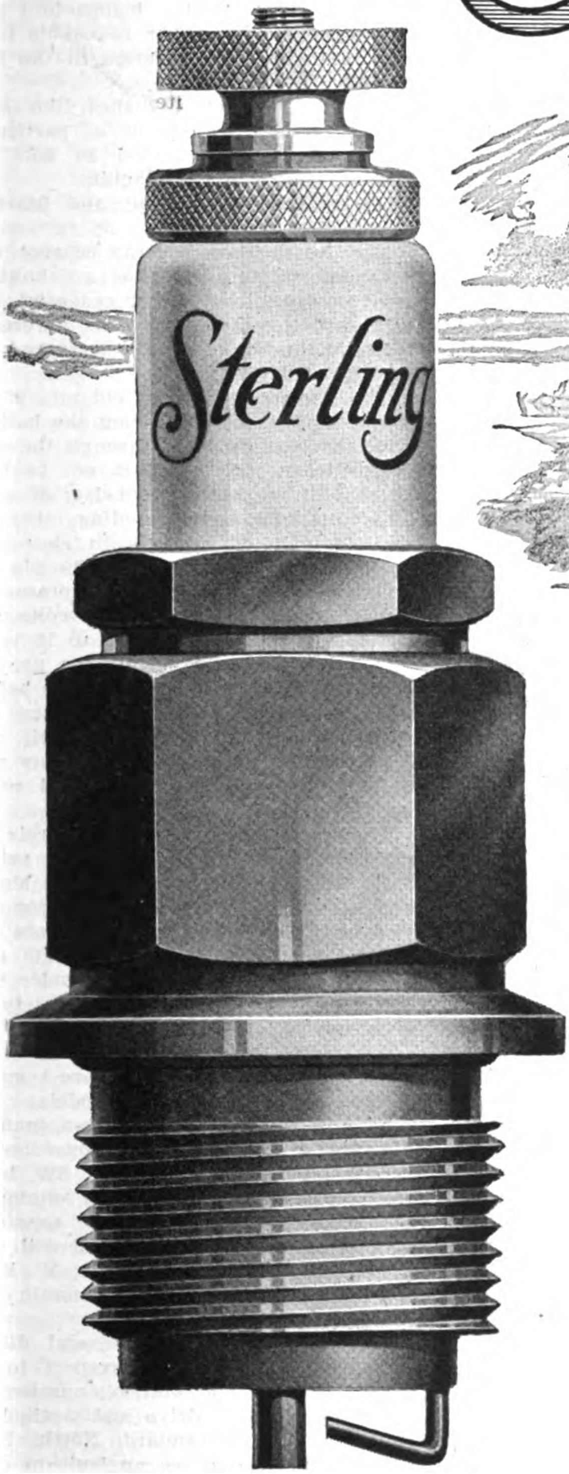
This product is put up only in steel barrels and steel half barrels; also heavy lithographed cans with an inner seal as the company is making an effort to keep its containers in the high rank set by the product, and to insure safe transportation and prevent danger of loss in handling.

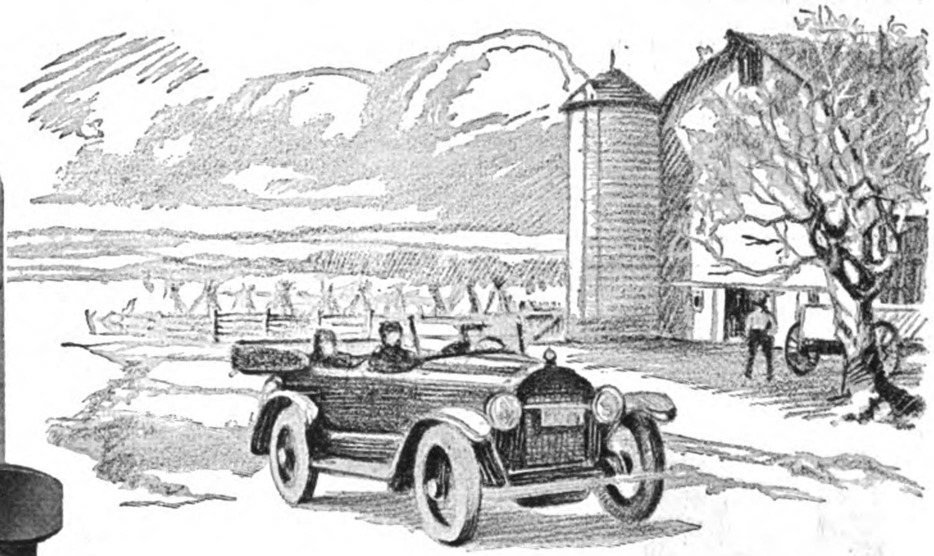


The Doughty Storm-King Electric Windshield Cleaner, the Arrows Showing the Device, Method of Installation, the Battery and Motor.

Sterling

Spark Plugs





AUTUMN is a wonderful time for motoring, for when the tang of fall is in the air the country beckons.

With your motor equipped with Sterling Red Brand Spark Plugs every joy of the open road will be yours.

Sterling Red Brand Plugs feed a hot, sharp spark that keeps the engine working at its best.

Sterling Plugs are made of the best grade of porcelain; the center electrode is of monel metal that will not warp, and, too, these plugs are separable and easily cleaned.

You can purchase Sterling Red Brand Plugs from progressive garages and supply dealers everywhere.

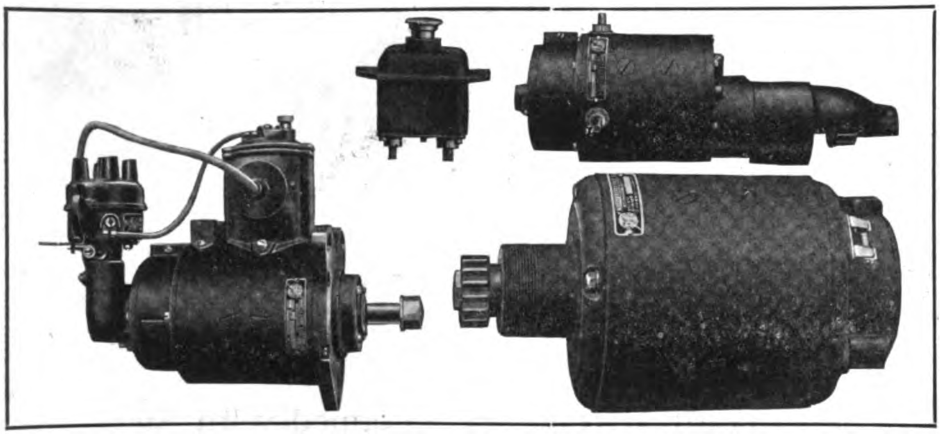
North East Ignition, Starting and Lighting Systems

AMONG the better known ignition, starting and lighting systems for automobiles is the North East, manufactured by the North East Electric Co., Rochester, N. Y. The complete North East system is made up of a starting motor, a generator, an ignition unit (or a combination ignition-generator) and a battery, the latter not being ordinarily supplied by the North East Co.

The North East Model L generators are built in a number of types which differ in direction of rotation, voltage, length of field ring and method of mounting. The standard model L is a bi-polar, shunt-wound machine with adjustable third brush output control. It begins to deliver current at a vehicle speed of from seven to 10 miles an hour, depending upon the character of the application and the rated voltage of the machine. The six-volt types cut in at an armature speed of 550 revolutions a minute, and the 12-volt types at 650. From the time of cutting in the output rises rapidly, with increasing speed until its maximum is attained at approximately 1100 revolutions a minute. From this point on, for the next 200 or 300 revolutions a minute, the output is held nearly constant, but with an additional increase in speed it is cut down again to an intermediate value, which is still further reduced if the speed rises higher.



Typical North East Ignition, Starting and Lighting Equipment: Lower Left, Model M, Six-Volt Ignition-Generator, Standard S. A. E. Flange Mounting, Third-Brush Regulation; Lower Right, Model G, 12-Volt Starter-Generator Combines Starting and Generating Functions in a Single Unit—Has Combined Third-Brush and Bucking-Field Regulation; Upper Left, Switch and Cut-Out Unit with Starting Switch and Reverse Current Cut-Out Mounted in a Single Housing; Upper Right, Model R Six-Volt Starting Motor, Standard S. A. E. Sleeve-Type Mounting, Internal Reduction Gears and Bendix Final Drive.

This tapering characteristic affords a charging rate that conforms at every point to the battery manufacturer's recommendations. At moderate speeds, when the demands for current are greatest, the maximum output is delivered, while at high speeds superfluous charging is guarded against by the automatic lowering of the rate. Besides this inherent adaptability, which enables the generator to accommodate itself to ordinary variations of service, a manual adjustment of the output is also provided, which permits of modifying the output to meet special conditions.

The generator field fuse is located accessibly on top of the field ring at the commutator end of the machine.

The generator is capable of automatically reversing its polarity to meet the conditions of the external circuit. Consequently, no distinction between positive and negative leads is necessary in making connection at the generator terminals, because there is no danger of damage to any part of the system even if the leads from the batteries are transposed. It is not advisable, however, to alter the connections at the battery because, while no actual harm would result, the charging indicator readings would then be reversed and might give rise to wrong conclusions as to the performance of the equipment.

The generator brushes are specially selected for the duties they have to perform and, under normal conditions, are capable of very long service.

Starting Motors.

The North East Model H, K and R starting motors are very nearly identical in their fundamental characteristics, the chief distinction between them being in the form of drive. In the Model H an out-board Bendix pinion is used; in the Model K an in-board Bendix; and in the Model R, an out-board Bendix, together with internal reducing gears.

Each model is in turn built in several types, which differ in respect to direction of rotation, length of field frame and method of mounting.

The North East standard two-unit starting motor is a four-pole, straight series-wound machine. Being equipped with automatic screw shift pinion, it is designed to remain in operation only during the actual starting period, since the pinion automatically disengages itself from the engine flywheel as soon as the peripheral speed of the flywheel exceeds that of the motor. Under average conditions the starting motor should crank the engine at a crankshaft speed of from 100 to 200 revolutions a minute, depending upon the characteristics of the installation and the condition of the battery. The cranking speed will, of course, be materially reduced in extreme cold weather or in the case of a depleted battery, but unless the impediment is great enough to cause more than a 50 per cent. reduction in speed, the effectiveness of the starting motor, it is stated, will not be seriously impaired. This is due to the fact that the North East motor is so designed that within wide limits anything tending to reduce its speed automatically brings into play sufficient reserve power to enable it to maintain effective operation in the face of added opposition.

The starting motor brushes, like those of the generator, are of a particular grade, especially selected to suit the characteristics of the machine.

Reverse Current Cut-Out and Starting Switch.

The North East reverse current cut-outs and starting switches are built in several types, but their essential features are the same, the chief difference being in the voltage of the coils and the method of mounting.

The reverse current cut-out, which serves as a check to prevent the battery from discharging back through the generator when its voltage is not as high as that of the battery, consists of a set of shunts and series windings that actuate a pair of contacts to close and open the charging circuit. The six-volt types close the circuit at a generator potential of approximately seven volts, and the 12-volt types at from 14 to 15 volts. The cut-outs of both voltages are designed to open the circuit always before the discharge current exceeds one ampere. Every cut-out is accurately and permanently adjusted at the factory and, under normal conditions, should never need attention in service.

The starting switch, which controls the starting motor circuit, consists principally of a pair of heavy contact blocks and a movable, laminated contactor carried on a push rod. Both contacts and contactor are sufficiently heavy to give practically indefinite service under normal usage and require approximately no attention in service.

North East Ignition Units.

North East ignition units are regularly made in the following models: ST, head and coil on common base, manual advance; SU, head and coil on common base, semi-automatic advance; SW, head and coil on common base, full automatic advance; T, head and coil separate, manual advance; U, head and coil separate, semi-automatic advance; W, head and coil separate, full automatic advance.

Each model comprises several different types, which vary in respect to direction of rotation, voltage, number of cylinders, style of drive and method of mounting. The standard North East ignition unit comprises an ignition coil, a breaker box, a high-tension distributor head and a spark-advancing mechanism. Current is supplied to the primary circuit of the unit by the generator while the engine is running at ordinary speeds and by the battery during starting and very slow speed operation. This low voltage current is converted by means of the breaker mechanism and the ignition coil into high-tension impulses, which are delivered selectively through the high-tension distributor to the spark plugs on the engine.

The amount of current drawn by the primary circuit depends in a measure upon the speed of operation. Even at its maximum at starting, however, the ignition current forms but a small proportion of the total generator output, while during ordinary driving and high speeds the current consumed for ignition is a negligible quantity. The high-tension impulses into which the primary current is transformed are, however, not greatly influenced by speed, but retain nearly the same vigor throughout the entire range.

Spark Advance Control.

In order to compensate for the inherent lag in combustion after the actual production of the spark, provision is made in all units for advancing the time of the spark relatively to the operation of the engine. In the manual control models this advance is accomplished through the spark lever on the steering column, which serves to shift the angular position of the breaker box assembly as running conditions require. In the automatic and semi-automatic models the advancing of the spark is taken care of either wholly or in part through the agency of a centrifugally actuated mechanism on the distributor shaft. This automatic advance mechanism is designed to conform accurately with the characteristics of the engine and, since it is permanently adjusted at the time of manufacture, should never be disturbed in service.

The North East ignition coil is exceptionally durable and under ordinary service conditions requires no attention whatsoever.

The distributor cap and rotor arm, which serve to conduct the high-tension impulses selectively to the proper spark plugs, are designed to operate indefinitely without appreciable wear.

The breaker mechanism consists chiefly of the breaker cam, the breaker arm and contact points and the condenser. The breaker box assembly, in which all these parts are contained, can usually be removed if desired by simply withdrawing it from the base casting after first backing off the retaining screw that holds it in position.

The breaker contacts are of unusually liberal size and the breaker mechanism is so designed as to minimize the wear on their faces. They may, accordingly, be expected to run for a whole season or even longer without requiring any cleaning or readjustment.

Condenser and Breaker Arm.

The condenser is durably built and is sealed in a case to protect it from internal injury. Under ordinary service it requires no attention, but if it should ever become inoperative it can be replaced easily. In case a new condenser should not happen to be available, the ignition unit may be operated for a reasonable length of time with the condenser removed. This should never be resorted to except in an emergency, however, and then for no longer than absolutely necessary.

The breaker cam needs virtually no attention in service. It is fastened rigidly on top of the distributor shaft by means of a nut and special lock washers and is accurately set in position when the unit is installed on the engine.

North East ignition generators are supplied in two styles: Model M with the ignition apparatus attached at the commutator end of the generator and Model P with it attached at the drive end. These are simply combination assemblies of the standard ignition and generator units, and the only additional attention required by them is the thorough lubrication of the internal parts.

North East Single-Unit System.

The North East Model G starter generator is a single-unit machine, performing both starting and generating duties without the aid of any adaptive mechanism. All parts, from brushes to field coils, serve in virtually the same capacity for either function. They are built in a number of types which differ in respect to direction of rotation, voltage and style of wiring (two-wire or ground return system). The standard Model G starter-generator is a four-pole, compound-wound machine with its output controlled by third brush regulation supplemented by a "bucking" series field. The 12-volt types begin to deliver current at an armature speed of approximately 1000 revolutions a minute, and the 24-volt types at 1300. These speeds correspond to from eight to 10 miles an hour in service, depending to a certain extent upon the driving ratio and the operating characteristics of the vehicle.

It has the same tapering characteristics as the Model L standard generator before described, the output rising rapidly with increasing speed until its maximum is attained at approximately 1800 revolutions a minute (16 to 18 miles an hour). From this point on to 2200 revolutions a minute the output is held at a practically constant value; but with additional increase in speed it is cut down again to an intermediate rate, which is further reduced if the speed continues to rise. This affords a charging rate that conforms at every point with battery manufacturers' recommendations.

Manufacturer's Warranty.

The North East Electric Co., in conformity with the standard warranty of the National Automobile Chamber of Commerce, guarantees each new piece of apparatus turned out to be free from defects in material and workmanship under normal use and service, the company's obligation being limited to the furnishing at the factory of any part which shall, within 90 days after delivery to the original purchaser, be returned with transportation charges prepaid and which an examination shall disclose to the satisfaction of the company to have been defective.

TWO PERTINENT PAMPHLETS ON THE OIL QUESTION.

Richard D. Leonard, general manager of domestic sales for the Atlantic Refining Co., 1211 Chestnut street, Philadelphia, Pa., has just released for public distribution "The Story of Gasoline," which he characterizes in the introductory paragraph to be "the plain, frank story of gasoline, told for its million of users; the story of "American ingenuity and progress." The work is handsomely illustrated, and a good idea of its scope may be obtained from a citation of the heads under which the subject is treated, as follows:

What Gasoline Is. Essentials of Good Gasoline: Gravity, Volatility, Calorific Power, Purity, Refinement, Range. Carburetion. Driving in Traffic. Carbon. Dilution of the Motor Oil. The Cost of Gasoline. The Future of Gasoline. Engine Trouble. Precautions.

The work contains many valuable hints on the use and abuse of the automobile engine in relation to its fuel supply, location and remedying of the causes of engine troubles, etc. The Atlantic Refining Co. will send a copy to any one interested.

The Petroleum Outlook.

One of the most complete and interesting publications for the lay reader yet issued on the all-important subject of today, the crude oil supply, is "The Petroleum Outlook," a monograph, a limited number of copies of which are now available for distribution to bankers, brokers, manufacturers, etc., by the publisher, Arthur D. Little, Inc., chemist and engineer, 30 Charles River road, Cambridge, Mass.

This work comprises an economic study of the petroleum outlook with especial reference to American fields, and is illustrated by a large map and several charts arranged for comparative reference. The text, written in popular styles, deals with the geology, production history and apparent state of exhaustion of the crude oil resources of the country. It purports to be an impartial, forceful presentation of the petroleum problem without reference to the companies or interests that own or operate in the respective section.

Requests for a copy of "The Petroleum Outlook" should be addressed to Department E, care of the publisher.

STUDEBAKER REPORTS SHOW GOOD BUSINESS.

The Studebaker Corporation's report, recently compiled, shows that in the nine elapsed months of the current year net earnings, after all charges and provision for preferred dividends, totaled $9,765,851, equal to $15.38 a share on the common stock, compared with net earnings of $7,023,386, or $21.53, earned on the common stock in the first nine months of 1919.

The consolidated profit and loss account for the third quarter of the present year shows that sales totaled $27,823,611, against $21,248,983 in the same months of last year. In the nine months sales amounted to $73,374,153, compared with $48,639,097 in the nine months of 1919.

Comparison of the balance sheet as of Sept. 30 with that of Jan. 1 shows total assets of $101,732,033 for the later date, as against $88,115,378 on the earlier date.

Concerns Engaged in Distribution of Automotive Equipment

The names published below were submitted through various sources, and from the viewpoint of many manufacturers of automotive equipment, supplies, accessories, etc., are listed as jobbers. It must be admitted, that from the standpoint of manufacturers generally there are great variances as applied to the term "jobber." However, as this list contains the names of concerns who are recognized by many manufacturers as jobbers, it is only reasonable to assume that all producers seeking the patronage of the trade will draw their conclusions from their own point of view as to what concerns are entitled to the distinction of being a jobber.

PRODUCTION AT CAPACITY ON THE COMMERCE SPEED MODEL.

The Commerce Motor Car Co., Detroit, is back in production after a shutdown of three months and has benefited by under production to such an extent that its plant is now operating at capacity and expects to maintain this situation indefinitely. In October far more orders were received than for August and September combined. The high priced inventory has been reduced to a minimum through the distribution of finished trucks. The manner in which the slump in the industry and the credit restriction was handled has enabled the company to come forward with a post-war speed model at less than pre-war prices.

"Taking early action as a result of the public's mind that there must be a reduction in prices," declares Director of Sales and Advertising George D. Wilcox of the company, "enables us to be among the first to return to normal production basis. We knew that the public wanted prices to come down. We had the public pulse. Instead of ascertaining how we could force a market despite the public's wishes—we instead decided to get our post-war speed model before the public as quickly as possible at lower than pre-war prices. That our policy met with instant public approval is proven by the influx of orders that we have received. Both Commerce dealers and prospective customers who have inspected and had demonstrated to them our Mercantile Express vindicate our judgment and policy.

NEW CONCERNS RECENTLY INCORPORATED

Buffalo—Farmers' Oil Station.

Hobart—Alex Kastner, brick and concrete garage building, 50x117, 3rd and Wash. Sts.

Hollis—Dr. Pendergraft and Howard Smith; brick filling station, 25x60.

Jennings—Jennings Garage; enlargement, 140x50.

Waurika:

Dunkin Bros., Daggett Bldg., W. Broadway; garage and service station on Main St.

W. H. Gresham; filling station, Main and G Sts.

Pennsylvania.

Allentown—Wm. H. Gangwere, National Bank Bldg.; one-story public garage, 80x120, at 1313-19 Linden St., for Penn Motor Co., 1425 Hamilton St.; $50,000.

Bally—Danl. Bauer; one-story public garage, 40x70, for Bally Garage.

Bethlehem—F. B. Glassmire, Bethlehem Trust Bldg.; one-story garage, 30x70, at 11th and Union Sts., for Bethlehem Paper Co., Bethlehem Trust Bldg.; $5200.

Brownsville—L. J. Noble; three-story garage, 65x105, for B. J. Bernstein, 2723 Broadway; $35,000.

Dormont—Central Hope Co., Vandergrift Bldg., Pittsburgh; one-story commercial garage, 60x96, for Alex. Garage Co., 3216 Wainbell Ave.; $10,000.

Erie—Geo. Schantz Engineering Co., 860 Seneca St., Buffalo; one-story garage, 42x24, at 15th and Reed Sts.; for Schaffner Bros. Co., 641 E. 15th St.

Philadelphia:

Jos. Ashby; one-story garage, 37x96, west side Oxford Ave., south Loney St., for Harry Fenton; $7000.

C. E. Biddle; one-story brick garage, 60x17, with rear building 16x103, north side Pentridge St., east 51st St., for Dr. Regan; $14,000.

Geo. W. Bottoms; one-story garage, 16x19, at 923 N. 64th St.; $1350.

Antoni Bukowiski; one-story garage, 48x19, south side Thompson, east Westmoreland St.; $2000.

E. G. Burwell, Jr.; four garages, 61st and Yocum Sts., for A. L. Elliott; $2600.

Clark & Dillenback; two-story garage, 20x24, at 209 Pelham Rd., Germantown; $2500.

Nicola DiFabro; one-story garage at 432 N. 64th St.; $1200.

Chas. Dunn; one-story garage, 23x25, at 1105 N. 63rd St., for A. A. Bland; $4200.

I. D. Engle; one-story garage, 16x22, rear 1400 S. 58th St.; $1000.

A. J. Fiorello; one-story garage, 8.6x19, southeast corner 17th and Reed Sts.; $1200.

J. D. Fisher; one-story garage, 36x100, at 4856-58 Lancaster Ave., for Melchiori Bros.; $10,500.

France & Meissar; one-story garage and shop, 20x50, north side Yocum St., west 69th; $1800.

A. L. Fretz & Son; one-story garage at 6637 N. 8th St., for A. Lincoln; $1500.

Fry Bros.; one-story garage, 15.6x28.9, north side Luzerne St., west 17th, for Dr. S. J. Wojcyznski; $1700.

General Construction & Engineering Corp.; one-story garage, 20.6x35.6, at 1016 Westview St., for M. H. Harrington; $5600.

B. W. Glover; one-story garage, 34x85, north side Pemberton St., west 7th, for Donata Amaroso; $6300.

S. Gourley, 2108 Nassau St.; one-story garage at 12th and Vine Sts., 90x140, for Quaker City Cab Co., 1211 Vine St.

A. Hartman; six-story sales and service station, 58.1x103.3, with wing 78.1x17, at 1603-7 Vine St.; $100,000.

Fred R. Havens Co.; one-story garage, 42x37, south side Indiana Ave., west 18th St., for C. H. White & Sons Co.; $6000.

W. S. Heisler; one-story garage, 15.8x37, rear 3307 N. 15th St., for Chas. Merkle; $2350.

Saml. Himelfurb; three garages, rear 950 N. 52nd St., for Chas. Marion; $2000.

E. W. Holland; one-story garage, 25x100, for Harry D. Lyster; $5000. Also one-story garage, 50x100, for Harry D. Lyster; $10,000.

Simon Kaplan; one-story garage, 18x30, at 2906 N. Orkney St., for Bernard Solomon; $3000.

Kensington Construction Co.; one-story garage, 19x37.9, at 4343 N. Marshall St., for Wayland Herb; $1900.

Albert Kramer; two-story brick garage, 16x20, at 4461 Silverwood St.; Ludwig Philipp; $1600.

C. Lakowicz; one-story garage, 18x100, west side Torresdale Ave., below Orthodox St.; $2500.

Chas. D. Land; two one-story garages, 16x16 each, at 2008-10 N. 22nd St., for F. Fraganza; $4860.

John Lauro; two-story garage, 16.6x46, with wing, 24.6x19.2, rear 4931 N. 4th St.; $5000.

A. Leibovitz; one-story garage, 50x16, northeast corner 41st and Baltimore Ave.; $1500.

Frank Lucci; two-story brick auto supply station, 18x100, at 661 N. Broad St., for J. G. Duncan Co.; $15,700.

John Marchino; one-story garage, 17x24, rear 1222 S. 58th St., for John D. Lamond; $1000.

Jas. N. Mitchell; one-story garage, 21x21, at 661 Lincoln Drive; $1500.

H. Moister; one-story metal garage, 24x24, at 6201 Girard Ave., for E. R. Keyworth; $1200.

Wm. F. Muldrew; one-story garage, 160x18, west side York Rd., south 70th Ave.; $7500.

Willard Myers; one-story brick garage, 40x80, northwest corner Boston Ave. and Salmon St., for Jos. Hunter's Sons; $7000.

Niles-Bement-Pond Co.; one-story garage, northeast corner Meadow and McKean Sts.; $2000.

Jas. Oliver; one-story garage, 50x124, at 238-42 N. 63rd St., for John M. Kennedy, Jr.; $32,000.

S. M. Peters; one-story garage, 35x19, northwest corner Second and Minor Sts., for Edward Schaffer; $1200.

Phila. Realty Co., Inc.; one-story auto sales room, 125x95, north side Walnut St., west 46th., for John P. Donahue; $37,000.

Jas. Reichenbach; one-story garage, 50x72, York Rd., below Ontario St.; $8000.

A. Raymond Robb Co.; one-story garage, 15x86, for John Frederick; $4000.

Robbins Contracting Co., 1137 N. Front St.; two-story garage, 80x87, at 5th and Berks St., for McCaffery File Works; $50,000. Also two-story brick garage, 48x74.3 and 83.2x90, southeast corner 5th and Berks St., for McCaffery File Co.; $31,000.

J. S. Rogers Co.; three-story auto manufacturing plant, 60x400, with inclosed fireproof loading platform, 50x155, at Grange Ave. and Reading Ry., for Fox Motor Car Co.; $500,000.

Benj. C. Sagel; one-story garage, 18x38, at 5617 Market St., for Geigood Bros.; $5000.

Chas. S. Shuster; one-story garage and storage station, at 1951 N. Broad St., for Dr. W. Richardson; $3000.

Gilbert R. Smith; one-story brick garage, north side 69th Ave., west 10th St.; $1200.

H. C. Sweger; one-story brick garage, west side Germantown Ave., north Mt. Pleasant St., for Chas. Hemberger; $35,000.

Thomas Co.; one-story garage, 10x20; $2000.

A. S. Tourison, Jr.; two-story garage, 19x20, west side Ardleigh, north Durham St., for Sedgwick Farmes Co.; $2500.

Turner Construction Co.; one-story garage, 32x77, southeast corner Front and Shunk Sts., for American Mfg. Co.; $10,000.

Milton W. Young; one-story garage, 24x24, at 5911 Overbrook Ave., for Francis C. Gregsley; $1500. Also two-story garage, 26.8x25, northeast and southeast corner 71st St. and Sherwood Rd.; $8000.

F. W. Zebley; one-story garage, southwest corner Highbee and Vandyke Sts., for Geo. Lauderbeck; $2000.

Pittsburgh:

Jos. Damm, 1403 East St.; one-story commercial garage, 65x65, at 1206 East St., for Louis Kaufman, 920 Liberty Ave.; $14,000.

Mellon-Stuart Co., Oliver Bldg.; two-story garage, 80x114, at Friendship Ave. and Euclid St., for Whitehill Motors, Inc., 5707 Friendship Ave.; $100,000.

Miller Construction Co., Empire Bldg.; six-story sales room and storage station, 50x110, for Dyke Motor Supply Co., 5500 Hoburt St.; $90,000.

Geo. Shipley, 7026 Agnew St.; one-story garage for W. M. Henderson, 5650 Aylesboro Ave.

Toupet & Conley Co., Inc., 5874 Ellsworth Ave.; one-story commercial garage and sales room, 7x90x225, at Liberty and Center Ave.; for Hiland Auto Co., 5829 Penn Ave.; $600,000.

Scranton—Mann & Behlki, Coal Exchange Bldg.; one-story public garage, 30x90, for J. Simpson, 308 Clay Ave.; $15,000.

Wayne—A. C. Hale, Lincoln Highway; one-story sales room and service station, 50x100; $50,000.

Williamsport—Turner Construction Co., 1713 Samson St., Phila.; four-story public garage at 3rd and Hepburn Sts., for McCormack Motor Car Co., 601 N. 3rd St.; $250,000.

Tennessee.

Nashville—Rock City Construction Co.; one-story garage, 30x70, for P. H. Hicks, Stahlman Bldg.; $9000.

Texas.

Brenham—J. R. Nix; garage and filling station, Houston & Texas Central R. R., for Mrs. A. C. Vogelsang, Burton.

Cuero—Magnolia Petroleum Co.; filling station, Church and Esplanade Sts.; (site) $7000.

Dallas—Rupert Slaughty; one-story garage, 42x140, at 1818 Wood St., for Ballard, Burgher & Fisher; $17,500.

Houston—Oldsmobile Sales Co.; Frank Bradley, Pres. and Gen. Man.; two-story fireproof brick and tile auto building, 1115 San Jacinto St.; $40,000.

Longview—J. G. Pogues; brick garage, 150x100, corner Mothvin and Green Sts.

Platonia—Citizens' Auto Co.; hollow tile auto building with glass front.

San Antonio—Russell C. Hill; one-story brick and hollow tile auto building, white stone trimmings, plate glass windows; $20,000. Lessee, Bull Bros.

Seymour—J. M. Brown; blacksmith shop and garage.

Sweetwater—John Meyers and J. H. Snell; drive-in filling station and garage, 50x200, West N. 2nd St. Lessee, Bibbee & Warren.

Waco—Sparks & Williamson; one-story auto building for Goodhue Smith; $6000.

Virginia.

Brambleton—Price Construction Co., Maryland Trust Bldg., Baltimore, Md.; one-story brick and reinforced concrete garage, 55x105, for Standard Oil Co., Baltimore.

Cape Charles—C. H. Legg; one-story garage, 78x125, for F. C. Fitshugh; $30,000.

Wisconsin.

Milwaukee:

S. Buchbinder, 545 Van Buren St.; one-story garage, 70x65; $15,000.

Gus E. Kahn, Caswell Blk.; two-story garage, 40x120, at 499 Jefferson St., for W. H. Krueger Motor Car Co., 485 Jefferson St.

A. G. Wolff, 901 Becher St.; one-story garage, 50x60, at Greenfield and 21st Aves., for Wm. Schaefer, 995 Greenfield Ave.; $8500.

Garage Happenings

Bessmer, Ala.—Edwards Motor Co. has remodeled its show room and constructed plate glass front.

New Haven, Conn.—Capital Garage, 164 Columbus Ave., has built one-story concrete block addition, 31x85, adjoining present building, costing $10,000.

Quincy, Fla.—O. C. Pinson has sold his vulcanizing shop to J. P. Colgan.

Columbus, Ga.—Couchi Automobile Co. has rebuilt garage destroyed by fire.

Boise, Ida.—Edward L. Kokesch and Otto E. Marshall have opened tire shop at 25 Devereux St. They specialize in vulcanizing, etc.

Illinois.

Abington—C. E. Chambers has sold his garage and battery service station to Edward H. Sevens.

Aldeo—Logan Dun's Garage has purchased interest in East End Garage.

Aledo—C. S. W. Giffin has purchased interest of his partner, Clovis Finch, in Clovis & Finch Garage.

Alton—J. E. Orr has purchased interest of Denny Hayward in garage and repair shop in J. J. Henry building on Washington Ave.

Anna—Harry Lee has moved his garage and service station to 126 E. Vienna St.

Athens—Seigle Garage is now being conducted by Joseph Johnson.

Aurora—N. C. Wagner recently purchased interest of his partner M. J. Linder, in Victory Garage on North La Salle St.

Austin—Large addition has been built to C. E. Bailey's automobile shop at 609-11 N. Waller St.

Belleville—Louis and Ollie Truttmann have sold their garage and repair shop on North Illinois St. to Selle & Miller.

Carlinville:

C. M. Rhodes has sold his interest in garage on W. Main St. to T. F. Shoemacher, St. Louis, Mo.

Robert Whitely, Jr., has sold his garage on North West St. to Leo Seaman.

Monmouth—Cunningham Auto Top Co. has opened an auto top repair shop at 516 W. 4th Ave.

Monticello—John E. Pembroke has sold his garage and repair shop on East Main St.

Mt. Carmel—L. H. Kamp will erect an addition to his garage and repair shop to cost $20,000.

No Komis—Milo J. Johnson is now associated with his brother in a garage and repair shop.

North Henderson—Partnership of Woodside & Koons Garage has been dissolved. Business will be continued by Watson T. Woodside.

Oak Park—Battery Sales & Service Co. has opened for business at 818 N. Boul.

Ottawa:

Charles A. Causlin is conducting tire service station at 811 La Salle St., formerly operated by J. E. Mitchell.

Leverich Garage on Clinton St. has been purchased by Mrs. Anna Leix.

Osco—J. J. Hadley will erect an addition to his garage and repair shop.

Pana:

Kulin Brothers are conducting garage at 3rd and Locust Sts., formerly operated by Thomas & McTaggart.

John A. Downs & Son have sold their garage and accessory shop to Universal Motor Co.

C. W. Roberts has purchased interest of his partner, J. E. Bramlett, in vulcanizing, repair and supply shop.

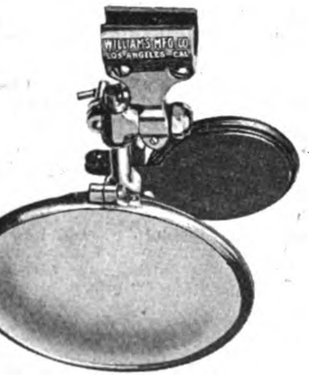
Paris:

Paris Auto Co. has opened an office on North Central Ave.

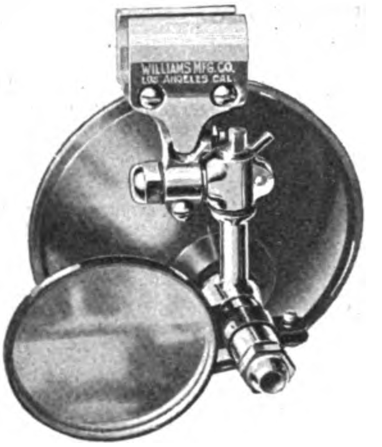
Willys & Knight have opened Overland salesroom and service station at 219-21 W. Court St.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Williams Combination Spot Light and Trouble Light offers to the motorist a combination which the manufacturer claims is unexcelled for its purpose. High grade material is used throughout in its construction, while all metal parts pass through several annealing and spinning processes which give the metal a uniform thickness and compactness, thus affording a better finished surface. All bright parts are heavily nickel plated before the enamel is applied, while the enamel is put on with an air brush to secure uniformity and is then baked in an oven at 400 degrees Fahrenheit, resulting in a hard, durable finish. No spot light with soldered parts could possibly stand so intense a heat, the manufacturer states.



WILLIAMS MFG. CO.
LOS ANGELES CAL.



WILLIAMS MFG. CO.
LOS ANGELES CAL.

Williams spot lights are guaranteed unqualifiedly at the time of sale and the manufacturer will make good any defect in the lamp or its parts.

Manufactured by Hughson & Merton, Inc., 56 East Randolph Street, Chicago, Ill., and 77 O'Farrell Street, San Francisco, Cal. Prices on request.

The Indianapolis Guaranteed Pump embodies many special features in its construction which place it in a separate class from other high grade air force pumps. The cylinder of the pump is made of 18-gauge (1/16 inch) steel, and is claimed to be dent proof, even under abuse. The finish of the barrel is either a highly polished nickel or an equally highly polished, chip-proof, baked enamel.

The pump plunger is fitted with two leathers, each provided with a machine turned washer and expansion spring which at all times hold the leather snugly against the inner surface of the barrel or cylinder. The incoming air, instead of being taken in at the top of the barrel as is customary, enters through a special valve provided for the purpose in the base. The valve, being automatic in action, also prevents the air from leaking out. A check valve is located at the air outlet, where the air passes into the hose to the tire, which is also automatic in action. It is stated that the pump is very easy to operate on account of the improved principle employed in its construction, and that tires of varying sizes can be inflated in a few minutes time with a minimum of effort.

Manufactured by the Indianapolis Air Pump Co., 1625 Bell Street, Indianapolis, Ind. Price, $4.

The Pee Gee Auto Painting Outfit is claimed to make it possible for the motorist to purchase at small cost the necessary enamel, varnish and top dressing to refinish the average small car at nominal cost so that by following the complete instructions given, which are very simple and easily understood, he may refinish his car in a few hours time and be able to use it the next day without danger of marring the new finish.

The outfit is packed in a neat cardboard container with each article plainly marked and includes a brush for applying the paint, one quart Auto flat black, one quart Auto gloss black, one quart Auto top dressing, one-quarter of a dozen sheets No. 1 and No. 00 sandpaper each and one two-inch all Chinese bristle varnish brush.

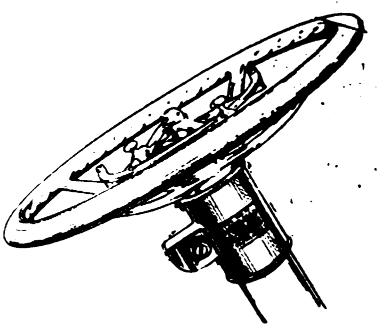
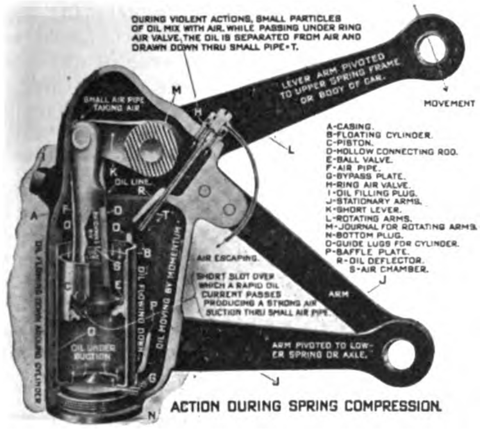
Karlok Thief-Proof Lock for Automobiles was designed to obviate the stealing of automobiles, the manufacturer stating that he has perfected a lock that cannot be picked and that provides certain assurance of protection from theft.

The device is attached to the steering post of the car and the underside of the wheel hub is equipped with a Yale lock which is easily locked and unlocked, and will prevent anyone from moving the car in any direction other than a straight line, as the wheels are set in a straight ahead position when the Karlok is attached. In case of fire the car can be rolled ahead out of danger.



Manufactured by the Russell Sales Co., Newark, N. J. Price $15. Literature on request.

The Landis Shock Diffuser differs from most of the so-called shock absorbers in the fact that instead of using coiled springs to take up and absorb the road shocks, use is made of a container, partially filled with oil, which is acted upon by a piston. A cushioning effect is gained through the admission of air which is later compressed within the diffuser and acts as a buffer.



DURING VIOLENT ACTIONS, SMALL PARTICLES OF OIL MIX WITH AIR. WHILE PASSING UNDER RING AIR VALVE, THE OIL IS SEPARATED FROM AIR AND DRAWN DOWN THRU SMALL PIPE-T.

ACTION DURING SPRING COMPRESSION.

The diffuser is fastened to the car chassis by means of three arms; two are fastened to the axle and one to the frame. The action of the springs when driving over uneven road surfaces causes the arms, which are fastened to the axle, to actuate the piston, this in turn compressing the oil below, thus cushioning the shock, while the upward rebound is snubbed by the compression of the air above the piston shortening its distance of travel.

Provision is made for any excess of oil in the base to pass into an enlarged chamber at the side as it is thrown upwards by the action of the piston during the period of compression, and, when the compression is released, the oil again returns to the bottom of the container. A grate having small openings is provided at the bottom of the oil container, which regulates the flow of oil, when under compression, and prevents the piston from losing its compression effect too rapidly.

ACTION DURING SPRING RECOIL.

The Landis Shock Diffuser is claimed to be an unusually high grade device and is being placed on a number of the larger, higher priced cars. It is further stated that cars so equipped are practically free from the annoyance of shocks and vibration due to uneven road surfaces.

Manufactured by the Landis Engineering & Manufacturing Co., Waynesboro, Pa. Prices and literature on request.

The Sunbeam Search Light is stated to be a very desirable spot light of exceptional illuminating possibilities. It is so constructed as to be easily attached or detached for use when locating and remedying troubles of all kinds about the car. The focussing device is so arranged as to produce a large or small beam on the road as best meets the needs of the motorist. The light is fitted with a silver plated convex lens and highly polished reflectors and uses six-eight volt, 21 candlepower nitrogen bulbs. The back of the light container is finished in black enamel and all parts are highly finished, while an excellent regulating attachment is included which is stated to comply with the law.

Manufactured by the Sunbeam Manufacturing Co., Inc., Seattle, Wash. Prices and literature on request.

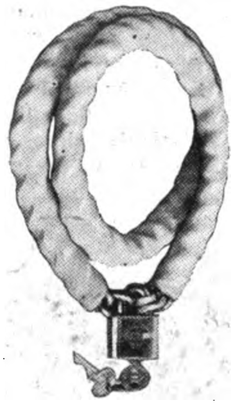
The B-G Spark Plugs were developed during the war for aviation purposes and the manufacturer states that they did such good work under these conditions that they have decided to use the principles employed to make a component suitable for passenger cars, trucks and tractors.

The self-cleaning feature of the B. G. plug is based on the sudden changing of the direction of gases or air in which small globules of oil are suspended. The oil will continue in the initial direction, while the gases will make the change of direction. This fact is used in the construction of the interior of the B-G plug in the shape of a small oil pocket in the lower cavity of the plug, formed by the construction of the body of the plug. All holes or inlets into the plug are shaped to direct the incoming gases and oil globules into this pocket, where the oil will be separated and held suspended until the spark jumps between the sparking points, causing an explosion of the gases in the combustion chamber and in the interior of the plugs.

The combined area of all the openings in the end of the plug is sufficient to permit the interior of the plug to fill with pressure nearly equal to that accumulated in the compression chamber of the cylinder on a compression stroke of the piston. This causes a tremendous blast to pass between the sparking points at the exact time that the ignition current jumps the gap between the sparking points, thus assuring clean sparking points at the most essential moment. The interior of the plug is so constructed that when the gases are ignited and pass out from the plug into the combustion chamber of the cylinder they are all directed by the interior construction of the plug, between the sparking points, thus blasting or blowing any carbon or oil that may have accumulated in the chambers of the plug into the combustion chambers of the cylinder.

Manufactured by the Brewster-Goldsmith Corporation, 33 Gold Street, New York City. Prices and literature on request.

The Brookins Thief-Proof Tire Lock is designed with the end in view to making it next to impossible for a thief to steal an automobile tire from the tire hanger of a passenger car. The links from which the chain is made are electrically welded from specially heat treated and chilled, non-corrosive steel which, it is claimed, cannot be cut by the strongest bolt cutters, neither can the links be pried apart.



A pure rubber tubing covers the chain to prevent rattling and to protect the enamel finish of the car.

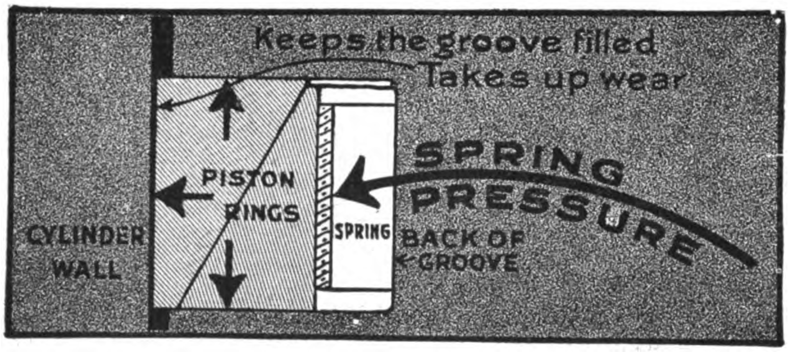
With each chain is supplied a specially designed 24-tumbler lock with hardened shackle, it is stated, which cannot easily be cut. The lock is dust, rust and weather proof and is guaranteed by the manufacturers to be non-pickable, and is stated to bear the indorsement of the Underwriters' association.

Manufactured by the Brookins Manufacturing Co., Dayton, O., Department A. Price at all accessory dealers, $4.50.

Packard Electric Cable has been manufactured for many years and is known throughout the trade as a product that can be relied upon, whether in high or low-tension work, to give the best of satisfaction. It is insulated with several layers of pure Para rubber properly compounded to give maximum dielectric and mechanical strength. The rubber insulation is protected by two heavy braids impregnated with Packard special formula enamel which is proof against deterioration from heat, grease, oil, gasoline and vibration, the manufacturer states.

Packard cable has a characteristic seal brown color with two red stripings running spirally in opposite directions. The true Packard cable is supplied in coils of 100 feet or more, neatly wrapped and tagged.

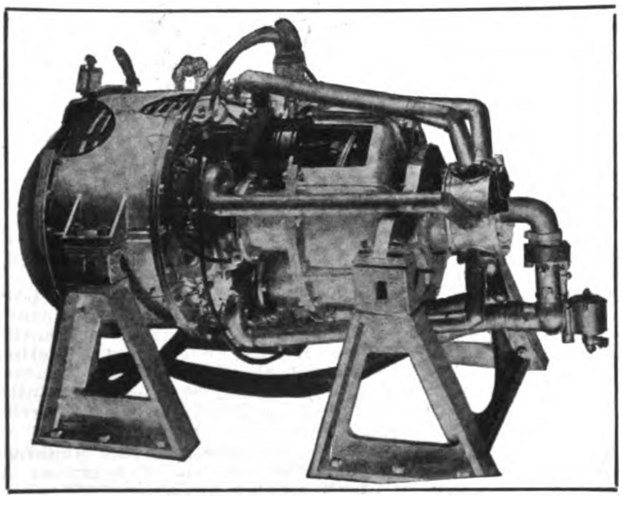
Manufactured by the Packard Electric Co., Warren, O. Literature and prices on request.



Section Showing Construction of 3-A Piston Rings.

CONSTRUCTION OF 3-A PISTON RINGS.

The accompanying sketch shows the construction of the 3-A piston ring, which is made and marketed by the Steel Spring Piston Ring Co., 147 Metropolitan avenue, Brooklyn, N. Y. Two pieces of Mohegan metal of triangular cross section form the wear members of the ring and their bearing quality is claimed to be such as to relieve the cylinder from all wear, while at all times they completely fill the cylinder groove from top to bottom. The wear members are kept snugly against the cylinder walls at all times and at all points—also against the top and bottom of the groove—by a spring backing. This construction also cushions piston slap and maintains an oil-tight, compression-tight seal for a long time.



New Type of Motor Designed by Sun Motors Corporation, Granite City, Ill.

This is accomplished by the utilization of a spring inserted between the rings and the piston and keeps the ring at just the right pressure all around the walls even when the ring is worn. Only one over size is made, .031 inches, which it is claimed, takes the place of the 15 or 20 sizes supplied by cast iron ring manufacturers. It is stated that the 3-A piston ring will stop oil trouble and compression loss on cylinders, .008 out of round, on worn grooves and aluminum pistons.

The manufacturer offers, upon the return of the rings to refund the price of any set of 3-A rings that does not accomplish all that is claimed for them.

NEW TYPE ENGINE USES STEAM AND GAS FOR FUEL.

The Sun Motors Corporation of Granite City, Ill., a $5,000,000 concern, has been recently organized to manufacture a new type of motor, the principles of which are stated to be so revolutionary that they are startling to the average layman, although these same principles have long been familiar to scientists.

Briefly, this motor is designed to utilize gas steam turbine principles in creating power and it is claimed by its inventors that this motor is capable of going 40 miles on a gallon of gasoline, at the same time giving 50 per cent. greater power efficiency than the present type of internal combustion engine.

This motor converts the expansion forces of gasoline into its steam pressure equivalent by the injection of water into the combustion or mixing chamber, at 212 degrees Fahrenheit. This is possible because of a specially designed steam chamber surrounding the combustion or mixing chamber into which the water is automatically supplied. The heat given off by the explosion of the gas is sufficient to immediately convert the water in this steam chamber into live steam.

The valves, specially built to control the trapped steam and gases in their respective chambers, open at the same instant, allowing both exploded gas and steam to be discharged into a chamber designed for combining steam and gas.

At this point the gases (combination of steam and gas) are shot into a nozzle at a velocity of 22,000 feet a minute; the gases are then discharged through the nozzle against the rotor blades of the turbine. The gas velocity, together with the expansion power of steam, causes the turbine to revolve. This gives the motor a peripheral instead of impulsive power.

AN ACCEPTABLE CHRISTMAS GIFT.

The F. W. Wakefield Brass Co., Vermilion, O., manufacturer of Red Spot lighting specialties, suggests the appropriateness of a good search light as a Christmas gift in the eyes of any motorist. It combines value and utility and certain acceptability from the fact that while it is not an absolute necessity its presence on the car continuously enhances it as a token of friendly remembrance.

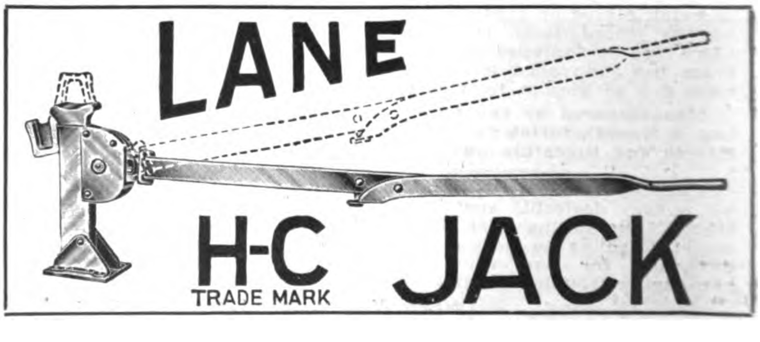
The Red Spot search light people are cooperating, through their jobbers, with many dealers in conducting a holiday sale campaign.

FARR'S TIRE CEMENT AND PATCHES.

The story of the development of Farr's Sure-Hold tire cement and Stay-Put patches, manufactured by Farr's Sure-Hold Tire Cement Co., New York city, is an illustration of the old adage that "Necessity Is the Mother of Invention." Mr. Farr, the originator, while riding in a motor car in the pursuance of his vocation as an accessory salesman, got exasperated at being bothered by blowouts and the failure of ordinary patches to stay in place, and invented a cement and type of patch that is claimed to obviate trouble of this nature.

LANE H. C. JACK.

The Lane H. C. jack, designed to use with any 1920 car, has just been placed on the market and reports tend to show that it has met with high favor by the automobilist, as well as the manufacturer. The outstanding feature of its construction is the ease with which it can be adjusted and operated. The user can stand nearly erect while placing it under the axle, and can raise the wheel to any desired height without stooping, by means of the patented handle. It appears to be desirable from a mechanical as well as a labor saving viewpoint. Manufactured by Lane Brothers Co., Poughkeepsie, N. Y.



Hardware Association to Stage Big Accessory Show

One of the important divisions of the National Hardware Association of the United States, which is one of the principal organizations covering that field in the United States is the Automobile Accessories branch, which is to hold its third annual meeting in the Coliseum in St. Louis, Mo., Nov. 30, Dec. 1, 2 and 3.

This event is considered as one of the most interesting and successful features of the entire automotive show and convention season, and in point of the pertinency and scope of the programme offered, the number and diversity of the exhibits, and numbers of members and others allied to the industry in attendance, promises this year to eclipse all previous occasions held under the auspices of this association. The tentative programme is as follows:

Tuesday, Nov. 30, 10 a. m.—Opening remarks, President A. H. Decatur, Decatur & Hopkins Co., Boston, Mass.; annual address of the chairman, A. H. Nichols, Buhl Sons Co., Detroit, Mich.; roll call; address of welcome, Hon. Henry W. Kiel, mayor of St. Louis; address, "The Business and Financial Outlook for 1921," A. L. Shapleigh, Shapleigh Hardware Co., St. Louis, Mo.; report of St. Louis general committee, Chairman H. W. Geller, Geller, Ward & Hasner Hardware Co., St. Louis; address, "St. Louis," Charles F. Hatfield, general manager St. Louis Convention Bureau; discussion, "Probagle Developments in the Accessories Market During 1921 from the Wholesalers' Standpoint," H. E. Hulburd, George Worthington Co., Cleveland, O., W. H. Terstegge, Stratton & Terstegge Co., Louisville, Ky., and R. O. Smith, W. A. L. Thompson Hardware Co., Topeka, Kan.; discussion, "The Accessories Market from the Viewpoint of the Manufacturer," J. C. Stearns, Culver-Stearns Manufacturing Co., Worcester, Mass.; discussion, "The Present Condition of Accessories Stocks," W. S. Isherwood, Champion Ignition Co., Flint, Mich., and R. L. Wilkinson, Klaxon Co., Newark, N. J. Adjournment, 12:15 p. m.

Wednesday, Dec. 1, 9:45 a. m.—Address, "The General Outlook for 1921," W. D. Biggers, president American Hardware Manufacturers' association, Detroit ,Mich.; address, "Assisting the Retailer," Rivers Peterson, editor National Hardware Bulletin, Argos, Ind.; discussion, "Some of the Evil Results of Quantity Price Schedules," D. D. Akers, King Hardware Co., Atlanta, Ga.; discussion, "The Advantages of Quantity Price of Schedules;" discussion, "How Manufacturers Can Assist in Catalogue Compilation," S. Edward Rose, Barker, Rose & Clinton Co., Elmira, N. Y.; discussion, "Catalogue Efficiency," Kenneth Gardner, Gardner Printing Co., Cleveland, O.; discussion, "Guaranteeing Prices Against Decline," T. R. Thompson, Townley Metal & Hardware Co., Kansas City, Mo.; discussion, "Credit Conditions;" discussion, "Overhead Expense in the Wholesale Distribution of Accessories;" question box. Adjournment at 12 m.

Thursday, Dec. 2, 9:45 a. m.—Discussion, "The Validity of Orders and the Return of Merchandise;" discussion, "The Advantages of Changing Discounts Instead of List Prices," H. J. Hopkins, Geller, Ward & Hasner Hardware Co., St. Louis; discussion, "Developing the Dealer," W. R. Hay, Kelley, How, Thomson Co., Duluth, Minn., G. S. Winders, Van Camp Hardware & Iron Co., Indianapolis, Ind., and J. C. Adams, Marquette Manufacturing Co., St. Paul, Minn.; discussion; "Stimulating Dealer Interest," Felix Van Cleef Brothers, Chicago, Ill.; discussion, "The Compensation of Salesmen," F. J. Tenk, Tenk Hardware Co., Quincy, Ill.; discussion, "Cash Premium, Its Necessity and Its Obligations," Edward O. Faeth, Stowe Supply Co., Kansas City, Mo.; discussion, "The Disposition of Unsaleable and Slow-Moving Stock," J. F. Miller, Bigelow & Dowse Co., Boston, Mass.; discussion, "Market Tendencies in Tires and Tubes;" discussion, "How Can the Methods of Distributing Tires and Tubes Be Improved?" F. R. Goodell, Converse Rubber Shoe Co., Malden, Mass.; Glover S. Colladay, Frank Colladay Hardware Co., Hutchinson, Kan., and D. T. Henne, Columbia Tire & Rubber Co., Columbiana, O.; question box. Adjournment, 12 m.

Friday, Dec. 3, 9:45 a. m.—Discussion, "Federal Revenue Legislation;" discussion, "Recent Tendencies in Lens Legislation," H. E. Patterson, Warner-Patterson Co., Chicago, Ill.: address, "Postal Legislation," Charles D. Clark, National One Cent Letter Postage Association, Cleveland, O.; statement of preference as to place of fourth annual meeting and exhibition; question box; unfinished business; new business. Adjournment at 12 m.

List of Officers.

The officers of the National Hardware Association are as follows:

President, A. H. Decatur, Decatur & Hopkins Co., Boston, Mass.; first vice president, Brace Hayden, Dunham, Carrigan & Hayden Co., San Francisco, Cal.: second vice president, F. A. Heitman, F. A. Heitman Co., Houston, Tex.; secretary-treasurer, T. James Fernley, Philadelphia, Pa.

Automobile Accessories Committee—Chairman, A. H. Nichols, Buhl Sons Co., Detroit, Mich.; R. S. Woodruff, C. S. Mersick Co. New Haven, Conn; Glover S. Colladay, Frank Colladay Hardware Co., Hutchinson, Kan.; W. R. Hay, Kelley-How-Thomson Co., Duluth, Minn.; P. L. Logan, Logan-Gregg Hardware Co., Pittsburgh, Pa.; Wm. E. Foskett, Albany Hardware & Iron Co., Albany, N Y.; H. W. Geller, Geller, Ward & Hasner Hardware Co., St. Louis, Mo.; R. V. Cusack, Richards & Conover Hardware Co., Kansas City, Mo.; J. W. Barlow, Blish, Mize & Silliman Hardware Co., Atchison, Kan.; George W. Ellis, Supplee-Biddle Hardware Co., Philadelphia, Pa.; Thos. R. Frazer, King Hardware Co., Atlanta, Ga.; S. Edward Rose, Barker, Rose & Clinton Co., Elmira, N. Y.; L. C. Webb, Lee Hardware Co., Salina, Kan.; G. S. Winders, Van Camp Hardware & Iron Co., Indianapolis, Ind.; L. C. Scheller, Union Hardware & Metal Co., Los Angeles, Cal.; W. M. Bonham, C. M. McClung & Co., Knoxville, Tenn.; J. D. Moore, Jr., Moore, Handley Hardware Co., Birmingham, Ala.; Edward R. Brayton, Belcher & Loomis Hardware Co., Providence, R. I.; H. A. Bremer, The Leutkemeyer Co., Cleveland, O.; R. W. Kinzer, Seattle Hardware Co., Seattle, Wash.

List of Exhibitors.

The following list of exhibitors has been given out by the show committee:

No.	Exhibitor
1	Auburn Ignition Mfg. Co.
2	Mayo-Skinner Mfg. Co.
3	K-D Lamp Co.
4	National Rubber & Specialties Co.
5	Jiffy Jack Co.
6	Valley Electric Co.
7	Sidel-Rattner Mfg. Co.
8	New Era Spring & Specialty Co.
9	Rajah Auto Supply Co.
10	N. A. Petry Co., Inc.
11	Mooers-Wright Co.
16	Essenkay Products Co.
21	Converse Rubber Shoe Co.
27	Advance Auto Accessories Corp.
32	Chicago Fuse Mfg. Co.
33	Elite Mfg. Co.
34	Gill Mfg. Co.
39	Packet Auto Specialty Co.
54	Sterling Manufacturing Co .
56	Las-Stik Patch Mfg. Co.
57	Vosburgh Miniature Lamp Co.
58	Sharp Spark Plug Co.
59	Mueller Electric Co.
60	Standard Corporation.
62	Frange Mfg. Co.
63	F. G. Ruddeman Co.
64	Star Rubber Co.
65	Clayton & Lambert Mfg. Co.
66	Frank Rose Mfg. Co.
67	Clucker & Hixson Co.
68	Coe-Stapley Mfg. Co.
69	Eberson-Lindsey Paint Co.
70	General Asbestos & Rubber Co.
71	Dryden Rubber Co.
72	F. W. Wakefield Brass Co.
73	S. C. Johnson & Son.
74	South Bend Lathe Works.
75	Marquette Mfg. Co.
76	Brocksmith Mfg. Co.
77	Star Specialty Mfg. Co.
78	Splitdorf Electrical Co.
79	Columbus Varnish Co.
80	Allord Reamer & Tool Co.
81	Kraeuter & Co.
85	Hart Bell Co., Inc.
86	Mazura Mfg. Co.
87	Presto-Felt Mfg. Co.
88	Judd & Laland Mfg. Co.
89	Bellevue Mfg. Co.
90	Cincinnati Auto Specialty Co.
91	Barcalo Mfg. Co.
92	Greb Co., Inc
93	Anthony Co.
94	Geo L. Holmes.
95	J. Wadsworth Staff.
96	Wm. Vogel & Bros.
97	Carburundum Co.
98	McCord Mfg. Co.
101	Lockrite Patch Co.
102	Templeton Kenley Co., Ltd.
103	Essex Rubber Co., Inc.
104	Milwaukee Tank Works.
105	Giant Grip Mfg. Co.
106	Inland Pump Mfg. Co.
107	Derf Mfg. Co.
108	Voorhees Rubber Mfg. Co.
109	Globe Machine & Stamping Co.
110	Corcoran-Victor Co.
111	F. A. Smith Mfg. Co., Inc.
112	Continental Rubber Works.

113..Imperial Brass Mfg. Co.
114..Anderson Co.
115..Fred G. Bremer.
116..E. Edelmann & Co.
117..Pennsylvania Piston Ring Co.
118..Gray-Heath Co.
119..Lockwood Ash Motor Co.
120..Haywood Tire & Equipment Co.
121..Moco Co. of America.
122..Howe Lamp & Mfg. Co.
123..Tuthill Spring Co.
124..Tuthill Sales Co.
125..U. S. Air Compressor Co.
126..Fernald Mfg. Co.
127..Metal Specialties Mfg. Co.
129..Jenkins Vulcan Spring Co.
130..Frank Mossberg Co.
131..National Standard Co.
132..Reserved.
133..Van Cleef Bros.
134..Victor Mfg. & Gasket Co.
135..Chicago Solder Co.
136..Jefferson Electric Mfg. Co.
137..Klaxon Co., Newark, N. J.
138..Edgar C. Guthard Co.
139..Casey-Hudson Co.
140..Iron City Products Co.
141..A. Nelson Mfg. Co.
142..F. W. Stewart Mfg. Co.
143..Arrow Grip Mfg. Co.
144..Higgins Spring & Axle Co.
145..Manhattan Electrical Supply Co.
146..Double Fabric Tire Co.
147..Outlook Co.
148..Sprague Tire & Rubber Co.
149..Corcoran Mfg. Co.
150..Apex Electric Co.
151..Gordon Radiator Co.
152..Stark Inland Machine Works.
153..Trexler Co.
154..Eclipse Mfg. Co.
155..Fitzgerald Mfg. Co.
156..Ideal Clamp Mfg. Co.
157..Schroeder & Tremayne.
158..Oakes & Dow Co.
159..Atlas Specialty Mfg. Co.
160..Flash Chemical Co.
162..Standard Parts Co.
163..J. & B. Mfg. Co.
164..Davies-Young Soap Co.
165..Bonney Vise & Tool Co.
166..B. & B. Mfg. Co.
167..Northwestern Chemical Co.
168..C. A. Shaler Co.
169..Apco Mfg. Co.
170..Pyrene Mfg. Co.
171.."X" Laboratories.
172..Moon Bros. Mfg. Co.
173..Bannet Accessory Mfg. Co.
174..Bussman Mfg. Co.
175..Badger Mfg. Co.
176..Badger Mfg. Co.
177..Motor Specialties Co.
178..Long Distance Spark Plug Co.
179..20th Century Tire Protector Co.
180..Bethlehem Spark Plug Co., Inc.
181..Walden-Worcester, Inc.
182..Spencer-Smith Machine Co.
183..Oliver Rim Co.
184..C. N. & F. W. Jonas.
185..American Grinder Mfg. Co.
186..Albertson Co.
187..Asch & Co., Inc.
188..Spencer Metal Products Co.
190..J. P. Gordon Co.
191..Cincinnati Ball Crank Co.
192..Hardware Mfg. Co.
193..Durkee-Atwood Co.
194..H. & D. Co.
195..Gates Rubber Co.
196..Reflex Ignition Co.
197..Hall Thompson Co.
198..Dover Stamping & Mfg. Co.
199..Will B. Lane Unique Tool Co.
200..Dayton Wire Wheel Co.
201..Moto-Meter Co., Inc.
202..J. H. Faw, Inc.
203..Culver Stearns Mfg. Co.
204..Clover Mfg. Co.
205..Columbia Tire & Rubber Co.
206..Stone Mfg. Co.
207..American Sponge & Chamois Co.
208..P. H. Webber Co.
209..Bemiller Foundry & Machine Co.
210..Bemco Mfg. Co.
211..Walter Eckhouse & Co.
212..Mayhew Steel Products Co., Inc.
213..McQuay-Norris Mfg. Co.
214..Paul G. Niehoff & Co., Inc.
215..Nu-Back Mfg. Co.
216..American Hammered Piston Ring Co.
217..E. Edelmann & Co.
218..Fulton Co.
219..Monroe Auto Equipment Co.
220..American Metal Parts Co.
221..Cooper Mfg. Co.
222..American Chain Co.
226..Reserved.
227..Curtis Pneumatic Machinery Co.
230..Bayne Mfg. Co.
231..Perkins Campbell Co.
232..Hill-Smith Metal Goods Co.
233..E. A. Laboratories, Inc.
234..Anderson Electric & Equipment Co.
235..Rosier-Howard Sales Co.
236..Packard Electric Co.
237..National Lamp Wks. of Gen. Elec. Co.
238..National Lamp Wks. of Gen. Elec. Co.
239..Braender Rubber & Tire Co.
240..Stiles Mfg. Co.
241..Bastian Blessing Co.
242..Reserved.
243..Champion Ignition Co.
244..Veeder Mfg. Co.
245..Polson Rubber Co.
246..N. J. Car Spring and Rubber Co., Inc.
247..Bergougnan Rubber Corp.
248..Gemco Mfg. Co.
250..Cooper Storage Battery Mfg. Co.
251..General Tire and Rubber Co.
252..Milwaukee Auto Engine & Supply Co.
254..Motor Spindle Corp.
256..Metal Stamping Co.
257..National Carbon Co., Inc.
280..McLean Tire & Rubber Co.
287..Bridgeport Brass Co.
288..Wm. R. Johnston Mfg. Co.
289..Walker Mfg. Co.
290..Simmons Mfg. Co.
291..Charles S. Monson.
296..Raybestos Co.
297..Motor Products Co.
301..No-Leak-O Piston Ring Co., Inc.
302..Mansfield Tire & Rubber Co.
303..Manley Mfg. Co.
304..Manley Mfg. Co.
320..Au-To Compressor Co.
321..Western Vulcanizer Mfg. Co.

The Season's Show Offerings

Jan. 3-8—New York, N. Y., Motor Truck Show, Motor Truck Association of America, 12th Regiment Armory. Theodore D. Pratt, Manager.

Jan. 4—New York City, Annual Meeting, Automotive Service Association of New York.

Jan. 4-7—South Dakota Implement Dealers' Association, Sioux Falls; Secretary, C. J. Bach, Sioux Falls.

Jan. 5-7—Midwest Implement Dealers' Association, Omaha; Secretary, James Wallace, Council Bluffs, Ia.

Jan. 7—Sydney, Australia, Australian Motor Show.

Jan. 8-15—New York City, National Passenger Car Show, Grand Central Palace.

Jan. 11—New York City, Meeting, Eastern Automotive Equipment Association.

Jan. 11-13—New York City, 11th Annual Meeting, Society of Automotive Engineers, Hotel Astor.

Jan. 11-13—Minneapolis, Minn., Annual Convention, Minnesota Implement Dealers' Association, West Hotel. C. I. Buxton, Secretary, Owatonna, Minn.

Jan. 11-13—Mississippi Valley Implement Dealers' Association, at St. Louis; Secretary, F. E. Goodwin, Kirkwood, Mo.

Jan. 16-22—Milwaukee, Wis., Annual Passenger Car and Truck Show, Milwaukee Automotive Dealers' Association, Auditorium. Bart J. Ruddle, Manager.

Jan. 16-22—Schenectady, N. Y., Show, Company E, F and Machine Gun Company, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

Jan. 17-22—Lowell, Mass., Sixth Annual Show, Passenger Cars, Trucks and Accessories, Casino. Dan O'Dea, Manager, 154 Moody Street.

Jan. 18-20—Pacific Northwest Hardware and Implement Association, Spokane, Wash.; Secretary, E. E. Lucas, Spokane, Wash.

Jan. 18-20—Western Retail Implement, Vehicle and Hardware Association, Kansas City; Secretary, H. J. Hodge, Abilene, Kan.

Jan. 18-20—Texas Hardware and Implement Association, Dallas; Secretary, A. M. Cox, Dallas.

Jan. 19—Milwaukee, Wis., First Annual Convention, Wisconsin Automobile Dealers' Association.

Jan. 22-29—Cleveland, O., Passenger Car Show, Cleveland Automobile Manufacturers' & Dealers' Association, Wigmore Coliseum. Fred H. Caley, Manager.

Jan. 22-29—Ceylon, India, Automobile Show, Ceylon Motor Show Syndicate.

Jan. 22-31—Sydney, Australia, Second Annual M. T. A. Motor Show. N. Kingsley-Strack, Secretary, Challis House, Martin Place, Sydney.

Jan. 23-29—Amsterdam, N. Y., Annual Automobile Show, Benefit Company H, State Armory. J. J. Callahan, Manager.

Jan. 24-29—Atlanta, Ga., Annual Convention, Georgia Automotive Dealers' Association. P. A. Magahee, Secretary.

Jan. 25-27—Kentucky Hardware and Implement Association, Louisville; Secretary, J. M. Stone, Sturgis, Ky. Exhibit.

Jan. 25-28—Oregon Retail Hardware & Implement Dealers' Association Convention, Portland. E. E. Lucas, Secretary, Hutton Building, Spokane, Wash.

Jan. 26-28—North Dakota Implement Dealers' Association, Fargo; Secretary, R. A. Lathrop, Hope, North Dakota. Exhibit.

Jan. 29-Feb. 4—Chicago, Ill., National Passenger Car Show, Coliseum, N. A. A. C.

Jan. 30-Feb. 5—Hudson, N. Y., Annual Automobile Show, Armory. J. J. Callahan, Manager.

Jan. 31—Chicago, Ill., Annual Meeting, National Automobile Dealers' Association, La Salle Hotel.

Feb. 2—Chicago, Ill., Winter Meeting, Society of Automotive Engineers, Hotel Morrison.

Feb. 5-12—Minneapolis, Minn., Annual Winter Automobile Show, Minneapolis Automobile Trade Association. Walter R. Wilmot, Manager, 709 Andrus Building.

Feb. 6-12—Newburgh, N. Y., Annual Automobile Show, Benefit Companies E and L, State Armory. J. J. Callahan, Manager.

Feb. 7-12—Columbus, O., National Tractor Show, Columbus Tractor and Implement Club, Ohio State Fair Grounds.

Feb. 7-12—Parsons, Kan., Fifth Annual Automobile and Accessory Dealers' Association Show, Passenger Cars, Trucks, Tractors and Accessories. W. N. Chapman, Secretary, 1818 Broadway.

Feb. 8-10—Oklahoma Hardware and Implement Association Convention, Oklahoma City. W. B. Porch, Secretary-Treasurer, Oklahoma City.

Feb. 10—Columbus, O., Tractor Meeting, Association of Automotive Engineers.

Feb. 12-19—Kansas City, Mo., Annual Passenger Car and Truck Show, Kansas City Motor Car Dealers' Association. Ed. E. Peake, Manager.

Feb. 14-19—St. Louis, Mo., 14th Annual Show, Passenger Cars, Trucks and Accessories. Robert E. Lee, Manager, 3124 Locust Street.

Feb. 18-28—San Bernardino, Cal., Show, Passenger Cars, Trucks, Tractors and Accessories. Fred M. Renfro, Manager, Chamber of Commerce Building.

Feb. 19-26—Newark, N. J., Passenger Car, Truck and Accessory Show, Newark Auto Trade Association, First Regiment Armory. Claude E. Holgate, Manager.

Feb. 20-26—Pittsfield, Mass., Annual Automobile Show, Benefit Company F, State Armory. J. J. Callahan, Manager.

Feb. 21-26—Deadwood, S. D., Eighth Annual Automobile Show, Auditorium, Passenger Cars, Trucks, Tractors and Accessories.

Feb. 21-26—Bethlehem, Pa., Seventh Annual Show, Passenger Cars and Accessories, Coliseum, Broadway and Montclair streets. J. L. Elliott, Manager, 1038 Norway Place.

Feb. 21-26—Elmira, N. Y., 11th Annual Passenger Car Show, Elmira Auto Club, State Armory. H. S. Bryan, Manager, 210 East Water Street.

FISK CORD TIRES

Sold Only by Dealers

FISK takes pride in continuing to make its relation with its dealers profitable and pleasant to them. It will pay you to sell Fisk Tires.

When a consumer wants a Fisk Tire he must go to a tire dealer for it—there's no other source of supply. The Fisk policy is strictly wholesale.

Fisk dealers everywhere are benefited by this Fisk policy of selling only to dealers.

Standing squarely behind our dealers, giving them twenty-four-hour service through one hundred and forty branches, stocked to meet any demand, Fisk dealers know they can always satisfy and serve their customers.

Service a Vital Issue of Commercial Competition

(*By F. J. WELLS, Service Manager, Pierce-Arrow Motor Car Co.)

SERVICE is unquestionably the most vital issue of commercial competition today. It yields satisfied customers, creates good will, maintains prestige and breaks down sales resistance with consequent increased sales volume, which in turn means greater financial returns.

Competition in the automotive industry is certainly and rapidly resolving itself into one of service. Time was when competition in the sale of automotives was one of product alone. Today it is a competition of both product and service. In the future it may be a competition of service alone, and success in maintaining sales volume will depend upon the successful solution of the service problem.

It is not uncommon today for manufacturers of automotives and their sales representatives, knowing only too well that their future may be dependent upon the verdict rendered them at the bar of public opinion, to ask the question: "What changes or elements can we incorporate in our present service policy or organization that will enable us to meet the growing demands of the public and, incidentally, increase our business?" In the consideration of this question many in the industry fail to observe the fundamental principles involved and, therefore, their consequential failure to obtain the much desired results.

Service No Longer a Side Issue.

Service, as applied to automotives, is no longer a mere side issue established as a guise to conceal errors in manufacture or design or satisfy the whims of customers. It is a big, broad, vital issue and its possibilities are practically unlimited. Service developed along sane and legitimate business like lines is here to stay, not only because it is essential, but because of the equally good reason that it is an excellent business venture. Experience has demonstrated conclusively that it is just as essential in the successful marketing of an automotive manufacturer's product as any other branch of his distributing organization.

The events of the past several years have given automotive transportation a tremendous forward impetus. To sustain this impetus the public must be convinced of the reliability as well as the rapidity and economy of this particular mode of transportation. Reliability involves quantity, quality and availability of service and the successful solution of the problem depends to a large extent upon proper organization and a definite standard of high ideals.

The aim of a service organization should be every automotive operating uninterruptedly at the highest efficiency and at a minimum maintenance and operating expense. Purchasers of automotives today are not induced to buy through a desire to simply acquire a mechanism or satisfy fads or fancies, but for the convenience, pleasure or profit which the investment will yield. Any service rendered to the owner must, therefore, tend to insure him in securing the object of his purchase—continuous, efficient and economical transportation.

The Crux of the Service Problem.

The crux of the service problem is the availability of effective repair work at the lowest possible cost consistent with first class workmanship. Education and instruction in proper maintenance and operation methods and even the training and supplying of a skilled personnel are important adjuncts to successful service. In the last analysis, however, to secure satisfactory, continuous, efficient and economical transportation, whether for merchandise or passengers, it is imperative that every owner have ready access to a stock of repair parts of ample variety in addition to adequate repair facilities. The emphasis in automotive service is, therefore, placed on an efficient repair shop so organized and equipped as to carry on the work of instruction, adjustment and inspection in addition to its repair function. So organized a repair shop attains the dignity of a service station.

The objective of an automotive manufacturer's service activities should be to establish and maintain, wherever his product is used, a source of assistance to owners which embodies within it the four cardinal principles of first class service, efficient organization, effective personnel, adequate equipment and spirit of service.

Service, to be effective, must be properly and efficiently organized. Duplication of effort, idle time, misunderstandings, lack of cooperation and internal friction must be eliminated by a clear and concise definition of duties for each integral part of the service organization. An efficient and definite division of labor, however, is useless unless the duties devolving upon each integer are administered through an effective personnel.

The requirements of automotive service are such that every member of the organization should be most carefully and thoughtfully selected for the particular work for which he is peculiarly adapted, both by nature and training, to perform. Each individual should possess a thorough knowledge of the automotive both from a manufacturing and maintenance standpoint and also have special intensive instruction and training in the standards and methods peculiar to the product to be serviced. But even an efficient organization and an effective personnel cannot function properly without proper housing facilities and suitable and adequate equipment through which to express themselves. The buildings in which repairs are to be made should provide ample air and light and sufficient space for carrying on prompt and effective repair work. The interior arrangement should be such that service work can be carried on with a minimum of undue effort. The equipment, depending upon the size of the territory to be serviced, should consist of ample and suitable machine tools, small hand tools, jigs, fixtures, cranes and wash racks, and of such other items as may increase efficiency and reduce idle time.

Repair parts is another item of no less importance than any one already mentioned. Obviously it is quite impossible to render prompt and adequate service or maintain repair shop efficiency and give entire satisfaction to owners unless there is available at all times a stock of repair parts of ample size and variety.

Underlying all of these requirements of first class service, however, the entire organization must be permeated by the spirit of service. This spirit is the motive force animating any real attempt at assistance. It is the inner desire to unselfishly use knowledge and ability in the interests of another. It is the inner sense of obligation which prompts every member of the organization to cheerfully, willingly and courteously undertake each new problem as it arises and carry it through to a successful conclusion without regard to time, expense or his personal convenience. This spirit, instantly felt and powerfully effective, creates in the customer, who is the recipient of service, a feeling of confidence, gratefulness and satisfaction just as surely as the lack of it breeds suspicion and discontent. The spirit of service is the basic element in any successful service organization.

Indifference, lack of courtesy, incompetency, inefficiency, improper organization and lack of system and facilities have done more to retard the development of service in the automotive industry than any other factor.

It is very poor policy to minimize the importance of looking after customers. The public, profiting by past experience and knowing very well that the automotive is subject to wear and sometimes abuse, in which case repairs are necessary, prefers to deal with a manufacturer or his representative who, when selling a passenger car or truck, gives with it a guarantee of legitimate service. Such a guarantee means nothing more or less than a desire, coupled with ability, to meet what is fundamentally a moral obligation.

In conclusion, the purpose of every automotive manufacturer's service department should be to maintain, wherever his product is used, an effective service organization with properly trained personnel and adequate equipment—an organization thoroughly imbued with the spirit of service, eager to employ any means to assist an owner in securing efficient and economical transportation services.

VOL. X. PAWTUCKET, R. I., DECEMBER, 1920 No. 8

Boston Home of Noyes-Buick

Magnificent Structure, Unsurpassed by Any Commercial Building in the East, Backed by Powerful Organization, Has Five Acres of Floor Space Devoted Exclusively to the Distribution of Cars and Trucks.

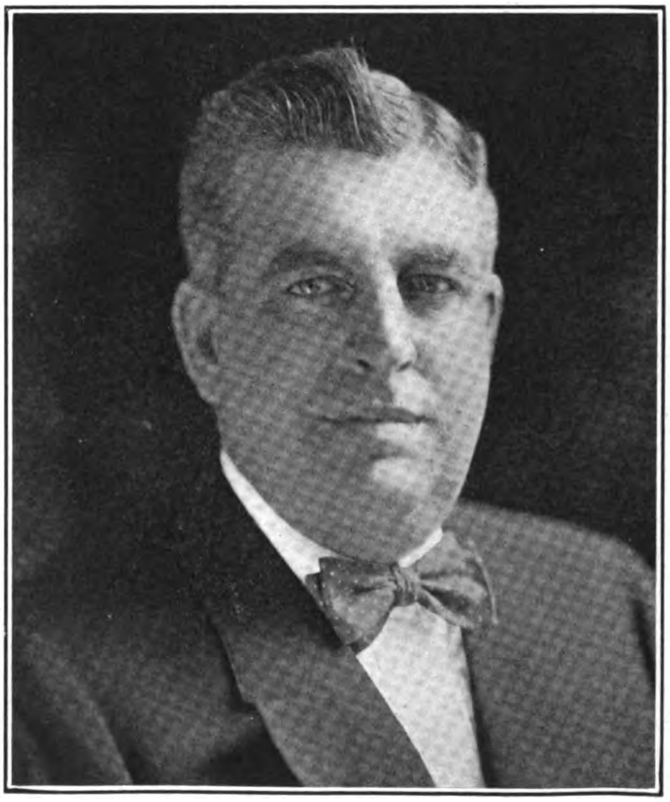
(*By* S. G. SWIFT)

WORK tinctured by faith is still the fundamental law of success, and achievement the remuneration for applied ambition. Today, as in countless days gone by, the busy world is ever ready to pause in its stride to pay homage to the institution which points new paths or progress, and the beautiful new home of the Noyes-Buick Co., 857 Commonwealth avenue, Boston, which overlooks the historic Charles river, emphatically proves the truth of the foregoing.

This modern building, which so logically combines the artistic and the practical, contains five floors, with a total area of five acres, every inch of which is devoted exclusively to the wholesale distribution of Buick automobiles and GMC trucks. In beauty of design and workmanship it raises the standard of automobile homes and strikes an original note which is bound to have great and far-reaching influence in the construction of buildings erected in the future for similar purposes.

At first glance the casual observer is most impressed by the wonderful beauty and grandeur of the edifice, but a careful study of the physical features shows that it is really a structure of rugged simplicity, while the ornamental finish has a dignity far removed from cheap and tawdry display.

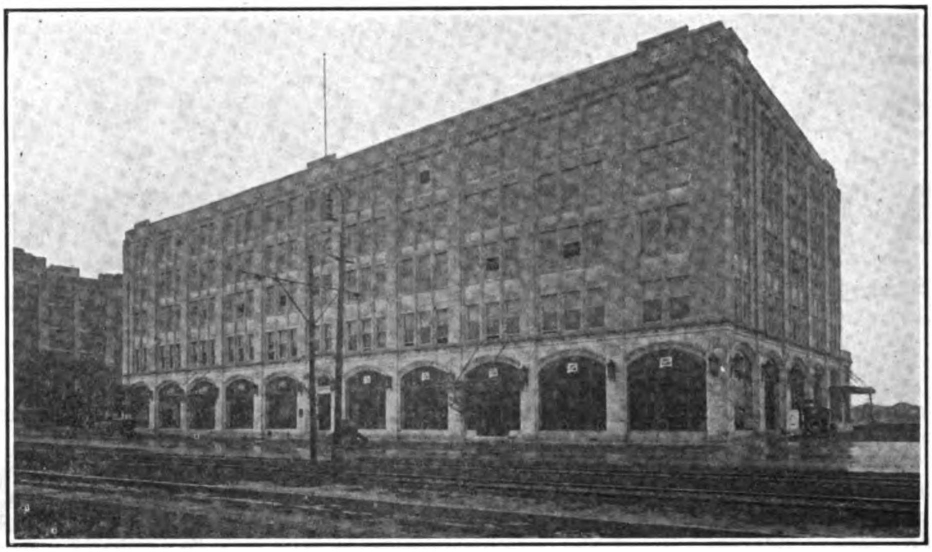
In general appearance the exterior is unsurpassed by any commercial building in the city.



Harry K. Noyes, President and Treasurer of Noyes-Buick Co.

The rough construction is of reinforced concrete, faced with Indiana oolitic limestone, laid slab style, which gives the appearance of solid blocks. On the Commonwealth avenue side of the building there are two immense ornamental marquises which overhang the two vestibules of the twin show rooms, and on the east, looking toward Cottage Farm bridge, another of even larger proportions juts out over the entrance on that side of the building. The impressiveness of the large column at the front of the structure, beautifully designed, is further enhanced by 21 wrought iron lanterns, pendant from the tops.

The entire front and sides of the ground floor are lighted with bays of heavy polished plate glass, with Kawners copper mullions, and colored leaded glass camber head transoms, in the blue and white panels of which the trade names, "Buick" and "GMC" appear. All of the window trim and frame is of cast iron, and the limestone arches above the leaded glass transoms are ornamented with rosettes carved in the



This New Building Supplies New England with Buick Cars and GMC Trucks. It Is a Striking Example of Modern Architecture and Is Strictly Fireproof.

gothic style, the same design predominating in the belt course. The parapet, in which two large Buick panels and a GMC panel are set, is decorated with terra cotta panels of blue and white, producing a pleasing effect.

The doors to the entrance of the show room vestibules, and the main lobby, are of heavy quartered oak with massive bronze trimmings, and were especially designed and made by hand.

The entire aspect gives the idea of harmony, so far as the exterior is concerned and as one passes through the ample doorway, he realizes that the same simplicity of harmonious design has been carried to the interior as well.

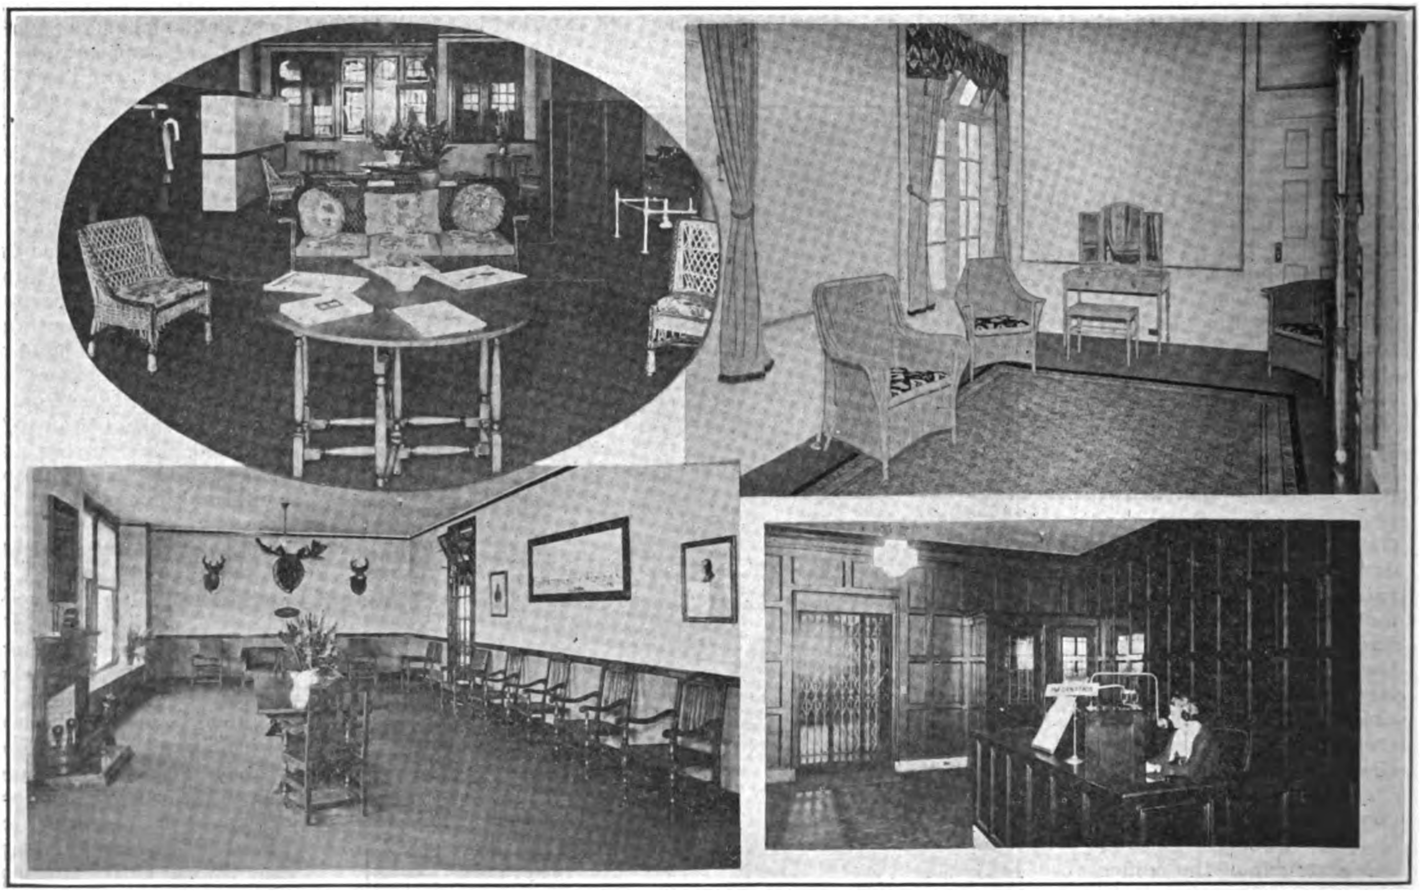
Interior Finish Has Touch of Old World.

The twin show rooms in the front of the building have 4500 square feet of floor space, which affords ample area for the display of trucks and automobiles. These rooms have a gray sanded tile floor, with a Holland brown border, and the windows have stools of gray Tennessee marble.

The walls are cast travertine, and laid up as ashlar, to match the limestone on the outside, the travertine running up to an old Roman ceiling on walls and pilasters. This travertine is believed to be mixed in exact proportion to that found in old world ruins and, while it would require one versed in the language of art to adequately describe it, it seems safe to employ a time-worn platitude, and say that it is especially beautiful in coloring and texture. It has the look of weathered fire brick, and this effect is furthered by artificial mars or blemishes, which appear to the eye to be the result of erosion and time.

A large fire place with a heap of white barked birch, contentedly awaiting the wintry days, also adds color to the sales rooms, and strikes a happy note in the general harmony of beautiful lines and tastefully designed furnishings.

In the center of the Buick show room, which is on the right as one enters, there is a grand stair case, 11 feet wide, which runs to the lobby on the second floor. In design and workmanship—both inadequate words when used in this connection—this stair case has been considered by competent art critics to be the most artistic in Boston, with the possible exception of one in the public library, and appears to have been transplanted bodily from some palatial mansion in the old world.

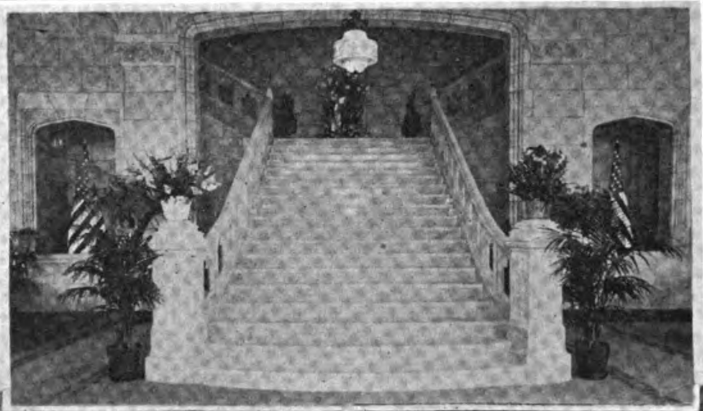


Upper Left—Women's Rest Room. Upper Right—Customers' Waiting Room. Lower Left—Dealers' Assembly Room. Lower Right—"Information."

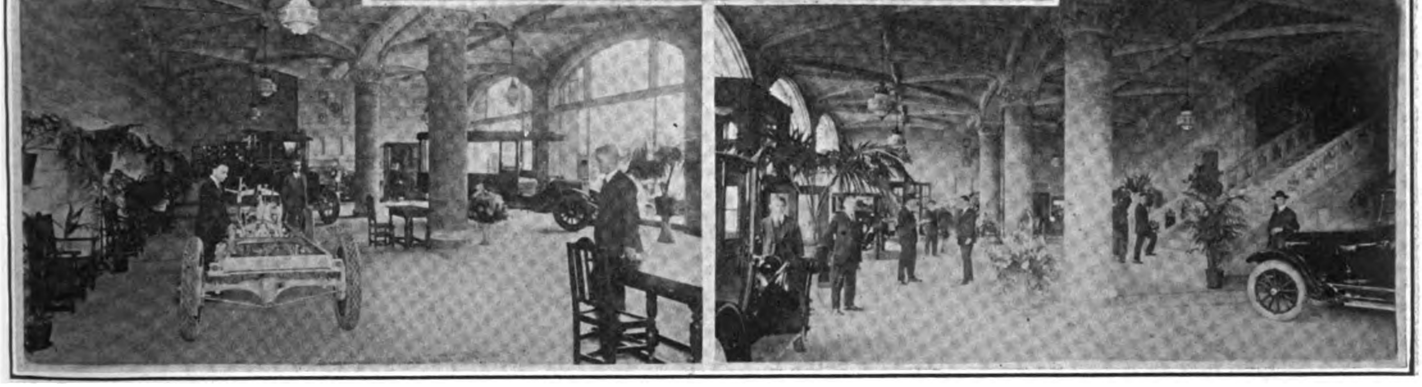
Of the finest gray Tennessee marble, with stone balustrade to match, it has a ruggedness and simplicity of outline which ranks with the best traditions of the Bay state, and art lovers of Boston have given it the seal of their approval, which means that it is right.

Executive Offices on Second Floor.

The 17 executive offices, accounting department, dealer's room and rest rooms, with space for another truck show room, are all on the second floor, which is constructed throughout with a hung ceiling. The offices line the front of the building and open on to the main hallway, the dividing partitions being finished in yellow tint, with large leaded glass doors. The wood trim on this floor is made up of plain oak, quartered oak, sycamore and chestnut, which is laid up with a simplicity of outline that approaches the severe.



Above—This Artistically Designed Staircase Is Made of Gray Tennessee Marble with Stone Balustrade to Match. It Has Occasioned Much Favorable Comment.



Below—Twin Show Rooms, Situated to Left and Right of the Main Entrance, Are Glass Enclosed on Three Sides and Have a Combined Floor Area of 4500 Feet.

With some few exceptions the furniture in the halls and corridors is of antique design and was planned by Irving & Casson, the decorator, who also attended to other details of interior finish. Filing cabinets, desks, telephone booths and all furniture and furnishings are of some shade or tint of brown, and the wall paneling, of walnut, also follows the general color scheme.

The telephone booth and information desk, located at the head of the stairs, is paneled waist high with walnut, and the busy operator is provided with an easy chair although, truth to tell, she has very little time to use the back of it.

Men Have Two Rest Rooms.

The men's rest rooms, two in number, are well furnished, and are at all times supplied with the latest fiction and technical magazines. One of these is for general office men, and the other for service station employees, the latter room being reached from the service station by a stair case constructed for that purpose. There is as yet no lunch room service and, as practically all of the 180 workers are enthusiastic boosters for the "carry-your-lunch" movement, the rest rooms present an animated scene during the noon hour.

Women's Rest Room Model of Comfort.

With all respect to other organizations, and other rest rooms, it is doubtful if any in New England can compare with the women's rest room in appointment. Tastefully furnished in wicker furniture with tapestry upholstering, it is the embodiment of comfort, and the wicker couches and reclining chairs invite the observer, almost against his will, to stop and rest awhile.

Growing things lend an air of outdoors to the quiet room, and the current books and magazines, dear to the heart of woman, are provided for those who would combine reading with rest. Ample drinking water, cool and refreshing, bubbles from an automatic fountain, and the retiring rooms and lavatory are examples of the architect's best mood. And if anyone wishes to know whether the young women appreciate this consideration for their comfort, he has but to look in at the open door during the noon hour.

As one practical minded dealer from Maine remarked, when being shown through the building, "The rest rooms you people have for employees is the best argument for the open shop I know of," and without discussing the ethics of the remark, one is inclined to agree with him in abstract.

The stock room, located in the rear of the first floor, makes one think that he is in the assembly room of a big factory. The large amount of parts carried invoices at one-half million dollars, and contains, in large quantities, practically everything needed to assemble a new Buick or GMC truck, with the possible exception of the body.

Piles of engine blocks, flanked by heaps of rear and front axles, lie close to barrels of hub caps, and some idea of the immense amount of stock can be gained from the fact that even in these days of efficient self-starters, the writer counted seven barrels of hand cranks. It doesn't seem possible that use could ever be found for so many of them, but there they are, and it is obvious that they aren't kept for show.

More than 15,000 cards were necessary to list this vast amount of materials, and 20 clerks under the direction of the advertising manager, comprise the personnel of this department. All small parts, such as springs, valves, nuts, bolts and washers, are dispensed from Durant steel cabinets. These are all arranged by "families," following the system adopted by the General Motors Co., and almost identical with the method of listing books used in the Congressional library at Washington. A new clerk, who had never been inside the department, would be able to start working immediately and, by following simple directions, would be able to locate any article asked for.

For instance, suppose he were looking for a valve spring collar key: He would glance down the aisle until he located the letter "V," the wing cards giving him the location alphabetically. Going to the cabinet so marked he would find "Valve Family" on another wing card, in the corridor, to the right of the aisle. Under

"Valve Family" he would find what he wished for listed alphabetically on another wing card, and the writer can testify to the ease with which he would be able to get what he was after. The illustration will serve to explain the working of the system, which is ideal and efficient.

"Parts" Salesman Keeps Dealers' Stock Complete.

In addition to the large stock carried by the home office, the 108 dealers are also supplied with a working stock of parts, apportioned to the size of their agency. There is no guess work as to whether a dealer is properly stocked either. A very efficient salesman attends to this phase of the matter and spends his entire time in calling on the agents. He doesn't say a word about cars, neither does he claim to know anything about them. He is an expert on parts, and parts alone, and knows exactly what stock each dealer in his territory has on hand at any given moment. He inventories their supplies, suggests ideas for better service and many busy agents have given him the entire charge of their stocks, all of which accounts for the fact that Buick dealers are always well supplied with parts.

No one realizes better than he the importance of at all times carrying as complete a stock as possible and, though the supplies carried by the different agencies total $300,000, it frequently happens that some part is missing, and the company is occasionally in receipt of letters from customers who claim to be unable to get proper service.

Trouble Department Backs Up Dealers.

When this happens the trouble department gets busy. This department is also under the personal direction of the advertising manager, who investigates all complaints personally, first referring them to the president. Endeavor is primarily made to supply the missing part. If neither the home office, nor any other dealer has it in stock in the New England territory, and this can happen with older models, the department tries to get it from other districts. Recently the department got a much wanted part for an old model from San Antonio, Tex., after having been advised of its whereabouts by the dealer at Dallas. All of these emergency inquiries are made by telegraph, frequently at much expense, but the company believes that "Service is service, only as it serves," and goes the limit to adjust matters.

Having supplied the necessary part required by the disgruntled customer, a letter is written telling him why the local dealer was unable to give the service asked. Particular emphasis is given to the fact that the dealer was not at fault, and explanation is made in a logical manner which does much to promote good feeling between owner and agent.

Service Station for Buicks and GMC's Only.

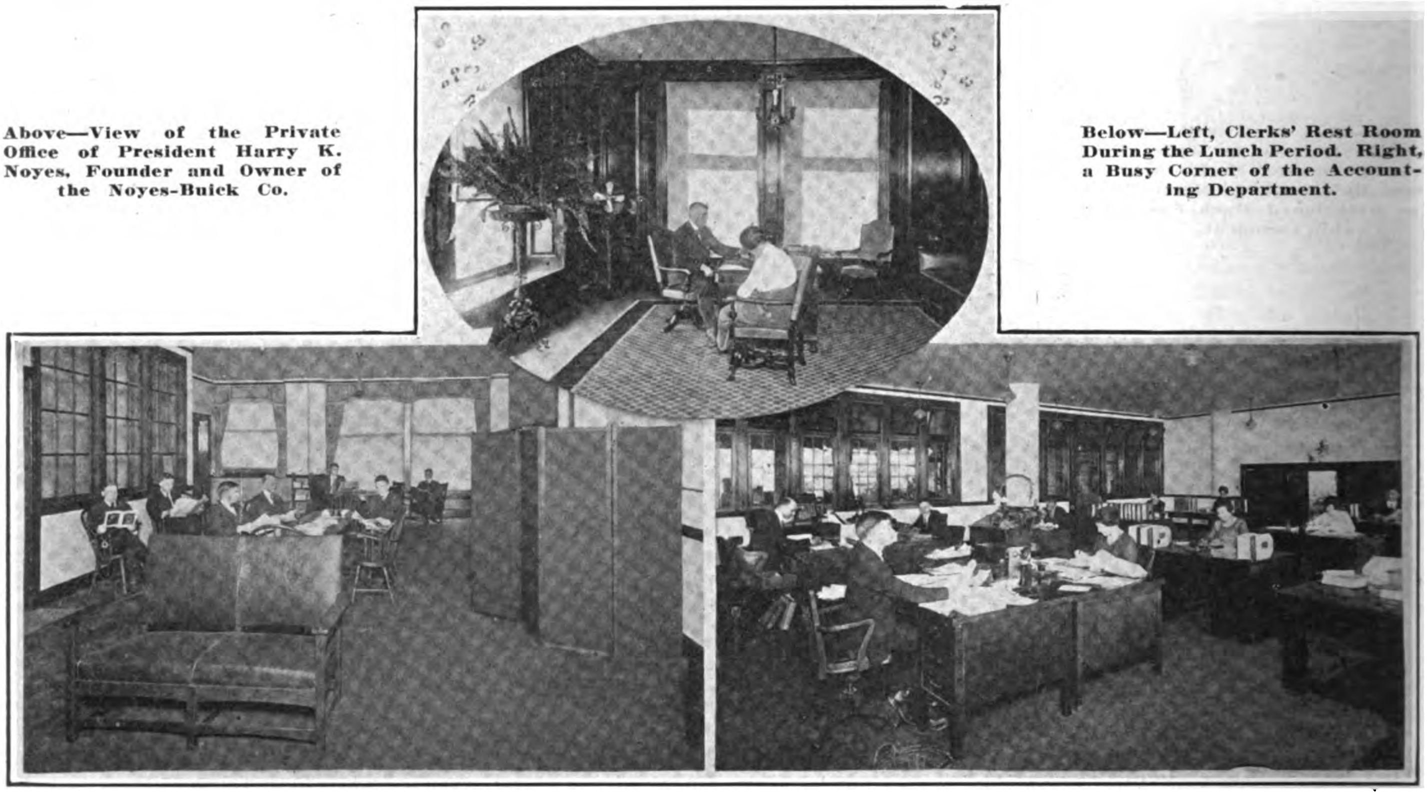
The service station employs 50 men. Practically all of this crew are skilled mechanics who have specialized on Buick and GMC service. They test the cars when they arrive from the factory, and tune them up to the highest degree of efficient operation. No repairs on customers' cars are made unless authorized by an agent, who sends them to the station and only Buick atuomobiles and GMC trucks are serviced. The charge for work not cared for under the guarantee clause in the contract is $1.25 an hour, which, considering the labor saving methods employed and the consequent saving of time, appears to be very reasonable.

A blacksmith's shop, in charge of a competent workman with a corps of helpers, attends to all frame alignment work, and makes a few small parts that are necessary from time to time. The writer was much interested in watching this department straighten out a truck frame that had been bent in nine places, and is prepared to state, from previous knowledge of the trade, that the work was done faultlessly, being exactly true when tried with straight edge and square. The machine shop, also a part of the service station, contains little equipment, as all parts come from the factory milled and ground, and little if any machine work is necessary.

Three Acres of New Buicks.

All cars and trucks, after having been received and tested in the service station, are taken by the twin A. B. C. elevators, which carry four automobiles or two trucks, to the third, fourth and fifth floor for storage. These three floors at present are filled with new cars, and one can get an idea of the number by thinking of a three-acre field parked with orderly rows of automobiles. The visitor hardly believes that so many cars can ever be sold in New England, but Buick is a staple—a necessity of life, so to speak, and the entire allotment for 1921 has already been marketed. Not only that, but the company is trying to get its allotment increased. Despite rumors of bad business in other lines, this concern looks forward to a year of the biggest truck and automobile business it has ever done and, if coming events still "cast their shadow," the view has substantial foundation.

All cars, at the present time, are received in Charlestown, as the company has been unsuccessful in getting a spur track from the railroad, but it is expected that this condition will soon be remedied and deliveries will be made by



Above—View of the Private Office of President Harry K. Noyes, Founder and Owner of the Noyes-Buick Co.

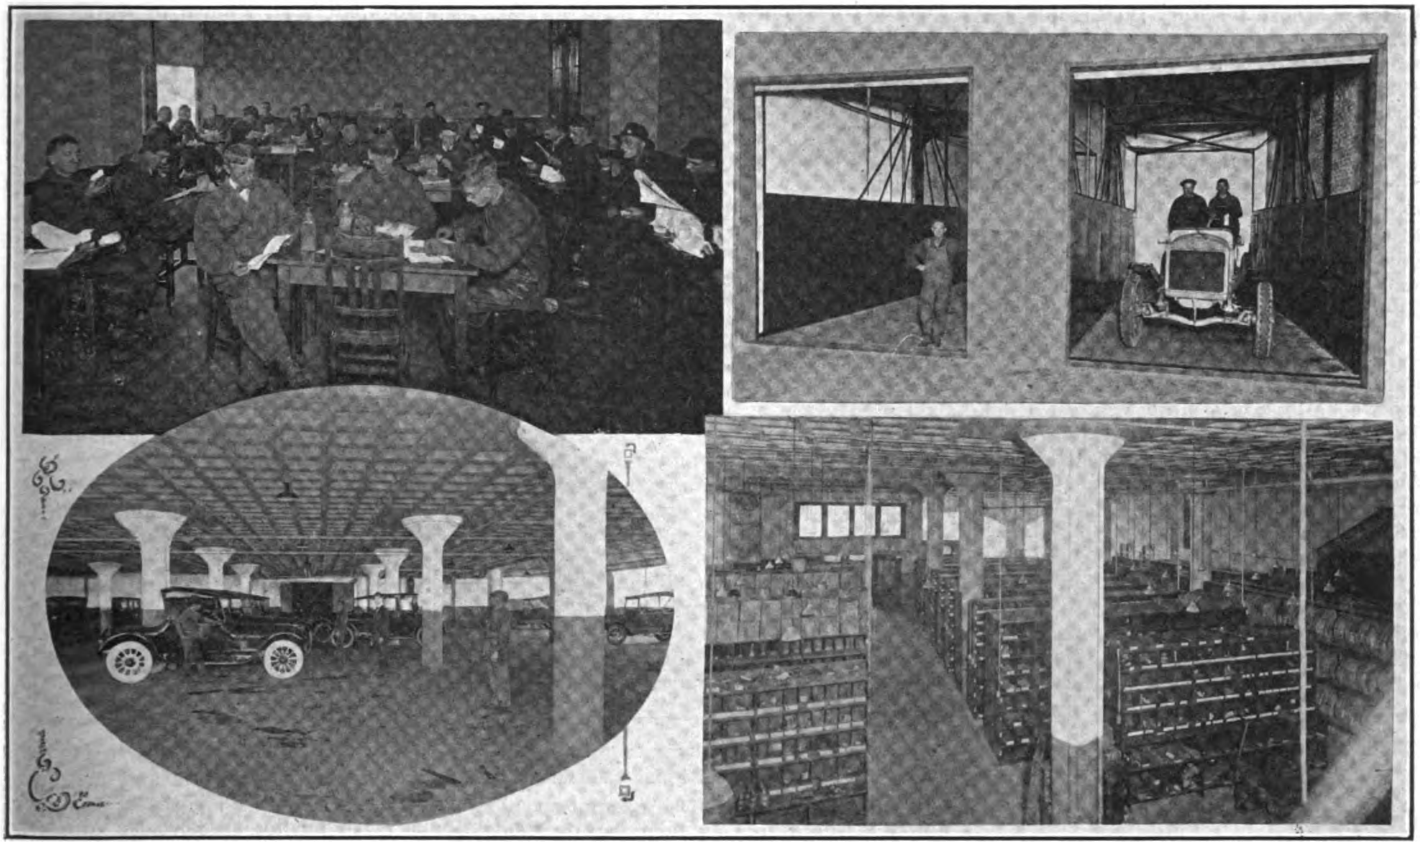
Below—Left, Clerks' Rest Room During the Lunch Period. Right, a Busy Corner of the Accounting Department.

freight, direct to the plant, which is within a few feet of the railroad track.

Garage and Heating Plant in Basement.

The entire basement is used as a storage garage, with the exception of a room for the heating unit, which is a Fess oil burner of the vapor type. Small and easily handled, this little machine heats 35,000 square feet with little effort, and appears to be very efficient. The radiation is all of the concealed, or indirect form, with the exception of certain work rooms, and much clever planning is apparent in the way in which the heat is distributed to the show rooms and offices.

The building has a wet sprinkler system with approximately 2450 outlets, and the piping is concealed. This was installed by the General Fire Extinguisher Co., Providence, R. I.



Above—Mechanics' Rest Room and Twin A. B. C. Elevators. Below—Car Delivery Department and Part of the Stock Room.

The type of construction used throughout the building, which was erected by the Fred T. Ley Co., Inc., Springfield, Mass., is known as "Grid," and the Noyes-Buick building is the largest that has been built in this manner, the main feature of which is the absence of pillars, and the added floor space, all suspension being made by a series of wires which run from the plates of the building at the floor heights to central columns. Roughly speaking, it embodies the principle of the suspension bridge, which permits the carrying of great weight.

The electric lighting system, with the exception of several large, hand-wrought lanterns, is of the indirect lighting type, with concealed wiring, and was installed by Bigelow-Kennard & Co.

Arthur H. Bowditch & Co. was the architect and the whole work of construction and finishing has been done under the personal supervision of Harry K. Noyes, president of the Noyes-Buick Co., the man who made the undertaking possible. Mr. Noyes is modest and retiring to a marked degree and has a wholesome dislike for ostentation in any form but, under the circumstances, it seems proper to print a very short paragraph of the man and his achievements.

He first started in the automobile business in Lowell, as a Buick dealer, and later became New England manager for the Buick Co., located at Boston. His unusual success in business is largely accounted for by his limitless faith which, coupled with his capacity to thrive on hard work, has made him an outstanding figure in the business world of Boston.

The entire personnel of the Noyes-Buick Co. is efficient to a high degree. Everything is done by team work, and there is no set organization. Each department is a unit of the "family" group. The head of the company, Mr. Noyes, has surrounded himself with cheerful, capable workers, and the worst grouch in the world would absorb the idea of good fellowship after working at the plant a few days. It fairly radiates, and the results of the "family" idea have been wonderfully successful.

Team work is the rule and not the exception. Everyone is called by his first name and titles don't go. There aren't any office boys, and even the president distributes his own mail and carries his own messages. The entire workings of the different departments are along lines as simple and plain as the beautiful architectural design of the building, and though said to be a distinct innovation in the conducting of a large business, have proved their value.

All welfare work is in charge of the advertising manager. This part of the organization is too young for much to have been done, but many plans for winter entertainment are being made and a bowling league is being formed. It is possible, too, that community buying of household supplies may come when prices get a bit more stabilized, and the employees feel that this part of the work will be well taken care of if detailed to the same person who picked out the half ton of turkeys which the company gave to the employees at Thanksgiving.

Entire Organization Formed to Aid Dealer.

The motive underlying the construction and intended use of the beautiful building is best described as "backing up the dealer." The management believes that the agent is in reality a salesman and, as such, is a component unit of the organization. It does not believe that he should be left to his own resources entirely, and has planned in many ways to give material aid, which shall result in closer cooperation.

With the return of normal conditions, with car production hovering around the saturation point, a new era has dawned in the automotive industry, and the company feels that the entire future of the business depends not only upon the quality of the product but, to a marked degree, upon the skill shown in marketing. With the boom attendant on war conditions and during the very early stages of the industry, the dealer needed no assistance in marketing his allotment, which frequently was sold without effort, but the future presents a different aspect, and the successful dealer must learn again the lost art of selling.

Efficient Programme of Sales Helps.

It is with this idea, long ago conceived, that the company prepared an efficient programme of sales helps for backing up the dealer. The most important item in the list is probably the new Buick sales room, and its organization of experienced salesmen, who are prepared to handle the trade of all prospective customers from all parts of New England. These purchasers receive the same attention that would be accorded them in the sales rooms of their local dealers, with the added advantage of very attractive surroundings.

Highly trained salesmen wait on the trade and close the sale, if possible, the dealer in whose territory they reside getting the full credit of the sale, at no expense to his account. All that remains is for him to deliver the car, and it is surprising to see the number of sales made in this way.

The resident salesman does not make any transaction involving the handling of a used car but, should the customer desire to make such a trade, takes his name and address on a blank provided for the purpose, which, with other details, are forwarded to the agent with instructions for him to call on the prospect and notify the home office of the result of his canvass. This is followed up in two weeks by a card filing system, which lists the prospect and the dealer in alphabetical and chronological order, and the dealer gets little peace until he has forwarded a report on the prospect.

Sales are frequently made to persons who have come to the place on a sight-seeing tour, and had no intention of purchasing. While such visitors are not solicited directly for their patronage, the shrewd salesman rarely scores a miss on a prospect, and many agents have been agreeably surprised at opening their mail to find an order from some one whom they had never thought of as a prospective buyer.

Special Retiring Room for Dealers.

A dealer can also bring a client to the sales room with the same feeling of confidence and proprietorship that he would assume in his own place of business. Convenient desks are provided for the transaction of business, and the agent is welcome at all times. To assure him of this feeling a very attractive dealers' room has been prepared on the second floor.

This room is large and well appointed, and is lighted by windows for one side of its entire length. It has a marble mantle and a practical fire place, and is furnished with carved antique furniture. Over the mantle is a picture of W. C. Durant, the founder of the General Motors Co., and, on the other side, flanking a large water color of the building, are pictures of H. H. Bassett, president, and E. T. Strong, sales manager of the Buick Co.

In this room the dealer may receive and entertain his customers and friends while in the city, and the organization stands ready and willing to furnish any assistance or attention desired.

Will Aid by Advertising Campaign.

For Buick dealers and prospective purchasers the company is issuing three forms of catalogues. There is a large booklet with a blue and gold cover, illustrated with a complete line of the 1921 product, and general descriptions are detailed in such manner as to be understood by the layman. Another small booklet, for those mechanically inclined, deals with the technical features of the car, and a folder, to be used as a file for the casual inquirer and catalogue collector, has also been prepared, which completes the list.

In addition to this there will appear from week to week large double-page advertisements, as well as smaller ones, in weekly and monthly publications. The form of advertisements to be supplied is of unique and attractive design, and the combined publicity, already planned, is especially forceful and commanding. The catch phrase, "Authorized Service," will be continually and strongly displayed, and the company plans to make every owner a satisfied customer, if service and advertising can be used to make this possible.

In addition to the forms of advertising planned, a system has been developed whereby each agent will have a weekly advertisement in his local paper, over his agency name. Mats and stereotypes will be sent direct to these papers and will appear simultaneously throughout the country, all at no expense or trouble to the dealer.

Management Well Known in Automotive Field.

The entire personnel of the Noyes-Buick Co. has been carefully selected from a long list of applicants, and the officers, especially, have been hand-picked, being men well known in the automotive field of New England, as a glance at the appended list will show. They are: President and treasurer, Harry K. Noyes; secretary and general manager, R. G. Clarke; district managers, W. S. Simonds. F. W. Nichols, H. E. Noyes (also assistant treasurer) and C. H. Richards (who is manager of the truck department); comptroller, C. D. Paige; advertising manager, F. W. Tucker, and assistant sales manager, H. J. Carlson.

With a wonderful new building, a competent management and an ideal product to market, the Noyes-Buick Co. should go far along the road to success. It has the right idea of cooperation and efficient service, and these factors alone will serve to make it one of the most highly developed selling organizations in the country.

THE QUESTION OF TAX REVISION.

The recent recommendations of Secretary Houston to Congress for what he characterizes as a more equitable and just distribution of America's $4,000,000,000 tax burden has occasioned unusual interest throughout the automobile industry and trade inasmuch as several of the proposed measures directly concern every manufacturer of, dealer in, owner or user of a motor vehicle. These specific recommendations are as follows:

A tax of two cents a gallon on gasoline for motor cars and all other purposes, to yield $90,000,000.

A federal license tax of 50 cents per horsepower on the use of motor cars to yield $100,000,000.

Secretary Houston also suggests in addition the following sources of increased income:

A tax of 20 per cent. on corporation profits. distributed or undistributed, in addition to application of a higher surtax rate to yield $690,000,000.

An additional tax of six per cent. on corporation incomes to yield $465,000,000.

Readjustment of surtax rates on incomes to yield an additional $230,000,000.

Abolition of the $2000 exemption allowed corporations on incomes, to yield $58,000,000.

An increase from the present four per cent. to six per cent. in the tax on incomes of $5000 or less, and from eight per cent. to 12 per cent. in the tax on incomes between $5000 and $10,000, the whole estimated to yield $150,940,000 annually.

A 10 per cent. additional tax on theatrical admissions to yield $70,000,000.

As might naturally be expected, Mr. Houston's proposal's to Congress have been received with strong protests throughout the industry. This feeling was well voiced by Alfred Reeves, general manager of the National Automobile Chamber of Commerce in an address to the members of the New York Automobile Dealers' association, immediately following the announcement of Mr. Houston's recommendations. He said, in part, that such measures, if incorporated in the tax laws, would increase by 100 per cent. the taxes now paid by motor car dealers and manufacturers. He added that the automobile industry is paying $143,000,000 annually to the federal government, with state fees of $64,000,000, and personal property taxes and other fees of $50,000,000.

He characterized as an injustice any additional taxes on owners, dealers and manufacturers of motor cars. Farmers own one-third of the 7,200,000 passenger machines in the country, he declared, and more than 100,000 doctors use the motor car as a means of conveyance.

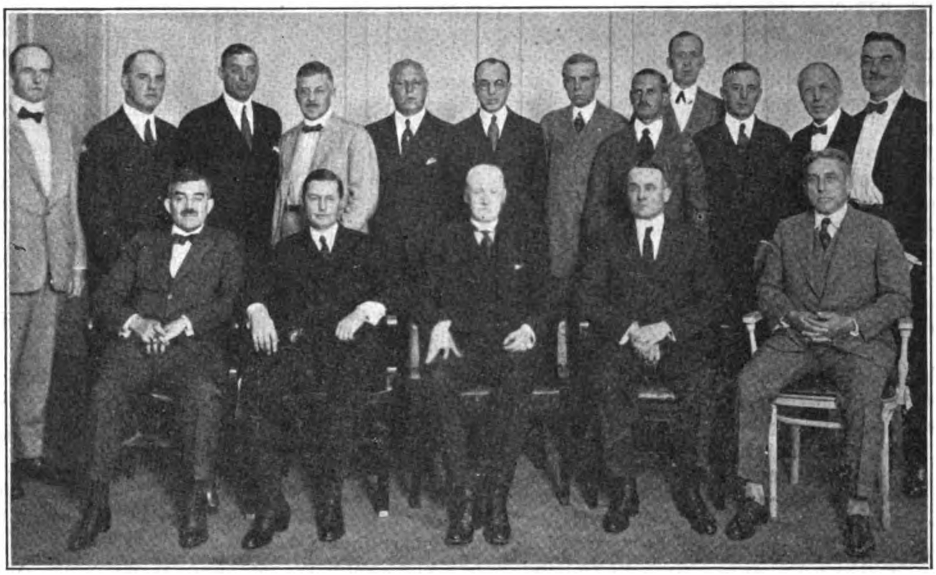
The speaker asserted that although the motor business is now running at less than a 50 per cent. basis, the full year's production will exceed all records, approaching 1,900,000 cars and 340,000 trucks.

Citing as proof of the necessity of the motor car to business and transportation, he said motor car mileage in 1919 exceeded 22,000,000,000 miles, with a total passenger mileage averaging three passengers per car in excess of 66,000,000,000 miles.

Interest in New York Show Presages Season of Prosperity

THE big annual national automobile shows may well be considered an index of the marvelous progress that has characterized the automotive industry in America. For instance, contrast in the mind's eye the first automobile show ever held in this country, in Madison Square Garden, on Nov. 3, 1900, when there were in all 66 exhibits, with the 21st annual New York show to be held in the Grand Central Palace, Jan. 8 to 15, at which there will be some 400 exhibitors of motor cars and accessories. Only those who attended that first crude exhibition can fully realize the wonderful development in all branches of the industry as compared with the latter day de luxe affairs comprising hundreds of beautiful car models shown in an elaborate decorative setting under such ideal conditions as are afforded at the spacious and elegant Grand Central Palace.

It should be remembered that two decades ago motor cars were considered almost as freaks and attracted fully as much attention as such, as from a realization of the tremendous latent possibilities involved in this, at that time unique, type of locomotion. And it is safe to say that not even the most ardent advocates of the future utility and ubiquity of the self-propelled vehicle could hardly have visualized the handsome creations upon which the eye may feast at the coming exhibition. There were no palatial limousines, stately sedans, rakish looking sport or touring models at the initial show, but only the, it might be said, experimental products of a few far-sighted manufacturers who were the pioneers in what has now become the third largest industry in the world.



Officers and Directors, National Automobile Chamber of Commerce:. Stand'ng, J. S. Marvin, Assistant General Manager; Alvan Macauley, Packard; Harry S. Jewett, Paige-Detroit; R. E. Olds, Reo; W. C. Sills, Chevrolet; J. E. Kepperly, Willys-Overland; Fred J. Haynes, Dodge Brothers; Alfred Reeves, General Manager; C. W. Churchill, Winton; J. Walter Drake, Hupp; S. A Miles, Show Manager; William E. Metzger, Columbia. Seated, A. J. Brosseau, Mack; Secretary; Roy D. Chapin, Hudson, Vice President; Charles Clifton, Pierce-Arrow, President; Windsor T. White, White, Vice President; H. H. Rice, G. M. C., Treasurer.

The coming exhibition, which will occupy four floors of the Grand Central Palace, each floor a city block square, will consist of 88 exhibitors, each representing a different make of car, which will bring the total estimated number of passenger cars to be seen up to at least 350.

The New York show will be again under the auspices of the National Automobile Chamber of Commerce, as will also its twin brother, the Chicago exposition, to be held later in the month, and again under the immediate general supervision of S. A. Miles, who may perhaps be said to have had an unusually difficult task this year in whipping the shows into form on account of adverse business conditions which have been reflected in the automobile industry during the past several months. Mr. Miles recently returned from a trip west, in the course of which he saw many automobile men, and expresses himself as confident and even optimistic regarding the outlook.

It already appears that despite the depression evident at certain periods of this year, next season will show a wholesome recovery. The weak spots have been found and, where not entirely eradicated, have been strengthened. Predictions are freely made that a large number of cars will be sold at the January show.

A Practical Side to Exhibits.

While at these events manufacturers of and dealers in every make of car vie with one another to stage an exhibit of beauty, there also is a practical side to each display. The latest models of cars are, of course, shown and, while body design makes a car attractive, it is the engine that now makes the appeal to the majority of present day motor car prospects. Motor car manufacturers have, in the past few years, paid more attention to the power plant. There have been many improvements in body designs, but automobile builders learned many lessons during the period factories were turned over to the government for the purpose of manufacturing war material. Some of the most improved features in engines came as a result of these experiences, and such betterments will no doubt attract attention at the coming exposition.

These refinements tend toward efficiency and economy, thus giving a buyer more for his money and at the same time adding to comforts and conveniences of motoring. No radical changes are expected in body lines, the basic principles of last year proving so popular that they are for the most part being retained. Here and there will be found improved hood and windshield designs, and where these have been made they will undoubtedly add to the attractiveness of a car.

A canvass of manufacturers reveals that more careful attention is being paid to the preparation of exhibits than ever before, and this, with the numerous new models that will be on display, is expected to stimulate interest in a degree that will cause all previous show records to be surpassed. In years gone by some shows have been open to the criticism that they were somewhat drab and colorless, most manufacturers displaying their standard models, finished in dark blue or black. This year, it is expected that the reverse will be true, with somber colors conspicuous by their absence.

General Manager Miles, moreover, predicts that some of the newer models to be on view at the January shows will open the eyes of those who thought the peak in automobile construction had been reached at the 1920 exhibitions.

Practically every make of automobile that has earned a place in the motor car industry will be represented, and there cannot fail to be found some model that will fit the pocket book of every possible prospective buyer as well as to suit the most fastidious taste.

Ten New Makes to Be Seen.

One of the features of the show in New York will be the appearance of 10 makes of cars which have never been seen at the New York show. These include the latest offerings of the Cortland Cart and Carriage Co., the du Pont Motor Co., the Friend Motors Corporation, the Gardner Motor Co., Inc., the Hanson Motor Co., the La Fayette Motors Co., the Lincoln Motor Co., the Lorraine Motors Co., the Noma Motor Corporation and the Piedmont Motor Car Co., Inc.

Another interesting point in connection with these national shows is the fact that the exhibits are made up of cars made in America through and through, and American-made cars only. This is evidence that is given every year that cars made on this side are fully equal to the high priced importations brought from abroad, and these expositions in recent years prove that there is no reason for going to Europe for the best that may be conceived in motor cars.

Accessory Exhibits to Break Record.

The list of accessory exhibitors at the New York show, as given out by the management, numbers 221 different concerns and will undoubtedly equal, if it does not exceed, the unprecedented representation of last season. It should also be borne in mind that as a truck and tractor exhibition was then held coincident with pleasure cars, the concomitant accessories swelled the total number of exhibits, while this season it is to be expected that this department will be more largely confined to passenger car fittings and equipment. All of the latest fads, as well as the many utilities, new and old, which are now demanded as adjuncts to the modern motor car, to say nothing of equipment for private and public garages, etc., will be comprehensively in evidence. The many new inventions appeal strongly to many motorists who are more or less mechanically inclined and always attract great interest.

Manager Miles has planned novel features for the decorative scheme at the palace this season, the details of which have not as yet been divulged. It is certain, however, that the lighting and color effects will be brilliant and will make a setting that will reflect the cars to wonderful advantage.

The fact that the interest in this 21st exhibition at New York is being manifested in a tangible way is shown in Mr. Miles' statement that the applications for exhibitors' invitations, up to the middle of December, showed an increase of approximately 50 per cent. over last year.

WINTER MEETING, SOCIETY OF AUTOMOTIVE ENGINEERS.

Unusual import is attached to the meetings of the Society of Automotive Engineers this winter, inasmuch as it is felt that any retrenchment of engineering activity when sales resistance is high is an unsound economic policy. It is not the time for the automotive engineer to rest on his oars; he must rather accept the responsibility of increasing the sales appeal of automotive products by effecting economies in their design that will justify price reduction. Operation costs must be decreased by increasing efficiencies and providing better accessibility for adjustment and repair. It is considered that the stabilization of the industry and the development of an active automotive market will be greatly dependent upon the work of the automotive engineer during the coming year.

N. A. C. C. OFFICERS AND SHOW COMMITTEE.

President,
CHARLES CLIFTON.

General Manager,
ALFRED REEVES.

Assistant General Manager,
J. S. MARVIN.

Show Manager,
S. A. MILES.

First Vice President,
HUGH CHALMERS.

Second Vice Presidents,
Passenger Cars—
R. D. CHAPIN.
Motor Trucks—
WINDSOR T. WHITE.

Secretary,
C. C. HANCH.

Treasurer,
H. H. RICE.

Passenger Car Show Committee,

Chairman, **JOHN N. WILLYS**
H. G. ROOT,
HARRY M. JEWETT.

Appreciating this fact, the meetings of the Society of Automotive Engineers are being planned to have a more comprehensive scope than ever before and to devote more time to beneficial round table discussion by the conduct of simultaneous technical sessions, an innovation in the proceedings of the organization.

The following programme has been arranged for the annual meeting, which will be held in the Engineering Societies' building, New York city, Jan. 11-13:

Tuesday, Jan. 11—Morning and afternoon, standards meeting, discussion of the revisions of and additions to prevailing S. A. E. standards and recommended practises which will be reported by the divisions of the standards committee. Evening, aeronautic session, technical meeting to consider recent engineering developments in air craft, such as variable camber wings, metal construction, internally trussed wings, retractable chassis and propellers, with the presentation of authoritative papers on these topics.

Wednesday, Jan. 10—Morning, annual business meeting, election of officers, finance, membership, meetings and other committee reports; "The Engineer's Place in the Industry," presented by three prominent executives of the automotive industry. Afternoon, simultaneous meetings: Body engineering session discussing the genesis of a closer cooperation between engineers engaged in automotive work, consideration to be given to tendency in design, construction and methods of production and encouragement of standardization in this field and reduction in body weight. Aeronautic session, discussing the development of commercial aviation using both lighter and heavier than air types, a presentation of the progress of air transport in Europe and study of its future possibilities in America. Chassis session, considering the increase of the efficiency of the automotive chassis to conserve fuel, study of mechanical losses, advisability of smaller engines and higher axle ratios, reduction of sprung and unsprung weight and the possibilities of European types of small cars in America.

Evening—The carnival, the social S. A. E. event of the year.

Thursday, Jan. 13—Morning, fuel session, discussion of the efficient utilization of the present high end-point gasoline in internal combustions, analysis of valuable research in the phenomena of combustion and detonation, and employment of increased compression pressure with knock eliminated. Afternoon, simultaneous meetings: Continuation of fuel session, including the consideration of combustion and flame propagation, distribution problems, the petroleum refiner's viewpoint, extent and effect of crank case dilution and a symposium of the present views of leading authorities; highway session, discussing the effect of the heavy automotive vehicle on highway surface, and the study of subsoil and its relation to surface durability—a meeting to further develop cooperative contact with the civil engineer who builds and maintains the road bed on which automotive products operate. Evening, annual S. A. E. dinner at the Hotel Astor at 7 o'clock.

Chicago Meeting.

On Feb. 2, at the Hotel Morrison in Chicago, the society will hold two technical sessions, morning and afternoon, one being devoted principally to the consideration of truck design trend, introducing a paper on an interesting steam truck development, and the other dealing with the operation of automotive vehicles from the viewpoint of the service man and the owner, offering an opportunity for the operator to constructively criticise engineering errors in design.

In the evening will be held the annual S. A. E. dinner of the Mid-West section.

Columbus Meeting.

Two technical sessions will be held the morning and afternoon of Feb. 10 at the Hotel Deshler, in Columbus, O., which will be devoted to the consideration of farm power engineering, trend of tractor design, plowing and belt speeds and the faults developed in the Nebraska state trials, and the adaptation of stationary farm engines for lighting, pumping and utility uses.

In the evening will be held the farm power wagon dinner, the annual get-together of the tractor, lighting plant and farm engine divisions of the automotive industry.

First Annual Exhibition of Ohio Automotive Trade Association at Cincinnati, O.

THAT the activities of the Ohio section of the accessory trade were well exemplified this year in the fourth annual convention and first annual exhibit held under the auspices of the Ohio Automotive Trade association in Music hall at Cincinnati, Dec. 7-10, is signified by the statement that there was a total of 141 exhibitors and that the records showed an official registration of 1080 people.

An improved business aspect was reported and the trade outlook was stated to be decidedly brighter.

The convention was called to order at 1:15 Tuesday afternoon, Dec. 7, the exhibit having already opened at 9 a. m. Mayor John Galvin extended the greetings of the city, and the welcome in behalf of the Cincinnati Automotive Trade association was given by its president, A. C. Mundew. These were fittingly acknowledged by A. E. Mitzel, president of the state organization. Then came a period for the transaction of routine business, the announcement and appointment of committees, the presentation of the report of Manager E. J. Shover, and the official address of President Mitzel. The remainder of the afternoon was taken up by papers on the "Intelligent Equipment of Garage and Service Stations," by Charles F. Hodgson, secretary of the Weaver Manufacturing Co., Springfield, Ill., and "Selling Service Intelligently and Its Relations to Sales," by P. E. Chamberlain, manager of the R. R. Hall Cadillac Co., Denver, Col.

The first day closed with an informal reception and dance at Hotel Sinton.

Papers of Second Day.

The afternoon of the second day was devoted to the presentation of papers on "The Future of the Truck," by A. W. Osborn of the White Co., Cleveland, O., in which were cited examples of how trucks have aided in the commercial development of the country and an even greater field of utility was forecast; "The Motor Vehicle Industry and Our Confidence in It," was discussed by W. O. Rutherford, vice president of the B. F. Goodrich Rubber Co., Akron, O.; H. B. Harper, who was scheduled for a paper on "What Constitutes Good Merchandising," did not arrive until late in the afternoon, his train having been delayed, and he was obliged to curtail his remarks on account of an engagement at another convention in the South. He made a number of pertinent suggestions on the used car question and offered, as a solution of some of the problems involved, for dealers to handle such cars on a consignment or commission basis.

Round table discussions were also held as follows: "Passenger Car Dealers," Warren E. Griffith, chairman; "Truck Dealers," Y. B. Jones, chairman; "Garage and Service Stations," Andy Auble, chairman; "Tires and Automotive Equipment," A. H. Draime, chairman; "Electrical Dealers," Don A. Parshall, chairman; "Tractor Dealers," F. M. Loomis, chairman; "Ohio Automotive Equipment Jobbers' Association," J. C. Hipp, president.

NEW OFFICIALS OF OHIO AUTOMOTIVE TRADE ASSOCIATION.

President, Warren E. Griffith, Landman-Griffith Co., Toledo.

First Vice President, Y. B. Jones, Mack International Truck Corporation, Columbus.

Second Vice President, Roy Faulkner, F. J. Santry Co., Cincinnati.

Directors:

Charles B. Ratterman, Ratterman & Co., Cincinnati.

Dr. R. T. Kennedy, Roberts & Kennedy, Bucyrus.

Howard G. Wiley, Springfield Motor Car Co., Springfield.

Leo J. Collier, Mahoning Buick Co., Youngstown.

E. J. Shover, manager, is appointed by the directors.

The evening was occupied with a theater party at B. F. Keith's.

Third Day's Discussions.

Several pertinent papers made up the discussions for the afternoon of the third day. Harry G. Moock, general manager of the National Automobile Dealers' association, talked on "The Need of Organization," and outlined what that organization is doing for the trade. In the course of his answer to the question, "What Are the Real Functions of a Dealer?" George C. Hubbs, vice president and general manager of the Grant Motor Car Corporation, Cleveland, O., made some criticisms of trade methods and suggested improvements. "What Is Going on in the Automobile Industry" was the topic assigned to Edward S. Jordan, president of the Jordan Motor Car Co., Inc., Cleveland, O., and he emphasized the need of more efficient methods in selling. While the speaker did not predict any enormous return of volume of business in a brief period, he was of the opinion that dealers should be foresighted enough to get stocked up sufficiently and in good season to be prepared for a brisk spring demand. A. R. Kroh of the Goodyear Tire & Rubber Co., Akron, O., gave a strong presentation of the relations between "The Banker, the Farmer and the Motor Vehicle.

The association's annual banquet was held in the evening at Hotel Gibson.

Activities of Last Day.

On Friday, the last day, the forenoon was devoted to various important matters of business, following an address on "This Year and Next in the Automotive Industry," by Ray Sherman of New York city.

It was recommended that a committee work for uniform state wide franchises for freight and passenger carrying vehicles.

Support was pledged to a uniform anti-theft automobile law.

Legislation was favored against obliterating the identification marks on storage batteries.

A uniform traffic bill was favored, with the reservation that it would be dangerous to change the present laws until cars are no longer taxed as personal property.

Disfavor was recorded in the case of factories which permit "national buyers" of trucks to secure parts at about the same discount as the dealer gets.

It was recommended that cash payments on trucks should not be less than one-third the list price, and that passenger car dealers consider the suggestion. Twelve months was favored as the limit for completing the time payments.

The consensus of opinion was in favor of holding the convention in Columbus next year.

The event came to a most enjoyable social climax in the evening when what was termed "A Session of Mystery" was staged in the dining room of Music hall under the immediate supervision of the Cincinnati entertainment committee. It is reported that especial credit is due E. P. Zachmann for the originality and success of this feature.

The retiring president, A. E. Mitzel, who has been prominently connected with the organization practically since its inception, was the recipient of a diamond Masonic ring as he turned the chair over to the new president, Warren E. Griffith.

The plan of devoting a half day each session of the meeting exclusively to the exhibits proved satisfactory to all interests, and there is no doubt that these displays will continue to be made a part of the annual conventions of the associations in the future.

List of Exhibitors.

The principal exhibitors were as follows:

Advance Automobile Accessories Corp., American Bureau of Engineering, Inc., Apco Manufacturing Co., Au-To Compressor Co.

Badger Manufacturing Corporation, Bantlin, Julius J. Co., Black & Decker Manufacturing Co., Buell Manufacturing Co., Buob & Scheu.

C. & D. Auto Supply Co., Canedy-Otto Manufacturing Co., Central Brass & Fixture Co., Champion Ignition Co., Champion Spark Plug Co., Cincinnati Automobile Co., Cincinnati Auto Specialty Co., Cincinnati Ball Crank Co., Cincinnati Screw Co.. Cincinnati Storage Battery Co., Columbus Varnish Co., Cooper Auto Supply Co., Cooper, I. J., Rubber Co., Cooper Storage Battery Mfg. Co., Corcoran Manufacturing Co., Corcoran-Victor Co.

Dayton Iron & Steel Co., Dayton Wire Wheel Co., Dole Valve Co., Dover Stamping & Manufacturing Co., Durkee-Atwood Co.

Eastern Rubber Co., Eclipse Manufacturing Co.

Fairbanks Co., Fleckenstein Visible Gasometer Co., Franco Electric Corporation.

Gates Rubber Co., General Asbestos & Rubber Co., Giant Grip Manufacturing Co, Gill Piston Ring Co., Gilmer, L. H. Co., Gordon, J. Co., Griswold-Sohl Co., Guthard, Edgar C. Co.

Hansen Manufacturing Co., Heller, W. C. & Co.

Indianapolis Air Pump Co.

J. & B. Manufacturing Co., Jeavons Co., Johns-Manville, H. W. Co., Inc., Justus & Parker Co.

K-D Lamp Co., Kellogg Manufacturing Co., Kruse Hardware Co.

Lawson, F. H., Co., Las-Stik Patch Manufacturing Co., Liberty Mfg. & Sales Co., Inc., Louden Machinery Co.

Macbeth-Evans Glass Co., McQuay-Norris Manufacturing Co., Metal Stamping Co., Mid-West Manufacturing Co., Mueller Electric Co., Multibestos Co.

National Jack Co., New Era Spring & Specialty Co., No-Leak-O Piston Ring Co., Northwestern Chemical Co.

Ohio Rubber Co., Outlook Co.

Pennsylvania Piston Ring Co., Inc., Pennsylvania Rubber & Supply Co., Polson Rubber Co.

Raybestos Co., Rosler Howard Corporation.

Shaler Co., C. A., Smith Bros. Hardware Co., Stanwood Equipment Co., Star Rubber Co., Security Manufacturing Co., Sterling Manufacturing Co., Storm Manufacturing Co.

Templeton, Kenly & Co., Thermoid Rubber Co., Thompson-Neaylon Manufacturing Co., Tide Water Oil Co., Toe Water, G. M. & Co., Trexler Co., Tuthill Spring Co.

Uniform Hood Lace Co., United States Air Compressor Co., Universal Tool Co., Inc.

Walker Manufacturing Co., Weaver Manufacturing Co., Wedler Shuford Co., Weindenhoff, Joseph, Westinghouse Lamp Co., Wilson, K. R., Wright Manufacturing Co.

York Supply Co.

X Laboratories, Inc.

OFFICERS OF OHIO AUTOMOTIVE EQUIPMENT ASSOCIATION.

During the annual convention of the Ohio Automotive Trade association at Cincinnati, O., the Ohio Automotive Equipment association also held a meeting at which officers were chosen:

President, H. H. Brenner, I. J. Cooper Rubber Co., Cincinnati; vice president, Curtis Sohl, Griswold-Sohl Co., Columbus; secretary, C. H. York, York Supply Co., Greenville; treasurer, Charles E. Justis, Justus & Parker Co., Columbus.

Cooperation the Keynote of Hardware Convention

THERE was a representative attendance at the big annual convention and exhibition of the Automobile Accessories branch of the National Hardware association in the St. Louis Coliseum, Nov. 30-Dec. 3, and cooperation was the keynote of what is reported to have been, without doubt, one of the most constructive meetings in the annals of the hardware trade. Jobbers and manufacturers were apparently vying with each other in an effort to boost the things that make for the more efficient distribution of automotive accessories, equipment and supplies. Throughout the sessions the interests of the retail hardware dealer were given constant consideration; his progress and development and the means for aiding and stimulating them were frequently and exhaustively discussed, and it seemed to be the consensus of opinion that the hardware channel is one of the most logical and legitimate outlets for the distribution of accessories.

In regard to the displays it is stated that the total number of manufacturers represented was well upwards of 300, and it resulted in a very comprehensive showing of everything pertaining to the equipment and upkeep of the modern motor car. The National Hardware association adheres to the policy of providing exhibition facilities free to manufacturers, and every inch of available space in the big Coliseum was utilized in forceful, instructive exhibits, and, at the same time, every booth was in charge of high grade salesmen, competent and eager to present, in an effective manner, every detail in the construction and use of the products displayed. It was a veritable revelation of the progress and possibilities of the industry to the hundreds of jobbers who attended.

The volume of sales is reported to have been fully up to the expectation of those versed in the business status of the trade at the present time, while the profitable relations established between the exhibitors and high class jobbers will doubtless be reflected on the order books of the manufacturers for years to come.

Pertinent Opening Addresses.

In his opening address as chairman of the Automobile Accessories branch, A. H. Nichols declared that "The automobile and its accessories are not confined to any particular class or location for the demand is everywhere, it being estimated that more than 2,500,000 automobiles are used by the American farmer." Mr. Nichols also stated that he often wondered if hardware jobbers fully realized the great opportunity and impetus the accessory industry has given both dealers and jobbers to increase the volume of their accessories business.

Mr. Nichols took charge of the meeting following a short address by A. H. Decatur of Boston, president of the National Hardware association, who extended the official greetings to all members and visitors present, and stated that he looked forward confidently to at least a normal business in 1921 in all branches of the hardware business.

Hon. Henry W. Kiel, mayor of St. Louis, extended a welcome from the city to the members of the convention and directed attention to the many points of interest to the guests.

H. G. Geller, chairman of the St. Louis general committee in charge of the entertainment features of the convention, introduced A. L. Shapleigh, who addressed the association on the business and financial outlook for 1921. "Keep the Green Light Burning," in the sense of proceeding with caution, but without fear, was the slogan he wished adopted and, after reviewing the general business situation he quoted statistics purporting to show that the conditions existing in the United States are fundamentally sound.

Charles F. Hatfield, general manager of the St. Louis convention bureau, spoke about St. Louis' advantages and resources.

H. E. Hulburd of the George Worthington Co., Cleveland, O., touched upon the growing tendency to recognize the hardware retailer as the logical accessories distributor, and considered the probable development in the accessories market from the wholesalers' viewpoint. This led to a general discussion in which the chairman, W. H. Terstegge, R. O. Smith and others participated.

J. H. Faw, in considering the accessories market from the standpoint of the manufacturer, epitomized the problem in the three words, Need, Value and Service.

"If we all succeed in carrying out these principles," he continued, "our various establishments will have justified themselves, and we will have the satisfaction of a duty well performed and the business world will be the better for our influence."

The present condition of accessory stocks was discussed by W. S. Isherwood, Champion Ignition Co., Flint, Mich., who said that as far as he had been able to find out live jobbers and the large dealers have their stocks in pretty good shape now. But he said he had also found many cases where they were subnormally low.

Secretary Fernley Urges Optimism.

T. J. Fernley, secretary of the National Hardware association, then addressed the meeting, expressing gratification at the auspicious opening of this third annual convention. After urging members to disseminate the optimistic spirit, he touched upon the question of the guaranteeing of prices, which provoked a somewhat general discussion, and an expression from the assemblage seemed almost unanimously in favor of a guarantee in some form. Mr. Fernley also touched upon the question of the classification of jobbers and dealers, and said it was up to the manufacturers to make their own classification of the trade.

W. B. Biggers, president of the American Hardware association, opened the Wednesday morning session by an address on the general outlook for 1921, in the course of which he made the following pertinent aphorisms: "Deflation is always painful, but it should be met fearlessly and in a business like way. Do not allow the accumulation of unwieldy stock. Frequent turnover is always important, but doubly so in a period of declining prices. Turnovers, not leftovers, are what yield a profit. We should all seek to increase efficiency in our sales departments and carefulness and watchfulness in our credit departments. This is a good time for affiliation with trade associations, as we will need all the information we can secure. This is a good time for cooperative competition, which should advance our whole industry instead of leading to demoralization. If we will have steadiness, sanity, confidence; if we will exercise common sense and ordinary business sagacity, then the present disorganization should be followed in the first half of next year by good, active, healthy business at moderate profits which, after all, are the best for all in the long run. There are three kinds of automobile dealers—the self-starter, the hand cranker and the trailer. Figure out which kind you want to be."

Rivers A. Peterson, editor of the National Hardware Bulletin, spoke on the subject of assisting the dealer, in the course of which he made the statement that quantity discounts are working to the disadvantage of the small town dealer who is not justified in buying large quantities of any one article at a time, and a discussion of quantity price schedules followed, which was led by a paper by J. T. Donohue based on the experiences of the Moto-Meter Co.

The matter of catalogue compilation was then considered at some length.

Thursday morning's session was opened with a discussion on "Developing the Dealer," by W. R. Hay of the Kelley, How, Thomson Co., Duluth, Minn., in which he pointed out that it is bad policy to try to overload the dealer at any time, but that the possibilities of large sales of accessories through the hardware dealer are unlimited.

Felix Van Cleef of Van Cleef Brothers, Chicago, delivered a significant address on the subject of stimulating dealer interest, which he summarized as follows: "I want to say that the dealers who come into direct contact with the ultimate consumer are the real salesmen of the industry and unless they know how to sell the goods the industry will suffer."

F. J. Tenk of the Tenk Hardware Co., Quincy, Ill., spoke on the subject of the compensation of salesmen, and it was followed by a general discussion.

Mr. Campbell of St. Louis, one of the large automobile accessory distributors of the country, outlined briefly some of the difficulties confronting large buyers today.

The subject of the cash premium was introduced by Edward O. Faeth of the Stowe Supply Co., Kansas City, Mo.

The first subject treated at Friday's session was on the improvement of methods of distribution of tires and tubes, and the initial speaker was F. R. Goodell of the Converse Rubber Shoe Co., Walpole, Mass. He stated that during the calendar year now coming to a close about 50 per cent. of the tire and tube product of his concern was distributed through hardware trade channels. He said that in every case that had come under his observation the successful jobber was the one who specialized; in short, the one who departmentized thoroughly, who had a capable and trained executive in charge and, perhaps, one or more specialty accessory sales men.

Glover S. Colladay of the Frank Colladay Hardware Co., Hutchinson, Kan., treated the same subject from the angle of the small jobber, and G. S. Shugart gave some interesting information on conditions in the tire industry.

H. A. Patterson addressed the convention on the subject of proposed legislation affecting automobile owners, which is coming up at the next session of Congress, and which will attempt to regulate the use of glaring lenses.

When the subject about the next place of meeting was brought up the majority seemed to favor Atlantic City.

Before adjournment President Decatur stated that in his official capacity he felt responsible for outlining briefly the attitude of the Jobbers' association. He said that the jobbers are not hoping and looking for lower prices. They do not want a depression in prices. That is the last thing that any sensible jobber would be looking for. There are high spots that should be changed; but do not get the idea that every jobber is wishing for or will be crowding you for lower prices. He also urged the manufacturers to go to jobbers who are not already in the accessory business and point out to them the fact that there is opportunity for them to maintain in this way the former inflated volume of business when business drops now to normal.

Entertainment Features.

In conclusion it should be mentioned that the entertainment features were of a particularly high order, including an informal dance at Hotel Statler, a smoker and one of the most enjoyable banquets of the season at which the vaudeville and musical programme was interspersed by toasts by men well known in business and political circles.

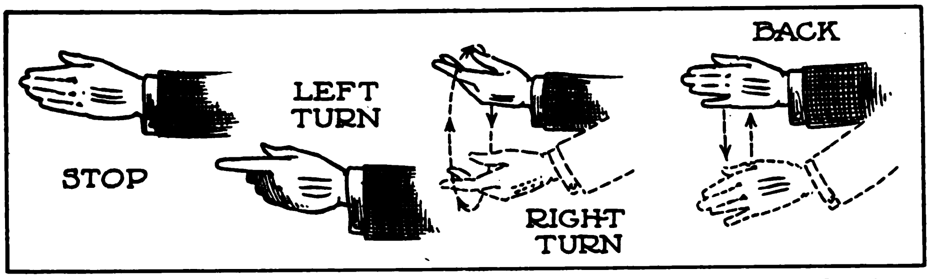
The committee chairmen were as follows: H. W. Geller, Geller, Ward & Hasner, general committee; R. H. Ogle, Shapleigh Hardware Co., finance; H. J. Hopkins, Geller, Ward & Hasner, entertainment; Alexander Witte, Witte Hardware Co., hotel; A. B. Berge, Coe-Stapley Manufacturing Co., programme; E. P. Hellmuth, Geller, Ward & Hasner, publicity; O. W. Witte, Witte Hardware Co., exhibits; T. Frank Wood, Shapleigh Co., reception.

CODE OF APPROVED SIGNALS.

Register of Motor Vehicle Frank A. Goodwin of Massachusetts has approved a series of hand signals for power vehicle drivers which are practically the same as have been approved by the state officials of Connecticut.

The imperative need of a system of signals is admitted. Hundreds of avoidable accidents happen daily that are the result of failure of one or more drivers understanding what seemingly is clear enough to the observer. The principal reason is that with no accepted code of signals the intention of the drivers is unknown or may be misunderstood. Massachusets and Connecticut have the largest number of vehicles of the six New England states, and with these two commonwealths approving the code there is reason to believe that the other states will approve them.

The signals are described as given by a driver seated at the left side of the machine, but they can be given quite as well with either hand. The code is as follows:



The Code of Hand Signals for Power Vehicle Drivers Approved by Massachusetts and Connecticut to Simplify Day Driving.

STOP: Extend the left arm and hold it stationary, with all fingers extended and close together.

LEFT TURN: Extend the left arm and hold it stationary, with the index finger pointing and the outer three fingers closed.

RIGHT TURN: Extend the left arm with the fingers extended and the palm upward and rotate it from the rear to the front.

BACK: Extend the left arm with the fingers open and close together and the palm vertical, and move it upward and downward from a horizontal position.

TURNING: Give the "Left Turn" signal and repeat it until the vehicle has been turned and can be driven directly ahead. When turning always drive forward and turn into and with the traffic moving in the direction opposite to line of original movement.

The arm of the driver should always be extended full length and held a sufficient length of time to justify observation of the drivers following.

The reader will note that the signal to stop is what has been very generally accepted for both turning and stopping, and there is little probability of confusion or accident in the event of the driver making the signal not being precisely understood.

NOTES OF INDUSTRY AND TRADE

Neu Metal Co. Moves to Binghamton

The Neu Metal Products Corporation has just been organized for the purpose of manufacturing in Binghamton, N. Y., the several products of this company that have already become well known. The new concern takes over the business of the concern of the same name that has been manufacturing "neu metal" in New York city for several years.

This product is designed to mend leaks in all kinds of materials, including iron, steel, enamel and aluminum, without the use of heat. It is said to be a remarkable invention.

A second product to be manufactured is C-Cleer, a substance to be used to keep rain and snow from automobile windshields and to prevent steam from forming on windows.

Several other specialties are to be included in the company's lines of manufacture, including an automobile polish.

The officers, recently elected, are: President, Fay E. Spawn; vice president, Archibald Howard; secretary and treasurer, H. H. Hathaway. A factory is in operation at 221-223 Washington street.

KLAXON PLANT CHANGES HANDS.

The Klaxon Co.'s plant, situated in Newark, has been sold to the Wallace-Tierman Co. of New York city according to a recent announcement by the Kraemer agency, which acted as agent in the transaction. The Klaxon firm, which was originally organized as the Lovell-McConnell company, manufactures automobile horns. It is now a subsidiary of the General Motors Corporation, which purchased the Bloomfield plant of the International Arms and Fuse Co. The General Motors Corporation decided to move the Klaxon organization from Newark to Bloomfield, and the work of transferring equipment from the Wright street factories is now under way. It will be completed before Dec. 31, when the Wallace-Tiernan company will take possession.

The Wright street plant covers 23 city lots, with groups of buildings numbered from one to six.

NEW OFFICERS OF RICHARDS CO.

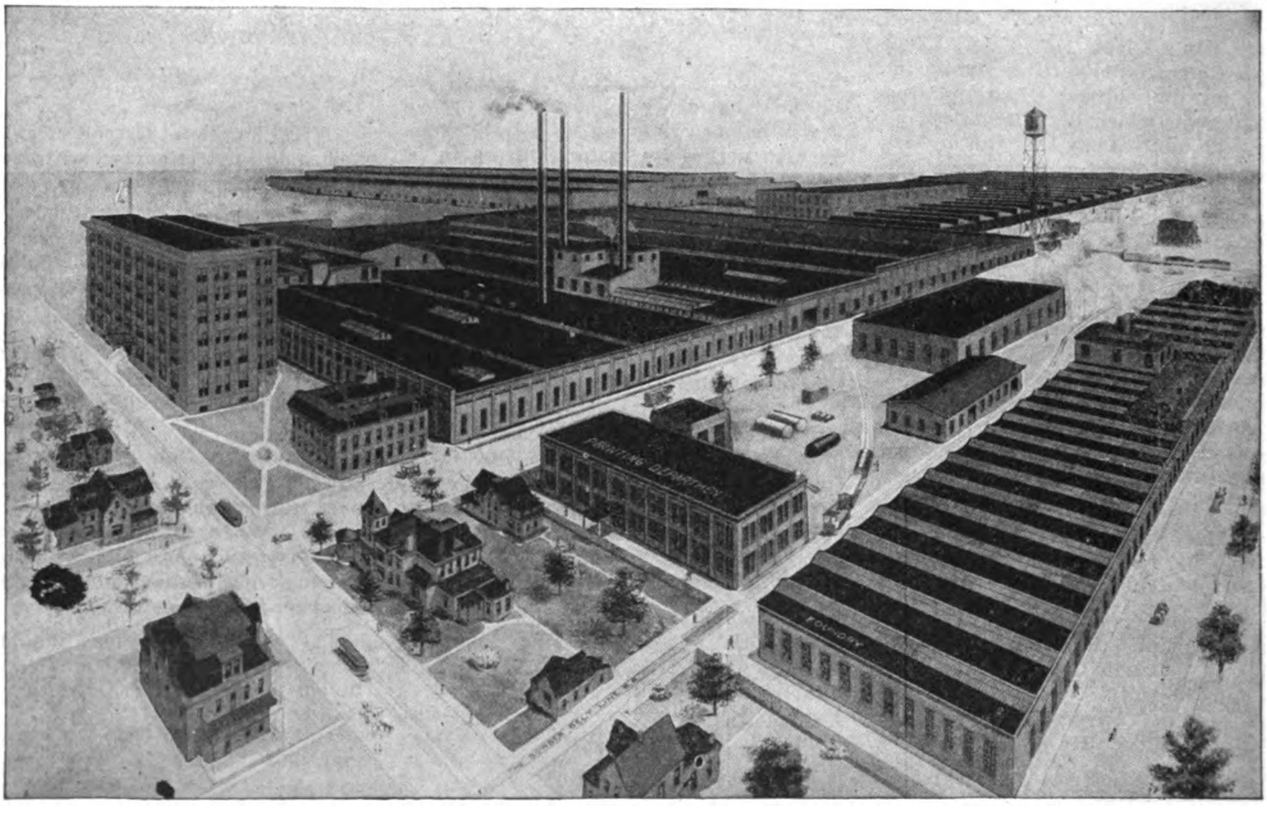
The Richards Motor Co., Chattanooga, Tenn., distributing Locomobile, Briscoe, Mercer, Maibohm and Sayers, elected the following officers at a recent meeting: President, J. C. Richards; vice president, D. Minard Shaw; treasurer, Stephen E. Wade; secretary, Sydney H. Vaught. E. H. Cornes was re-elected sales manager and Marshall Kratzer cashier. For the last two years Mr. Shaw has been Nashville manager for the Herff Motor Corporation, wholesale distributor for Fiat and Briscoe.

Hercules Corp. Forms Big Merger

Announcement has been made of the merger of five Evansville, Ind., manufacturing plants more or less directly allied to the automotive industry, into one organization known as the Hercules Corporation. The concerns involved are the Hercules Buggy Co., the Hercules Wheel Co., the Hercules Gas Engine Works, the Hercules Body Manufacturing Co. and the Indiana Color & Varnish Co. The new corporation will have an authorized capital of $8,000,000, $6,000,000 of which will soon be issued. William H. McCurdy is president.

FALLS RIVET CO. BUYS AKRON CONCERN.

The Falls Rivet Co. of Kent, O., has purchased the machinery, patents and patterns relating to the manufacturing of cotter pins and flat spring keys from the Ohio Wire Goods Manufacturing Co. of Akron, O., and will add the business to its established products of rivets, bolts and nuts. Department heads formerly in the employ of the Akron company have all been added to the personnel of the Kent company and the machinery, having been moved to its new location, is already at work.



The Magnificent Plant of S. F. Bowser & Co., Fort Wayne, Ind., Built on the Site Where S. F. Bowser, the Founder and President, Conceived the Idea Which Has Proven So Potent in Modernizing the Present Oil Storage and Distributing System. A Subsidiary Company Is Located at Toronto, Canada.

NOVEL TEST OF CAR'S RIDING QUALITIES.

Goldfish in South Dakota have a soft time of it apparently. They are cared for as carefully as the most valuable Pekinese dog, and report comes of a bowl full of the shining beauties which has just been taken on a 573-mile automobile trip in a new Overland sedan. The demonstration was made to test the riding qualities of the car, which was driven by Miss Lois Bauch, champion high diver of the state, and ample proof of the ease and comfort of a journey in this car was given by the fact that although the trip was made in 54 hours the bowl containing the fish was as full at the end of the run as at the start. The gold fish apparently enjoyed the ride and that they were much interested in the scenery is not contradicted. They frisked around in dashes of red and gold and never a drop of water splashed overboard.

HAYNES AUTOMOBILE CO. NOT SOLD TO FORD INTERESTS.

Alton G. Seiberling, vice president and general manager of the Haynes Automobile Co., Kokomo, Ind., is authority for the statement that rumors to the effect that Henry Ford or associates have bought or are negotiating for the purchase of the company are false. There is said to be absolutely no intention of changing the policy, or selling any of the stock, and the management has outlined an extensive programme for future business which promises to be good.

OLD FASHIONED DEMONSTRATION SELLS BRISCOES.

A. J. Shorey, president of the New England Velie Co., distributor of Briscoe and Velie products for New England, in a recent statement said that there are now 42 Briscoe dealers in the Pittsburgh, Pa., section, over 30 of whom maintain a complete stock of Briscoes. They have resorted to the original sales tactics of demonstrating cars and, even though business has shown a falling off in many lines, has, nevertheless, succeeded in moving a large number of cars.

TEXAS ASSOCIATION'S NEW ORGAN.

The Texas Motor Car association has decided to supercede its original house organ, the Texan, with a new publication to be known as the Motor Monthly, which will make a direct appeal to the company's stockholders and the general public as well, as it is intended to broaden its scope so as to discuss and disseminate news relating to the automotive industry. It will be conducted by a competent publicity man, assisted by a board of editors.

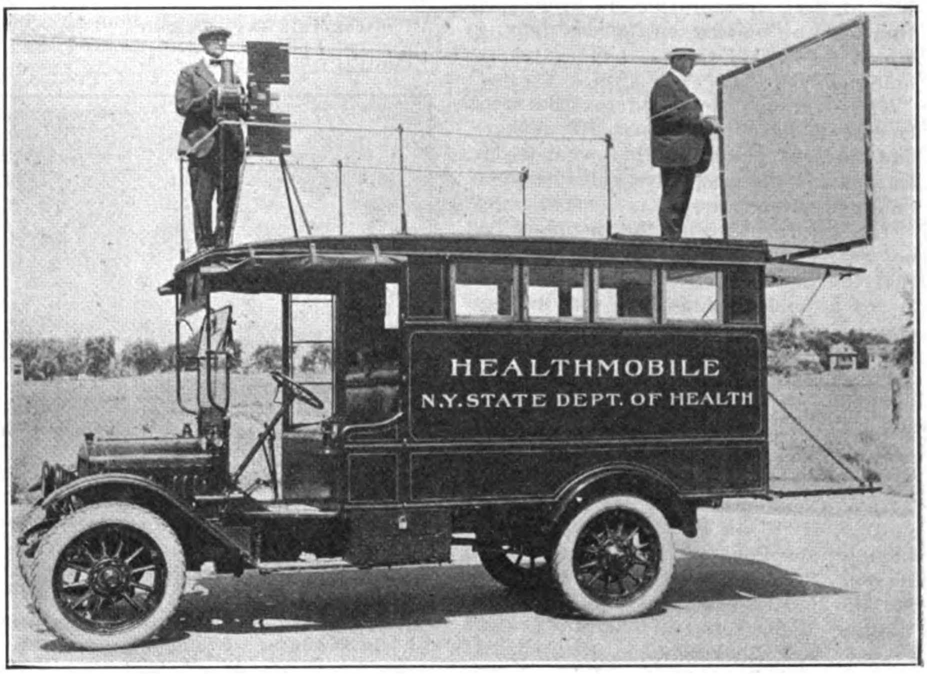
The yearly sales for the General Electric and Westinghouse companies, based on the new business during the last six months, are estimated to reach $550,000,000.

Fighting Disease with Healthmobile

The Department of Health of the State of New York is using a Healthmobile as a weapon to carry the fight against disease into the rural districts. This move is taken advisedly, as figures show that there is more disease in the country than in the city.

This Healthmobile is one of the latest utility outlets for the motor truck. The machine is a ¾-ton GMC truck, with a special body. In the truck have been installed a Delco ¾ kilowatt generator and a Powers projector, fitted to run on this current, which makes the travelers independent of local sources of electricity. A large variety of screens and a big assortment of films are carried.

This machine has been used the past summer in an intensive Child Welfare campaign. One day stops are usually made at each point. The morning is usually given over to moving and setting up and children are examined in the afternoon. Three physicians and two nurses conduct these examinations. Youngsters from six months to six years are examined and an effort is made to have their physical condition remedied by local physicians.



Healthmobile, with Projecting Movie Screen, Used by the New York State Department of Health in Child Welfare Campaign.

In the evening a public meeting is generally held in a church or grange hall. The projector is set up indoors and the current carried from the generator in the Healthmobile by means of a long electric cable. Motion pictures are shown and health talks given.

It is planned to make five stands a week. Saturdays and Sundays are days off, except that a meeting called off during the week is usually held on Saturday.

The outfit will be kept on the road as long as weather conditions permit.

While the accompanying illustration shows the projection of the pictures on the roof of the car and this is possible, it is generally found more desirable to set up the projector in a hall and show indoors. When it is necessary to exhibit outside the usual method is to erect a large screen in the open and mount the projector in the rear of the truck.

WILLYS-OVERLAND ORGANIZATION NOT TO MARKET CHRYSLER.

The new Chrysler automobile will be distributed by the manufacturer, and not by the Willys-Overland sales force, as was formerly understood. General sales offices have been opened at the home plant in Elizabeth, N. J., and the selling organization, which was recently incorporated under the name of the Chrysler Motor Co., has made specific plans which will absorb the 500 or 600 cars a day which will be manufactured by the new plant. It is understood that no Overland distributors will handle the car, although there are said to be certain trade connections between the two companies.

APPERSON MOVING OUTFIT.

Perhaps the smallest complete moving picture laboratory in the world is operated by the Harris Film Co., Beaver Falls, Pa. Mounted on an Apperson Eight, the machine takes all kinds of commercial motion pictures such as machinery in operation, and the various operations connected with various kinds of manufacturing. The car carries the complete apparatus for finishing, printing and projecting the pictures, and O. C. Healy, business manager of the outfit, is highly pleased with the performance of the Apperson, finding it ideal for the work.

General Motors Corp. Taken Over by du Pont

THE incorporators of the newly organized du Pont Securities Corporation, which was formed to take over from William C. Durant, president of the General Motors Corporation, about 3,000,000 shares of that company's common stock, are Pierre S. du Pont, George H. Gardner and John J. Raskob. They will hold respectively the following positions: President, vice president and secretary-treasurer.

The deal came as a culmination of one of the most violent stock market declines in recent years, extending over a longer period, if not as acute, as that which occurred on the stock exchange in the dark hours immediately preceding the outbreak of the great war. According to gossip in Wall street the actual cash involved in the deal was $27,000,000.

It is announced that Mr. Durant has started on a long vacation, although it was at first thought that he would continue in the employ of the company, in which he is said to still have extensive holdings.

The average price paid for the stock is said to have been about $13 a share, and current rumor intimates that Mr. Durant and his associates unloaded their holdings without monetary loss.

The future policy of the company has not yet been disclosed, but it is expected that the new organization will act merely as a holding company and that no change will be made in the manufacturing end of the business.

Directors of General Motors.

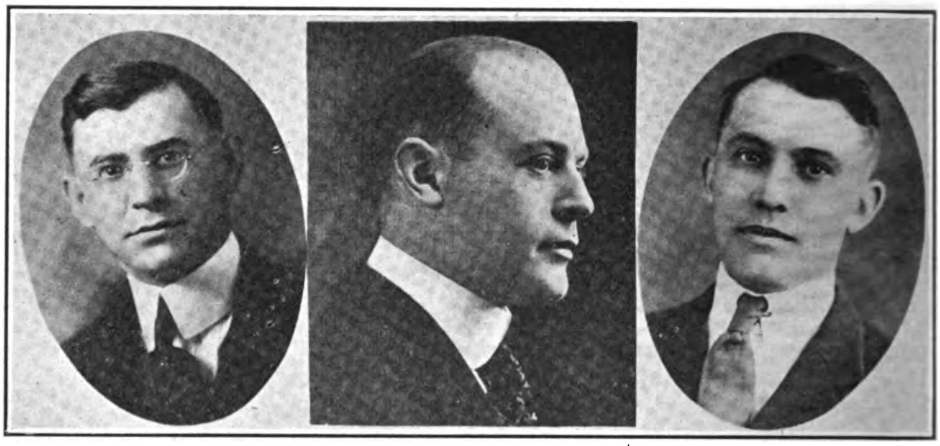
The board of directors of the General Motor Corporation is made up as follows: P. S. du Pont, chairman; G. F. Baker, Jr., H. H. Bassett, A. G. Bishop, Arthur Chamberlain, R. H. Collins, W. L. Day, H. F. du Pont, Irenee du Pont, Lammot du Pont W. C. Durant, J. A. Haskell, F. W. Hohensee, L. G. Kaufman, Sir Harry McGowan, R. S. McLaughlin, William McMasters, C. S. Mott, Seward Prosser, J. J. Raskob, A. P. Sloan, Jr., J. T. Smith, E. R. Stettinius, Edward Ver Linden, F. W. Warner, W. H. Woodin, C. M. Woolley, O. D. Young.

A statement of the various units, representing every phase of the automotive industry, which is comprehended in the General Motors organization, is of especial interest in this connection. Divided into groups, they are as follows:

- General Motors Group—
  - Buick Motor Div., Flint.
  - Cadillac Motor Car Div., Detroit.
  - General Motors Truck Div., Pontiac.
  - Oakland Motor Car Div., Pontiac
  - Olds Motor Works Div., Lansing.
  - Scripps-Booth Corp., Detroit.
  - Sheridan Motor Car Co., Muncie.
- Chevrolet Group—
  - Chevrolet Motor Co. of Mich., Flint.
  - Chevrolet Motor Co. of N. Y., Tarrytown.
  - Chevrolet Motor Co. of St. Louis, S. L.
  - Chevrolet Motor Co. of Texas, Ft. Worth.
  - Toledo Chevrolet Motor Co., Toledo.
  - Chevrolet Motor Co. of Bay City, Bay City
  - Chevrolet Motor Co. of Kansas City, Kansas City.
  - Chevrolet Motor Co. of Atlanta, Atlanta.
  - Chevrolet Motor Co. of Minn., Minnesota.
  - Chevrolet Motor Co. of Cal., California.
- General Motors of Canada, Ltd.—
  - Canadian Products, Ltd., Div., Walkerville.
  - Chevrolet Motor Co. of Canada Div., Oshawa.
  - McLaughlin Motor Car Div., Oshawa.
  - Olds Motor Works of Canada Div., Oshawa.
- Tractors and Implements—
  - Samson Tractor Div., Janesville.
  - Samson Tractor Co. of Cal., Stockton.

Accessories.

- United Motors Group—
  - Buffalo Metal Goods Co., Buffalo.
  - Dayton Eng. Laboratories Co., Dayton.
  - Harrison Radiator Corp., Lockport.
  - Hyatt Roller Bearing Div., Newark.
  - Jaxon Steel Products Div., Jackson.
  - Klaxon Co., Newark.
  - Lancaster Steel Products Corp., Lancaster.
  - Remy Electric Div., Anderson.
- Miscellaneous—
  - Champion Ignition Co., Flint.
  - Dayton-Wright Co., Dayton.
  - Delco-Light Co., Dayton.
  - Frigidaire Corp., Detroit.
  - General Motors (Europe), Ltd., London.
  - General Motors Export Co., New York.
  - Sunnyhome Electric Co., Detroit.
- Central Products Division—
  - Central Axle Div., Detroit.
  - Central Forge Div., Detroit.
  - Central Gear Div., Detroit.
  - Northway Motor & Mfg. Div., Detroit.
- Muncie Products Division—
  - Muncie Parts Div., Muncie.
  - T. W. Warner Plant, Muncie.
- Saginaw Products Division—
  - Central Foundry Div., Saginaw.
  - Central Motor Div., Saginaw.
  - Jackson-Church-Wilson Div., Saginaw.
  - Saginaw Malleable Iron Co., Saginaw.
- General—
  - Michigan Crank Shaft Div., Lansing.
  - St. Louis Mfg. Corp., St. Louis.
  - Dayton Metal Products Co., Dayton.
  - Domestic Engineering Co., Dayton.
  - Doylestown Agricultural Co., Doylestown.
  - Fisher Body Corp., Detroit.
  - General Motors Acceptance Corp., New York.
  - Industrial Terminal Corp., Detroit.
  - Janesville Machine Co., Janesville.
  - Lancaster Steel Products Corp., Lancaster.
  - Bearings Service Co., Detroit.
  - Brown-Lipe Chapin Co., Syracuse.
  - Doehler Die Casting Co., Brooklyn.
  - Durant Building Corp., Detroit.
  - Flint Varnish & Color Works, Flint, Mich.
  - Independent Lamp & Wire Co., Weehawken.
- Consumers Power Co., Durant Hotel Co., House Financing Corp., Hyatt, Ltd., Lansing, Home Building Co., Modern Housing Corp., Novelty Incandescent Lamp Co., Wisconsin River Power Co.



Officials of Ray Battery Co., Ypsilanti, Mich.: At Left, Roger P. Fisher, President; Center, Daniel B. Jack, Sales Manager, and at Right, Thomas Lavier, Vice President and Chief Engineer.

RAY BATTERY CO. MOVES TO NEW PLANT.

The Ray Battery Co., formerly of Detroit, has moved to its new plant at Ypsilanti, Mich. This company makes batteries which contain, in most highly perfected form, the Lavier formula plates. It is claimed that by unusual chemical and manufacturing processes these plates are given a very high porosity with a more than usual toughness, and that harmful sulphation is minimized by the use of the formula, which is said to generally increase the efficiency of the battery.

N. A. A. C. COMPILING FOREIGN TRADE SUPPLEMENT.

The foreign trade committee of the National Automobile Chamber of Commerce is preparing a supplement to the hand book which will be of help to foreigners in determining approximate charges for insurance, consular fees, ocean freight and customs duties. The supplement will accompany the hand book when sent abroad. All members have been forwarded blanks to fill out, which will give the chamber committee the necessary information in compiling the supplement.

MAXWELL-CHALMERS APPOINTS ADVERTISING COUNSEL.

A. E. Baker, general sales manager, announces the appointment of MacManus, Incorporated, as advertising counsel for the Maxwell-Chalmers interests. Theodore F. MacManus is known throughout the United States as the exponent of a definite type of advertising which helps good products to establish themselves firmly in the mind of the public as entitled to a good reputation.

In addition to acting as counsel for the Maxwell-Chalmers, MacManus, Inc., serves in the same capacity for the Cadillac, Remington Typewriter, Dodge Brothers, Hupmobile, Liberty, Republic, Torbensen Axle and Hayes Wheel companies, Hamond-Standish & Co., Stroh Products Co. and Victor-Vassar Knitting Mills.

Ace Car to Be Placed on Market

Preparations are being completed for the supplying to a broader field of the Ace car, which has been manufactured for about a year past by the Apex Motor Corporation, Ypsilanti, Mich. The Ace car has heretofore been marketed through one distributor on the Pacific coast, who took the entire output for distribution in the great northwest. O. W. Heinz, president and general manager of the Apex Corporation, has associated with him a strong organization, the personnel of which is as follows: Secretary and treasurer, T. S. Mathews; vice president and chief engineer, Fred M. Guy; sales manager, F. E. Earnest; production manager, W. R. Wiley; office manager, James E. Croak; advertising manager and assistant to the sales manager, Robert T. Walsh.

To prepare for a wide distribution of the Ace car the Apex Co. is adding to its factory a large two-story structure of the most modern design, which will give 30,000 square feet of floor space.

New Plant of Ray Battery Co., Ypsilanti, Mich., Into Which Removal Was Recently Made from Detroit.

It is announced that the Ace car will be shown for the first time at the national shows in New York and Chicago, space having been secured at Hotel Commodore in the former city and at the Auditorium hotel in the latter.

VAN DORN ELECTRIC DRILL MOTOR.

The Van Dorn electric drill, manufactured by the Van Dorn Electric Tool Co., is a portable, electrically operated drill, hand built on the same lines as an electric railway motor, and is constructed to take care of varying loads and sudden stops and starts. These drills are adaptable for drilling wood, iron or steel, and are used by a great many of the large automobile manufacturing plants.

The company, formerly the Van Dorn & Dutton Co., also makes portable electric grinders, heavy duty bench or pedestal type grinders and various sized grinding wheels and buffers.

ADDITION TO LAMINATED SHIM PRODUCT.

The time is not so far past when, in order to make a shim, it was necessary to take a piece of sheet metal and cut it down to a shape more or less approximating that of the bearing and punch or drill holes in it for bolts. And when this had been accomplished the result was ordinarily far from ideal to say the least. Among the many shims which have appeared from time to time designed to remedy this condition, the laminated shim, made by the Laminated Shim Co., New York city, has had a conspicuous success.

This company now announces a new addition to the laminated stock shim family in the Fit-All, "the laminated shim that can be cut to fit." The Fit-All shape was decided on after a study of over 100 different forms of shims.

As the name implies, it will fit nearly all shapes of bearings, either as is or with the help of a couple of snips with a tinner's shears. In short, it is claimed the new Fit-All shim combines the advantages of the laminated shim with the universality of the old fashioned sheet brass shim. The Fit-All, like its brothers in the laminum family, comes in different thicknesses with holes punched in two different diameters.

UNIVERSAL POWER DRIVE.

The Universal Tool Co., Inc., Detroit, Mich., with main factories at Garwood, N. J., is bringing out a new Universal power drive for use with the Universal cylinder reboring tool. The Universal power drive can be operated by one-half inch portable electric or air drill and by bench drill or floor type drill press. Attaching the drive to the reboring tool is but the work of a few seconds and it can be used with all models of the improved Universal cylinder reboring tool.

The wholesale value of the motor car and truck output in 1919 in the United States was $1,885,112,546.

Ford Breaks Day Production Record

The world's record for automobile production in a single day was broken recently at the plant of the Ford Motor Co. at Detroit, Mich., when 5673 cars were turned out. Of this number 4061 were assembled as completed cars at the close of the day. It was announced that production was to be continued at the Ford plant at an average of 4000 a day.

BUSINESS SHOWS LARGE GAIN IN YEAR.

In eight months of this year the net sales of the Black & Decker Mfg. Co., Baltimore, Md., have been almost two-thirds greater than the net sales during the 12 months of last year and, according to a statement sent out by the company, the total sales for this year, as compared with last, will probably show an increase of 100 per cent. The company, which was organized in 1910, has enjoyed steady growth and, for the last two years, the sales have shown decided acceleration and, though the firm states that sales resistance for the last few months has been felt, this condition has been overcome to a great extent by increased efficiency throughout the whole organization. This company claims to build more portable electric drills than any other manufacturer in the world.

SCHRADER'S VALVE CAP SETS.

It is stated that in a recent survey of 1309 motor cars parked along Broadway, New York city, valve caps were found missing on no less than 455 valve stems. This means that 455 tires were being run with the valve stem open to the admission of dirt and dust and mud. Such abuse of a tire valve is nothing short of criminal. A valve may be ever so perfect, but it cannot be expected to remain so if all kinds of foreign matter are permitted to enter it.

The difficulty found by a great number of motorists in replacing valve caps lost in the process of changing or pumping up tires has prompted the firm of A. Schrader's Son, New York city, to put up five of these very essential valve adjuncts in a small metal box at 40 cents.

INFRINGEMENT SUIT SETTLED.

It is reported that the Connecticut Telephone and Electric Co. of Meriden, Conn., has obtained a settlement from the Eastern Parts Co. of New York on the ground of patent infringement involving United States letters patents Nos. 1,029,914, 1,113,850, 1,204,104 and 1,266,811.

Under the agreement it is stated that the Eastern Parts Co. acknowledges the validity of these patents and in accordance discontinues the manufacture and sale of parts affected and surrenders to the Connecticut Telephone & Electric the process of manufacture, as well as the tools and dies used in production.

Personal News of Industry and Trade

Harvey Becomes Sales Manager for Koehler

Samuel C. Harvey, formerly sales manager of the Indiana Motor Truck Co., has been appointed general sales manager of the H. J. Koehler Motors Corporation, Bloomfield, N. J. His connection with the automotive industry dates back some 20 years, and from the inception of the motor truck he has been specializing on that branch. He has had a ripe experience in the sales, export and advertising field.

Charles S. Clark, who has been connected with the H. J. Koehler Motors Corporation for the past three years in the capacity of sales, advertising and export manager, severed his relations with that concern on Dec. 1 and is at his home, Malvern Hill, Va., for a brief vacation before taking up work again. Mr. Clark's experience covers 16 years as an executive in the retail, wholesale and manufacturing ends of the automobile and truck industries, during which time he has handled salesmen, advertising and dealers and has become familiar with the intricate details of the export business.

J. H. Behr, widely known in advertising, publishing and kindred lines, has joined the Akron Advertising Agency Co. as director of purchases. Mr. Behr was for years associated with the old Werner Printing Co., after which he was on the advertising staff of the Goodyear Tire & Rubber Co. and later was in charge of sales for the S. & O. Engraving Co.

Joseph Goldring announces that he has severed his connection with the King Tire Co., 1987 Broadway, New York city, for which concern he has acted as purchasing agent for the past 8½ years and is now engaged in business as a manufacturers' agent distributing equipment at 250 West 54th street, New York city.

Frank E. Bohn has been elected president of the Noble Heater Co., Ft. Wayne, Ind. Mr. Bohn has had a wide experience with corporation companies as a managing executive. At the present time he is general manager of the Home Telephone Co. of Fort Wayne.

C. R. Stowell has become manager of the Fresno, Cal., branch of the Bearings Service Co. He has served in the capacity of traveller, working out of the San Francisco branch of that company.

A. F. Ward, recently assistant service manager of the Timken-Detroit Axle Co., has been appointed manager of the Omaha branch of the Bearings Service Co. This concern acts as the service department of the Timken and Hyatt Roller Bearing and New Departure Manufacturing companies, has 33 branches in the principal cities and an organization of approximately 1000 authorized distributors.

Earl W. McGookin, after an absence of two years, has again joined the William R. Johnston Manufacturing Co., 451 East Ohio street, Chicago, Ill., as factory representative in the states of Michigan and Ohio.

J. E. Long is in charge of the new battery station at the Central Garage, Hot Springs, Ark.

Messinger Promoted to Responsible Office

Clifford F. Messinger has been appointed general sales manager of the Chain Belt Co., Milwaukee, Wis., manufacturer of Rex chains, concrete mixers and elevating and conveying machinery. Mr. Messinger, for the last two years assistant to the vice president, is a Yale graduate and has been connected with the Chain Belt Co. since 1911. He is perhaps best known in his capacity as manager of Rex mixer sales, which he held for three years, and has also been advertising manager. Mr. Messinger was recently elected chairman of a group of nationally known construction machinery manufacturers.

Owen D. Young, vice president of the General Electric Co., New York city, and **A. T. Van Scoy**, vice president of the International Harvester Co. of America, Milwaukee, Wis., have been appointed by President Joseph H. Defrees of the Chamber of Commerce of the United States, as members of that organization committee on immigration. This committee will hold its first meeting in the near future in Washington, D. C., when it will consider the question of a national immigration policy.

A. J. Raples, who was for a number of years in business in Tescott, Kan., has purchased the Salina Motors Co., 215 North Santa Fe street, Salina, Kan., where he will conduct a general automobile repair business beginning Jan. 1.

New Officials of National Association of Truck Sales Managers

Vice President, E. T. Herbig, Service Motor Truck Co.

Secretary-Treasurer, A. E. Schaefer, Gramm-Bernstein Motor Truck Co.

President, Hal T. Boulden, Selden Truck Corporation.

Packard Car Co. Promotes Chamberlain

R. E. Chamberlain has been promoted by the Packard Motor Car Co., Detroit, Mich., to the position of general assistant sales manager. His experience with the Packard organization dates back to 1916 when he assumed the duties of truck sales manager of the New York Packard Co., and he later became truck sales manager of the Detroit factory. Prior to joining the Packard organization Mr. Chamberlain was identified with the Garford Motor Truck Co. as manager of the Philadelphia branch and before this with the Wilcox Truck Co. of Minneapolis, Minn.

Dan Gilkey, who has been Pacific coast representative of the Acason Motor Truck Co., Detroit, Mich., has been made vice president of that company in charge of sales and advertising, with headquarters in the Michigan city.

C. F. Folkman, Director, Four Wheel Drive Auto Co., Clintonville, Wis.

W. O. Browne has been appointed general sales manager of the Southern Motor Manufacturing Association, Ltd., Houston, Tex. He comes to Southern Motors with an excellent record in the sales end of the automotive industry, having been connected with several of the leading automobile concerns of the country as factory representative and branch manager. Just previous to joining Southern Motors he was district manager and special representative of the Bethlehem Motors Corporations, Allentown, Pa., associating himself with that concern upon leaving the United States air service, in which he served as an enlisted man and later as an officer in the United States and France, from April 22, 1917, to March 31, 1919.

George McGee, formerly service manager of the Herman Motor Truck Co., New York city, has gone into the sales department of the same company.

William W. Rennick has become service manager of the Vim Motor Truck Co., New York city.

Dan Gilkey, Vice President of Acason Co.

W. A. Olen, President, Four Wheel Drive Auto Co., Clintonville, Wis.

R. E. Chamberlain, New General Assistant Sales Manager of Packard Motor Car Co.

Death of Head of Dodge Brothers Co.

Horace E. Dodge, who has been the head of the Dodge Brothers automobile interests since the sudden death early in the year of his elder brother, John Dodge, died on Dec. 10 at his winter home, Palm Beach, Fla. Although his health was impaired by a severe attack of influenza, his serious illness had not been reported. The Dodge brothers founded the automobile business that bore their name at Detroit, Mich., eight years ago, after manufacturing automobile parts since the early days of the industry, when they were associated with Henry Ford.

Walter G. Hinnau is now the acting branch manager at New Orleans, La., of the United Motors Service, Inc., Detroit, Mich. He succeeded T. H. Fonda, resigned. Mr. Hinnau joined United Motor Service in July, 1919, as special representative for the distributor department, and later took over the sales of the merchandise lines. In October of this year he went to Atlanta, Ga., as assistant to Branch Manager Schuyler.

D. J. Rohrer, Director, Four Wheel Drive Auto Co., Clintonville, Wis.

W. B. Neff, sales manager of the Automobile Supply Co., Chicago, Ill., who was in charge of the party of salesmen of the company who recently inspected the plants of the concerns manufacturing the products handled by that company, was killed in an automobile accident at Bridgeport, Conn., during the visit of his party to that city.

E. G. Soward was recently made special district supervisor for the Liberty Motor Car Co., Detroit, Mich., in the west central states. He was formerly general sales manager for the Jeffrey Motor Truck Co.

George C. Murray, formerly of the Aluminum Castings Co., Detroit, Mich., has gone to San Francisco to assume charge of the sale of Fruehauf trailers on the coast.

Equitable Motor Truck Officers

E. Leindorf and A. H. Mollenhauer, Jr., hold the offices of president and general manager and sales manager respectively of the Equitable Motor Truck Co., 136th to 137th streets, on Madison avenue, New York city. Mr. Leindorf has an enviable record in the motor truck sales field in and around New York. He managed the metropolitan branch of the motor truck division of the Studebaker corporation, having the title of assistant sales manager, and for nearly four years was the retail sales manager for Rainier trucks. Mr. Leindorf also heads the Leindorf Motor Sales Corporation, which handles the Signal truck in addition to the Ace and is also to manufacture a truck of its own, the Lion, a 1500-pound model.

Mr. Mollenhauer has been for more than seven years prominently associated with the retail and wholesale truck trade. He was formerly with the Union Motor Truck Co. and was also vice president and treasurer of the Marvel Motor Truck Co. The Equitable service manager is Leonce Raboin, who was for seven years on the experimental staff of the Knox Motor Car Co., had charge of the fleet of trucks of the Porto Rico Transport Co. and was service manager for the Rainier truck. The advertising and publicity work is in charge of Putnam Drew, for 25 years a writer on automotive topics and advertising manager of truck concerns.

W. A. Carpenter, Advertising Manager, Acme Motor Truck Co.

L. Logie, formerly general sales manager of the Chalmers-Maxwell companies for Canada, and more recently associated wih the tractor business in Toronto, has been appointed district supervisor of Canada for the Liberty Motor Car Co., Detroit, Mich.

Clinton W. Atwood, president and treasurer of the Williamsville Buff Manufacturing Co., Danielson, Conn., died Dec. 1.

Joseph F. Dineen, Former Auto Editor, Boston Record, Now Executive Secretary Motor Truck Club of Massachusetts.

A. H. Mollenhauer, Jr, Sales Manager, Equitable Motor Truck Co.

E. Leindorf, President Equitable Motor Truck Co.

Conlon in Charge of Paige Sales

Harry A. Conlon, a former director of the Acason Motor Truck Co., has been appointed sales manager of the truck division of the Paige-Detroit Motor Car Co. and will supervise an intensive educational and sales campaign. He has been connected with the industry for 10 years in the work of organization and retail sales.

W. J. Foster, formerly assistant truck sales manager of the New York branch of the Packard Motor Car Co., has been appointed by W. G. Toland, general truck sales manager of Hare's Motors, transportation engineer and assistant to the truck sales manager. Mr. Foster has specialized in automotive engineering for eight years, supplementing the education he received in America with more advanced study in France, Switzerland and Germany. Upon his return to the United States he was made an instructor and subsequently principal of the New York School of Automobile Engineers. Later he became principal of the Stewart Automobile school, and was a member of the New York Public School Board of Lectureship. During the war he was appointed an aeronautical mechanical engineer with the United States Signal Corps. Later he was commissioned a lieutenant in the air service and assisted in the designing, development and testing of the famous Gnome, Hispano-Suiza and King-Bugatti engines. Upon being mustered out of the service he joined the Packard Motor Car Co. of New York as transportation engineer.

Harry A. Conlon, Veteran in Industry, Heads Paige Truck Division.

W. T. Whalen has taken over the management of the New York branch of United Motors Service, Inc., Detroit, Mich. He is a graduate of Iowa State college, and has for many years been associated with the Westinghouse Electric Co. in Philadelphia.

John M. Frayler, formerly with the Flushing Avenue Auto Co., New York city, is now with the Rainier Motor Co.

Smith President of Midwest Co.

Lon R. Smith, general sales and advertising manager, at a recent meeting of the directors of the Midwest Engine Co., Indianapolis, Ind., was elected vice president of that company. Mr. Smith will remain in full charge of sales of the Hill Pump division of the company at Anderson, Ind., and of the Indianapolis plant which is making the Midwest Utilitor and a complete line of truck and tractor engines. He was, for many years, with the Eisemann Magneto Co., and before going to the Midwest was sales manager of the Buda Co., Harvey, Ill.

Otis Hacker, formerly a member of the firm of Hacker & Co., Bethany, Mo., recently sold to the Crossan Motor Co., has again engaged in the automobile business in the building on Central street, recently vacated by Orley England.

A. F. Wisel has purchased the interest of R. E. Fletcher in the Fletcher-Means Co., El Paso, Tex., and the company has been reorganized with the election of Robert Boyle as president and E. R. Means, secretary and treasurer.

C. W. Ferguson is the new manager of the Delaware Supply Co., 1114 North Broadway, Oklahoma City, Okla., which has the state distribution of Gillette tires and tubes and Dural tubes and handles Marlan gasoline and oils.

Leigh Smith, who has been in charge of the service department of the Fisher Body Co., has been made service manager of the Fleetham-Buick Co., Wyandotte, Mich.

Fred D. Rice has joined the forces of the Eaton Axle Co., Cleveland, O. He was formerly with the Hess Steel Corporation.

Ernest P. Lash has joined the Philadelphia Locomobile branch of Hare's Motors as sales and service representative, with headquarters at Reading, Pa.

Celsus Durrett and **A. L. James** have bought the Tucker-Page garage at Marshall, Mo. They are agents for Hudson and Essex cars.

C. W. Doble of Kansas City, Mo., has leased the Davis & Durret garage at Marshall, Mo., and has purchased Henry Hyob's stock of supplies and equipment.

H. R. Henry has been appointed general manager of sales by R. C. Frampton, Motor Car Co., St. Louis. Mo.

Arch Moore of Kansas City, Mo., is now in charge of Benning's Garage, Second and Main streets, Odessa, Mo.

W. A. Evans is now in charge of the New York service station for the Cunningham car, 130th street and Broadway.

G. T. Broughnau of Dubuque, Ia., has opened an automobile repair shop at Pleasanton, Kan.

Perle Chartier has purchased the battery business of W. S. Abbott at Clyde, Kan.

T. C. Moon has purchased the plant and business of the Hardin & Halter garage at Bonne Terre, Mo.

Lon R. Smith, General Sales and Advertising Manager, Midwest Engine Co., Has Been Elected Vice President.

E. J. Krause, Jr., has been made manager of the service station equipment division of the Fairbanks Co., Broome and Lafayette streets, New York city. He is well known in automotive circles in the Middle West, having been eight years in St. Louis, and recently general sales manager of the Service Station Equipment Co., for which the Fairbanks company is now exclusive sales agent. Mr. Klause's headquarters will be at the Service Station Co.'s factory in Chicago, known as the service station equipment division of the Fairbanks company.

W. S. Phillips, manager of the Uneeda Car Wash Station, Third and Thockmorton streets, Fort Worth, Tex., has opened a garage, which he will operate in addition.

K. W. Robinson is in charge of a direct factory branch of the Packard Motor Car Co. in St. Joseph, Mo., with headquarters at 218 North Sixth street.

J. G. C. Wayland, Vice President, J. I. Case Plow Works Co., Racine, Wis.

Cole Executives Have Served Long

J. J. Cole, S. J. Kuqua and **J. F. Morrison**, president and general manager, vice president and secretary-treasurer respectively of the Cole Motor Car Co., Indianapolis, Ind., have served continually in these capacities since the inception of the company in 1908. This would seem to be an unusual record in the industry.

K. W. Zimmerschied has been appointed general manager of the Chevrolet Motor Co. by Pierre S. du Pont, president of the General Motors Corporation, to succeed W. C. Durant. **F. W. Hohensee** is, it is understood, to continue as general manager of production, and **W. C. Sills** as general manager of sales. Mr. Zimmerschied has been identified with General Motors since 1911, for the past two years as assistant to the president of the corporation. His first connection with that company was as metallurgist at Flint, Mich. During the war he served the government at Washington and at its close went to General Motors headquarters at New York city.

Lieut.-Col. Theodore Roosevelt, Jr., recently made a rather remarkable run from Los Angeles to Santa Barbara, Cal., in a Cole Aero-Eight, made by the Cole Motor Co., Indianapolis, Ind. He left Los Angeles three-quarters of an hour after the "Lark," the fast railroad special had departed, and made the 96-mile run in two hours and 22 minutes, reaching Santa Barbara ahead of the "Lark."

H. G. Spangler has been appointed manager of the Boston station of the National Chain Motor Service Corporation, and Charles Colstat has been promoted to the office of chief engineer, with headquarters at the main office, 811 Boylston street. Mr. Spangler has been in business for himself in Boston for 20 years and is recognized in the trade as an authority on automotive repair service.

H. W. Avery, Jr., has been made director of Marmon sales by the W. D. Block Motor Co., distributor in Detroit. He was, for 10 years, with the Packard Motor Car organization as sales manager at Cincinnati, O., and Buffalo, N. Y., and as special representative for the Packard-Detroit branch.

Thomas F. Moore has become executive secretary of the Automobile Dealers' association of New York, vice Harry Gardner, who has become sales manager of the passenger car division of the Packard Motor Car Co. at Detroit, Mich.

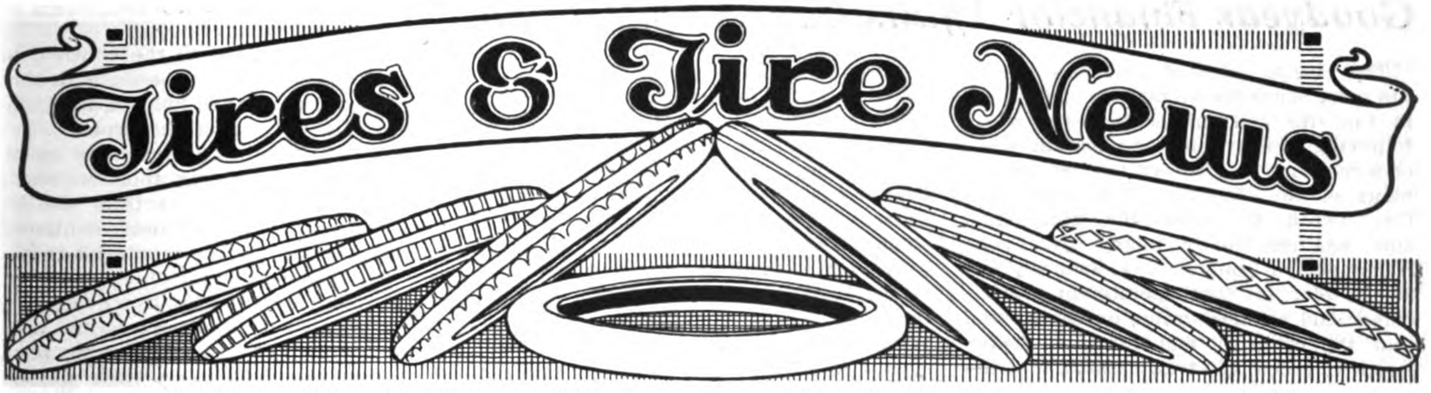
C. L. Dunning, who has been assistant superintendent at the White company's Long Island plant, has been transferred to the Chicago branch of the same company.

J. M. Harris of Kansas City, Mo., has been placed in charge of the entire sales organization of the Ardmore-Akron Tire & Rubber Co., Ardmore, Okla.

C. R. McDonald has opened a new garage on South Main street, Strong City, Kan.

F. C. Lowry is the manager of the Sayre Auto Supply Co., Sayre, Okla.

Tires & Tire News



Weston Elected President of Ajax Co.

Announcement is made of the election of Joseph C. Weston as president and general manager of the Ajax Rubber Co., Inc., 218-22 West 57th street, New York city, to succeed Horace DeLisser, who has been discharging the duties of the active presidency in addition to those of chairman of the board of directors. President Weston came to the Ajax company as vice president about a year and a half ago from the United States Rubber Co., with which organization and its subsidiaries he was connected in executive capacities for more than 20 years. Few men are so well known in the tire industry or in the larger automobile field.

Chairman DeLisser stated on the occasion of the company's 15th anniversary that no changes in policy or personnel were suggested in Mr. Weston's election to the presidency.

GREAT BRITAIN PROTESTS AGAINST TIRE IMPORTS.

It is reported that a large number of protests have recently been made in the House of Commons of Great Britain against the continued importation of large quantities of tires of American manufacture to that country. Particularly strong is this sentiment in view of virtual stagnation in the English rubber industry. One member even goes so far as to state that thousands of British rubber workers were swelling the ranks of the unemployed, although 90,000 American tires were imported in September.

CHANGES IN UNITED STATES RUBBER PERSONNEL.

The United States Rubber Co., Akron, O., recently made the following additions to its personnel: George W. Seiberling has been made general manager of the company's tire factories and Erwin Meyer, chief consulting chemist. John J. Shea, at one time a director of the Hartford Rubber Works Co., has been made factory manager, Colt plant, Revere Rubber Co., Providence, R. I., and A. P. Delahunt has been appointed chief accountant of the same plant.

Joseph C. Weston, Recently Elected President and General Manager of Ajax Rubber Co.

BENEFITS OF KANSAS CITY ORGANIZATION.

The Kansas City, Mo., Tire Dealers' association, which was organized in October, is to open permanent offices in that city with a secretary in charge of the work of the association, which consists, in part, of credit work, service to dealers toward betterment of methods and elimination of bad business practises, etc. It is reported that a marked improvement has been created in the trade since the formation of the association, including regular hours for opening and closing stores and shops, Sunday and holiday observance, and the matter of free service, which has been eliminated.

The association at present numbers 47 representative dealer members, with the following officers: President, Charles A. Peake, Jr.; vice president, Herbert Ford; secretary, H. A. Winters.

TIRE DEALERS TO ORGANIZE.

During the week of the Chicago automobile show, Jan. 29-Feb. 4, a meeting will be held for the formation of a national tire dealers' and vulcanizers' organization to foster interests of dealers and repair men in West and Middle West.

No Changes in Present Tire Standards

At a conference of interests, primarily affected by a proposed change in tire standards, recently held in Cleveland under the auspices of the Society of Automotive Engineers, after a long and exhaustive discussion it was almost unanimously resolved that the present standard of pneumatic tire sizes be continued.

The conference was composed of representatives of car, truck, tire and rim manufacturers, the Society of Automotive Engineers, the Rubber Association of America and the National Automobile Chamber of Commerce. It was decided to refer all suggestions as to changes to a joint committee representing all interests, which could make a study of the subject as it may be affected by future developments.

Representatives of tire manufacturers favored a proposed standard based on a 24-inch wheel on the ground that a great economy of production could be expected by reducing dealers' stocks many thousands of dollars and factory equipment proportionately. These savings, it was pointed out, were bound to be reflected in reduced prices and other advantages to the owners and operators of motor cars.

Car makers, engineers and representatives of the National Automobile Chamber of Commerce, on the other hand, while clearly indicating a desire to further standardization in every practicable way, put forth several reasons why the change was not desirable at this time. Among the arguments they presented were: The trend of automobile design toward wheel diameter smaller than the 24-inch size; the very large production using and planned for 25-inch wheels; added expense to car manufacturer for tire equipment in some cases; disturbance of the export situation, etc.

It was pointed out particularly that the present standard has been operating only since Jan. 1, 1920, and that from now on the use of tire sizes discarded at that time will decrease and eventually enable tire manufacturers to reduce by one-third the number of tire sizes made.

The Mason Tire & Rubber Co., Kent, O., has opened branches at Portland, Ore., and Los Angeles, Cal.

Goodyear Financial Affairs Cause a Sensation

The closing days of 1920 saw one of the most sensational episodes of the year in the tire and rubber industry when, following closely on the announcement of a meeting to consider the refinancing plans of the Goodyear Tire & Rubber Co., Akron, O., came the filing of a suit against the company by Frank S. Monnett, a Columbus, O., attorney and stockholder, for the appointment of a receiver and an accounting, on the ground that the company had sustained heavy losses in recent big transactions, that the fall stock dividend was unwarranted, etc.

The Goodyear company filed a motion to quash the service summons, which was later allowed.

The stockholders' meeting, which was originally called for Dec. 24, was to consider a plan to be voted upon by the stockholders which, it is understood, will call for the authorization of a mortgage or deed of trust to secure the payment of not to exceed $50,000,000 eight per cent. bonds or notes which will be issued. Under the reorganization, it is reported, the company will have an authorized capital of $100,000,000 seven per cent. preferred stock, which will be exchanged, share for share, for present preferred, and not to exceed 1,500,000 shares of common stock of no par value, which will be exchanged, share for share, for the present $100 par value common stock.

In a letter to stockholders President Seiberling said in part:

"Sales of the company falling $45,000,000 below the $250,000,000 which had been estimated for the 1920 fiscal year, and the necessity for carrying considerable raw material with the curtailment of banking credits, resulted in a strained financial condition.

"The company, however, has been able to arrange, through a banking syndicate, for temporary loans of $28,800,000, maturing Feb. 15, 1921. Negotiations are under way looking to an agreement in regard to a plan of permanent financing.

"Pending final agreement on such plan, however, it seems necessary to call a meeting of stockholders. Unless necessary action is taken by stockholders before the end of December, it will not be possible for the company to pay dividends accruing Jan. 1 on preferred stock. It is expected that before the date of the meeting final arrangements will have been made with bankers for a definite financing plan which will be presented to stockholders for approval."

The commercial and banking creditors of the Goodyear Tire and Rubber Co., it is stated, are trying to come to some form of comprehensive agreement with regard to their claims, and if the agreement is broad enough, bankers say, there may be no necessity for new financing. The company, reports from the West say, has debts amounting to about $28,800,000, which it will be called upon to meet or fund by Feb. 15 next, and if these claims are funded the company will not have to raise new money immediately.

The adjourned meeting, set for Dec. 29, was again postponed until Jan. 12, the finance committee reporting that plans for refinancing were still incomplete.

Illustration Showing One Corner of the Factory of the Akron Rubber Mold Machine Co., Akron, O.

TIRE MANUFACTURERS AND DEALERS.

C. A. Swinehart, assistant general manager and sales manager of the Victor Rubber Co., Springfield, O., is of the opinion that some very pronounced changes are soon to occur affecting the attitude of tire manufacturers toward their dealers.

"In the past," says Mr. Swinehart, "it has been the policy of some companies to sell to any dealer who would handle their tires. No matter how poor his location, how unscrupulous the man, or how unfair his methods of competition, he could handle the product of many manufacturers.

"Not only have some manufacturers placed their line with a varied assortment of dealers in a community, but they have even gone farther and sold direct to large consumers and fleet owners in direct competition with their own dealers.

"This is unfair to the real dealer, the reliable merchant who takes an actual interest in the sale of the tire he represents, and expends energy and money in developing its sale."

He called attention to the contrast in this method of doing business with that adopted in some other lines of merchandising, notably the clothing trade.

"It is my firm belief that tire manufacturers now following those methods so manifestly unfair to their dealers must revise their policies," continued Mr. Swinehart. "I am convinced that a new era is dawning for the aggressive, business-like dealer who has dealt honestly and fairly with customers and competitors alike. The time is coming when tire companies will select their dealers with a view of their prestige and ability rather than a haphazard appointment of every Tom, Dick and Harry who wants to sell tires, and protect him through an exclusive sales arrangement, so that he will not have to fight unscrupulous competition in his own line."

NATIONAL ASSOCIATION TO BE FORMED AT CLEVELAND.

At a recent meeting of the Cleveland Retail Tire Dealers' association at Hotel Winton in Cleveland, it was decided by the officers and members to organize a national association of tire dealers with its probable headquarters in that city.

E. L. Green, chairman of the Better Business Commission of the Cleveland Advertising club, spoke of the influence that a strong national organization has on the welfare of the particular industry or trade represented, and urged dealers to adopt a policy of charging a fair price for goods, neither reverting to cut-throat reductions or adhering to profiteering methods.

SEAMAN ELECTED PRESIDENT OF SPRINGFIELD CO.

At the recent meeting of the directors of the Kelly-Springfield Tire & Rubber Co., F. A. Seaman, vice president and secretary, was chosen president to succeed Van H. Cartmell, who retired on account of ill health.

Arthur Sachs of Goldman, Sachs & Co., was elected a director.

A quarterly dividend of $1.50 a share on the six per cent. preferred stock of the company was declared and will be paid Jan. 1.

NEW DEPARTMENT HEADS FOR SYRACUSE RUBBER.

George C. Mecklin has joined the organization of the Syracuse Rubber Co., Inc., maker of Syra-Cord tires, as head of the calendar department, having left a similar position with the Miller Rubber Co.

W. F. Fiske, who has had an extensive experience in the tire building and curing department with both the B. F. Goodrich Co. and the Miller Rubber Co., is the new head of this work at the Syra-Cord factory.

Trenton, Mo., Tire Co., has moved to 14th and Main streets.

PRICE REDUCTIONS STILL CONTINUE.

Announcement is made by President E. F. Jones of the Republic Rubber Corporation of Youngstown, O., of a reduction in the price of Republic, Grande cord and fabric pneumatic tires and tubes and solid and pneumatic truck tires. Contracts for next year's business are based on this reduction in price.

The Syracuse Rubber Co., Inc., Syracuse, N. Y., announces a reduction of 12 per cent. in the price of Syra-cord tires and 15 per cent. on tubes.

The company also announces the addition to its line of the Canton cord pneumatic truck tire built to the high standard of its regular Canton cord tires.

The Michelin Tire Co., Milltown, N. J., has reduced the prices of casings and tubes at approximately following rates: Fifteen per cent. on all soft bead clincher fabric casings; 10 per cent. on the larger size fabric casings; 7½ per cent. on all cord casings and 10 per cent. on all Michelin Ringshaped tubes.

New Syra-Cord Ford Tire.

The Canton-Blackstone Co., Youngstown, O., through its sales manager, H. J. Woodward, announces a reduction in prices on its line of Blackstone fabric and Canton cord tires.

The Bergougnan Rubber Corporation, Trenton, N. J., made a reduction in the prices of Bergougnan fabric and cord tires effective Dec. 1. On fabrics the cut ranges from eight to 15 per cent., and on cords from 10 to 12½ per cent., according to size. No reductions are made in inner tubes.

Two more tire manufacturers who announced substantial cuts, effective the middle of November, are the Gordon Tire & Rubber Co., Canton, O., and the Pennsylvania Rubber Co., Jeannette, Pa.

NEW SYRA-CORD FORD TIRE.

The Syracuse Rubber Co., Inc., Syracuse, N. Y., announces the addition to its line of Syra-Cord tires a size for the Ford car in which it is claimed that a new method of making beads is utilized which eliminates the common trouble of rim jumping. Exhaustive factory tests of these tires have been substantiated by trials by private owners.

Salt City Tire Co., Hutchinson, Kan., has moved to 12 Fifth street.

Financial Notes of the Industry

FISK CO. VOTES TO PASS DIVIDEND.

The Fisk Rubber Co., Chicopee Falls, Mass., has voted to pass a dividend of 75 cents a share on the common stock of the company, which was due for declaration at this time. This action was deemed advisable notwithstanding the fact that the company had more than earned an amount equal to this disbursement.

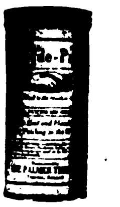
The regular dividend of 1¾ per cent. on its preferred stock was declared, payable on Feb. 1 to stock of record on Jan. 21.

"Sales of the company for the year," said H. T. Dunn, its president, "will be approximately $42,000,000 net, which compares with $43,000,000 in 1919. While inventories are larger than during normal times, the finished product is composed of standard salable sizes. The company intends to mark down its stocks of all cotton fabrics, rubber and other materials at the end of the year to sound values, and will be able to effect such readjustment out of 1920 earnings and without drawing on the surplus."

FIRESTONE DROPS DIVIDEND TO SIX PER CENT.

The directors of the Firestone Tire & Rubber Co., Akron, O., have decided to cut the rate of dividend on common stock from eight to six per cent. a year, this affecting the dividend payable Dec. 30. This is in line with the conservative policy adopted by the company to conserve its cash resources during the present readjustment period. Coincident with this announcement, it was likewise revealed that the company would reduce all salaries 10 per cent., effective at once, it being pointed out that salaries were increased 20 per cent. during the past year to meet rising living costs, and now that living expenses were coming down, adjustment in salaries must be made. The wage rates of factory workers have not been reduced, it is said, but the hours of work have been to apportion employment so far as this was at all possible.

PALMER "HAN-DE-PACH" OUTFIT.



A new, quick tire repair outfit called "Han-de-Pach" has been trade-mark patented by the Palmer Tire Co. of Topeka, Kan., and is now being offered to the trade. One of the outstanding features is the manner in which it is put up for the benefit of both retail and distributing trade. The retail boxes make a neat, silent salesman and the shipping boxes are specially made in dimensions so that they stack compactly in the jobbers' shelves. The outfit retails for $1. The company is now open for exclusive territory with manufacturers, sales agents and jobbers, or state agents.

NORWALK'S PROFITS FOR EIGHT MONTHS.

The Norwalk Tire & Rubber Co., Norwalk, Conn., reports its gross sales for the eight months ending Aug. 31, 1920, to be $3,048,800, from which there were net profits, after all charges but before federal taxes, of $703,807. This is at a rate of nearly 10 times the dividend requirements on the $1,500,000 seven per cent. preferred outstanding. There is also $1,000,000 common stock outstanding. Balance sheet as of Aug. 31, shows total assets and liabilities of $4,684,337, the surplus being $1,328,325.

LEE RUBBER FINANCES.

In a balance sheet, as of Sept. 30, the total assets of the Lee Rubber & Tire Corporation, Conshohocken, Pa., were shown to be $6,642,211, a gain of $1,045,942 over the year previous. The surplus for the year was stated as $1,039,470, and the net assets applicable to dividends on capital stock $5,203,061, or $34.69 a share.

L. C. Rockhill. Sales Manager. Elected to Goodyear Directorate.

PENNSYLVANIA RUBBER DIVIDEND.

The Pennsylvania Rubber Co., Jeannette, Pa., has declared a regular quarterly dividend of 1¾ per cent. on preferred and 1½ per cent. on common stock, payable Dec. 15.

ROCKHILL A GOODYEAR DIRECTOR.

At the recent annual meeting of the stockholders of the Goodyear Tire & Rubber Co., Akron, O., L. C. Rockhill, sales manager, was elected a member of the board of directors, succeeding J. P. Loomis, retired.

The I. J. Cooper Rubber Co., Cincinnati, O., tire distributor, has opened branches at Birmingham, Ala., Louisville, Ky., and Atlanta, Ga.

PLATE V.

MODEL SERVICE STATION AND SALES ROOM.

Two-Story Fireproof Structure Complete with Show Room, Machine and Repair Shops—Generous Spacings and Modern Equipment

Designed by the Architectural Department of the Automobile Journal Publishing Co.

THE accompanying plans offer a suggestion for an ideal automobile building to be used by an up-to-date, progressive dealer, and its arrangements permit of its use for practically every branch of the trade in which he can conveniently engage.

Facilities are provided for handling the agency for one or two new cars, and the appointments are such that the dealer may handle used cars and take live or dead storage. Space is also provided for the care, renovation and repair of cars. In fact, an examination of the plans will reveal that a careful survey has been taken of the progressive dealer's requirements, which has been taken into consideration in the design offered.

Having provided for all the practical needs of such a structure, the architect has taken into consideration the value of nice appointments where customers are received and accommodated in addition to providing a suitable facade, which is valuable as an advertising feature, a fact testified to by the thousands of dealers throughout the country who have gone to considerable expense in having highly decorative fronts erected to their buildings whenever their means would warrant it.

This structure, of course, is primarily for a dealer in a fairly large city where business would pay for its erection, maintenance and a profit. It is designed to go on a corner lot 50x100 feet. On the ground or first floor plan is an entrance vestibule, leading off the main street. To the right of the entrance is the show room, where several cars may be exhibited and an accessory case set up with other stock displayed in glass cases on the walls. On the left side of the entrance is the office, which has an entrance leading into the garage floor and shops.

On the side street there is a service door leading directly into the garage and in front of the turn table. This arrangement enables the operator of the car to turn his machine in any direction and run it to any position in the garage, onto the elevator or into the repair shop. The latter room is fitted with two repair pits, although there is sufficient room to handle three cars at a time or possibly four.

Manoeuvering cars about inside of a building has always been found a troublesome problem, but the arrangement given in these plans, in relation to the layout of the building, seems to offer a simple and easy solution.

In one corner of the garage, out of the way of the passages from the entrances to the other points in the room, is a wash stand conveniently located near both the turntable and elevator, thereby facilitating the washing and storage of a car with little trouble.

A machine shop of ample dimensions is walled off in the rear left hand corner of the building and lighted by a huge skylight in the light shaft extending through the second floor to the roof. There is an entrance to the machine shop from the garage; also one to a passage back of the elevator, which leads across to the repair shop for the convenience of the machines.

On the second floor are toilet accommodations for customers, office employees, salesmen, a large floor area devoted to new and used car storage, supply and locker rooms and toilet for the employees. Entrance to the front of the second floor is reached by the main staircase, which leads into a hall similar to that on the first floor. To the right of this hall is a rest room and toilet for ladies and on the right similar accommodations for gentlemen.

In the centre of the rear end of the second floor is the elevator well, which divides the skylight over the machine shop from the locker and supply rooms and employees' toilet. These rooms may be reached from the repair shop by stairs.

The exterior of the building is of terra cotta with tile inlay, backed with brick. Steel is used for the frame, large girders in the floor and roof supported on steel "H" columns in piers that are spaced as shown by dotted lines on plans. Reinforced concrete floors and roof slab are necessary to make it a fireproof structure.

Lighting and heating equipment must be of standard make and complying with insurance underwriters requirements. Fireproof specifications would also include steel sash throughout and an automatic roller door at the service entrance on the side street.

The gas tank and service pumps are located outside the entrance on the side street and are connected up so that cars may be filled either from the inside or transient customers may be accommodated at the curb. Lubricating oil reservoirs or tanks may be placed where found most convenient.

The construction cost of such a building with all modern improvements, of course, would vary according to labor conditions and material supplies in different localities, but a minimum estimate of $25,000 and a maximum of $30,000 would cover the costs approximately.

Mechanical Hints for Garage and Repair Shop

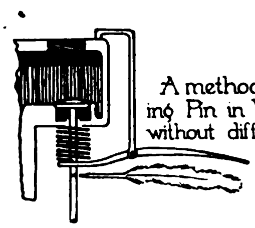
PLACING VALVE PINS.

A device which may be used to good advantage when fitting valve pins into valve stem openings is shown in the illustration and consists of a small quill feather or a straw. The valve spring is compressed with a compressor and the pin inserted in the end of the quill or straw and the pin inserted in the opening. This idea is applicable especially for engines of the L head type.

DETECTING SHORT CIRCUITS OR GROUNDS.

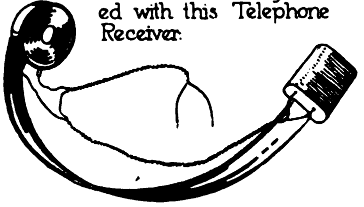
An apparatus for detecting short circuits or grounds in the lighting and starting units can be easily made from a 70-ohm telephone receiver, a head band and a flash light battery as shown in the cut. No. 1 is the telephone receiver, No. 2 the head band, No. 3 the flash light battery, No. 4 the wire connections and No. 5 the testing wires.

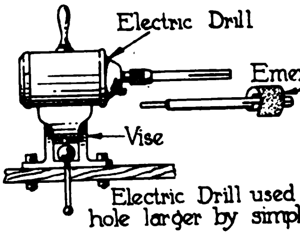
It is stated that the battery will detect grounds and short circuits in the units that will not show on a voltmeter or ammeter. By use of the battery one of the test wires is connected to the frame of the automobile and the other on a grounded wire. If any of the electrical connections of the units are short-circuited, sharp clicks will be heard in the receiver by making and breaking the connection on the frame of the automobile.



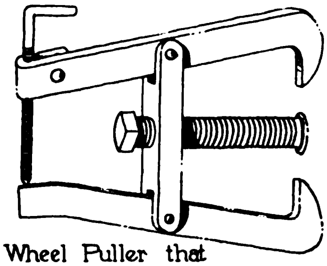
A method for replacing Pin in Valve Stem without difficulty

Knocks in a Motor are easily detected with this Telephone Receiver.

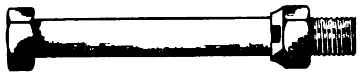




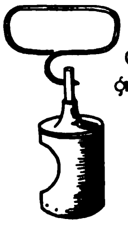
Electric Drill used to grind hole larger by simple method.



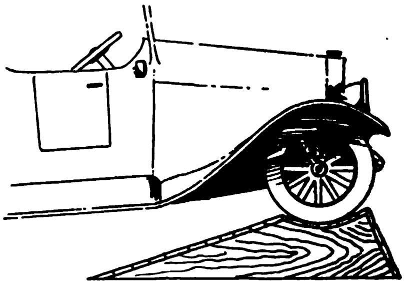
Wheel Puller that will not slip from Wheel.



Simple method of making additional Threads.



Convenient Tool for grinding Cage Type Valves.



Handy device for elevating Wheels.

TO ENLARGE DRILL HOLE.

A simple method of enlarging a drill hole is shown in the cut. An electric drill is fastened between the jaws of a vise and a special spindle fitted to the chuck having a split in the end. In this split or slot is fitted a strip of emery cloth wound around the spindle several times. Insert the spindle and emery cloth in the drill hole and start the electric drill. It is stated that this method will quickly enlarge a hole, at the same time smoothing it inside, to the desired size.

CUTTING ADDITIONAL THREADS.

In many cases it is necessary to cut a few more threads on a bolt in order to set the nut up tight. The illustration shows how this may be done when the proper size die is not at hand. Steel castellated nuts are generally considerably harder than bolts or studs and, when inverted and screwed down with a wrench they will cut as true a thread as a die. This method will also facilitate the clearing out of worn or jammed threads and will many times enable the motorist to make a repair on the road that would otherwise have to wait till a repair shop was reached.

SIMPLE WHEEL PULLER.

A wheel puller that it is said cannot slip off the wheel when in use, consists of two arms provided with claw ends that fit over the brake drum, a cross member to which the side members are hinged and a screw which passes through the center of the cross member, having a pointed or square end which fits against the end of the axle shaft. To prevent the puller from slipping, a second screw is fitted across the top ends, which holds the jaws of the puller an equal distance apart regardless of the strain being put upon the axle by the center screw.

Such a device may be made easily in spare time and many uses will be found for it around the garage for pulling wheels, gears, pulleys, etc.

TOOL FOR GRINDING CAGE TYPE VALVES.

By bending a piece of round steel wire as shown and flattening out one end to fit the valve stem slot or hole, a tool is made which is very useful when grinding cage type valves.

PLATFORM FOR ELEVATING FRONT END OF CAR.

A platform for elevating the front end of the automobile or light truck is shown, which can be made easily in spare time by the garage repair man, and with which can be done such work as taking up bearings, etc., without lying in a cramped position on the floor.

The device consists of two end pieces of wood cut in the shape shown, with strips battened across the top and the bottom, making an inclined platform with a curved rack to hold the wheel. The rack should be about one foot in width, which is about right to hold one wheel. However, it is advisable to have two sets of racks, so as to permit of elevating both the front wheels or rear wheels at the same time.

EMERGENCY CARBON BRUSHES.

The small carbon rods, which are part of the ordinary pocket lamp battery, can be filed and trimmed down to make a very acceptable temporary replacement for worn out carbon brushes in the magneto.

BATTERY MARKING TOOL.

An old star drill, bent roughly in the form of a U, with a plus sign ground on one end and a minus sign on the other, makes an ideal tool for marking battery terminals on storage batteries.

EXPORT DEPARTMENT
W.

DENMARK IDEAL COUNTRY FOR AUTOMOBILES.

Denmark, although a small country, is an ideal place for automobiles. The roads are good, the land quite flat and the country interesting and attractive to the motor tourist. It is stated that no other land on the continent has so many automobiles in comparison to the number of inhabitants. In view of the general topography of the country it is ideal for the cheaper grades of trucks, tractors and automobiles, and combinations that can be used for pleasure and freight. This last type won considerable favor during the war, while the car of luxury plays a somewhat smaller part.

Despite cars sent in by other countries, the American product has the first call, and the general attitude of the people is favorable towards the manufacturer from the states. Harbor strikes delayed the unloading of the American shipments in 1919, and the increase in the dollar value has also restricted trade. The customs duty on motor vehicles has also been increased, but business men, familiar with all sides of the question, incline to think that this condition will be speedily adjusted and state that Denmark offers a rich field for the American car manufacturer.

AUTO TIRES SCARCE IN GERMANY.

Berlin streets resound to the rattle of iron-tired automobile wheels today, much the same as they did during the war. Automobile tires are at a premium throughout Germany, and even the very low priced grades imported into the country find a ready market at a much appreciated value.

Only the wealthy can afford to purchase even the poorer sort of tire, and the average car owner is content to jog along on the rim of his rattling car. Taxi drivers alone seem to find this condition satisfactory, as there are no troublesome punctures to repair, and if the passenger murmurs when the car jounces over some particularly bad bump in the road, the operator merely laughs and applies more power for the next bump.

Hundreds of old horse cabs have made their reappearance at the railway stations, in front of the hotels and along the principal thoroughfares. They have taximeters and their drivers multiply their totals by eight when charging for a ride.

AUTO CENSUS SHOWS GREAT GAIN IN NEW ZEALAND.

The use of motor vehicles in New Zealand has grown rapidly. Figures for 1910 totalled 2000, as compared to 30,000 in 1920. There were more than 6000 automobiles imported during the first six months of the current year, and future orders booked indicate that the average for the first six months of 1921 will be even larger. It is estimated that imports of bicycles, automobiles, trucks, accessories and parts for 1920 will amount to more than $15,000,000, and the demand is said to be greater than the supply.

Motor vehicles entering the kingdom from Great Britain and possessions pay a duty of 10 per cent., with 10 per cent. additional from all other countries. Motor fuels pay no duty other than the war tax of one per cent., which is charged on all imports.

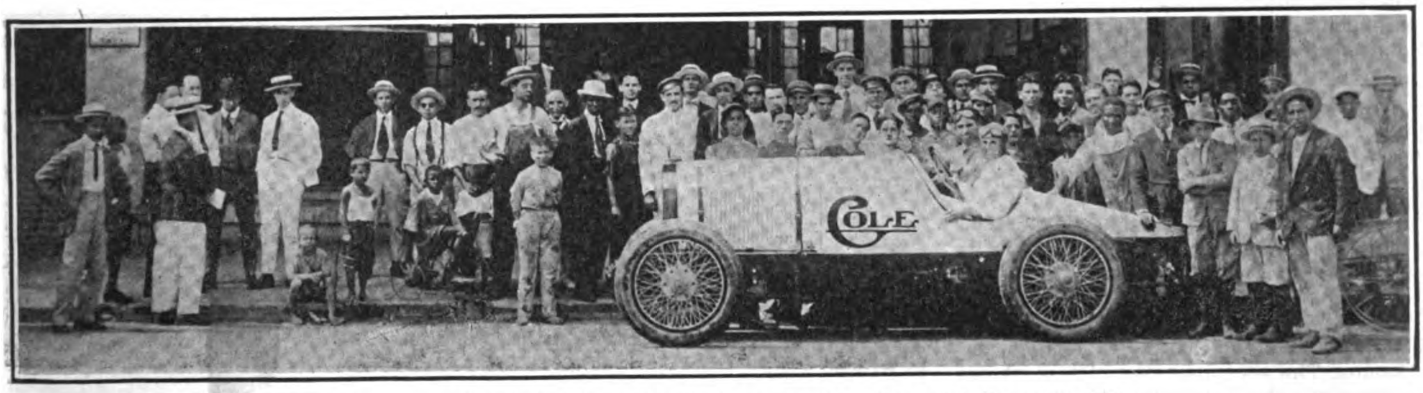
SOUTH AFRICANS FIND SUBSTITUTE FOR GASOLINE.

The South African car owner is apparently somewhat up against it as regards gasoline, the price being fixed by the government at $1.12 a gallon. This condition has resulted in extensive experimentation in an endeavor to find a substitute for the high priced fuel, and "natalite," a by-product of the sugar cane mills, has been used extensively with marked success. In addition to this substitute, "acetol," a secret compound in which alcohol and ether figures, has recently made its appearance.

Many claims of superiority have been made and substantiated for acetol, one of the most interesting being the assertion that it burns absolutely without carbon sediment, and is non-injurious to the carburetor and engine. Its use is said to solve the question of the air-cooled engine, and extensive tests have been made along this line with marked success. It is selling for 60 cents a gallon at this time and it is understood that it can be produced to sell at lower price.

RACING IN CUBA.

The Cole stock chassis, in racing regalia, shown in the picture, recently made a new record in a 10-mile road race staged in a mile track in Havana, Cuba. The Compania Nacional de Commercio, Cole distributor at Havana, report the track as having been in very poor condition and the resulting time of nine minutes and 10 seconds is considered unusually good. The previous Cuban record for the distance was nine minutes and 36 seconds.



Cole Stock Chassis Which Recently Made a New Race Record in Havana, Cuba.

Typical Dutch Village in Which the 17th Century Town Hall Is in Strong Contrast to the Modern Motor Car in the Fore ground.

AMERICAN AUTOMOBILE BUSY IN TURKEY.

In the midst of the hundreds of carriages, creeping ox carts, camel trains and mule packs which constitute a lively traffic scene in Constantinople, the American motor car, flying the American flag, offers an interesting contrast. And the contrast seems to be in favor of the automobile. These cars, many of them ambulances and trucks, are bound for Russia, but on account of the difficulty of securing local transportation facilities the American Red Cross has pressed them into service for the time being, in moving supplies from the docks to the three immense warehouses which the society owns. These busy cars are housed in the Red Cross garage and expert mechanics, many of them former service men, keep them in first class condition.

HUNGARIANS LIKE AMERICAN AUTOMOBILES.

The 11th Annual Hungarian Industrial exposition, recently held at Budapest, covered a surprisingly large range of products, and the interest taken in the exhibition by the Hungarians was keen. Presumably the greater part of the products shown was intended for home consumption, but there were many of the exhibitors who announced their intention of catering to the foreign markets. American automobiles were featured at the show and occasioned much favorable comment, as did several accessory lines of American manufacture.

THE DIXIE FLYER ABROAD.

The Dixie Flyer, manufactured by the Kentucky Wagon Manufacturing Co., Louisville, Ky., is fast building up a reputation with the foreign buyer, and many lucrative sales have been made by branches located in England, Scandinavia, Iceland, Holland, Switzerland, Portugal, Greece, Egypt, China, South Africa, India, the South Sea Islands and Samoa. The accompanying picture shows a foreign shipment in line for the dock.

COLE IN HOLLAND.

During his recent visit to Europe, the export manager of the Cole Motor Car Co. travelled in a Cole Aero-Eight through Holland. The red brick highways impressed him as being especially fitted for automotive traffic, and he found travelling delightful. The accompanying picture shows a typical Dutch village scene with the 17th century town hall in the background. Although the automobile is not much used in Holland, he reported that interest in the Cole was keen, and it is probable that sales will be made in the near future.

Foreign Trade Opportunities

(Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from district or co-operative offices.)

34,118—An electric power company in East Africa desires to receive catalogues on Diesel oil engines.

34,120—A mercantile company in Argentina desires to secure an agency for the sale of draperies, silks, cotton goods, general dry goods, knitting machines, dyes, agricultural implements and machinery tools. References.

34,125—A commercial agent in the Netherlands desires to secure an agency for the sale throughout Europe of binder twine, manila and sisal cordage, farm machinery, wire rope, cotton goods and motor trucks. Quotations should be given c. i. f. European ports or f. o. b. New York. References.

34,128—A commercial agent in South Africa desires to secure the sole agency for the sale, in the Belgian Congo, of various lines of machinery, including agricultural implements, hardware and tools.

34,134—An inquiry has been received from a man in England wishing to secure the representation of firms for the maintenance of a permanent exhibit of American goods, such as motor fittings of all kinds suitable for English motor cars, electrical goods, fancy goods, toys, small interior fittings, kitchen appliances, locks, tools of all kinds, trimmings for motor cars, farm and garden implements, boots, collars, dental goods, surgical goods, pens and accessories, and advertising signs. References.

34,136—A merchant in Maderia desires to receive catalogues of any good make of automobiles, with a view to securing an agency for their sale in that island. No references offered.

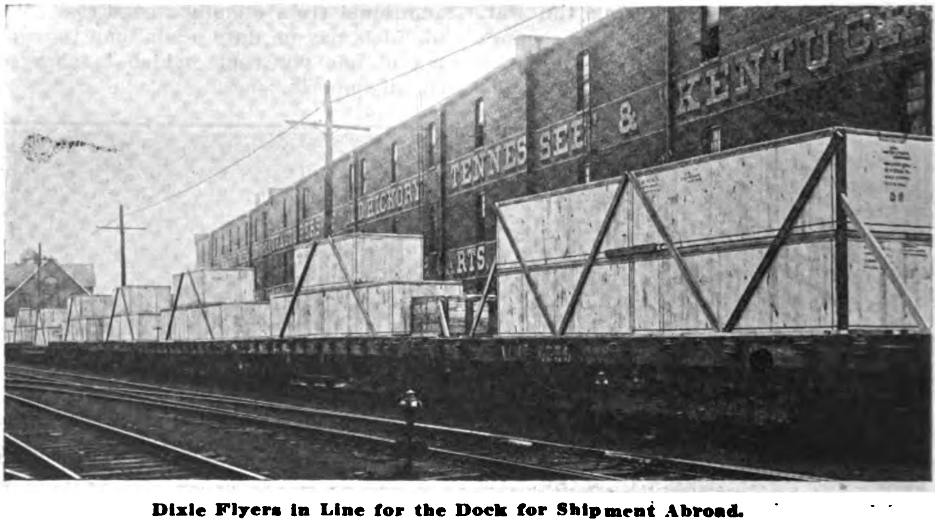
34,154—A mercantile company in India desires to secure an agency and purchase motorcycles and side cars, motor cars and lorries of different capacities, rubber tires and tubes of good quality and other motor car accessories; motor boats, launches and accessories; electric appliances and electrical goods. Quotations should be given c. i. f. Karachi or Calcutta preferred, also f. o. b. American ports. Payment to be by draft at 60 days sight through any exchange bank. References.

34,156—An engineering and trading company in India desires to be placed in communication with manufacturers only of direct and semi-direct lighting fixtures, switches, motors, farm lighting plants, centrifugal pumps, fans and heating appliances.

34,183—The partner in an import firm of South Africa is in the United States and desires to secure an agency for the sale of equipment for coal mining plants, house lighting plants, household refrigerating machines, high speed steam generating sets, briquette making machinery, concrete mixers, centrifugal pumps used for removing gravel, stone crushing machinery and electrical household contrivances. Reference.

34,189—A mercantile firm in France desires to secure an agency for the sale of a medium priced automobile. Quotations should be given c. i. f. docks, Bordeaux. Correspondence should be in French. Reference.

34,192—A manufacturing company in Greece desires to be placed in touch with manufacturers of waterproof cloth for automobile covers. No reference offered.



Dixie Flyers in Line for the Dock for Shipment Abroad.

CARANZA CONCLUDES REIGN BY INSPECTING ACASONS.

It is stated that the last official outdoor act of President Caranza of Mexico previous to losing his job was the inspection of a new shipment of American-made trucks, the product of the Acason Motor Truck Co., Detroit, Mich. The accompanying illustration shows the ex-president just after he had finished the inspection of part of the shipment. The trucks were intended for military service, but are now employed for commercial purposes.

IMPORTS OF TIRES INTO SOUTH AFRICA.

The value of all rubber tires, including inner tubes, imported into the Union of South Africa during the years 1918 and 1919 was as follows:

	1918	1919
United Kingdom....	$1,090,066	$963,903
Canada	44,875	242,288
France	76,983	400,703
Italy	50,822	78,313
Japan	10,873	3,319
United States........	548,562	714,719
Total..............	$1,822,181	$2,403,245

The customs duty on rubber tires imported into South Africa is 20 per cent. ad valorem. A rebate of three per cent. is granted on the products or manufactures of the United Kingdom and reciprocating British colonies.

At the close of the year 1919 there were approximately 9000 motor cars of all descriptions registered in the Cape Province. Most of these consisted of pleasure cars.

Most of the motor cars in use here are of American make, consisting of the lighter and medium priced cars. Most of the British cars used here are also of the lighter and cheaper models. Roads in the rural districts are very poor and the cars used are essentially employed for travelling in the cities and short runs nearer the larger centers, and the cars used are of a type particularly suited for this purpose. Few trucks or heavy touring cars are used. Roadsters and five-passenger cars whose consumption of gasoline per mile (the present price of which is $1 per gallon) is not too great are most popular.

ROBERTS RE-ELECTED PRESIDENT ST. LOUIS DEALERS.

The St. Louis Tire Dealers' association at its recent annual meeting re-elected Joseph Roberts of the Roberts Motor Tire Co. as president. The other officers chosen are as follows: Vice president, Art B. Mooney, Art B. Mooney Tire Co.; secretary, Robert E. Lee; directors, G. F. Poertner, Majestic Tire Co.; Joseph Kuemmerle, B. & K. Tire and Equipment Co.; I. Riefler, Independent Tire Co., and Auguste Chouteau, Lee Tire Service Co. New members elected were: Field-Lippman Co. and Zerwek-Grayson Co.

W. G. TOLAND TO DIRECT KELLY-SPRINGFIELD AND RIKER SALES.

William G. Toland has been appointed general truck sales manager for Hare's Motors, Inc., and will proceed to strengthen the sales organization for the distribution of Kelly-Springfield and Riker trucks. This announcement has been made by Vice President Henry Landsdale, who is in charge of distribution for Hare's Motors.

Following his school days Mr. Toland had two years of business life on the Coast and then came East. He sold advertising for the New York Herald, was in the ship building business and then became assistant New York manager for the National Cash Register Co., his duties in the latter post being to analyze and develop new fields for his wares.

In 1917 he joined the truck sales organization of the Packard Motor Car Co. of New York, of which E. S. Hare was then president, and was placed in charge of truck sales for the Springfield, Mass., branch of that company. His success led to his promotion to be truck sales manager for the New England territory and to his subsequent transfer to the larger field of the New Jersey district.

Mr. Hare's idea of selling motor freight transportation, rather than merely trucks, found ready acceptance with Mr. Toland and he was one of the most successful of the executives in Packard, New York, in working along that line. He thoroughly believes that an analysis of the prospect's transportation problem is essentially the first step to be followed by intelligent and impartial advice as to its solution and his appointment makes sure that Hare's Motors plan for merchandising trucks will be based on this substantial foundation.

AUTO SUPPLY SALESMEN VISIT HAMMERED PISTON PLANT.

The salesmen of the Automobile Supply Co., Chicago, Ill., in the course of a tour of the plants of all the automotive equipment manufacturers whose products are sold by this concern, were recently entertained by the officials of the American Hammered Piston Co., Baltimore, Md., at dinner, theater and supper. The morning following the theater party, the Chicago salesman made a very thorough inspection of the American Hammered Piston Ring Co.'s model plant. They also inspected the shops of the Bartlett-Hayward Co., the George Oldham Pneumatic Tool Co. and the Campbell Metal Window Co. A baseball game and luncheon at the Bartlett-Hayward Co. followed these tours of inspection.

After luncheon the advertising, manufacturing and sales plans of the American Hammered Pistcn Ring Co. for 1921 were the subject of a general discussion, which proved mutually beneficial.

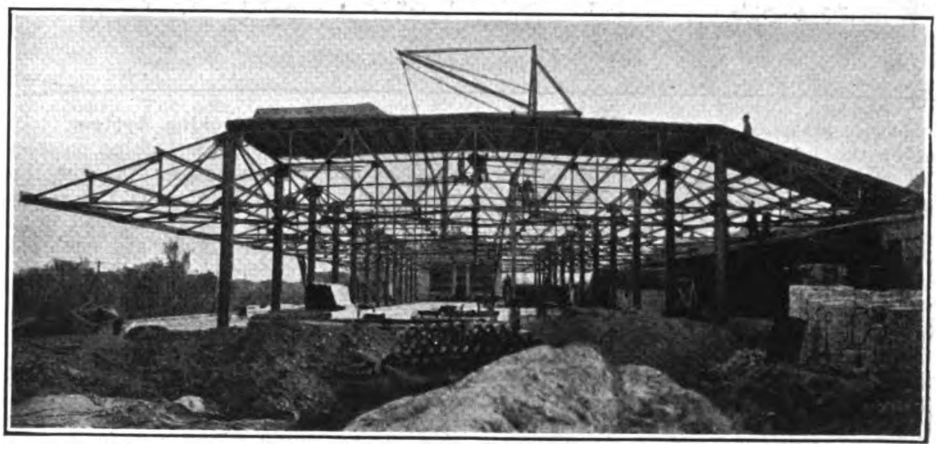
TRANSPORT STORAGE DOCK AT MT. PLEASANT, MICH.

The scope of the expansion plans under way by the Transport Truck Co., Mt. Pleasant, Mich., may be gleaned from the accompanying illustration, which was taken when work on the roof of the plant's giant new storage dock was commenced. It is now nearing completion. The photograph gives an excellent view of the frame work, which is supported by two rows of steel columns.

The dock is 90x240 feet and has a total floor area of 21,600 feet. It will add materially to the facilities for handling the business of the Transprt Truck C.,. which is reported to have been on the up grade throughout the so-called depression period.

A complete switch track system will be operated on either side of the building. The place will have facilities for export crating. This latter equipment will give fresh impetus to the business this concern is rapidly building overseas.

Detroit Steel Products Co. has increased its capitalization to $5,250,000 and declared a common stock dividend of 300%.



Immense New Storage Dock of Transport Truck Co., Now Nearing Completion.

Automayer Lubrication and Jacking System

AMONG the novel devices recently brought out for automatically oiling motor cars from the dash, as well as for automatically raising a motor car off the ground is the Auto-Mayer system invented by F. D. Mayer, president of the Essenkay Products Co., 220 West Superior street, Chicago, Ill. In describing the Auto-Mayer oiling system, attention is called to the fact that ordinary lubricating oil is used, carried in the tank under the hood of the car, and drawn therefrom by a single-cylinder pump operated by gears from the magneto shaft, the oil being forced into a reservoir attached in front of the dash, under the hood, under pressure. From the reservoir ordinary brass or copper tubing forms leads to the various grease cups on the car, these grease cups being self-closing and of ball-and-socket type.

When it is desired to lubricate any part of the car, the indicator knob on the dash is turned to the number corresponding with the particular cup to be filled or, in the event that it is desired to oil all parts of the car at once, the indicator knob may be turned to a specified point and, in two minutes, every cup will be filled with oil under pressure. Turning the indicator knob actuates the cam which is located on the back of the dash and this raises the plunger of the valve, or by-pass, permitting the oil to be forced out of the reservoir into the line or lines leading to the cup or cups.

Oiling the car in this way daily may possibly entail a small waste of lubricant, but perfect and constant lubrication is insured even to the point of forcing out old oil, it is claimed, which may contain dirt or grit, and replacing it with new oil. Movable parts on the car may be served with flexible tubing.

THE "AUTOMAYERJACK" OIL OPERATED JACKING SYSTEM

Operation of Jacking System.

The operation of the jacking system is practically the same as that of the lubricating system insofar as the reservoir, pump, valves, cams and lead lines are concerned. The jacks are enclosed in dust-proof cases and are attached behind the front and rear axles at four points on the car. When it is desired to raise a particular wheel, the indicator knob is turned to the number corresponding to "right rear," or "left front," as may be necessary. Oil is then forced into the hydraulic cylinder, through the line from the oil reservoir, by engaging the clutch attached to the pump, thus extending the jack and lifting the car. The jack may be closed again either by opening a by-pass or by springs, fitted for the purpose.

The car may be entirely raised from the floor by turning the knob on the dash indicator to a fixed point, thereby opening the four by-passes, after which the car may be locked in its jacked-up position, making it impossible to move the machine and taking all strain off the tires.

Both systems are controlled by safety valves and are stated to be practically fool-proof, and can be locked with a Yale key. They are protected by a number of patent claims covering all operations, attachments and use.

HARVEST TIME FOR AUTOMOBILE TRIMMERS.

The time is now ripe for automobile repair men to inaugurate a lucrative annex to their regular line of business in a trimming and top department. This work of retopping and other repairs of this nature is ordinarily best done when the cars are laid up for the cold weather.

The best way to book this class of trade is by circularizing automobile owners, using a good form letter or a nicely printed folder. The circularizing should suggest that if the owner of the car intends driving it through the winter the time is now at hand when a torn, worn, or leaky top should be replaced or repaired; worn or damaged curtains renewed and broken window lights replaced. The best time to have this done is before the rush starts just before extreme cold weather sets in.

The circularizing should also suggest that if the car is to be laid up for the winter it is an advantage to book an order early for necessary repair and replacement work, repainting, reupholstering, or whatever needs to be done to put the machine in good condition for an early spring start.

The fellow who is annoyed by having to wait for his car to be refitted in the spring is the chap who delays ordering his work until the last minute and then expects the repairman to finish his job in a couple of days.

Some well planned solicitation along these lines ought to make a busy fall and winter season for auto trimmers, top makers and painters.

REMOVING INSULATION.

In removing insulation from stranded wires be careful not to cut any of the fine threads. These are so small that it is an easy matter to slice off five or six with the insulation, but each does its share in carrying current to the lamps.

TO PROTECT WIRE FROM RUST.

Melt mineral pitch and add to it 1/15th part by weight of coal tar and 1/20th part by weight of very fine quartz sand, and immerse the wire in the mixture. The coating becomes hard in 24 hours.

Ingenious Weaver Wheel Alignment Indicator

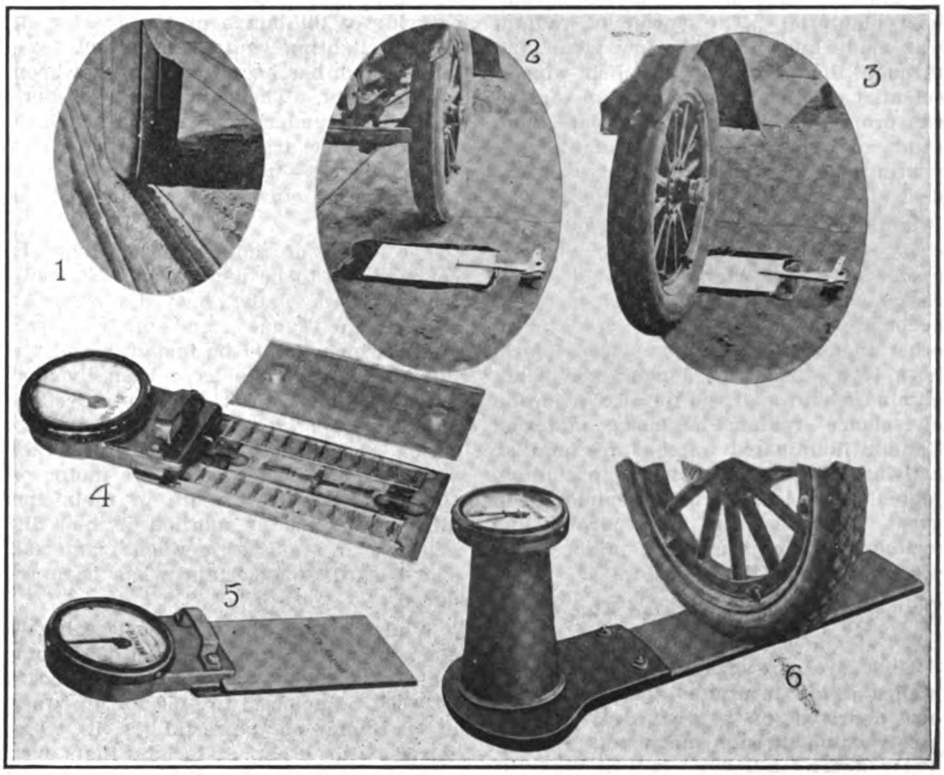
IT IS stated that the greatest single factor responsible for unnecessary wear on tires is misalignment of wheels, front or rear. It is perfectly evident that when the wheels are parallel the wear on the tires is at a minimum, since the wheels simply roll along the road or pavement with no friction. Any deviation from this parallelism, however, develops a side thrust or "drag" on the tires that is very destructive, especially when driving over pavement or hard surface roads. To be more explicit, if the front wheels of a car are out of true alignment one inch, it naturally follows that the tires must be dragged sideways three inches in every revolution. Figuring upon this basis, a 30-inch tire would be dragged sideways 168 feet in every mile that the car is driven. Therefore, when one considers that statistics show that from 50 to 75 per cent. of the cars being driven today have their wheels out of alignment to a greater or lesser degree, it is not difficult to understand what is causing the enormous consumption of tires, and also that by properly aligning the wheels, millions of dollars could be saved the motoring public each year.

It may be asked why it is that this condition has continued year after year without attracting more attention, and the only answer seems to be that up to this time it has been difficult for the car owner to detect the misalignment of the wheels on his car unless it existed to a very excessive degree.

The Weaver Manufacturing Co., Springfield, Ill., has brought out an ingenious and at the same time comparatively simple device by which any misalignment of wheels may be detected, measured and recorded. This is the Weaver wheel alignment indicator, illustrations of which are shown herewith, at 4, 5 and 6. The inventor of this device noted that a car having the wheels in perfect alignment left a perfectly clean, evenly balanced impression in sand or oil, while one having its wheels more or less out of alignment constantly pushed the soft surface of the road to the side towards which the wheels inclined. This effect of a properly aligned and misaligned wheel is shown at 1.

This condition convinced the inventor that the amount of the side thrust on the tire could be measured in some way so as to accurately record the actual misalignment of the tire while the car was in motion.

His first real experiment consisted of placing a piece of card board on a heavily greased spot on a cement road with a mark on the card board to indicate the amount of travel as the misaligned wheel passed over it. He then drove a car with the wheels quite radically out of line over this card board with the result that the card board was drawn sideways a distance corresponding to the misalignment of the wheels. It will be readily understood that in view of the fact that the other wheel was still in contact with the rigid surface of the road, the side thrust on the tire caused by the misalignment of the wheel was instantly relieved as soon as the one wheel passed on to the greased card board, which would not offer the same rigid resistance as the hard surface of the road. The instant the wheel passed on to the card board the wheels were immediately relieved of all side thrust and consequently endeavored to assume a normal position. It is plain to see, therefore, that the movement of the card board indicated the degree to which the wheels were out of true alignment. This experiment is illustrated at 2 and 3.



Wheel Alignment Indicator Brought Out by the Weaver Manufacturing Co., Springfield, Ill.: Fig. 1 Shows Track of Properly Aligned and Misaligned Wheel; Figs. 2 and 3 Illustrate Initial Experiments Leading to Perfection of Weaver Indicator; Portable Type Is Seen at Figs. 4 and 5, While Fig. 6 Is the Larger or Stationary Type.

It, therefore, remained for the inventor to perfect a means for accurately recording these measurements and the Weaver Wheel Alignment Indicator is the result. The principle is simple in the extreme. The instrument consists only of two flat steel plates with roller bearings between, the upper plate being accurately connected with a recording mechanism which registers the movement of the plate on the dial. The construction of the portable type of Weaver Wheel Alignment Indicator is shown at 4 and 5.

The method of recording by means of the hand on the dial, the misalignment of the different sizes of wheels was, of course, a somewhat more complicated undertaking, but this has been carefully worked out by the manufacturers of this instrument and they are prepared to stand back of their claim that the reading of these instruments is accurate to the minutest fraction of an inch.

The advent of this device, therefore, makes it possible for the car owner to run his car slowly over the plate of this instrument and a glance at the dial will show him with perfect accuracy the misalignment of his car wheels while the car is in motion or, in other words, the true running alignment which it has heretofore been absolutely impossible to record.

The Weaver Wheel Alignment Indicator is made in two sizes. At 6 is shown the larger or stationary type designed for installing in the runway of the garage so that cars passing in or out will pass over it. This type is equipped with an electric bell which rings if the wheels are out of alignment more than the minimum degree which the garage man chooses to establish. Ordinarily, it is considered that three-eighths of an inch misalignment is not serious and the alignment indicator can be set so that the bell will not ring unless the misalignment is more than this.

The smaller or portable type of instrument, shown at 5, is designed for use in the shop in aligning the wheels after the stationary instrument has shown that the wheels need attention. Both types, however, are stated to be sufficiently rugged for service under the heaviest passenger car or commercial truck.

Utility of Radium as a Safety Element

(By ARTHUR ROEDER, Radium Information Service, New York City.)

RADIUM, the most mysterious and most powerful element known to science, which has the greatest power of all discovered sources of energy, has now been linked with the safety movement and will lend its power to the prevention of avoidable accidents. So great is its power that one gram is sufficient to raise a ton of water from the freezing to the boiling point. If one ton of it were harnessed to a ship equipped with 1500 horsepower engines the ship would be propelled at the rate of 15 knots an hour for 30 years.

Radium is best known to the world through its curative properties in the treatment of cancer and through its commercial value in making radium luminous material The power of radium was made known only a few years ago through the efforts of a Polish woman scientist, and a French and an American professor. Radium now treats thousands of cases of cancer annually, preventing death and eliminating a great deal of suffering.

Radium's role in industry as a life saver is less spectacular, but perhaps even more important than it is as a therapeutic agent. The great mass of accidents in factories, in mines and in other industrial institutions where darkness is a creator of danger, are being eliminated through the newest invention of science—radium luminous material. Radium illuminated watches are familiar articles. The same material that illuminates these is now being employed in great factories on all power line switches where fumbling might mean electrocution to the operator.

Gauges; Electric Switches, Etc., Illuminated.

High pressure gauges, which are installed as an insurance against dangers are deprived of a great deal of their safety value through inconstant lighting. Their dependability as indicators is increased tremendously through making them safe 24 hours a day by the application of radium luminous material, which is invariably luminous in the dark. Steam gauges and water gauges of all sorts are making use of radium to increase safety.

Electric switches are often set in places which are unlighted. This includes electric lighting equipment, which is usually visible only after the light it controls has been turned on. A spot of radium luminous material on the bottom of switch makes them easily located in the dark, so that in emergency they may quickly be made use of.

Likewise, a fire alarm or a fire extinguisher is deprived of a good deal of its efficiency through being invisible in the dark. Radium luminous material acts as a quick locater for them. Telephones which are often necessarily found quickly in the dark in emergencies, various emergency call bells and revolvers are made more useful through the application of "Undark." Gun sights, illuminated, insure accuracy of aim in the dark. The need of luminating poison bottles, so that they may stand out warningly in the dark has been demonstrated too often to need further dwelling on. An interesting safety device is the safe combination whose dial is radium luminated, so that no artificial light need be used for it.

The industrial uses of radium luminous material are many. Bolts that are necessarily attached to the dark under portions of machines and equipment are being touched with dabs of this luminous material with a consequent great saving of bloodshed. In mines where the carrying of oil lamps or the placing of electric lighting equipment is not feasible, radium has been found to be a boon to humanity. There are dark corners in the dark underground channels which miners must traverse, corners where danger lurks—these are made safe through the unvarying luminosity of radium.

The value of radium to mariners is commencing to be recognized. Not only the compass dials, but the steering wheels, the gauges, and other instruments which should be instantly and uninterruptedly visible have been touched with radium. Motorists, motorcyclists and the operators of any machinery which has indicating dials, or gauges which tell of the speed of the motor or the quantity and mixture of fuels and oils, are finding the solution of their difficulties in radium luminous material. The hazard of uncertainty has been reduced.

While radium is the most valuable element in the world—a gram of radium, which is about a thimbleful, costs $120,000, as opposed to $150 for an ounce of platinum—so powerful is it when mixed with other materials that even the minutest particle is effective in making material self-luminous for years. It is this quality which makes radium luminous commercially possible.

The great value of radium is due to its scarcity, and to the great difficulty in isolating it after it has been found. Much of the radium of the world is now found in America, in carnotite fields. A great portion of this comes from the Undark Radium mines in the Paradox valley of Colorado.

The ore is found in narrow seams in the ground. It is sorted and packed in 100-pound sacks and transported 60 miles to the nearest railroad station on the backs of burros and mules. Thence it is shipped in carload lots 2900 miles across the continent to an extraction plant in Orange, N. J. Two hundred fifty tons of ore treated with an equal amount of chemicals and water yields one gram, which is about the size of a pin head.

The power of radium lies in the penetrating character of its rays, which disintegrate and travel at the rate of 3000 miles a quarter of a second.

In addition to the use of radium luminous material on machinery in industrial plants, it is used extensively for the marking of any corner or spot which should be visible in the dark. Angles of tables and chairs, corners in rooms, numbers to indicate cubby holes or doorways on which there is no other illumination are touched with a spot of "Undark." Even the valuable electric torch increases its efficiency when it has a touch of radium on it so that it can be reached instantly in an emergency in the dark.

When other lights fail, when fuses blow out, wires break down—radium will glow dependably without danger of explosion or of burning.

The employment of radium to help solve our medical and industrial problems of life safety is as yet in the first stages of its development. What the future will bring, no one knows.

IMPORTANCE OF CRANKCASE LUBRICATION.

A recent test showed that to prevent excessive engine wearing the oil in the crankcase should be changed at least every 1500 miles, preferably every 1000 miles.

A new engine that was run 6000 miles with the oil changed at proper intervals, upon being disassembled, showed no signs of wear. The same engine, reassembled and run 6000 miles with the old oil plus new oil as needed, upon inspection, showed a wear of .015 inches.

Truck and passenger car manufacturers recommend that for better performance and longer life, crankcases be drained every 1000 miles, the engine flushed with kerosene and new oil added.

TAR REMOVER FOR TAKING PAINT OFF GLASS.

The tar removers which are designed to clean up machines after being run over newly tarred roads are also excellent for removing ordinary house paint from window glass.

If accessory dealers will advertise their line of tar removers as suitable for this purpose they will soon find themselves serving customers who do not own automobiles.

CLEANING MATERIALS.

Washing soda, kerosene and plain soap and water should be the cleaning agents used by car owners for cleaning parts, tools, etc., about the garage. Gasoline is not as good as these others and the cost is considerably greater. For taking grease spots out of clothing some of the inflammable fluids now on the market are better than the present grades of gasoline.

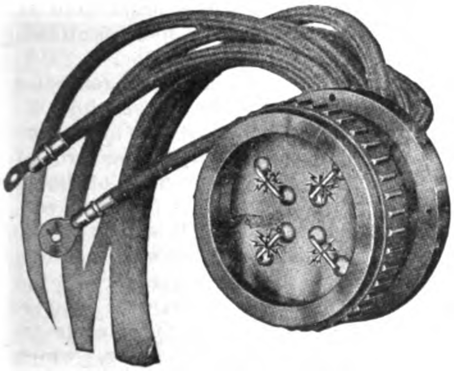
HERZ SPARK-GAS-SAVER AND "OSCILLUM."

The Pro-Mo-Tor Fabricating Corporation, successors to Herz & Co., is bringing out a new device called the "Oscillum," which is a combination spark controller, gas saver and spark intensifier.

The Herz company made a regular spark gap as early as 1902, which was attached to each individual spark plug, but the individual gap, being located directly over the spark plug and subject to temperature changes and jars on the motor, is stated to never have proven very satisfactory.

Letters patent have been granted to G. L. Herz, who has been the designer of a great many automobile accessories for the past 24 years, on a new invention which is claimed to combine all the advantages of the auxiliary gap and at the same time to eliminate its disadvantages.

This new spark gas saver, "Oscillum," attached to the dashboard, not only saves gasoline, but also shows whether or not all spark plugs are working; it indicates the broken or sooted plug and makes the motor run with more power and regularity.



Herz Spark Gas Saver Oscillum.

The Pro-Mo-Tor Corporation offers the Spark Gas Saver "Oscillum" complete, with cables and cable terminals to be attached to the Ford car at $6.50 postpaid (introductory offer, list price $7.50), or, in conjunction with a set of the well known Herz plugs, Bougie Mercedes, for Ford cars, at $11.50. The instrument alone, without cables, is obtainable at $5. It can be used for any four-cylinder car. "Oscillum" instruments, for six and eight-cylinder motors, are now in preparation.

In this connection it is interesting to note that a plan for the distribution of profits has been conceived by the Pro-Mo-Tor Corporation which provides for the free distribution of stock among the dealers in proportion to their sales. The corporation has set aside one-sixth of its capital stock for this purpose and since there is no preferred stock, no bonds or debentures outstanding, the offer amounts to a turning over of one-sixth of the entire business, assets as well as earnings, to the dealers.

The Pro-Mo-Tor Fabricating Corporation will be glad to explain its proposition to any dealer interested, and a letter addressed to 182 Locust avenue, New York, will promptly bring a little booklet which contains full information.

Recent Publications of Interest to Trade

NEW DIRECTORY AND MARKET DATA BOOK.

Crain's Market Data Book and Directory of Class, Trade and Technical Papers, now on the press, promises to be of unusual interest to advertisers generally and users of trade and technical papers in particular. It not only lists all of the business publications of the United States and Canada, giving circulations, rates, type page sizes, closing dates, etc., but supplies a market analysis of each trade, profession and industry. Thus the reader is given the basic facts of each line in which he may be interested, including its buying power, buying methods, character of requirements, etc. The volume, which is bound in cloth and contains nearly 500 pages, is published by G. D. Crain, Jr., 417 South Dearborn street, Chicago. The price is $5. Orders in advance of publication are being accepted at the rate of $3.75.

BURD PISTON RING DIRECTORY.

The 1920-1921 edition of the Burd Piston Ring Directory, published by the Burd High Compression Ring Co., Rockford, Ill., is off the press and is claimed to be the most comprehensive compilation in existence devoted to the subject of piston rings. It contains 192 pages, measuring four by seven inches, with cover printed in three colors.

This book gives the piston ring dimensions, year, model and number of cylinders for practically all makes and models of automobiles, trucks, tractors, motorcycles, gas engines, marine engines, air planes, etc., and in addition to the tabulations of sizes it contains much helpful information for ordering, handling and installing piston rings. It contains also valuable tables of standards that every repair man should have.

A copy will be mailed, on request, to any garage or repair shop by the company.

BASSICK MANUFACTURING CO. HAS NEW HOUSE ORGAN.

The Bassick Bugler, the breezy house organ of the Bassick Manufacturing Co., Chicago, maker of the Secret Service auto lock, Thompson's Graphite Penetration oil and the Alemite High-Pressure lubricating system, has just made its initial bow to the trade. It is well gotten up, full of sales pep and should prove interesting reading to jobbers. The editor is evidently too retiring to print his name, but he has good writing knowledge and is well up in the mechanics of house-organ lay-outs.

NEW STARRETT CATALOGUE.

The L. S. Starrett Co., Athol, Mass., manufacturer, has issued its new catalogue, which is in improved form both as to appearance and arrangement over all its previous compilations, but lists some 21 additional new tools. Among these may be noted an improved Universal bevel protractor, a new micrometer caliper gauge, tool maker's button, metric micrometer caliper, micrometer caliper heads, micrometer caliper sets, metric fillet or radius gauges, V-block and clamp set and firm joint dividers.

AMBU SERVICE MANUALS.

Service stations and repair shops, frequently handicapped in making repairs and adjustments by a lack of complete knowledge of the internal wiring of various starting and lighting systems, will undoubtedly find use for the Ambu Service Manuals, published by the American Bureau of Engineering, 1601 South Michigan avenue, Chicago, Ill. These manuals contain working drawings and complete data and the information is classified and indexed in a manner that makes it easy for one to find the particular subject in which he is interested.

NEVILLE MANUFACTURING CO. CHANGES QUARTERS.

The Neville Steering Wheel & Manufacturing Co., manufacturer of the Neville More Room Steering Wheel, has outgrown its manufacturing facilities in Detroit and has moved to Wayne, Mich., where it is installed in a new brick and cement building The new plant is one-story in height, 50x280 feet, with plenty of light and modern factory facilities.

The new quarters will more than triple the manufacturing space devoted to the More Room Steering Wheel and enable the company to take care of the rapidly increasing domestic and foreign demand.

PORTER CAR MADE IN BRIDGEPORT.

The Porter car, formerly the F. R. P., is now being manufactured by the American-British Manufacturing Corporation, Bridgeport, Conn. Morton W. Smith Co., Inc., of New York city will handle the distribution of the entire production of the factory, which is limied to about 350 cars a year.

Gen. Nelson A. Miles, Chauncey M. Depew and John Jacob Astor were judges of the second automobile run to be held in this country.

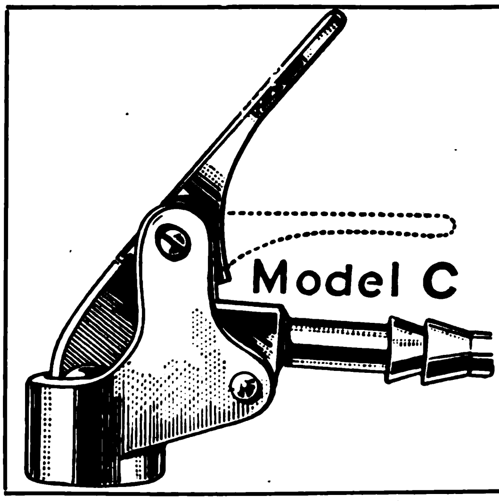
LOX-ON AIR CHUCKS.

There are illustrated, herewith, two models of the Lox-On air chuck, which is being marketed by the Automatic Safety Tire Valve Corporation, 1753 Broadway, New York city. The Lox-On principle for air chucks is stated to have completely revolutionized the old "push-on" methods, with increased efficiency and saving in expense. One of the latest additions to the line is the Model C, which is made of solid brass (nickeled) for direct pumping garage equipment, engine and hand pumps.

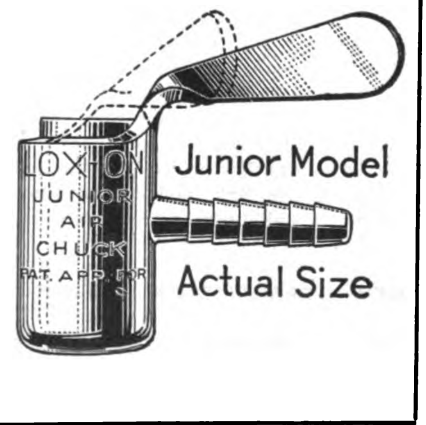
The Lox-On slips over the valve stem and then is caused to grip it by merely pressing down the lever with the thumb. It grips tightly, completely preventing any leakage. To release, simply push up the lever and lift it off. There is claimed to be absolutely no pushing or pulling of the rubber cylinders over the valve threads and consequently they do not have to be frequently replaced. The Lox-On cannot be jammed over the valve shoulder because of the metal baffle plate which protects it and the tire valve.

A smaller model, called the Lox-On Junior, has just been added to the line, and is stated to be as efficient in the class of service for which it is designed as the other members of the Lox-On family.

The list price of the Model C is $1.25 anywhere in the United States. Sold singly or six on an attractive display card. Furnished for one-quarter inch I. D. hose unless otherwise specified, but can be supplied also for 3/16 and ⅜-inch I. D. hose if desired. The list price of the Lox-On Junior is 40 cents each, sold singly or 12 on a display card. Furnished for 3/16-inch I. D. hose, without deflating pin, unless otherwise specified, or may be obtained for ¼ or ⅜-inch I. D. hose if desired.



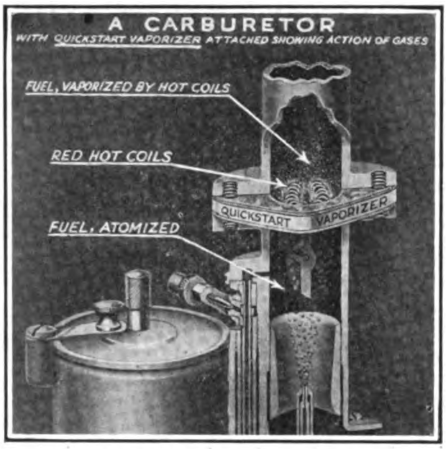
Lox-On Air Chuck, Model C.



Junior Model, Lox-On Air Chuck.

QUICKSTART VAPORIZER.

The Quickstart Vaporizer, made by the Scientific Devices Co., 15 Park row, New York city, makes use of a well known principle; i. e., that to overcome cold weather troubles, means should be provided for instantly vaporizing the heavy gasoline more or less finely atomized at the carburetor. This, it is claimed, can only be done by the application of heat. Exhaust heat or hot water is not available until after the engine has started, but electric heat from the battery is always and instantly available. The theory is that the best place to apply this heat is at the carburetor, where the gasoline is atomized and has not yet collected in streams on the walls of the inlet pipe. The heat should be at the carburetor where it can be aided by the pulverizing action of the air on the gasoline. Under low temperature conditions the gasoline now commonly supplied is difficult to vaporize because of its low vapor pressure.



A CARBURETOR
WITH QUICKSTART VAPORIZER ATTACHED SHOWING ACTION OF GASES
FUEL, VAPORIZED BY HOT COILS
RED HOT COILS
FUEL, ATOMIZED
QUICKSTART VAPORIZER

Interior View of Quickstart Vaporizer.

The Quickstart Vaporizer functions to supply heat and raise the vapor pressure of the unvaporized particles of gasoline that are carried in the stream of working fluid after it has left the carburetor. Even at extremely low temperatures a certain proportion of the fuel has been vaporized and the Quickstart takes advantage of this fact and supplies heat to the remaining unvaporized liquid particles as they are carried forward.

The Quickstart Vaporizer is of a gasket form to be installed in the place of the regular gasket. between the flanges of the intake manifold and the carburetor, and is connected, through a switch, to the storage battery. Its operation is as follows: Before pressing the starting button, or hand cranking, the switch is closed for 15 seconds—taking about 10 amperes of current. The motor is then started and the first intake stroke causes air to be drawn into the air passage of the carburetor, around the spray jet, where by reason of the velocity of the air stream and the pressure differential the gasoline is injected from the spray jet in the form of a fine spray of globules. Ordinarily, under warm weather conditions, this spray, presenting an enormous surface area in the aggregate, is quickly vaporized by the air, and the mixture of vaporized gasoline and air is drawn into the cylinder, properly proportioned, ready for compression and ignition.

Under low temperature conditions, however, when the vapor pressure of the gasoline is low, the small particles comprising the spray are not readily vaporized by the air stream. The air stream carries the particles until they strike against the walls of the intake manifold, where they condense into drops and the air, carrying too small a proportion of liquid fuel vapor to make up an ignitable gas, passes on into the cylinder.

The Quickstart, it is claimed, remedies just this condition. In 15 seconds its heating element is heated red hot. The air enters the carburetor, passes around the spray jet, entrains a mist of liquid fuel and projects this mist fairly in contact with the surface of this heated element. Immediately upon striking this heated surface the vapor pressure of the fuel is raised by the increase in temperature to a point where the fuel is instantly converted into vapor, which mixes thoroughly with the air to form a properly proportioned working gas, is drawn into the cylinders and is there compressed and readily ignited.

The price of the Quickstart Vaporizer is $6, complete and ready for installation, and it is claimed that anyone can attach it in 30 minutes. In ordering the name and model of car and carburetor should be given.

MARTIN AND DELAMOTTE'S PROCESS OF NICKEL PLATING.

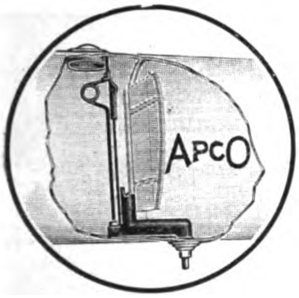
Prepare a bath of:

Water	3.3 gallons
Citric acid	2¾ pounds
Ammonium chloride or ammonium sulphate	1 pound
Ammonium nitrate	1 pound

The bath is heated to 175 degrees Fahrenheit and gradually saturated with freshly precipitated nickel hydrate. It is then removed from the fire, saturated with one-half gallon of ammonia and diluted with water to a bulk of 5½ gallons. It is now allowed to become cold. One pound of ammonium carbonate is then added, the fluid is allowed to settle and is finally filtered. It is blackish-blue and shows 11 degrees Baume. A white layer of nickel of great density and brilliancy is deposited by electrolysis. The temperature of the bath, when used, should be about 120 degrees Fahrenheit. A thicker coating can be obtained by adding hydrate of potassium or of sodium.

TWO NEW APCO ACCESSORIES.

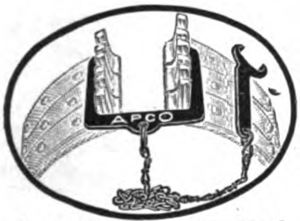
The Apco Manufacturing Co., Providence, R. I., is just putting on the market two interesting new items in the Apco Gasoline Reserve and Apco Transmission Tool.



Apco Gasoline Reserve.

The Apco Gasoline Reserve holds a gallon of gasoline in reserve, which can be used by throwing the valve spring over a quarter of a turn. When this reserve supply is used the tank cannot be filled until valve is reset, which is done by turning valve spring back to its original position. The installation is only the matter of a minute of time, no tools being necessary other than the hands. The filler cap is simply removed, the reserve snapped in place and the filler cap replaced. There is nothing to wear out or get out of order and once installed, it is claimed that it will last a life time. It is made from malleable iron and spring steel, finished in white nickel. It comes packed in a carton and list price is $1.50.

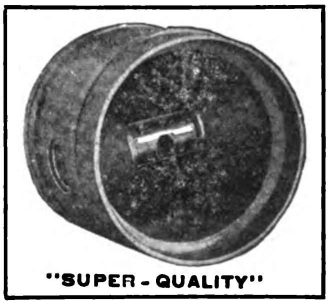
Transmission Tool.



Apco Transmission Tool.

The holding of the transmission bands together while assembling is often times an annoying problem to repair men, and the Apco transmission tool is designed to eliminate this difficulty. The clamp shown in the cut holds the bands in perfect alignment and it may be put on instantly. The wrench is drop forged, milled to the exact size of the adjustment nuts, and the chain eliminates the chance of losing the wrench in the transmission case. The entire tool is finished in black enamel. It comes packed one in a carton; list price, $1.

SUPER-QUALITY PISTONS.



Pistons for Ford Motors.

The Automotive Products Corporation, Hazelton, Pa., is making a line of Super-Quality pistons for Ford motors in standard and over sizes, which it is now supplying direct to the Ford Motor Co., Detroit. It is stated to be a perfectly balanced piston, made to conform to the new Ford specifications, answers every micrometer test and is ready for immediate installation. It is a turned piston of the finest gray iron, mechanically accurate in every detail and an exact stock duplicate of the new Ford stock type. It is guaranteed by the maker, all defective items being cheerfully replaced. The list price is $1.15 each, plus five per cent. war tax.

It is also of interest to note that this company is also making, among other products, such as step-cut piston rings, phosphor bronze individually cast bushings, etc., a line of replacement wrist pins for every type of passenger car.

PIONEER MIRRORSCOPES.

One of the most convenient and economical accessories that is now being offered in the field of automobile mirrors and similar devices is the Pioneer Mirrorscope, manufactured by the Brewer-Titchener Corporation, Cortland, N. Y. The claims made in favor of this accessory are as follows:

Simple: Can be attached and adjusted in a minute. A screw driver the only tool required. It is attached to the windshield of open cars and just above the windshield of closed cars. Can be instantly adjusted up or down or sidewise.

Accurate: Will remain properly focussed over the roughest road without readjustment.

Economical: The price of the Mirrorscope is so small that it is negligible compared with its usefulness.

Durable: Made of the very best material and workmanship. It will last longer than the car.

Handsome: Being protected by the top, it is always neat and clean.

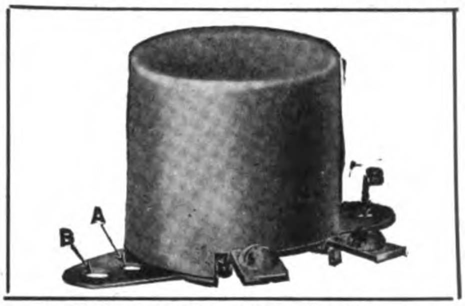
Safe: By placing before the driver a clear view of the road behind, the Pioneer Mirroscope greatly assists in the elimination of accidents, and adds to comfort and safety in motoring.

To aid the dealer in bringing the Pioneer Mirrorscope to the attention of the public the company offers an assortment on an attractive display easel board for the show window or counter.

Actual Photograph of Approaching Train as Seen in the Pioneer Mirrorscope.

GENERATOR CUT-OUTS MARKETED BY NEW YORK COIL CO.

The New York Coil Co. of 338 Pearl street, New York city, has placed on the market a line of generator cut-outs consisting of two models. A special model, for Ford cars only, fits on the round generator in exactly the position and by the same fastening means as heretofore employed. The second model, termed the Universal, is adaptable to all cars using a cut-out, as the lugs are provided with two sets of differently spaced holes so that the Universal model will instantly fit on all generator mountings or may be attached to the dash without boring holes or addition of any wires.



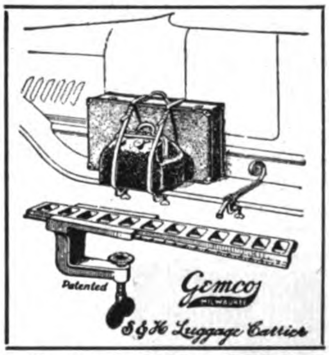
Universal Generator Cut-Out.

This device is claimed to be made with instrument precision, is much smaller, more handsome in appearance and sets a new standard for generator cut-outs.

The list price is $2.50, with a very liberal discount to the trade, and full descriptive matter will be sent on request.

GEMCO LUGGAGE CARRIER.

A good luggage carrier is an almost indispensable adjunct to many types of motor cars. The Gemco Manufacturing Co., 742 South Pierce street, Milwaukee, Wis., offers a form which can be attached to the running board of any car, and conveniently supports suit cases, traveling bags and parcels. The device consists of two main castings, each containing an inner casting, which slides to the necessary width adaptable for carrying the particular case or parcels desired, the adjustment giving a variance of 15 inches. Straps are drawn through openings in the main casting to suit the size of the baggage and to rigidly fasten it. Bundles or parcels may extend over the luggage carrier.



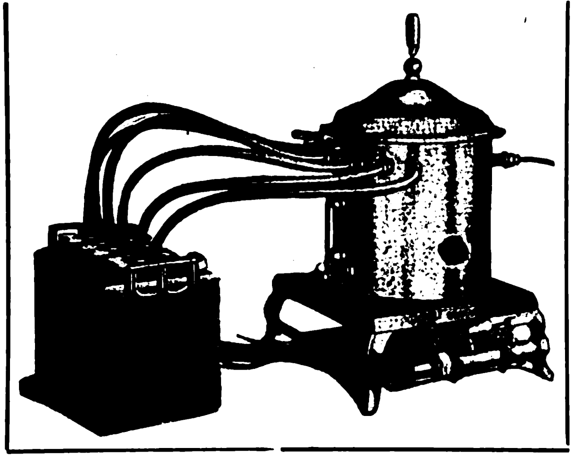
Gemco Luggage Carrier.

The attachment to the running board of the car, which is quickly accomplished, is by two thumb screws. The list price for the complete carrier is $4.10.

AUTOMATIC LUBRICATION BY THE VANOILER.

A new system of lubrication that is claimed to be automatic in its action has been placed on the market by the Advanced Products Corporation, Philadelphia, Pa. The device, which is known as a Vanoiler, is the invention of A. A. Van Orsdale, who is president of the company.

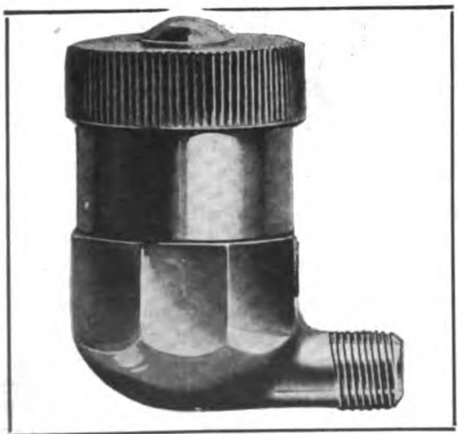
The action of the Vanoiler is dependent upon the vibration of the car, and its delivery of lubricant is in direct proportion to the need. When the car is not in operation lubrication automatically ceases. Oil is fed only when needed, where needed and in the quantity needed.



Ibisco Automatic Battery Steamer.

The principle of operation is simple. Where the cap of the device screws down tightly on the cup it presses on a steel spring which releases a valve and starts the flow of oil to the pan. When the machine is at rest an automatic seal is formed which keeps the oil from running through the bottom of the cup. When the machine is in motion, however, the vibration is sufficient to cause an overflow of oil from the pan, which continues while the machine is in motion, thus insuring a constant supply of oil to the part requiring lubrication. The amount of oil fed to the bearings is easily regulated, as the sensitivity of feeding is adjustable by moving the center piece up or down, which raises or lowers the constant oil level in the pan.

It is also claimed that the Vanoiler adds to appearance of the car.



The Vanoiler, a New Lubricating Device.

IBISCO BATTERY STEAMER.

Among the modern essentials for service station equipment may be mentioned the Ibisco Battery Steamer and Still which is being marketed by Bailey-Drake, Inc., 1120 South Michigan avenue, Chicago, Ill. This apparatus is designed by men who understand the needs of battery service stations. One or all six cells of a battery can be removed by the Ibisco in from three to five minutes with no danger of breaking the jars or injuring the battery in any way. The battery can be opened in a few minutes, making it possible to immediately show a customer the exact condition of his cells.

The Ibisco steamer is made of 14-gauge spun aluminum. It has no seams. No metal other than aluminum and brass comes in contact with the water. All models are equipped with safety valves, which keep the steam at low level pressure. The still attachment distills chemically pure water continuously and, while not in use as a steamer, supplies the fluid at the rate of about a gallon an hour. The amount of fuel required is very small and almost any kind of heating apparatus may be utilized. It seldom requires cleaning out but, by unscrewing the brass screws the top of the boiler can be easily removed for cleansing.

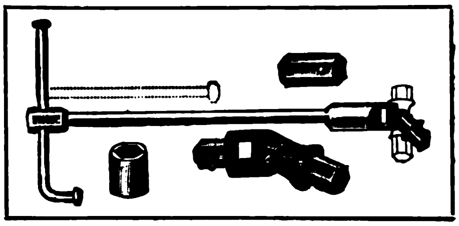
The outstanding features claimed for the Ibisco equipment are economy of operation and small amount of space required. The No. 1 Ibisco steamer and still is equipped with an automatic valve so that the operator can attach it direct to the municipal water supply. It is stated to require absolutely no attention. The faucet is simply turned on, and the automatic valve does the rest. The No. 3 model is identical with the No. 1 except that it does not have the automatic valve. A sight water gauge shows the level of the water in the boiler at all times. This outfit is fed by hand. The steamer may be obtained without the still.

The list prices are as follows: No. 1, combination steamer and still (automatic), $65; No. 2, automatic steamer (without still), $52.50; No. 3, combination steamer and still (not automatic), $50; No. 4, steamer only (not automatic), $37.50. Prices quoted do not include heating devices which, however, can be furnished if desired.

LANE'S SOCKET WRENCH SETS.

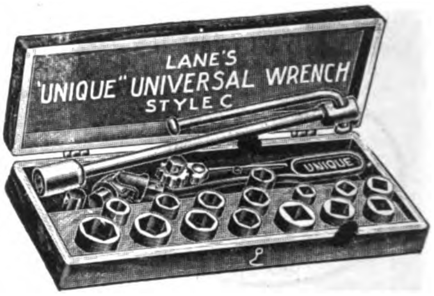
In the accompanying illustrations are presented two examples of the line of Unique Lane tools manufactured by the Will B. Lane Unique Tool Co., 180 North Dearborn street, Chicago, Ill.

The list price of style A socket wrench set is $4. It is especially commended to the attention of the legion of users of Lane's Standard and Ford ratchet sets, as it adds tremendously to the value of those sets because all the sockets can be used on either the adapter pin or universal joint. The A set consists of a wrench 11 inches long, universal joint, adapter pin and one No. 1 half-inch Unique socket to fit quarter-inch hexagon nut or 5/16-inch hexagon cap screw. The adapter pin fits the wrench in place of the joint and converts it into a T handle wrench in five seconds. It comes packed in a cardboard box.



Lane Universal Socket Wrench, Style A Set.

The Unique universal socket wrench set, style C, list price $12, is stated to be the handiest combination of socket wrenches that can be conceived. It consists of a Lane Unique ratchet wrench, an 11-inch sliding T handle socket wrench, universal joint, adapter pin, eight Unique machine made broached steel sockets, with hexagon openings, from 7/16 to ⅞ inch, and six Unique machine made steel sockets, with square openings from one-quarter to 9/16 inch by 16ths. This combination is useful to both mechanic and car owner. Separate wrenches to do the same work that can be accomplished with this combination would, it is claimed, cost 10 times the price. This set is put up in a strong hard wood varnished case.



Lane Universal Socket Wrench Set, Style C.

HARDENING COMPOUND FOR THIN STEEL.

Dr. Hartmann recommends to add about one pound of rosin to the usual mixture composed of one gallon of train oil, two pounds of beef suet and 4½ ounces of wax. He also recommends another compound consisting of 95 parts of spermaceti oil, 10 of melted tallow, 4½ of neats foot oil, one-half of pitch and 1½ of rosin.

FRENCH POLISHING FOR METALS.

Mix one part of washed ferric oxide with 50 parts of magnesium carbonate. Moisten a rag with water or alcohol, dip it into the powder, rub the articles thoroughly and dry them with soft leather.

WORKRITE HYDROMETER OUTFIT NO. 1.

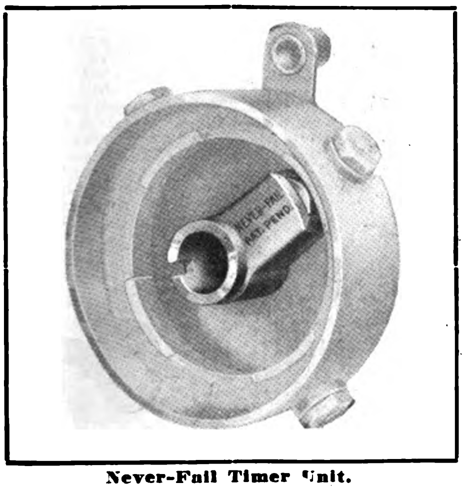
Among the comprehensive line of WorkRite hydrometers and outfits, may be noted the No. 1 outfit, for car owners and small garages, illustrated. This consists of a standard type A hydrometer fitted into a quart jar for holding distilled water. The large rubber washer on the hydrometer fits the mouth of the bottle, making it proof against dust and evaporation. Both the hydrometer and its contents are always clean and ready for use. Blank spaces on the label of the bottle are convenient for the filling in of the last date the battery was tested and filled. Four years of successful sales have made this outfit a standard article in automotive supplies.

No. 1 WorkRite Hydrometer Outfit.

It is manufactured by the Workrite Manufacturing Co., Cleveland, O., which is also supplying the type A hydrometer for general use, separate from the bottle, the No. 2 outfit for use with house lighting plants and auto batteries, which consists of the type A hydrometer fitted into the screw cap of a gallon jar with handle, and the No. 3 outfit for fast and accurate work in garages and battery stations, consisting of type B hydrometer with a gallon water jar with a soft rubber lined mouth designed to prevent breakage. The No. 3 hydrometer is especially designed for quick reading and rough use around a garage.

NEVER-FAIL TIMER UNIT.

The Never-Fail Timer Unit, marketed by the Never-Fail Carburetor Co., 191 Jackson avenue, Long Island City, N. Y., is claimed to double the life of the timer shell from the fact that it will operate in used shells; that it keeps the roller on the track and requires no oil. It is guaranteed to give satisfaction and afford real economy.

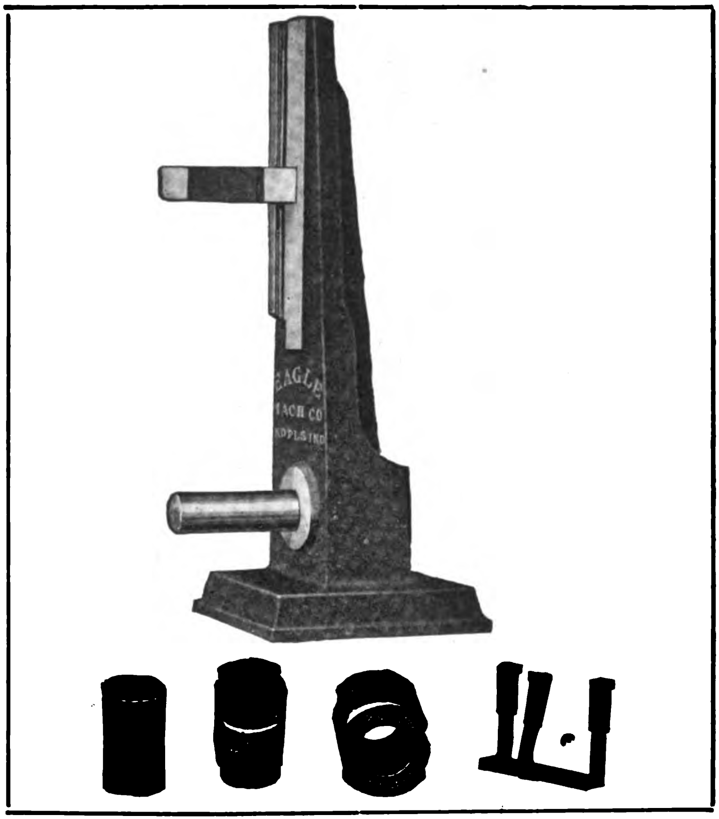


Never-Fail Timer Unit.

EAGLE UNIVERSAL ALIGNING FIXTURE.

One of the most essential tools in a garage or service station is an aligning fixture with which to line up the connecting rods and pistons, so that they will be parallel with the bore of the cylinder. The Eagle Machine Co., Indianapolis, Ind., has designed a tool which enables the mechanic to detect the slightest twist or bend in the rod or a wrist pin hole in the piston which has been bored or reamed out of alignment. By the use of this handy tool the garage man can save considerable time in fitting and assembling his pistons and rods and can be sure that the job is in perfect alignment.

The Eagle Universal aligning fixture embodies several new features, such as enabling garagemen to line up his connecting rod and pin alone or the connecting rod and piston combined. It also has a set of three Universal bushings which will fit all sizes of connecting rod bearings, ranging from 1¼ inch to 2½ inch and all intermediate sizes.



The Eagle Universal Aligning Fixture with Accurate Bushings.

In actual operation the lower connecting rod bearing is clamped on the correct size bushing as it is fitted to the crank shaft, and this bushing is placed on the hardened and ground steel arbor of the machine; and to see if the connecting rod is twisted, the piston pin is clamped in its place. Then the square will show whether it is out of line and how much. After all the pins are lined up the pistons are placed on the rods in the usual manner and the bushing is slipped on the arbor and the square is removed by a thumb nut, leaving a straight, smooth surface. By placing the piston over against this surface it can be readily seen whether it is in line or not. If it is out of line, slip the bushings off the pin and place the vise clamps in the vise and put the connecting rod in the clamps. Bend rod until piston lays straight with the surface. The bushings being solid the rod never has to be removed until the work is finished.

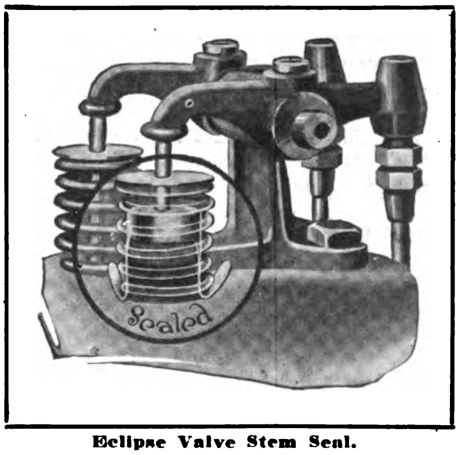
To prove if the rod is straight reverse it on the arbor and if it lays up against surface both ways it is perfectly straight.

Dealers' proposition will be furnished upon request to the Eagle Machine Co., 24 North Noble street, Indianapolis, Ind.

ECLIPSE VALVE STEM SEALS AND OILERS.

The Eclipse valve stem seal and oiler consists of a metal container with suitable packing to withstand the heat and wear to which valves are subjected. It fits on any motor that has 5/16-inch and ⅜-inch diameter valve stems—estimated to be about 75 per cent. of all motors made. It should be applied to the intake valves to obviate the suction of air into the cylinder on the suction stroke on low throttle, which causes missing and weak firing. These seals are suitable for both overhead and L-head motors. The oiling feature lubricates the stem and keeps the road dust out.

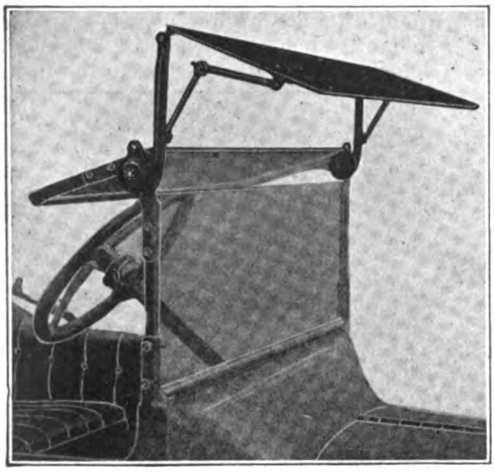
The Eclipse valve stem seals and oilers are manufactured by the Eclipse Accessories Manufacturing Co., 1138 East 112th street, Cleveland, O. They come packed in sizes, four in a box, retailing at $1, and six in a box, $1.50; felts for Chevrolet cars, 12 in a box, 25 cents.



Eclipse Valve Stem Seal.

CORCORLITE SPOT LAMP.

The Corcorlite Spot Lamp, Model 495, was offered for the first time to the trade at the recent Automotive Equipment show at Chicago, and is claimed by the manufacturer, the Thomas J. Corcoran Lamp Co, Winton place, Cincinnati, O., to embody a number of new, desirable features. For example, it can be converted into a trouble lamp by the mere turning of a thumb screw and the switch to operate it is unique but simple.



Loudon's Adjustable Storm and Sun Shade.

An attractive mirror, especially designed for this lamp, is an optional addition that may be obtained with it. The outside streamline body, single shell, is made of brass and finished in black enamel. The lamp is of the double-contact type, with bulb 21 candle power, six to eight-volt nitrogen. It comes furnished with four feet of lamp cord, and its construction is of the highest quality material and workmanship.

Corcorlite Spot Lamp, Model 495.

The retail price of the Corcorlite Spot Lamp, Model 495, is $4.95; with mirror, $5.75. Jobbers and dealers are invited to write for special proposition.

PREVENTION OF SCREWS RUSTING.

The screws in machines exposed to heat and moist air soon rust in even if oil is used, which makes the taking apart of a machine a difficult task. By dipping the screws, before putting them in place, in a thin paste of graphite and oil, they can be removed without difficulty.

LOUDON ADJUSTABLE STORM AND SUNSHADE.

The windshield on the ordinary Ford runabout and touring car is not made with a sub-frame and, consequently, is not adapted for the attachment of other types of shades and at the same time to permit the opening of the windshield without removing the shade. Still other types of shades do not allow the lowering of the top without removing the shade. Loudon's adjustable storm and sun shade is designed so as to be attached absolutely independent of either the top or the opening and closing of the windshield, and is thus particularly suitable for use on Ford runabouts or touring cars. The Loudon shade is 10 inches wide, affording sufficient projection in front of the windshield at any angle to protect the driver and passengers from the discomfort of sun glare or the fear of accidents caused by a rain or snow-clouded windshield. It is adjustable to any angle desired, ranging from horizontal to nearly vertical. It is, in short, an all-weather shade that is always in place and ready for any adjustment. It can be installed by anyone in five to 10 mintues by following the simple instructions furnished with the attachment.

The list price is $7.50, and it is manufactured and distributed by Loudon, Inc., 1303 West Lake street, Minneapolis, Minn.

IDEAL LOCK FOR FORD CARS.

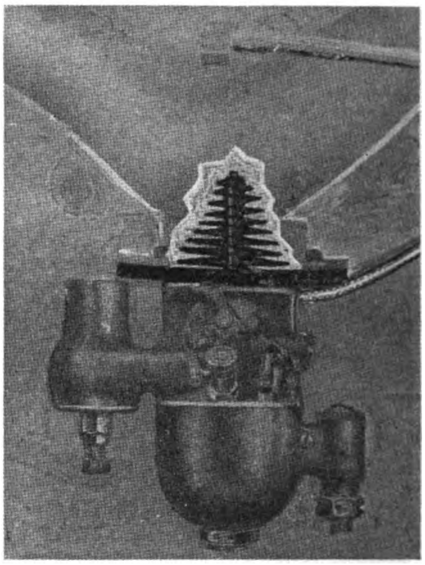
The Ideal lock for Ford cars, being marketed by the Penn Pressed Metal Co., Newton avenue and Line street, Camden, N. J., is stated to be the result of several years' experimentation in the manufacture of automobile locks and its every part and principle has been specially designed for its particular service. The advanced cleverness of the automobile thief has made useless many devices that were formerly considered adequate for protection.

The Ideal lock is provided with hardened steel locking cams that take hold of the steering with a grip of steel that is stated to be impossible to break, and locks the front wheels at any desired angle instantly. The simplicity and quickness of its installation will immediately appeal to dealers and owners of cars, as there is no cutting or fitting to be done. It is simple in operation. For instant locking and unlocking turn key and move lever; the lock cannot be removed when in locked position. The Ideal lock has been inspected and approved by the Underwriters Laboratories. A good proposition is offered to dealers which means big profits and satisfied customers.

The Penn Co. also makes other types of locks, including a combination auto lock.

POMEROY'S PATENTED GASAFIER.

There are now many devices on the market designed to give a more complete vaporization of gasoline, kerosene and similar liquid fuels. The Pomeroy "Gasafier" has been thoroughly tested out in the past 2½ years by the maker, the B. H. Pomeroy Electrical Works, 118 Ridgeway avenue, Rochester, N. Y., and is stated to work efficiently.

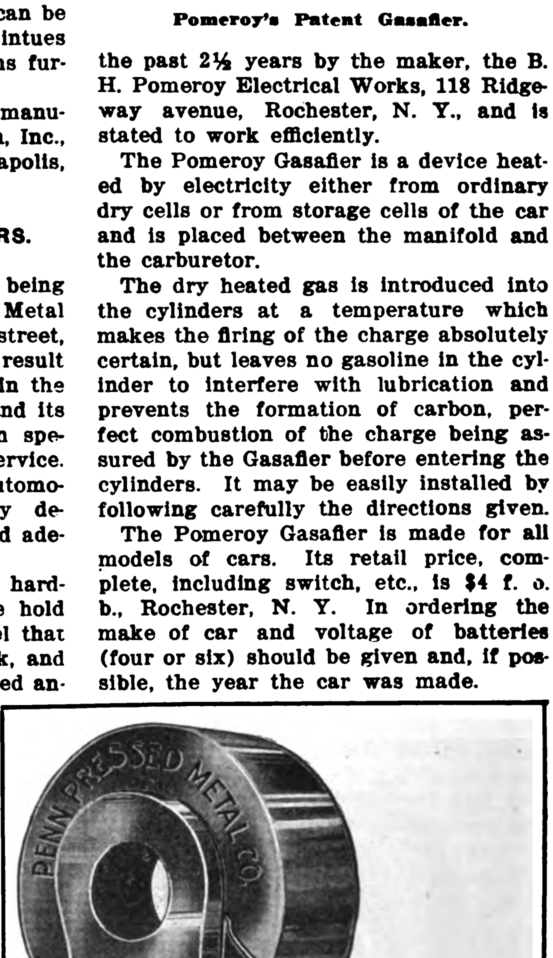


Pomeroy's Patent Gasafier.

The Pomeroy Gasafier is a device heated by electricity either from ordinary dry cells or from storage cells of the car and is placed between the manifold and the carburetor.

The dry heated gas is introduced into the cylinders at a temperature which makes the firing of the charge absolutely certain, but leaves no gasoline in the cylinder to interfere with lubrication and prevents the formation of carbon, perfect combustion of the charge being assured by the Gasafier before entering the cylinders. It may be easily installed by following carefully the directions given.

The Pomeroy Gasafier is made for all models of cars. Its retail price, complete, including switch, etc., is $4 f. o. b., Rochester, N. Y. In ordering the make of car and voltage of batteries (four or six) should be given and, if possible, the year the car was made.



Ideal Lock for Ford Cars.

RECORD OF BUILDING OPERATIONS FOR DECEMBER

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Alabama.

Mobile—Adams Machinery Co.; 3-story concrete show room and storage station, glass front.

California.

Stockton—Matteson Mfg. Co.; factory for tractor production; $150,000.

Connecticut.

Hartford—Paul and Anna Ruffins, 203 Front St.; 1-story brick and public garage, 36x66; $10,000.

Norwalk—J. S. Fairbanks, 438 Atlantic Ave.; 1-story frame battery station, 50x140; $60,000.

So. Norwalk—Jos. S. Fairbanks, Water and South Sts.; 1-story service station and garage; $10,000.

Georgia.

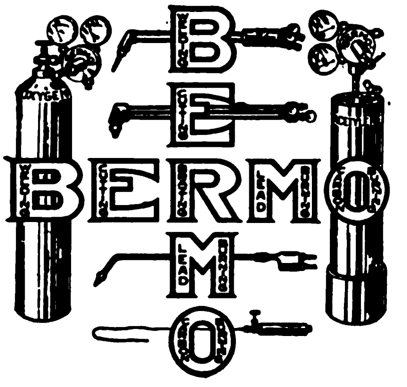
Wichita Falls, Tex.—Southern Tire & Vulcanizing Co.; $10,000 to $40,000.

Manitowoc, Wis.—Eastman Mfg. Co.; $25,000 to $50,000.

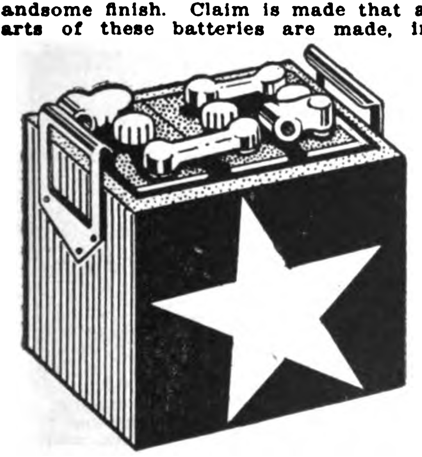
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

Bermo Welding Apparatus, for 16 years a well known product, is claimed to have reached a degree of efficiency which is the result of experience and experimentation and that practically all kinds of welding, cutting, lead burning, brazing and decarbonizing can be done at a minimum of time and expense. The manufacturer is in receipt of many letters of recommendation, all of which tend to show the general usefulness of the different products. All Bermo apparatus is guaranteed for one year and liberal terms of credit are given which enable the purchaser of a Bermo plant to pay for it from the profits of the business.



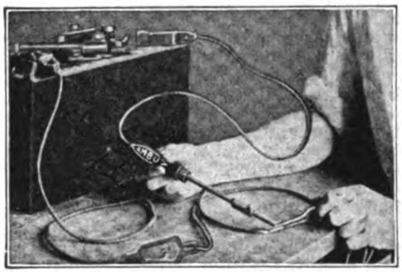
Manufactured by Bertschy Engineering Co., Cedar Rapids, Ia.

Star Storage Batteries, designed to meet every emergency to which a storage battery may be subjected, are made of the best of materials, of rugged design and handsome finish. Claim is made that all parts of these batteries are made, inspected and assembled by the manufacturer, and that no part is accepted until it has passed an especially rigid test. Car owners who have used the Star batteries are said to speak highly of their general efficiency and high class workmanship.



Manufactured by the Star Storage Battery Co., Muncie, Ind.

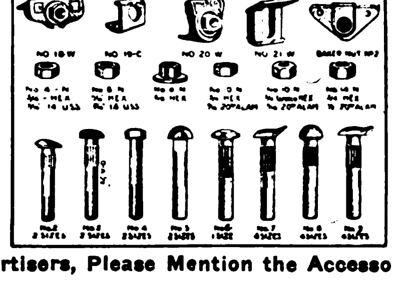
The Ambu Solder Iron complete, consists of three feet of rubber covered braided wire with clamp for attaching to battery, a three-foot connecting wire with two clamps, six carbon points, a piece of wire solder and one two-ounce can of Ambu solder paste. It is designed to work wherever there is a storage battery, and, therefore, can be used in the shop, the car or the garage. It is unique in that it wastes no current because none is used except at the instant of soldering.



Manufactured by American Bureau of Engineering, Inc., Chicago, Ill. Retail price, $5.

Hubco Replacement Rim Parts are said to be made in such manner as to eliminate all annoying squeaks and rattles when fitted to the car. The claim is made that properly annealed malleable iron is used, which does away with any wear on the rim, the idea being that it is better to have the wear come on the parts than on the rim. All parts are galvanized with a heavy double coating of galvanized iron, and are said to be absolutely rust proof. An interesting feature of the marketing of these parts is the dealers' specification sheets, which are laid out in such manner as to make it practically impossible for the wrong parts to be supplied to a customer. The line includes wedges, clamps, bolts and nuts for all makes of cars.

"HUBCO" REPLACEMENT RIM PARTS



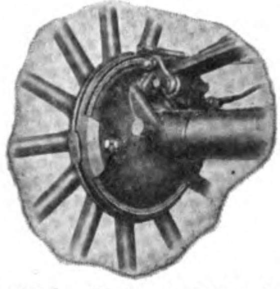
Manufactured by the Baltimore Hub Wheel & Manufacturing Co., Fallsway and Gay Streets, Baltimore, Md.

Gimlet Bit Sets—This set consists of 12 bits, 1/32 to 12/32 inches, put up in a round wooden box. Each bit is hand forged from crucible steel, carefully hardened, oil tempered and sharpened by hand.

ONE SET
No.577
HAND FORGED
GIMLET BITS
1/32 TO 12/32
MANUFACTURED BY
GOODELL-PRATT COMPANY
GREENFIELD, MASS. U.S.A.

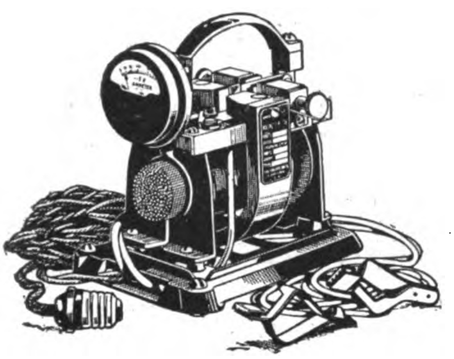
Manufactured by Goodell-Pratt Co., Greenfield, Mass. Price, complete, per set, $2.80. Weight, 1½ pounds.

The Moore Rear Wheel Service Brake for Ford Cars is a full wrap contracting brake, acting directly on the original Ford brake drums. It is operated from the original brake pedal, the Ford transmission brake band being disconnected and not used. Claim is made that it is positive in its action and can be applied gently or in such manner as to lock the wheels. There are no loose parts to rattle, and materials are used which seem to indicate that it will give thousands of miles of service.



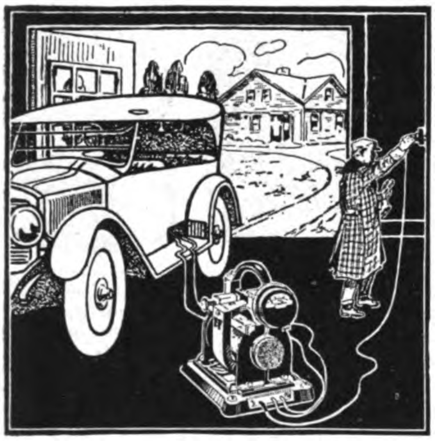
Manufactured by Tractor-Train Co., Connersville, Ind. Prices: Model 100, for passenger cars and all Model T chassis, $20 plus 75 cents excess tax. Model 200, for one-ton worm drive trucks, $40, plus $1.50 tax. F. O. B. Connersville, Ind.

The F-F Battery Booster is designed to furnish an efficient and satisfactory means for charging all types of storage batteries from alternating current. This device uses both sides of the wave of the alternating current, rectifying the positive and negative alternations through copper and carbon electrodes which, it is stated, are inexpensive and durable and cannot burn, break or depreciate on account of the infusibility of the carbon.



The essential parts of the mechanism are the transformer and rectifying unit. The rectified charging current delivered is an interrupted, pulsating direct current, the heating effect of which is stated to be less than with the straight direct current; therefore, charging can be done at a higher rate in less time. The upkeep is negligible as the carbon brushes are adjustable for wear simply by turning a thumb screw, and are claimed to be good for thousands of hours of service.

The F-F Alternating Current Battery Booster or Magnetic Rectifier is also stated to give the proper "taper" of charge. Its operation does not depend in any way upon the condition or state of the charge in the battery. It is entirely automatic and needs no fixed conditions of installation, constant attention or expert knowledge. The expense of operation is said to be no more than the cost of burning an electric light for a few hours. It is convenient in that the outfit can be readily transported and attached to the battery wherever located. All that is necessary to be done is to screw a plug into a lamp socket and snap the two charging wires on to the battery terminals.



The alternating current F-F Battery Booster is equipped complete with ammeter, long extension cord and plug, heavy charging wires and battery clips. The dimensions are five by seven by seven inches for types 16 and 112, and five by seven by nine inches for other types.

The same company also manufactures a combination of rectifier and carbon rheostat and F-F panel rectifiers in a number of types, as well as the F-F Battery Booster or charging rheostat with current regulator for use on 24 to 220-volt farm lighting plants, or direct current circuits.

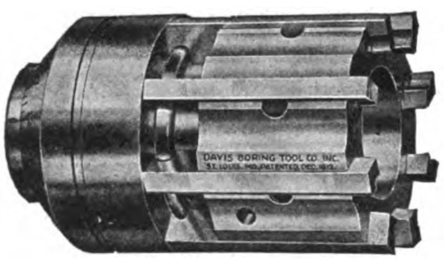
The company fully guarantees the F-F Battery Booster for workmanship and performance.

Made by the France Manufacturing Co., Berea road and West 104th street, Cleveland, O. Prices: Type 16, which charges one six-volt battery at a rate of eight amperes, $24; type 112, for one 12-volt battery at a rate of six amperes, $24; type 166, for one six-volt battery at a rate of 12 to 15 amperes, $32; type 1612, for one 12-volt battery at a rate of seven to eight amperes, $32; type 1626, combination outfit, for charging either six or 12-volt batteries at a rate of 12 or seven amperes, $48. These prices are for 110 or 220-volt circuits and for frequencies of 60 or 50 cycles. The voltage and frequency must be specified when ordering as the machines do not operate interchangeably on 110 and 220 volts or 60 and 50 cycles. When not specified, 110-volt, 60-cycle rectifiers will be sent. For 40, 30 or 25-cycle current, add $8 to above prices, except for types 16 and 112, which are made only for 60 or 50-cycle current.

The Davis Expansion Reamers have as distinguishing features, simplicity and practical construction, with the minimum number of parts, it is claimed. The blades are positively controlled by an accurate micrometer adjusting dial, graduated in quarter thousandths, which acts for both expanding and receding of blades. The blades are slotted and fit over the ring on the adjusting dial, which prevents their movement either way, without turning the dial. When the reamer is set to the size required the blades are individually and doubly locked to the reamer body by a locking principle which positively secures the blades without the use of individual blade screws, virtually making a solid reamer.

It is pointed out that the elimination of screws for holding the blades in a reamer body is a distinct advantage. The blades are held with a hardened pin, which is fitted to the reamer body on special taper with line contact only in groove in the blade, resulting in a constant downward and lateral thrust that firmly holds the blades under all conditions. Blades are clamped to the reamer body with the locking ring threaded on the adjusting dial, making it impossible to expand or recede the blades either by accident or carelessness without releasing the locking ring, which must be done before the expanding dial can be turned in either direction.

This reamer is stated to represent the first application of the principle of the forward movement of blades for the purpose of expansion in a tool of this type. This feature always keeps the blades cutting in advance of the tool body; consequently they never lose their bottoming feature. The movement of the blades is positively controlled by the adjusting dial, which expands or recedes them. They have liberal expansion, with one-quarter thousandth adjustment and the locking of the blades is absolute and positive.



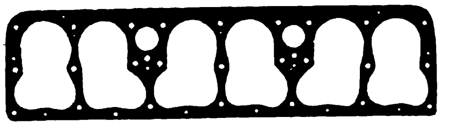
Among the distinctive features of Davis Expansion Reamers is simplicity of driving, which eliminates the necessity of making costly arbors. Any size can readily be applied without interfering with the driving shank. True alignment is assured when assembled in multiple form, virtually making a solid line reaming bar.

Blade efficiency and the cost of blades is an important factor which should be considered in connection with any adjustable reamer. Davis Expansion Reamers, it is stated, require but three groups of blades to cover a range of sizes from 1⅝ to six inches inclusive. When the blades for a six-inch reamer are worn under size they can be used in 32 smaller sizes down to and including four inches. Blades for a 3 15/-16-inch reamer can be used in 23 smaller sizes down to 2½ inches. Blades in a 2 7/16-inch reamer can be used in 15 smaller sizes down to 1½ inches. This wide range of adjustment permits reaming the maximum number of holes to a set of blades.

These tools are made either in the shell type or with a solid shank, straight or taper, to which a floating holder can be applied. All wearing parts are hardened and all threaded parts are protected from dust, chips or possible injury which might result from careless usage or accident.

Manufactured by the Davis Boring Tool Co., 3718-24 Forest Park Boulevard, St. Louis, Mo. Prices and literature on request.

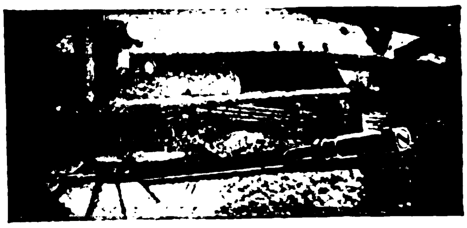
Universal Gaskets were designed to meet the demand of manufacturers and dealers for a first class gasket. They are of copper with an inner section of asbestos and are guaranteed to prevent the leakage of either gas or water. Universal gaskets are stated to be made of high grade material throughout and to stand up under the hardest usage. They are manufactured in all styles and shapes for regular and special work about the gasoline engine.



No. 1009 Hudson Super Six

Manufactured by the Universal Gasket & Manufacturing Co., 2901 South 48th avenue, Cicero, Ill. Prices and literature on request.

The Cincinnati Drag Link is designed for use in passenger cars and trucks and offers special features which should recommend it to manufacturers and service station owners. It is made of the highest grade of material throughout and special features are embodied in it the manufacturer claims, so that when once filled with lubricant no further attention is required for a year.

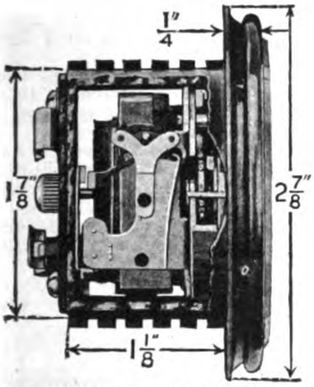


In the self-lubricating link a long wick is drawn through plugs at either end of the tube, and no matter in what position the link may be placed it is claimed that there is a constant flow of oil to the working parts, while the end grease cups deliver the lubricant directly to the wearing surfaces.

In a drag link which has been adapted to light vehicles, the connecting rod is upset into the sockets at the end to eliminate the weld. The sockets, while held firmly in place by spring pressure, are free to revolve slightly. This provides for the side motion of the steering arm which otherwise might injure the sides of the socket.

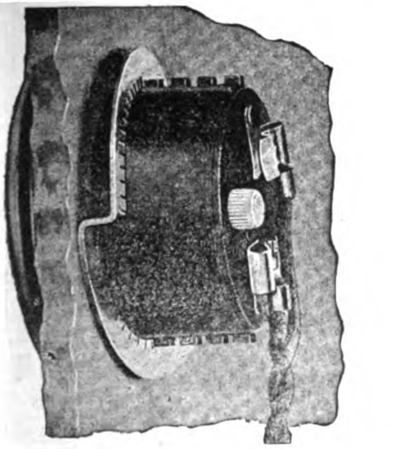
Manufactured by the Cincinnati Ball Crank Co., Cincinnati, O. Prices and literature on request.

The Connecticut Electric Clock was specially designed to meet the demand of the automotive industries for a time piece automatic in operation, needing no attention, and accurate under variable conditions. It has a finely adjusted seven-jeweled movement and in offering it to motor vehicle users the company does so with the positive knowledge that its value as an accurate, durable and simple time piece is beyond question, and that its merits will commend it to the thoughtful purchaser.



Simplicity is the keynote of construction in the Connecticut electric clock. All adjustments are of a permanent nature and will not get out of order. The contact points are of pure coin silver, and so mounted as to prevent arcing and corrosion. When connected with the storage battery a finely constructed coil spring is automatically tensioned to give the movement the exact power necessary for a proper beat of the balance, and being replenished electrically each minute, causes a constant spring tension, thereby effecting an excellent rating and a minimum of wear.

CONNECTICUT
ELECTRIC CLOCK

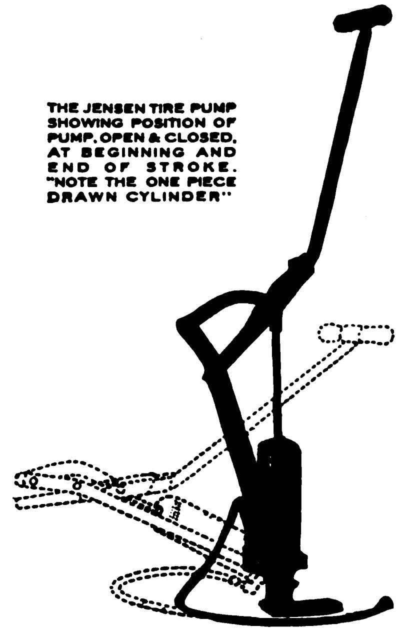


The materials used in this clock are of the very highest quality obtainable, and expense has not been a factor in developing it to make it the most reliable of automobile time pieces.

The case is of flange type to allow the use of a small dial and a small body, is dust proof, extremely compact and fitted with the Connecticut lock ring, which prevents it from jarring loose—no need of unsightly screws and nuts. The terminals on the back of the case are of a spring construction, which eliminates any possibility of becoming loose and insures a positive circuit. The setting knob is located on the back of the case, where it is not liable to be tampered with, but is at the same time easily accessible when actually needed for setting. The fiber washer at the back of the case completely protects it from short circuits. It is stated to be economical in current consumption, using less current in a year than a dash light in one hour.

Manufactured and guaranteed by the Connecticut Clock Co., Hartford, Conn. Price, $18; with luminous hands and dial, $2.50 extra.

The Jensen Tire Pump is designed to fill the demand for a pump that will inflate tires without back-breaking effort and physical exhaustion. It operates on the well known fulcrum and lever principle which actuates against a 90-pound pressure with less effort than the ordinary pump against a pressure of 65 pounds. It is stated that one-half the number of strokes are required to inflate a tire and that it is accomplished with one-third less energy on the part of the operator.



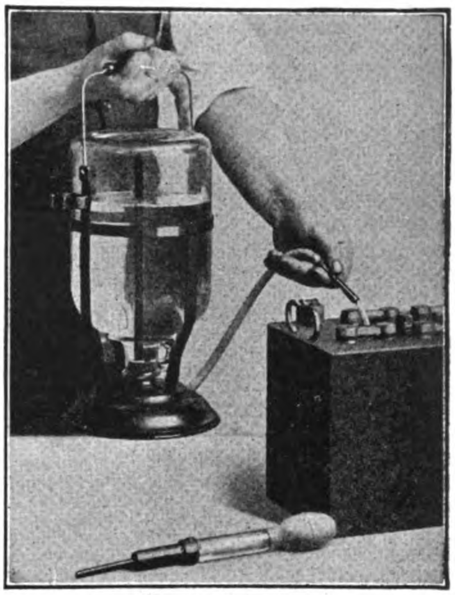
THE JENSEN TIRE PUMP SHOWING POSITION OF PUMP, OPEN & CLOSED, AT BEGINNING AND END OF STROKE. "NOTE THE ONE PIECE DRAWN CYLINDER"

The pump is constructed almost entirely of steel and is machined to fit accurately, is equipped with a ball check valve at the outlet of the cylinder, which prevents back pressure, while the 7/16-inch piston is made of cold rolled steel. The plunger is made of oil seasoned oak leather securely fitted inside of the cylinder chamber and fastened to the end of the piston by means of a threaded and reinforced plunger case with a metal washer and machine turned lock nut riveted tight. The cylinder is a one-piece drawn type insuring, it is claimed, absolutely air tight compression under all conditions.

Manufactured by the W. H. Howell Co., Geneva, Ill., Price $6; fitted with pressure gauge, $7.35.

The Reliable Battery Filler is designed especially for the service station which is called on to supply many batteries during the day with distilled water. The device is provided with a rubber tube fitted with hard rubber end for filling batteries, and a catch on the side member of the frame holds the tube when not in use, preventing leakage.

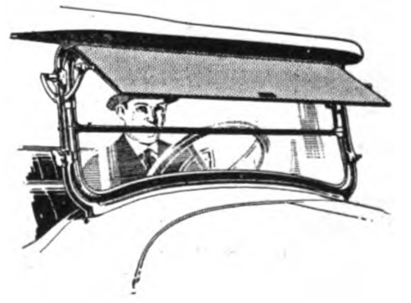
A bracket is also provided for the hydrometer used in testing the solution, while a handle is fitted at the top by which the filler is carried. The container consists of a large glass bottle, which is held inverted in a frame work of steel bands, the connection to the tubing being made through the base or stand. It is stated that the metal of the frame does not come in contact with the contents of the bottle and that any gallon bottle will fit the device. This filler provides a quick and easy means of testing and filling storage batteries.



Manufactured by the Reliable Manufacturing Co., Cleveland, O. List price, $5; discount to the trade.

The Doty Shield Visor is an adjustable shade fitted on to the windshield, made in sizes to fit any open, as well as some closed cars, and enables the car owner to have a convenience that is becoming standard equipment on some of the higher priced limousines. It will shut out the lights of other cars by night, giving a clear view of the road ahead. In the day time it eliminates the glare of the sky and sun's rays, relieving eye strain. During a rain or snow storm it keeps the windshield clear so that the driver can see the road ahead. It is also claimed to add to the appearance of the car.

The Doty Shield Visor is not built like an awning, but over a strong, well shaped, rigid frame, which conforms to the shape of the top. This frame is covered with a fine quality of black, long grain top material, while the under side covering has a green Spanish leather finish. The metal parts are black enamelled and nickel plated.



The Doty Shield Visor can be attached in five minutes, it is stated, no drilling of holes or altering of the car in any way being necessary. It will not rattle and is guaranteed to withstand the strongest wind.

When ordering the make, model and year of car should be stated, or the exact length (inside the frame) of the upper windshield glass only may be given.

Manufactured by Auto Radiator Shutter Co., Dayton, O. Sold to dealers through jobbers by distributors.

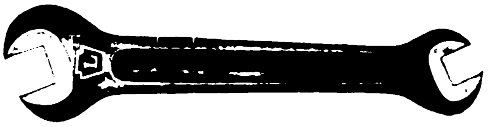
The La France Fire Extinguisher No. 3 is designed to give the motorist, who carries the extinguisher in his car and the service station owner who provides fire protection in his station the best means of handling and putting out small fires at the start. It has been developed, it is stated, with the aim of giving instantaneous and rapid action from the first pull to the last push of the handle. It throws a solid, steady stream from 30 to 40 feet. The pump mechanism is so constructed that it requires no solid joints and as a result it is claimed that there is no part which can be affected by corrosion which results from the action of the carbon tetrachloride solution on the acid flux used in soldering. It is further stated that accidental dents in the walls of the shell will not affect the perfect working of the extinguisher.

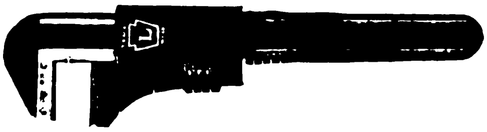
LA FRANCE
FIRE EXTINGUISHER
TO OPERATE
FLUID
CAUTION
REFILLING

Manufactured by the American-La France Fire Engine Co., Inc., Elmira, N. Y. Price with auto or wall bracket complete, $12. A handsome glass wall case can be supplied at $2 extra. The La France solution sells for $1.50 a quart, or $25 for five gallons.

The Lakeside Drop Forged Wrenches are entirely new in design and every detail of their construction, it is stated, has been carefully worked out. For strength, workmanship, quality of material, appearance and general utility, they are said to be unsurpassed.

All finished wrenches are milled to size and case hardened all over, polished and highly finished with bright heads lacquered. The semi-finished wrenches are milled to size and case hardened all over with polished heads, while the unfinished wrenches are the forgings milled only. All wrenches, unless otherwise ordered, are milled for United States standard nuts and bolts. A special line of heavy wrenches for United States standard nuts are also made and these will be found very desirable for heavy work.





Manufactured by the Lakeside Forge Co., Erie, Pa. Prices and literature on request.

Liquid Stoppit is a solution especially designed to stop leaks in radiators which, after considerable experimenting on the part of the manufacturer is stated to be very superior for this class of work; is absolutely harmless and cannot injure radiator, hose connections or cooling system, and that it includes no glue, flaxseed or meal.

It is claimed that Liquid Stoppit will search out every leak in the radiator and will seal it permanently, the work being done in a more efficient manner than by the old method of soldering, and at a fraction of the time and expense.

Liquid Stoppit is stated to be especially efficient in the case of a new radiator, in that filling it with the solution and allowing it to stay for a time will tend to keep the inside from rusting.

Manufactured by Cummings Brothers, Flint, Mich. Sold in pint cans only for all cars. Price, 75 cents each.

Allen's Soldering Paste is one of the many products put on the market, under this trade name, especially designed for this class of repair work on motor vehicles. This is the same material as offered in sticks, but is softened into a paste form for ease in application, and adheres to the surface while soldering is being done. It is put up in collapsible tubes, with non-tapering aluminum nozzles that feed the paste on to the work in a thin ribbon; also in two, four and eight-ounce and one and five-pound cans and 50-pound pails. The soldering material is made self-fluxing by dipping it in Allen paste.

ALLEN

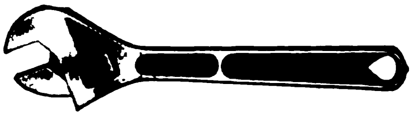
Other articles of the same class made by the same company are Alumni-Flux, Alumni-Solder, Alumni-Weld Flux, Non-Acid Soldering Fluxes, Soldering Stick, Soldering Salts, Soldering Liquid, Allen Fountain Pen for liquid fluxes and Allen's Commutator Lubricant.

All these goods are claimed to be convenient and economical, and are free of poisonous acid fumes when in use. Each article is accompanied by full directions for its use.

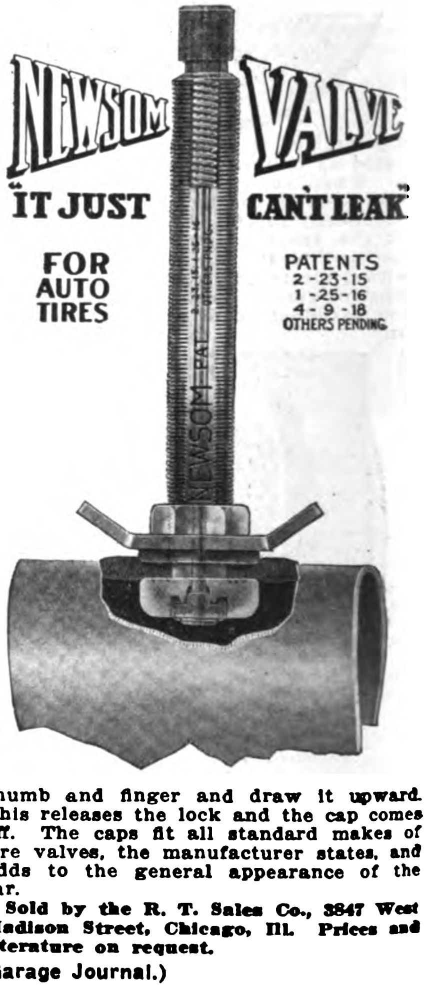
Made by the L. B. Allen Co., Inc., 4521 North Lincoln Street, Chicago, Ill. Prices and literature supplied at request.

The Barcalo Model N Wrench has been developed after much experimenting on the part of the manufacturer and engineers to supply a wrench that would combine ease of operation and toughness to a large degree. The manufacturer states that these qualities are found in the Model N wrench and that, from all angles of use, it is a superior tool. The wrench is of the adjustable type and is operated by a knurled nut, which opens and closes one jaw, the other jaw being stationary and forming a continuation of the handle. It is constructed on a 22½-degree angle and will fit standard hex and square nuts within its size.



Manufactured by the Barcalo Manufacturing Co., Buffalo, N. Y. Prices on request.

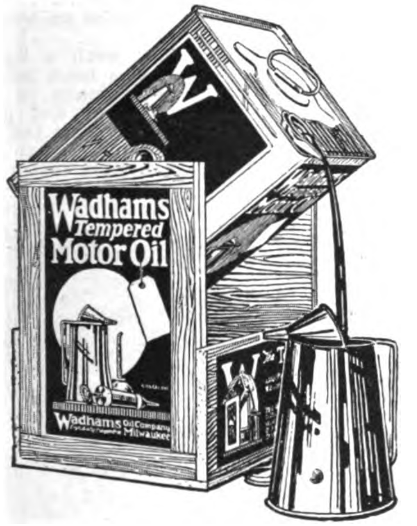
The Newsom Snap Lox Dust Cap fits any automobile tire valve by simply being snapped over the stem of the valve and fastened to the bushing on the rim. It consists of two parts, the bushing that screws down on the valve stem and holds the stem in place and the cap that snaps down and locks. To remove the cap it is only necessary to grasp it between the thumb and finger and draw it upward. This releases the lock and the cap comes off. The caps fit all standard makes of tire valves, the manufacturer states, and adds to the general appearance of the car.



Sold by the R. T. Sales Co., 3847 West Madison Street, Chicago, Ill. Prices and literature on request.

Wadhams' Tempered Motor Oils and Greases are stated to enjoy a large volume of business throughout the northwest, many new and novel ideas having been worked out for the marketing of this product, chief among which is the Wadhams tip-top can, which is used for five-gallon quantities of engine oil. Instead of using a container which is handled from the floor and is liable to spill or waste the oil over the floor or clothes of motorists, Wadhams' tip-top can has been developed to facilitate the pouring of the oil without this danger.

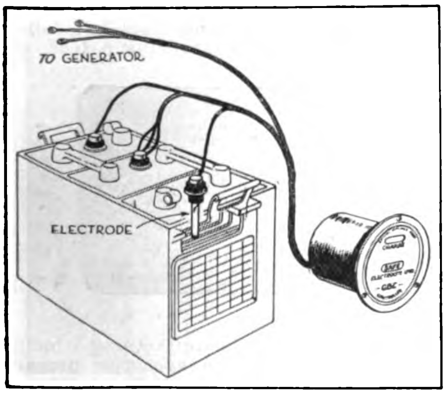
The container consists of a five-gallon metal can, which is fitted to a wooden case, provision being made for raising the can to the proper height for pouring. Pivots are fastened at the sides, which fit slots in the tops of the wooden sides, allowing the can to be tipped so that oil may be poured from the spout without wasting. The containers are not returnable, but become the property of the purchaser.



Tempered motor oils and greases are stated to be highly refined products, which will give the best of results when used for engine and chassis lubrication for either passenger cars, trucks or tractors.

Manufactured by the Wadhams Oil Co., Milwaukee, Wis. Prices and literature on request.

The GBC Controller has been perfected as a recognition of the need in the industry of some device to automatically protect the battery, generator and circuits against damage due to various causes.. As shown in the illustration, this simple protecting device employs three auxiliary electrodes, which project through the ordinary cell caps of the battery so that the bottom of each electrode is just above the respective cell plate tops. Connections are provided from these electrodes to the dash instrument and also from the latter to the generator. The dash instrument is essentially a combination of three electro-magnets which operate three signals, one marked "Low," another both "Low" and "Safe," and the third marked "Off." This latter indicates whether the battery is being charged or not; the signal "Off" indicates reduced generator output, while a blank space in the same window indicates normal charging.



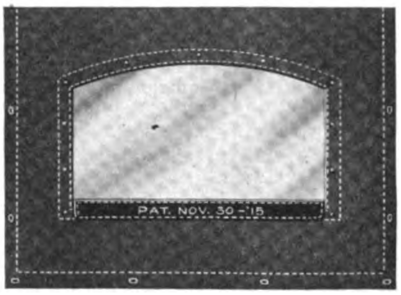
Overcharging is prevented in a simple way by appreciation of the fact that the condition becomes serious only when the battery heat has reached 110 degrees Fahrenheit. The GBC controller basically controls the temperature. The detail of the operation is as follows: Three electrodes, one per cell, are connected by wires to the instrument on the dash. Safe level exists as long as the electrodes are in contact with the electrolyte. If for any cause the level in any cell of the battery falls out of contact with its electrode, the level indicator immediately flashes the sign "Low" on the instrument dial and the driver at once knows that the cell needs water. The middle electrode is hollow and contains a small, rugged thermostat, adjusted to expand a specific amount when the battery attains a temperature of 110 degrees. When the battery is subjected to an objectionable overcharge the temperature reaches this 110-degree limit and immediately the action of the thermostat is conveyed by electrical leads to the instrument on the dash and it automatically changes the generator adjustment so as to reduce the charge, and thus reduces the battery temperature to under 110 degrees.

Ordinarily when the battery connections loosen or slowly corrode the generator voltage is no longer stabilized by the battery and it rises with increased car speed to values which may burn out the lamps, ignition coil and finally the generator itself. Fuse protection, if employed, saves the equipment, but stalls the car. High voltage due to overcharge in cold weather may also cause trouble. The GBC controller obviates such troubles, as it has a coil in the instrument on the dial which, being sensitive to rising or excess voltage due to any cause, immediately adjusts the generator output so that it can develop only the voltage needed for the lamps and ignition, thus protecting these auxiliaries and allowing the car to function.

It is stated that the device can be installed on any make of car in less than one hour's time.

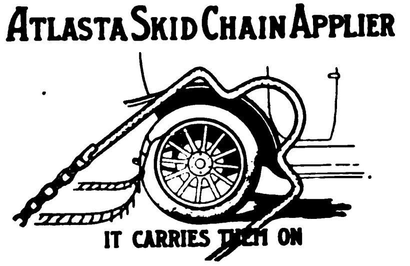
Made by the Battery Appliance Corporation, 1 East 49th Street, New York City. Price, $15, complete with all necessary wire, screws and new battery cell caps.

Replace Curtain Lights for Automobile Tops are designed and manufactured in many styles and shapes; they are adapted for the curtains of many of the standard makes of cars and can be easily fitted by any one. Instead of being sewed in they are fastened in with a special fastener provided with each light, tape also being supplied which is glued over the fastener, making the light water proof.



Manufactured by the Replace Light Manufacturing Co., 2308 Sixth Avenue, Rock Island, Ill. Prices and literature on application. Sold by manufacturers and dealers throughout the United States and Canada.

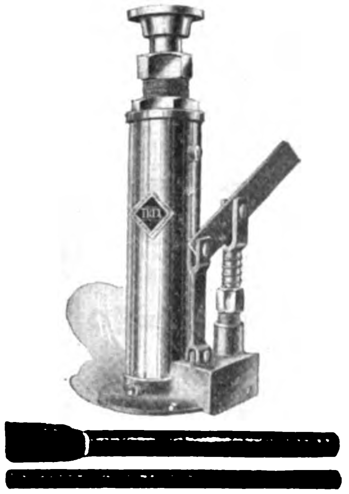
Atlasta Skid Chain Appliers are simple devices, but are claimed to be a great convenience to motorists in that they enable chains to be applied in muddy and rainy weather in a moment's time without dirt and fuss on the part of the driver of the car. They consist of a wire appliance designed to fit over the spoke and around the tire of the automobile wheel, with a hook at either end into which the chains are fastened. They make the operation of putting skid chains on any car easy and simple so that any woman driver can apply them as easily as an expert. All that it is necessary to do is to hook the Atlasta appliers to the chains, drive the car ahead a few feet, enough to make one complete revolution, and the chains are all on ready for service, after being fastened. Furthermore, both chains can be put on at the same time.



Atlasta Skid Chain Appliers are furnished in three sizes, 3½, four and five inch.

Manufactured by Atlasta Specialty Manufacturing Co., 2925-2927 Locust Street, St. Louis, Mo. List prices: 3½-inch, 30 cents each; four-inch, 45 cents; five-inch, 50 cents. A liberal discount is offered to dealers.

The Trex Hydraulic Jack for passenger cars and trucks has been developed by the manufacturer of the Trex tire tool and the Trex air operated valve spring compressor to complete the line. The Trex hydraulic jacks are stated to be the "little brothers" of the enormously powerful hydraulic jacks requiring three men to carry and two to operate them, which are used when lifting ponderous machinery and unusually heavy loads in construction and building work in ship yards and railroad shops.



The device consists of a cylinder containing a plunger, which is operated by a lever at the side, which in turn operates a small plunger in a cylinder at the side. Liquid is contained in the base, preferably an oil which will withstand low temperatures, and this oil operates the plunger in the large cylinder. Provision is also made for lowering the jack in a simple manner when the operator wishes to remove it from under the axle.

When not in use the jack packs into small space in the tool tox and is instantly ready when wanted.

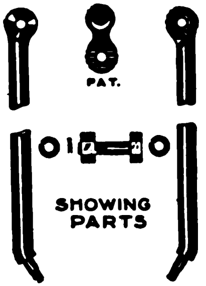
Manufactured by the Trexler Co., 1418 Walnut Street, Philadelphia, Pa. Price, one-ton size for passenger car service, $12; five-ton size for trucks, $25.

Automotive Brand Overalls are made especially for the service station and machine shop worker and garage repairer and mechanic. They are constructed in one piece form and are said to combine unusual wearing qualities with comfort. Pockets are fitted at convenient places, allowing the repairer to carry necessary small tools besides his personal belongings. The Automotive brand of overhauls are fitted with a belt at the middle, which proves a good feature, the manufacturer states, as it cuts down the danger of the workman getting his clothes caught in moving machinery.

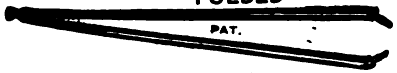
Seven pockets are provided in these garments, two side and two hip, and a rule pocket in the pants and two breast pockets in the blouse, while they are finished with a neat turned down collar of the close buttoned type at the top.

Manufactured by the Ohio Garment Co., Automotive Department, Springfield, O. Price on request.

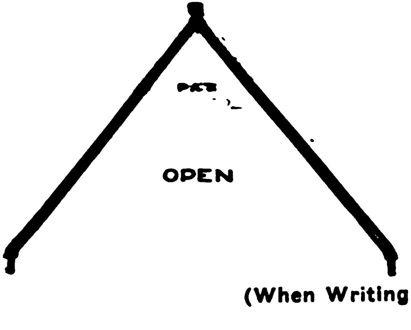
Bridge's Patented Three-Piece Radius Rods for Ford Cars are designed, as the name implies, to replace a broken radius rod. They are constructed in three pieces, which can be folded and stored in the car till wanted. Only a few minutes time is required to remove the old rod and substitute the new three-piece rod, and it is not necessary to lay up the car, or even drive to a garage unless the motorist desires a repair man to put in the new rod.



FOLDED



Three-Piece radius rods are constructed in such a manner, the manufacturer states, as to give them the greatest strength possible, and to hold up under the severest usage. They are made in two styles, one for the 1919 car and previous models, and the other for the 1920 model.



OPEN

Manufactured by the J. D. Bridges Co., Florence, S. C. Price, complete, $3.75.

The Invincible Acid Apron has been developed after much thought and experimenting on the part of the manufacturer to secure a product which would fill the demand for general purpose work around service stations handling battery work exclusively. As more or less acid is always present and the danger of spilling is great, it is necessary to have an apron that will protect the workmen's clothes and able to withstand the acid which would necessarily come in contact with the material. The Invincible apron, the manufacturer states, has met these conditions admirably, having been tested where they were subjected to rough usage, heat, acids, etc. The special fabric which has been developed for use in this apron has an extremely high resistive quality to all acids, giving an unusually long life under the worst conditions, but at the same time it is manufactured under such conditions that it can be put on the market at a very reasonable price, comparing very favorably with that of the ordinary rubber apron and lasting much longer, it is claimed.

Manufactured by the Defiance Welding Co., Defiance, O. Price and literature on request.

The Samson Automobile Horn has been designed to appeal to the discriminating buyer who wants the best obtainable for his money and is stated to embody in its construction those elements that go to make up a horn as nearly perfect as possible.

Samson horns are made in several different styles and are operated by an electrically driven motor which uses the six-volt current of the storage battery, and consumes but little energy, the manufacturer states. The Samson motor is powerfully built and employs a commutator fitted with seven segments. All parts of the motor and horn are stated to be constructed of the highest grade material obtainable and are assembled by skilled mechanics who do nothing else but this class of work.

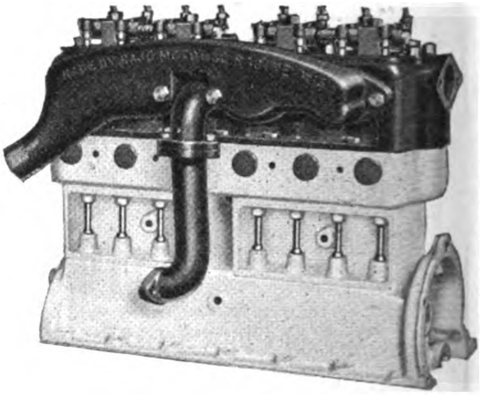
The copper gauze brushes are claimed to be self-adjusting and the field coils are properly insulated and are taped with linen to resist the entrance of moisture.

This company also manufactures a line of hand-operated horns which are stated to be second to none on the market.

Manufactured by the American Electric Co., State and 64th Streets, Englewood Station, Chicago, Ill. Prices and literature on request.

The Rajo Model 30, Valve-in-Head is designed to replace the regular engine head on either the Ford passenger car or truck, enabling the Ford engine to develop, it is stated, better than 32 horsepower, thus enabling the Ford car to reach a speed of 50 or 60 miles an hour if desired.

The device is equipped with a larger water carrying space in the head jacket, while the exhaust pipe is made in one piece and contains a by-pass and pipe, which carries the hot gases from the exhaust to a jacket on the intake manifold and preheats the gas before it enters the combustion chambers. The valves are of large size and are made of tungsten steel, carefully machined, are practically unbreakable and insure long life.. The push rods are of cold rolled steel, fitted with a hardened steel concave head, which retains the oil and greatly lessens the wear and friction.

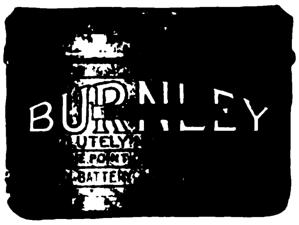


It is claimed that the power of the Ford engine is increased between 30 and 40 per cent. when using a Rajo equipment with valves in the head and that the gasoline consumption runs considerably less than the amount ordinarily consumed.

Manufactured by the Rajo Motor Co., Racine, Wis. Price and literature on request.

The Burnley Soldering Paste has been developed after considerable experimentation on the part of the manufacturer to find a suitable paste that would be efficient for all-around soldering work, more especially for radiator repairs and general work in the service station.

The manufacturer states that Burnley's soldering paste is the best flux that it is possible to obtain, that it needs no preparation for use and that it does not flow from the soldering line, but follows the heat of the iron, insuring a free, even flow of the solder.



Other articles manufactured include soldering salts and a specially prepared soldering stick which combines solder and flux in the one article.

Manufactured by the Burnley Battery & Manufacturing Co., North East, Pa. Prices and literature on application. Repair men are invited to send for samples of these articles.

Fisk for 1921

Sold only by Dealers

Choose your tire line for 1921 with care.
Choose a standard tire.
Choose a good tire.
Choose a company that backs you up.
Choose a tire that will give you a profit.

Fisk has the best proposition and the best policy for 1921 ever put out for a tire dealer.

Fisk policy makes dealer friends.

Fisk Tires make tire friends.

Fisk has the policy, the product, and the price which will give every dealer the opportunity to make 1921 a successful year.

You cannot afford to place your contract for spring delivery until you have talked with a Fisk salesman or learned our proposition.

There is a Fisk Branch within 24 hours of you. Mail the attached coupon and we will get into direct communication with you.

Suggestions on Methods of Nickel Plating

The double sulphate of nickel and ammonium, the salt generally used for nickel plating, may now be had in commerce almost pure. The anodes should considerably exceed in size the articles to be covered with nickel. Any common form of battery may be used. Three Daniell's cells, or two Bunsen's, connected for intensity, will be found sufficient. The battery power must not be too strong or the deposited nickel will be black. A strong solution of the sulphate is made and placed in any suitable vessel; a glazed stoneware pot answers very well if the articles to be covered are small. Across the top of this are placed two heavy copper wires, to one of which the articles to be covered are suspended, to the other the anode. The wire leading from the zinc of the battery must then be connected with the wire from which the articles are suspended, the other battery wire being connected with the anode.

To prepare the articles for coating they must be well cleansed by scrubbing them, immersing in boiling potash to remove any grease, then dipping them for an instant in muriatic acid, and afterwards washing thoroughly in water, taking care that the hand does not come in contact with any part of them. This is accomplished by fastening a flexible copper wire around them and handling them by means of it. The wire serves afterwards to suspend them in the bath.

If the articles are made of iron or steel they may be first covered with a thin coat of copper. This is best done by the cyanide bath, which is prepared by dissolving precipitated oxide of copper in cyanide of potassium. A copper plate is used as an anode. After they are removed from the copper bath they must be washed quickly with water and placed in the nickel bath. If allowed to become dry, or to tarnish, the nickel will not adhere. Great care must be observed during the whole process to keep all grease, dust or other dirt from the articles to be coated, or the result will be unsatisfactory. The whole process is one of the most difficult that is used in the arts, it being far easier to gild, plate or copper an article than to nickel it; but if due care is taken the results will amply pay for the trouble.

Improvement in Nickel Plating.

An experienced worker has found that an addition of boracic acid adapts the different salts of nickel better for the electrolytic separation than any other substance and especially prevents the formation of sub-salts of nickel on the cathode. The following mixtures can be especially recommended: Five parts of nickel chloride and two of boracic acid; or two of nickel sulphate and one of boracic acid. The nickel precipitated from these solutions adheres very tenaciously. Sheet metal plated by this process can be polished, stamped and fashioned into various shapes without injury to the coating.

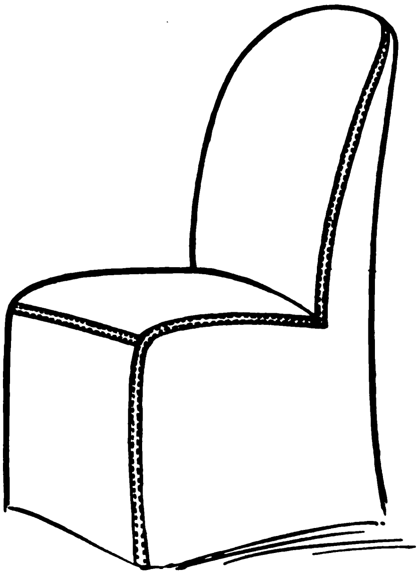
Latest Anglo-American Nickeling.

A nickel plating, the excellence of which is vouched for, is accomplished by using the following bath: Two pounds of the double sulphate of nickel and ammonium and one pound of refined boracic acid are boiled for one-quarter hour, when the fluid is allowed to cool. This bath gives a silver white plating and all parts of the article receive a uniform nickeling and remain unchanged even if continuously used, which is not the case with other nickel baths. In nickeling large articles several nickel anodes must be suspended on each of the four sides. In nickeling plates, cups, etc., a plate of nickel must be suspended in the center of the hollow, but should be, if possible, kept at a distance of two to four inches from the article to be nickeled. A strong Bunsen battery of four to eight elements or, what is still better, a dynamo electric machine is used.

REINFORCING SEAT COVERS.

The greatest wear on automobile seat covers comes on the edges of the seat where the seams occur in the cover. Here the friction causes the cover to wear through in time and as a result the cover gets too shabby for use. It is possible to lengthen the life of the seat cover by reinforcing the seams with strips of leather substitute, which stand the wear very well and as a result lengthen the life of the cover. The strips of leather substitute are one inch in width and are sewed to the cover cloth on each side of the seam, thus preventing the seam from ripping.

The seam reinforcement also prevents dust from accumulating in the seams and as a result adds to the cleanliness of the cover. The leather substitute strips should preferably be dark brown or black in color and serve as a trimming for the lighter goods of which the seat cover may be made.



Method of Reinforcement of Automobile Seat Covers with Leather Substitute Strips.

GUARD AGAINST BENT RIMS.

Bent rims are a direct cause of rim cuts, of tires blowing from the rim and of the breaking of the wire cables at the base of the tires. Oftentimes motorists cannot understand why tires should "blow" when they are driving along slowly. The facts of the case are that the overstrained carcass has reached the limit of its endurance from previous abuse and has given way.

Many motorists, were they to examine the wheels on their cars, would be surprised to notice that their rims are bent along the edges. These bent rim flanges are ordinarily little thought of, yet they cause a goodly percentage of tire trouble.

When the wheel hits a frog or a switch of a street car track or a hole in the road there is a tendency to flatten the rim, especially if the tire is underinflated. The rim's support, however, is essential to the life of a tire. If it is bent so that it does not fit the tire and allows the side walls to bulge, the motorist may know that trouble is to be expected unless he takes immediate precautions.

By trueing up their rings, motorists may prevent much tire trouble. And half the pleasure of motoring is freedom from tire trouble. A good rule to follow is to have both tires and rims inspected fortnightly. When rim trouble is found it may usually be corrected by careful tapping with a ball hammer.

CARE OF THE GENERATOR.

The engine should never be run when the storage battery is out of the car, or disconnected, unless the generator has first been rendered inoperative. Whenever the generator is being run it is delivering current to the battery, but if the battery is not there to receive the current, the generator simply piles up a voltage that may damage or burn out the windings, not to mention what it may do to the commutator and brushes. The engine can be run if the field winding of the generator is first disconnected. In some instances, where the generator is equipped with thermostatic control, the device may be short-circuited across the terminals.

WHEN CLEANING LEATHER.

Do not use gasoline to clean the leather upholstery of your car unless you want to crack it. Plain water with a few drops of ammonia will remove the dirt, after which the upholstery should be rubbed briskly with a soft cloth. An excellent leather dressing is made by combining two parts linseed oil to one part turpentine.

LACQUERING BRASS.

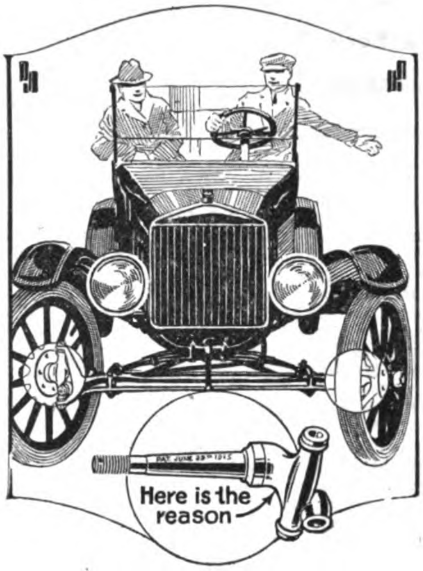
It is possible to protect metal surfaces by applying several coats of lacquer or celluloid varnish. The lacquer should be applied with a camel's hair brush, after the metal has been polished highly. There must be no trace of grease on the brass or other metal when it is lacquered.

Here Is Ready Money For Accessory Dealers and Garages

People buy Ford cars because of their low price and low running cost. But every driver of a Ford knows how he has to "hang on" to the steering wheel every minute, to be safe.

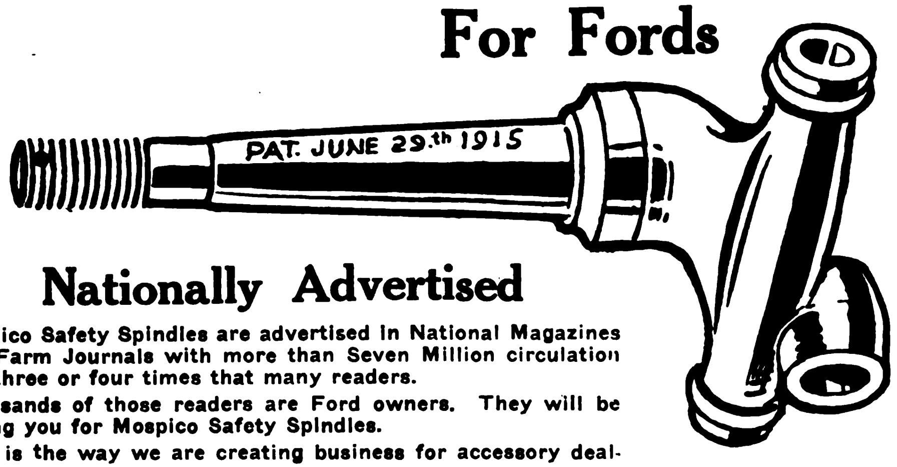
Show a Ford owner something that will make his Ford safe and easy to drive and you've made a sale, especially if it means only a small investment.

Mospico Safety Spindles are the biggest profit-making accessory for Fords that has ever come out. Just the minute you show them to the Ford owner he sees their value. As one Ford owner says: "They take the shimmy out of a Ford."



Mospico Safety Spindles

For Fords



Nationally Advertised

Mospico Safety Spindles are advertised in National Magazines and Farm Journals with more than Seven Million circulation and three or four times that many readers.

Thousands of those readers are Ford owners. They will be asking you for Mospico Safety Spindles.

This is the way we are creating business for accessory dealers and garage owners.

Sold With Money-Back Guarantee

Every pair of Mospico Safety Spindles is sold with the guarantee that they will do everything we claim for them or refund the price.

You Make a Real Profit On Every Pair

The Retail Price Is $9.75 a Pair

Every Ford owner is a sure prospect and sales records show that two out of five buy Mospico Safety Spindles when they have the opportunity. These Safety Spindles enable a Ford to run through mud, sand, snow and over rutty roads without the usual danger of overturning. They prevent the front wheels from locking.

The driver can turn a corner at 20 miles an hour, release the steering wheel, and the car will straighten up like the big cars with their spiral steering gears.

These spindles set the front wheels seven-eighths of an inch back of the center line of the axle. They act on the caster principle.

Ask For Our Special Proposition to Established Dealers

Get complete information on the Mospico Safety Spindles and how we are creating a demand for them among the several million Ford owners in the United States. Write us TODAY.

Portable Electric Tools

More Profitable Repair Work

MAKE your repair work show more profit. Double your shop capacity by speeding up repair jobs. A job quickly done makes way for more work—more profit.

Temco Portable Electric Tools eliminate slow, expensive hand labor. They work easier, faster and better. They pay for themselves in time saved on costly repair work.

Temco Portable electric Tools are for drilling in steel, iron or wood, tapping, tool sharpening and valve grinding—hundreds of miscellaneous uses make them indispensable for automobile repair work.

They do jobs that stationary equipment cannot handle. They save expensive tear-downs. They reach repair work easily and quickly in any part of the garage—inside or outside. They attach to any drop cord or lamp socket. They are easy to handle and operate and the cost of operation is extremely low.

Temco Portable Electric Tools are the result of years of specialization in repair shop needs. With them you can save half of the time on repairs, do twice as much work and add big profit.

Prepare for a big and profitable season now. Equip *your* garage with Temco Portable Electric Drills and Grinders. Write for catalog.

VOL. X. PAWTUCKET, R. I., JANUARY, 1921 No. 9

New York Show Predominant in Quality and Dignity

Period of Returning Prosperity Foreshadowed in Car and Accessory Field by Character and Amount of Business in Prospect.

THE predominant characteristic of the 1921 New York show in the Grand Central Palace may be tersely expressed in the one word "Quality," considered in its broadest sense as applicable to the exhibits themselves, both of cars and accessories, the thousands of enthusiastic and interested representatives of a critical buying public in attendance and, comprehensively, to all the arrangements and accompaniments which go to make up a successful event of this kind. It was distinctively a high class show. There was, moreover, in evidence a high spirit of optimism combined with business like dignity which go far to indicate that the dark cloud is passing and the silver lining of returning prosperity is beginning to show. All interests were determined to get together and work in harmony for the greatest good of all.

While this season's exhibition cannot be said, perhaps, to have surpassed all previous shows in number of cars shown, attendance and sales, it may, in a way, be characterized as a record breaker considered in the light of the vicissitudes through which the industry has recently passed.

The exact figures for the various sections do not vary greatly from those for 1920. Thus the total number of exhibitors is reported as the same for both years, 307, divided this year into 83 manufacturers showing gasoline cars, three electrics, one steamers and 221 accessories. A total of 341 cars were exhibited: 334 gasoline, seven electrics, one steam, 38 chassis and one four-wheel brake.

As to body styles, the gasoline cars displayed may be classified as follows: Total open cars, 163; sub-divided into 40 two and three-passenger roadsters, 91 four and five-passenger touring cars and 32 six and seven-passenger touring cars. Total enclosed cars, 120, including 23 two and three-passenger coupes, 80 four and five-passenger sedans and 27 other six and seven-passenger enclosed models.

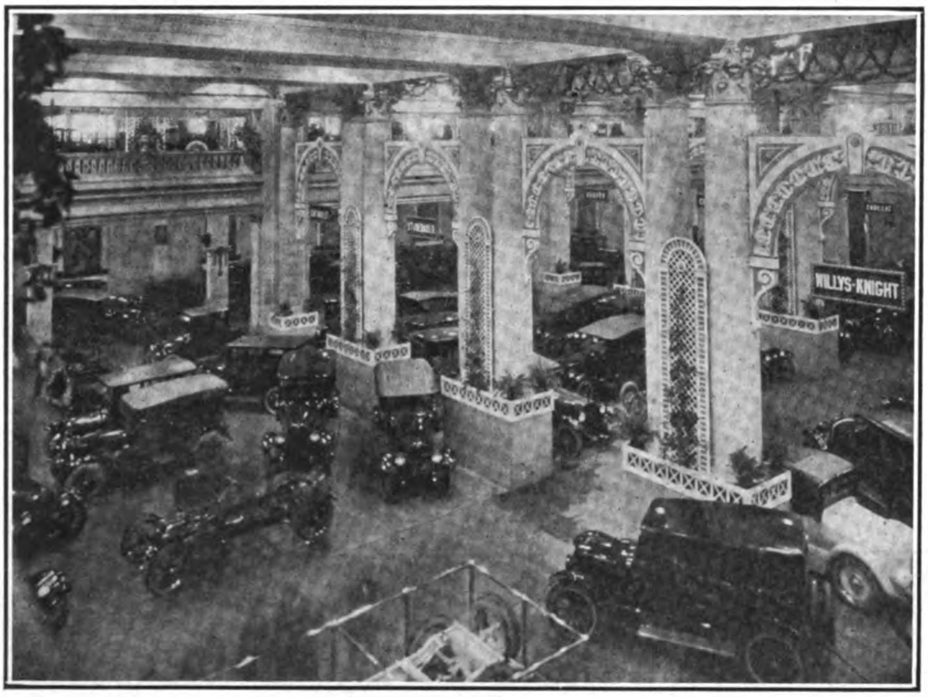
In regard to the actual amount of business transacted, while comparisons showed the average sales to have been only 50 to 75 per cent. of those for last year, yet this surpassed the highest hopes of exhibitors, the individual percentages running from 20 to 110.

To summarize, it might be said that sales of cars priced at above $3000 ran about 50 per cent. below those of last year. Contracts in

Main Floor of Grand Central Palace, Looking Towards Entrance, Showing the Elaborate Setting for the National Automobile Show.

the $1500 to $3000 class aggregated about 75 per cent. of those of 1920, and those in the class below $1500 a little under 75 per cent.

It should be kept in mind, however, that any comparison with previous years is very apt to be misleading. There was a great demand last year from the newly prosperous class—mechanics, small merchants, manufacturers and the like—who had accumulated the price of a car and a desire to own one on account of post-war prosperity. This year this element was not present, but was replaced by a type of prospect that appears to be nearer the solid class that is motor wise, knows about what it wants and makes intelligent investigation of the various models shown. During the first one or two days the question of price seemed to be the predominant consideration in the mind of the prospect but, as the show continued, buying began, as the downward trend that was expected did not materialize, and it was realized that it was not probable that further reductions would be made at least until the expiration of the guarantee period.



General View of New York Show, Main Floor of Grand Central Palace.

It cannot be said, however, that the show has put buying back to a normal basis. This was not expected. But the so-called "buyers' strike" was broken and new spirit was put into the selling organizations of New York and the entire East. Dealers went to the show with a determination to be optimistic and were prepared to be encouraged if actual sales reached a quarter of the average at a New York show. What happened is accepted by both manufacturing and merchandising interests as evidence that the tide has turned and that the buyers are back in the market.

More Prospects Than a Year Ago.

With prospect lists obtained at the show superior to those of previous years in size and quality, it seems logical to assume that these may develop into a considerable amount of business before the regular spring selling season opens. Many people were more willing than formerly to give their names as prospects, and the percentage of those naming a definite date when they expected to buy was unusually high. One exhibitor who checked up prospects obtained at the show, reports that he had 400 names that were not on his pre-show list.

The experience of the Haynes Automobile Co. may be cited as perhaps typical to a greater or less degree of many others. General Manager Alton G. Seiberling of that company reports that during the period of the show contracts for 4000 Haynes cars were made, and expectations at Chicago were even greater.

Another "quality" feature of the show was the constant and efficient endeavor on the part of manufacturers' and dealers' representatives and salesmen to round up every possible prospect and make it appear that his personal attention and inspection of the exhibits was sought, and this undoubtedly resulted in the public obtaining a better idea than ever before of the outstanding points of the various makes and placed it in a position to make intelligent comparisons.

Again referring to the spirit of optimism on the part of manufacturers and dealers, it should be understood that this enthusiasm is not of the self-complacent type. It is recognized that in all probability the buying habit is not going to return spontaneously, but that it will take extra inducements and much hard team work on the part of all interests to swing it back to normal even with the stimulation of the big shows. There is an unmistakable revival of the thinking, doing spirit which has brought the automobile industry to greatness in half a generation.

The show again revealed that the industry is more alert than it ever has been to the customers' wants. The dealer, who knows the public from intimate association far better than the manufacturer ever can, has had his ear to the ground and the show shone with efforts to please on his part.

One evidence of this is the fact that there was more "color" to this 1921 exhibition than has been seen in many years. What is meant is that more and varied choices in finish were offered in standard production than has heretofor been the rule. Quite a few makers who have been finishing out their cars only in blacks, blue-blacks and green-blacks, now have real blues, greens and perhaps maroons alongside the blacks on their standard lists, recognizing the universal desire on the part of mankind for a little color and individuality in their belongings. And there were not a few exhibits which attained the height of brilliancy in the presentation of specially finished jobs and in the artistic contrasting of colors.

In addition to this item of color, an unusual quality was manifested on the part of several exhibitors in the make-up and arrangement of displays such, for instance, as that of the Marmon, which had its complete line in miniature mounted on pedestals, and the General Electric Co., which showed a line of "Prosperity" garages, one for general service work, a second for battery work and a third for car owners, all fully equipped with models typical of the company's products.

Improvement in Assembly and Inspection.

Then, not so spectacular as the colorings, but even more important to the future of sales, is the improvement in assembly and inspection. All through the show the careful observer noted a sort of climax in the thing the industry has been talking about for several months—the evidences of painstaking workmanship in putting cars together. This was apparent in mechanical assembly and in the paint and upholstery work, which bore the earmarks of intelligent care.

There were some improvements tending toward economy of operation and some toward greater accessibility as facilitating serviceability, all adding to the salability of the cars.

The Accessory Exhibits.

Undaunted by weeks of depression the automobile parts and accessory maker has responded to the call of 1921 by rallying in greater numbers than ever before at the big opening national show. In actual numbers the 1921 list of accessory exhibitors, some 300 strong, completely outclassed its predecessors. It might also be added that it ranked second to none in interest, for there was more than the usual quota of new devices and refinements in familiar articles to attract the attention and interest of the spectator. But perhaps most significant of all was the general spirit of optimism expressed in many directions.

While willing to confess that matters in his line have been decidedly slow during the past few months, the accessory

PRICE FEATURES AT NEW YORK SHOW.

Reductions.

AUBURN—$200 on all models.

DAVIS—$200 to $290 on open cars; $390 on enclosed.

JACKSON—$200 on all models except new four-passenger.

PEERLESS — Four-passenger, $3230 to $2990; roadster $3200 to $2990.

Increases.

DORRIS—Increase of $200 practically effected through elimination of extra equipment, though refinements in construction were added.

DORT—$130 on new touring and roadster models.

FRANKLIN—$100 on open cars, Jan. 1; $100 on enclosed cars, Jan. 15.

MOON—$200 on model 6-68, $2685; 6-48, $2185; enclosed, $3185. (Prices on Moon cars had been previously cut $400.)

VELIE—$325 on new model 48 sedan at once; $100 on new model 34 touring, Feb. 15.

New Models.

COLUMBIA — Five-passenger touring, $1995; coupe, $2895.

DETROIT ELECTRIC—Brougham, $4000.

HAYNES—Five-passenger touring, $1985.

MAIBOHM—Coupe, $2395.

MITCHELL — Five-passenger touring, $1995.

PILOT—Five-passenger touring, $2285.

SAXON-DUPLEX—$1675 on open models; $2475 on enclosed. (Represents a reduction of $220 on former open models and $320 on former enclosed.)

and parts maker now sees plenty of business ahead. As to when the turn for the better will arrive there is a difference of opinion. Some there are who are ready to believe that the sky will clear immediately following the national shows. Others, viewing the matter more conservatively, see next spring as the time when some of the strain will be relieved. Indeed, reports are not infrequent of better business now than a month ago, with factories running at greater capacity and shut downs becoming a passing nightmare. However, notwithstanding these signs of better times there is generally felt to be every need for the most careful guidance of business activities over a considerable period to come.

Getting back again to the exhibits, nearly all of the lines that have become standard through years of intimate association with and service on the well known makes of automobiles, were found on view as usual, but there were enough new devices, however, to add interest. Stability in the products shown augured well for the success of the enterprises backing them; that is to say, there was a decided tendency to get away from the ephemeral novelties and merely ornamental fads which have previously mingled with the more reliable products, and to substitute in their places articles which fill a real need.

Thus there was disclosed much to interest the car owner along the line of bumpers, curtain windows, searchlights and upholstery and top materials, together with various other products with which he is gradually coming to have more than a mere superficial acquaintance, among which may well be included carburetors, batteries, axles, wheels, etc. There was a tendency on the part of the exhibitors, too, to emphasize the question of service, this indicating the greater care which the owner is expending in making an investment. In this connection it was interesting to note that one manufacturer well known in the piston ring field, instead of displaying his line in its various sizes highly finished to attract the attention of the passerby, rather sought to win instead through showing rings that had been in service for many thousand miles. These were displayed on stands with the mileage record that each had achieved clearly indicated.

Many of the displays were not only attractive, but artistic in their setting and arrangement.

In regard to quantity and quality of business, both present and prospective, this was such as to encourage even the more pessimistic. It is an undeniable fact that genuine optimism exists in this branch of the automotive industry. What is more, it is generally felt that when once readjustment is accomplished conditions will be better than ever before. Business streaming in with little or no effort undermines the efficiency of the selling organization. A product that must be sold to a public that is not incessantly clamoring for it places new and perhaps salutary burdens upon the sales force. It promises to restore the salesman to his proper place in the organization as a salesman and not as merely an order taker. Intensive selling methods must of necessity take the place of haphazard systems thrown together as occasion demanded.

Chicago Show Jan. 29-Feb. 5.

A majority of the displays will again be seen in the Chicago Coliseum and Annex and First Regiment armory, Jan. 29-Feb. 5. But there will be, in addition a number of makes of cars that have not been seen heretofore.

Ford Factories Resume Operation in Face of Financial Complications

THE name of Ford has, from the earliest days of the practicality of the automobile, been associated with unusual and oftentimes sensational features in production, administration and publicity. And the hectic period through which the industry has been passing for some months was virtually inaugurated last September by the cut in the price of Ford cars, placing them again on a pre-war basis.

This was followed by a reduction, more or less general, in the prices of other makes of cars, material and equipment, and a period of marked general depression through the closing months of the year. During all this time, however, reports were rife concerning the activities of the Ford interests, such as the acquiring of railroad, mining, timber and other outside properties, and of unrestricted production at the big Ford plants.

Then, with the opening of the new year, came rumors of changes of policy and a reorganization in certain departments, which were apparently confirmed by the resignation of a number of prominent executives who had been long and closely asociated with the Ford organization. These included Frank L. Klingersmith, vice president and treasurer; L. E. Turrell, chief auditor, and Charles A. Brownell, advertising director.

But the most recent and perhaps most significant turn in Ford affairs is the report, seemingly authenticated by New York bankers conversant with the financial situation of the concern, that the corporation was negotiating for a large loan to meet maturing obligations, the payment of federal taxes, and for working capital. These financial requirements are stated to be around $75,000,000, of which $44,500,000 is required to pay 1920 taxes during 1921. This same authority states that the total liabilities of the company are around $130,000,000, with assets above $160,000,000. The valuation of the Ford plant is estimated at $200,000,000, while the amount invested in the new steel furnace enterprise is placed at $30,000,000. And it is reported that the Ford Motor Co. has on hand at the present time about 130,000 unsold cars.

No Statement from Officials.

While no direct statement has been given out by any official of authority in the Ford Co., up to the time of going to press, as to the verity of this reported application for financial assistance, a close business associate of Henry Ford is quoted as stating that the company has not initiated negotiations for a loan of upward of $50,000,000, as was reported in New York banking circles, but that offers of a loan have been received, it was said, from a number of banks whose representatives called at the Ford company's offices in Detroit, but that they have been declined.

Henry Ford, the Dominant Spirit in the Gigantic Ford Enterprises.

No matter what the present stringencies in Ford financial affairs may be, there is no one at all conversant with the history and marvellous growth of this gigantic enterprise which has at all times been dominated by the remarkable personality and business acumen of Henry Ford, who does not believe that he will triumph over these difficulties and that, in all probability, he will eventually be able to place the Ford enterprises on a sounder and more substantial footing than ever before.

Big Detroit Plants to Resume Production.

And this would seem to be borne out by the most recent report of the starting up of the big factories at Detroit on Feb. 1 with the prospective employment of some 25,000 men on a production schedule starting at 1500 to 2000 cars a day and the return to normal output perhaps not far distant.

Another significant fact is that the company began the distribution of approximately $8,000,000 in bonuses to its employees Jan. 17.

Reviewing the incident of the Ford company's price cut last fall and the recent incursions of the chief figure in that enterprise into other lines of activity, it appears that the motive underlying the slash in prices was a daring attempt to stimulate buying and at the same time to materially reduce the cost of products entering into the makeup of Ford cars. Mr. Ford apparently recognized before anyone else that the automobile price structure was toppling and he determined to forestall, if possible, the calamity insofar as Ford interests were concerned. The effect of his pre-war price thunderbolt was immediate and it gave a temporary impetus to the price-cutting campaign in all lines of industry, but some of the big interests, notably the steel mills, remained firm.

Cars Sold Below Cost.

A month of manufacturing at the new scale of prices confirmed what Mr. Ford undoubtedly realized when it was decided to put the cut into effect, that the cars were being sold to the dealer below cost and that they could not possibly be produced to be sold at a profit at the reduced rates unless the company should find itself in a position to obtain materials at a substantial decrease. It is stated that touring cars, sedans and coupes were selling at from $25 to $40 below what it cost the Ford company to build them, but there was, however, still some profit on the chassis and tractors.

For a time business at the Ford plants was stimulated, but it failed, it is stated, to develop into the tremendous buying rush that was anticipated. Soon production caught up with the consumption in spite of the fact that the public was offered Ford cars at a price below the cost of manufacture. The Ford plant continued to turn out cars until it had a great surplus on its hands sufficient to supply the demand for six weeks or two months. Detroit credits the report that there are some $33,000,000 worth of cars on hand in the Ford storage houses. Naturally, the only thing left to do was to close the factories until the demand again caught up with the supply. And this was done.

Real Cause of Reported Stringency.

But all this is, perhaps, incidental to the real cause of the shortage of ready cash which the Ford interests are reported to be experiencing at the present time. When Mr. Ford found that the effort to force the prices of raw materials down at his bidding was only partially successful, he evidently realized that he was not sufficiently independent of the material makers to fulfill his vision of an even more stupendous programme of production and development of the Ford enterprises, so he made another move, almost Napoleonic in its scope, and fully as daring as the others which have brought him fame and fortune. He would make the great Ford works independent in reality. From the raw ore in the mine and the growing timber in the forest to the last speck of paint on the car, it should be a bona fide Ford product. And then he began to put out the millions. He bought vast iron ore tracts, coal deposits, lumber lands and the entire control of the Detroit & Ironton railroad—in fact whole

(Continued on Page 88.)

ORGANIZING 24-HOUR REPAIR SERVICE ON CHAIN STORE PLAN

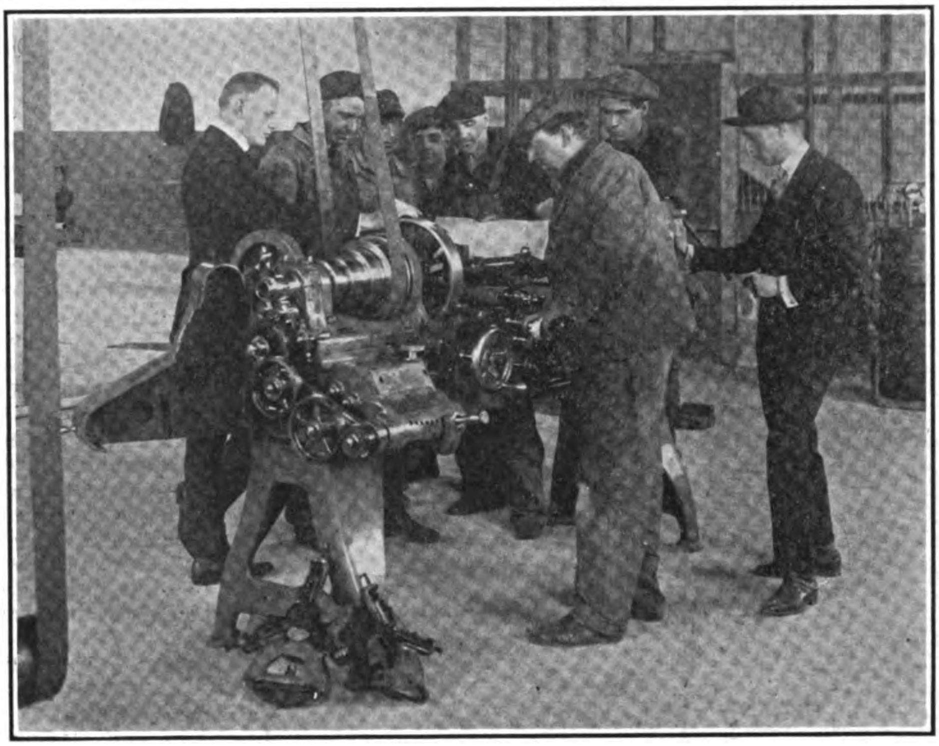
— *By S. G. SWIFT.* —

THE automobile industry has always been characterized by rapid development and the biggest forward strides have usually been the result of exploited innovation. The plan of yesterday has ever been the reality of today, and the abnormal growth of the business has been marked by daring and expensive experiment. Growing efficiency has long demanded more general standardization, with consequent saving of time and money, and now, in answer to that demand, comes 24-hour truck and car service, dispensed by the chain store method.

The National Chain Motor Service Corporation was formed in May, 1920, for the purpose of standardizing motor repair service by the chain store idea of merchandising. The paramount endeavor will be to give adequate truck and car repair service at a minimum of time and expense, and every shop in the proposed vast chain will be strongly organized on a factory production basis with experts in every department, in addition to being fully equipped with the most modern labor and time saving machinery. All of which will make for perfection in service.

Through scientific methods of management and quantity purchase of material, overhead expenses will be at a minimum. A system of popular charges will be inaugurated as a result of these savings to take the place of the arbitrary and extravagant rates frequently met with at public service stations not properly equipped as to merchandise and machinery.

A glance at the personnel of officers and directors shows the names of men of prominence in the automotive and engineering world and as the success of an industrial organization depends almost wholly on its management, the new concern seems assured of competent administrative supervision.



Company School for Mechanics—A Number of These Young Men Are Destined to Be Service Station Managers.

The president is John C. Speirs, formerly general manager of the Autocar Co., factory manager of the Mercer Automobile Co., and the Locomobile Co. He is well known in the automotive world and much of the success of various companies with which he has been connected has been credited to him. The other officers are: Vice president, Frank Mossberg, president of the Mossberg Pressed Steel Corporation, vice president of the Standard Machine Co. of Rhode Island and member of the American Society of Mechanical Engineers; treasurer, Robert J. Holmes, member of the firm of Holmes & Worthen, corporation attorneys; director of Mexican Investment Co., Inc., Darien Estates, Inc., treasurer of International Abrasive Corporation and treasurer of the Fidelity Capital Corporation; director, Jeremiah G. Long, chief engineer of the Boston Woven Hose and Rubber Co., director in the United States Fuel Corporation, member of the American Society of Mechanical Engineers, the Boston Chamber of Commerce and the Cambridge Board of Trade; director, Harry Eisner, president of the Eisner-Lenk Electrical Co. and member of the Society Automotive Engineers; director, Nathan C. Harrison, treasurer of the Harrison Supply Co., director Fidelity Capital Corporation, president of the International Abrasive Co. and of the Queen's Mills (manufacturers cotton thread), director of the Manufacturers National Bank, Cambridge, Mass., of the Citizens National Bank of Boston, of the Dorchester Savings Bank (also a trustee), director of the John West Thread Co. and member of the National Association of credit men; director, William J. A. Bailey, formerly president of Bailey & Co., investment securities, Boston, formerly connected with Federal Reserve Bank of New York, government loan division and formerly president of the American Hardware and Machinery Export Corporation.

William T. Richardson, formerly of W. T. Richardson & Co., engineers, is in charge of the development and expansion programme for the company and is formulating many plans in regard to future building operations. Mr. Richardson is amply fitted for this position, having built the Boston arena and several of the larger theaters in Boston.

First Unit Operating Successfully.

The first unit of the chain is located at 128-134 Cambridge street, Charlestown, Mass. It has been in operation since September and is already on a paying basis the management announces. Plans for the next station are not yet complete, but it is possible that it will be located in the city of Norwood, Mass., where a location is said to have been offered by the local chamber of commerce, which is also ready to place at least half of the stock necessary to establish the plant locally.

Locations are already being sought in Worcester, Springfield, Providence, Hartford, New Haven, New London, Bridgeport, South Norwalk and New York, and it is planned to have the main highways between Boston and New York well covered within the next two years.

The station, now in operation, along the general lines of which the other will be designed, was erected at a cost of $125,000, and is strictly fireproof. It contains approximately 20,000 square feet of floor space, and is about 100 feet long and 90 feet wide. The upper floor is used wholly as a repair shop and is reached by means of a ramp driveway with an angle of 30 degrees, which permits of easy entrance.

Space on this floor is alloted to the following departments: Tires and vulcanizing, battery, ignition, electrical, general repairs, machine shop, tool crib, radiator and sheet metal, accessory and stock, blacksmith and welding. It is well lighted by Fenestra type windows, and the roof is of truss construction, admitting of clear floor space.

Machinery to Make Any Part.

The equipment of the shop was installed at a cost of $39,074, and contains practically every time and labor saving device known to the modern repair shop.

NATIONAL CHAIN MOTOR SERVICE CORP.

These Forms Tell the Story of Every Operation Concisely and Yet with All Necessary Detail.

As a matter of fact it contains more than this, being specially equipped with machinery for the manufacture of any desired part, and the personnel includes mechanics capable of turning out first class machine jobs. It is the intention of the company to buy all parts needed from dealers so far as this is possible, but if time can be saved by manufacturing the necessary part, the shop is equipped to do this.

All of the chain shops to be started will contain the same layout as the parent shop, which is as follows:

Two Manley two-ton portable floor cranes.

Six portable steel benches.

One Cincinnati universal cone-driven Miller.

One 24-inch G. & E. shaper.

One Champion 20-inch by 10 foot plat-lathe.

One Champion 14 inch by six foot lathe.

One 14-inch Washburn sensitive hard metal drill.

Two St. Louis floor standard grinders.

One No. 60 Heald cylinder grinder.

One Landis 16 inch by 28 inch universal grinder.

One Landis 24 inch plain grinder.

Three Greenerd arbor presses (20-ton capacity).

One No. 1 Racine power hacksaw.

One Franklin valve grinder.

One Morris radial drill.

One Silver upright 20-inch drill.

One Waterhouse welding outfit (complete).

One G. & L. turret lathe.

One Cataract precision lathe.

Thirty complete sets of small tools for mechanics, in addition to which a complete list of seldom used tools is available to the tool crib.

Department Heads Responsible.

Each department is in charge of a competent mechanic who is a specialist in his own particular line He is paid at the rate of $1 an hour. His helpers are general line men, the idea being that they can be used by departments other than their own if press of business warrants. These men are paid on an average of 85 cents an hour, depending on their proficiency. The department head is responsible for the time of the men under his charge and keeps detailed records of the jobs worked on, which are checked with the record in the main office each night.

Company Provides All Tools.

The mechanic who enters the employ of the company is requested to leave his own tools at home. The management has selected specially designed tools to be used in the work, and each man starting in is given a complete set. The chest is fitted with a Yale lock and the user is charged with the full value of the outfit. The kits are inventoried each week and the value of any tool unaccounted for is deducted from the weekly wage.

If a tool is broken while in use the inspector in charge of the tool crib is authorized to replace it and makes an account of the way in which the breakage occurred. All tools taken from the crib are charged to the man using them and must be turned back at the end of each working period. Lost tools are frequently a heavy item of expense in the operation of a repair shop and the management intends to keep this bill as low as possible.

Three-Shift System Used.

All mechanics work on the three-shift principle. Watchmen and tool crib men work 12 hours, and the office hours for the clerical staff are from 8:30 in the morning to 5 in the afternoon, there being no night force in the latter department.

All repairs and general service are laid out in a special manner. When the vehicle to be worked on enters the station the head inspector first looks over the job and then assigns different department heads to the case.

As the work goes forward he makes a general inspection of the machine, giving his report on a blank form specially prepared for such work. This blank gives detailed information regarding the running condition of the vehicle and approximates the time and money necessary to put it in first class condition, in addition to the charge made for doing the work requested in the first place. It is mailed to the owner, who is then solicited by a salesman with a view to getting the overhaul job at such time as the truck can be spared from the regular work.

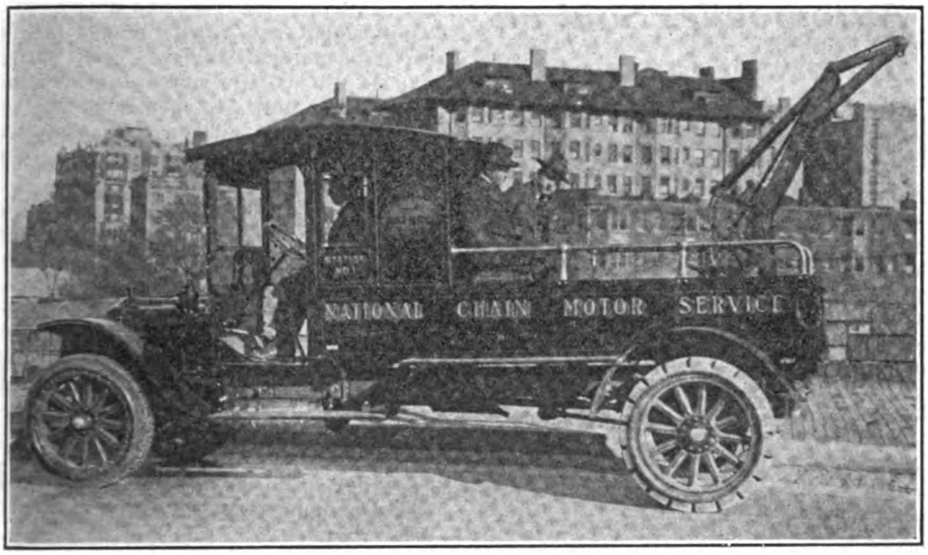
$25,000 Stock of Parts.

The time of each operation is kept by each department by means of a clock with time stamping device, and the different cards are turned in to the general office, where the final charge is computed and the bill made out. The repair work is based on a flat charge of $1.50 an hour, and all accessories and parts used, of which a $25,000 stock is carried, are figured from a retail standpoint, thus assuring a profit on this end of the business.

It might seem to the uninitiated that the charge of $1.50 an hour is somewhat exorbitant, but the opposite is more often true. Only such time as is actually used is charged, and the labor saving devices tend to speed up each operation to a great extent.

The writer was somewhat surprised to see a valve grinding job taken care of in 20 minutes by the efficient Franklin valve grinder, and the saving of time and money over the old fashioned hand method was very noticeable. All repairs made are guaranteed for a certain period of time, depending on the nature of the work, and it is apparent to even the lay man that the amount charged, taking all things into consideration, is comparatively nominal.

The business of the truck owner is solicited by two salesmen who were formerly connected with one of the large truck agencies. They call on all respon-



Service Truck on White Two-Ton Chassis with Kelly-Springfield Tires, Which Is First Aid to Trucks and Humans.

sible owners and sign them up for the service. Cards are given to the different drivers, which allow the men to get work done at any branch station of the company. The bill for the work is sent to the owner and settlement is made monthly.

An extensive drive for business is now being made under the direction of Murray Breese, sales and service manager for the concern. Mr. Breese was formerly connected with the New York Sun, and has had much experience in publicity and advertising work. He plans to circularize every prospect in Boston and vicinity, the letters to be followed up by personal solicitation by his service salesmen, and in addition to this, will spend an appropriation of $30,000 in newspaper advertising. It is to Mr. Breese that much of the present success of the plan is due, and he already has plans formulating which should do much to increase future business.

The first floor of the building is devoted wholly to general offices, storage space and vehicle and parts washing machines. A Polarine oil tank of 500 gallons capacity and a gasoline tank of 20,000 gallons are placed on either side of the front door, although no gas or oil will be sold to any other than customers, as the concern has no desire to get into that end of the business, wishing to keep strictly within the confines of repair shop work.

Service Truck Has a Pulmotor.

The service truck deserves a paragraph to itself. It is a two-ton White chassis, equipped with Kelly Springfield caterpillars, and is specially geared to attain a speed of 40 miles an hour in emergencies. It carries a first aid kit and a pulmotor, the driver being trained in the use of both, and the authorities have made a special concession, allowing the machine to be equipped with a fire truck gong. They have also extended unusual speed privileges, so that the truck is a first aid for both automobiles and humans.

The body is especially built to allow the carrying of a large equipment, and a three-ton, one-man operated Manley crane is mounted on the rear.

Carries Complete Outfit.

All sorts of tools are carried to enable the speedy salvage of a wrecked machine, a complete list of which follows:

One Basline autowline, 1 Powersteel truckline, one wrecking truck, rubber tired; one towing pole, four crowbars of various sizes, two shovels, two Fairbanks log chains, four Fairbanks white lanterns, four Fairbanks red lanterns, one Presto tank, one Prestolite storage battery, one Beamolite searchlight, eight oak plank, one Prentiss vise, two sets Weed tire chains, one small tool equipment, two Fairbanks steel tackle blocks, 150 feet manila rope, six jacks of various sizes up to five tons.

This truck presents a very fine appearance with its neatly painted body and lettering, and has attracted much favorable comment.

Special School for Mechanics.

In keeping with the policy of the company to render perfect service to the truck and automobile owner, the engineering department recently decided that the average automotive factory trained man is not of sufficiently high caliber to insure service in keeping with the ideals of the organization. A number of tests were made among average mechanics to determine the analytical powers of these men, with the result that it was found that while approximately 60 per cent. of them could efficiently repair defects in a machine where such defects were pointed out to them, not more than 15 per cent. could analyze the car's trouble.

As a result of the test it was decided to allow the department, under the personal supervision of the engineer, H. G. Spangler, to institute and operate classes for the men in such branches of the work as was thought advisable. A schedule was prepared calling for two one hour lecture periods weekly, the subjects taken up being: Theory of Engine Construction, Rear-End Construction, Common Motor Troubles, the Care of the Car, Transmission, Ignition and the Electrical System. The men have shown a hearty response to the training and much good is expected from the courses, which will be kept up through the winter at least.

Station Managers from Ranks.

All station managers will be recruited solely from the main plant at Charlestown, and all standardization of parts and methods of operating will also be worked out at that plant, which will be known as the main service station. Men who show exceptional merit will be carefully educated in the policies of the company, and from time to time, as occasion demands, will be sent to the new branches. It is practically impossible to exactly standardize the details of repair work, but so far as possible all shops will be operated alike and, with this in view, it is necessary for all managers to get information at first hand in order to conform to the standard.

Purchasing Power Money Saver.

The establishment of the many stations contemplated will go forward just as fast as it is possible for the management to perfect its plans. The great buying power of a chain of stations is apparent. The profit resulting from quantity purchasing is obvious, and

First unit of National Chain Motor Service Corp., located at 128-134 Cambridge St., Charlestown, Mass. The entrance to the right leads to a ramp, the grade of which allows trucks to be driven to the repair shop on second floor on high speed.

forms the keystone of the money making possibilities of the organization, while the standardization of the various operations of repair work should also effect a material saving.

It is upon the shoulders of the pioneer that progress rests. Hewing and carving his way through forests of doubt and uncertainty his trail marks the progress of civilization. This is true of life in general and may be applied to the automotive industry in particular. Chain merchandising seems to offer the fundamental idea of reduced merchandise costs. It has already worked out along many lines and while its application to truck service seems unusual, it nevertheless appears logical. The opportunity is here and the field is large. The National Chain Motor Service Corporation as a pioneer in the field deserves and will undoubtedly achieve the goal toward which its efforts are directed.

This Service Station Weekly Report Records the Financial Transactions of the Organization in a Nut Shell.

NATIONAL IMPLEMENT CONVENTION DATE.

The National Implement and Vehicle association has set the date for its 28th annual convention as Oct. 12-14, and Chicago has been chosen as the place.

The association has appointed the following to serve on its emergency and publicity for the ensuing year:

W. H. Stackhouse, French & Hecht; William Black, B. F. Avery & Sons; C. S. Brantingham, Emerson-Brantingham Co.; G. N. Peek, Moline Plow Co.; F. R. Todd, Deere & Co.; H. M. Wallis, J. I. Case Plow Works Co.

The Electric Storage Battery Co., Philadelphia, Pa., on Jan. 1 put into effect a reduction of 28 per cent. on all sizes and types of Exide batteries for starting and lighting.

Automobiles Sold on Deferred Payments

BETWEEN 45 and 55 per cent. of all motor cars being sold today are being marketed on some plan of deferred payment. This is stated to be the first authoritative answer to a question that has puzzled many sales executives of the automobile industry and has interested leaders in other lines of activity, including banks and agencies which advance money on such security. It is obtained from a tabulation just completed to a questionnaire sent to over 10,000 motor car dealers by the statistical division of the General Motor Acceptance Corporation, 120 West 42nd street, New York city.

The period for which the questionnaire asked information was from Aug. 1, 1919, to July 31, 1920, and, therefore, includes the latter half of a summer selling season, the following fall, winter and spring seasons, and the first half of the succeeding summer selling season. It is, therefore, a comprehensive sweep of sales conditions over a full yearly cycle of the industry.

In this report the General Motors dealers gave separate figures on sales to city dwellers and to farmers, and in each class listed the number of sales of new and used passenger cars and new and used trucks for cash and on deferred payments. It is interesting to note that of the sales to farmers, 38,216 were sold on time, the cash sales number 18,326. As was to have been expected, city dwellers paid cash more frequently than the farmers, only 44.9 per cent of cars sold to the former being through credit arrangements, there being 61,081 cash sales out of a total of 110,920. Of the new passenger cars reported sold to city dwellers and thus largely placed in the service of mercantile houses, were partly financed. It is also noted in this connection that only 51.2 per cent. of the used trucks were sold on time, and 51.9 per cent of the used pasesnger cars were sold to city dwellers.

Very much the same relative position is shown by the figures representing sales to farmers of new and used passenger cars and new and used trucks, 48.2 per cent. of new passenger cars delivered to farmers being sold on deferred payments, and 58.1 per cent. of the used passenger cars being similarly disposed of, while 59.9 per cent. of the new trucks are sold on time to farmers, and 56.7 per cent. of the used trucks. This figure, of 5.9 per cent. for new trucks, is the highest percentage in the whole list.

The dealers also reported the maximum amount of time they allowed on deferred payment sales to city dwellers and farmers, the average being 9.3 months to city dwellers, and 11.1 to farmers. The average down payment on all deferred payment sales reported was 40.3 per cent. of the cash selling price.

The Acceptance Corporation has subdivided its returns into two periods of six months each and some comparisons between them are of interest. In the first six months 378 persons gave their ages, which average 35.9 years for the group. During the second six months, 15,827 state their ages, which averaged 35.1 years.

In the first period 6940 reported their occupations, and in the second 17,955. A noticeable change evidenced in the second period is the increase in the proportionate number of individuals and firms in lines of business not rated by Dun's; that is, farmers, insurance, mining and real estate. Those of every occupation have bought more expensive cars, but this is probably explained by the price raises which occurred in practically all lines during the time covered. The price of the average car for the first period was $1044.23; for the second period, $1126.81. The average note in the first period was $591.86, which was 56.2 per cent. of the sale price of the car.

The average income is less for the second period than for the first, except individuals and firms not rated by Dun's. The average income of all purchasers was slightly lower in the second period, being $268.12, as against $275.45 in the previous period. Conversely, the average real estate equities reported are considerably higher for the second period than for the first, being $8606.37 against $6632.19.

In the geographical distribution of population by town, a very great change has occurred. In the first period over one-half of the time payment purchasers resided in cities of from 100,000 and up. In the second period, only one-third did so. In the first period, only five per cent. in towns under 500, while in the second period, 25 per cent. of the customers lived in towns under 2500, where the 1910 United States census places 55.3 per cent. of the total population.

Annual Meetings of National Associations

One of the biggest events coincident with the national automobile show at Chicago, Jan. 29-Feb 5, will be the fourth annual convention of the National Automobile Dealers' association at the Hotel La Salle. "Back to selling" will be the 1921 slogan of the 35,000 motor car dealers of the country represented in this association, according to General Manager Harry G. Moock, and the programme has been arranged to embody this idea. The convention will be in session five days, with two big membership days, Jan. 31 and Feb. 1.

The principal address of the session will be made this year by Charles W. Nash, president of the Nash Motor Co., Kenosha, Wis. The committee of arrangements of the association aims each year to bring some outstanding industrial leader before the convention and the choice at this time was unanimously Mr. Nash. His subject will be the relations between manufacturers and dealers as a necessary element of the success of both. Mr. Nash came into the business as a dealer. For many years he was a sales manager and his treatment of the subject will develop the thought of a golden meaning of dealing necessary to the proper merchandising of motor cars.

Three other strong features are provided for the business session of the convention. E. St. Elmo Lewis, New York advertising expert, will discuss the relation of advertising to merchandising. Leo Piel will speak on his success in what dealers regard as the most highly competitive motor market in the world, Chicago. Mr. Piel is president of the Mitchell Motor Car Co. of Chicago, distributor, and has been a leading factor in the fight for better merchandising methods for years. He is president of the Chicago Automobile Trade association.

Something Different in Association Talks.

"Something different" in trade association talks is promised in the "team talk" of L. E. Hooker and Arthur Livingston, called "Measuring the Value of a Territory." These two men are considered the leading sales and promotion men of the Burroughs Adding Machine Co. They will show by charts, especially prepared for the dealer convention, how it is possible to tell how many automobiles or other articles of merchandise a trade territory can absorb.

Other addresses will be by H. B. Harper, president; F. W. A. Vesper, treasurer, and Harry G. Moock, general manager of the association.

A feature which was introduced last year and which has been tried since in numerous other trade associations, the forum, will be continued this year. N. H. Cartinhour of the Cartinhour Bowman Co., Indianapolis, Ind., distributor of Federal trucks, and president of the Indiana Automotive Dealers' association, will lead the truck division forum, and P. H. Greer, Maxwell-Chalmers Hupmobile distributor, Los Angeles and San Francisco, the passenger car forum.

The association has obtained from the railroads a reduced rate of fare and a half round trip for members attending the convention, subject to the following conditions:

Tickets will be sold on the certificate plan. It will be necessary for every purchaser of a ticket who expects to obtain the rate, to obtain a certificate from his ticket agent, and bring that certificate to Chicago with him. At Chicago he has this certificate validated by Harry G. Moock, general manager of the National Automobile Dealers' association, and presents it to the ticket agent in Chicago. The agent then will sell him his ticket home for half fare. Issuance of the rate is made contingent on the receipt of not less than 350 certificates.

E. H. Broadwell, Fisk Rubber Co., Who Has Been Elected President of Motor and Accessory Manufacturers' Association.

Charles W. Nash, President of Nash Motor Co., Who Will Be Principal Speaker at Annual Convention National Automobile Dealers' Association.

NEW M. A. M. A. DIRECTORS ELECTED.

At the annual meeting of the Motor and Accessory Manufacturers' association held in New York, Jan. 12, F. C. Glover, vice president and general manager of the Timken Detroit Axle Co., Detroit, Mich., and H. L. Horning, secretary and general manager of the Waukesha Motor Co., Waukesha, Wis., were elected to the board of directors. They succeed C. Girl, president of the C. G. Spring Co., Kalamazoo, Mich., and E. W. Beach, general manager of the Ferro Machine and Foundry Co., Cleveland, O., who have been identified with the association both as members and directors for a long period of years.

Two members of the board whose terms expired this year were re-elected: E. H. Broadwell, vice president, Fisk Rubber Co., Chicopee Falls, Mass., and L. M. Wainwright, president, Diamond Chain and Manufacturing Co., Indianapolis, Ind.

The board of directors is now constituted as follows:

E. H. Broadwell, vice president, Fisk Rubber Co., Chicopee Falls, Mass.; E. C. Thompson, president, Steel Products Co., Cleveland, O.; W. O. Rutherford, vice president, B. F. Goodrich Rubber Co., Akron, O.; L. M. Wainwright, president, Diamond Chain and Manufacturing Co., Indianapolis, Ind.; G. Brewer Griffin, Westinghouse Electric and Manufacturing Co., East Pittsburgh, Pa.; J. M. McComb, vice president, Crucible Steel Co. of America, Pittsburgh, Pa.; G. W. Yeoman, treasurer, Continental Motors Corporation, Detroit, Mich.; A. W. Copland, president, Detroit Gear & Machine Co., Detroit, Mich.; C. H. L. Flinterman, vice president, Detroit Pressed Steel Co., Detroit, Mich.; E. P. Hammond, president, Gemmer Manufacturing Co., Detroit, Mich.; M. L. Horning, secretary and general manager, Waukesha Motor Co., Waukesha, Wis.; F. Glover, vice president and general manager, Timken Detroit Axle Co., Detroit, Mich.

At a meeting of the new board the following officers were chosen:

President, E. H. Broadwell; first vice president, W. O. Rutherford; second vice president, A. W. Copland; third vice president, H. L. Horning; treasurer, L. M. Wainwright (re-elected); secretary and assistant treasurer, G. Brewer Griffin (re-elected).

DURANT RE-ENTERS AUTO FIELD.

W. C. Durant, whose recent retirement from the presidency of the General Motors Co. caused considerable interest as to his future activities, has announced his decision definitely by the incorporation of Durant Motors, Inc., at Albany, N. Y., with an authorized capital of $5,000,000. It is further stated that the first factory unit of the new concern will be built at Flint, Mich., and that a four-cylinder car will be featured to sell for around $1000. Mr. Durant has been joined in his new organization by F. W. Hohensee, former vice president and director of General Motors, and A. T. Sturt, chief engineer of the Chevrolet Co.

Stay "Sold" on the Industry

THE dealer, service station, garage owner and repair man, who have their ears to the ground, are hearing a rumbling that portends early business. The factory wheels are again turning. The clink of the more agile dollar on its widening round is high harmony. There is plenty of good cheer in the triumph of the New York auto show and the forecast of a similar accomplishment at Chicago.

From the financial world comes glowing news of loosening purse strings. Wages are slowly but surely reaching a right level. Prices have somersaulted and have attained a firm footing on a lower rung. The buyer is again abroad in the land.

The New York show brought orders for present and future delivery. It awakened the latent longing of the car prospect. It advertised the industry to the nation. It focussed on the automobile the interest of the more than 9,000,000 who own motor vehicles and the 99,000,000 who would like to be listed in the owner column.

Figures gleaned on registrations from state executives by the B. F. Goodrich Rubber Co. definitely tell the man who has staked his all in the distribution, maintenance, equipping and repairing of the automobile that his lot has been cast in a pleasant place and that he has builded well.

This tabulation taken from official data shows that there are 9,295,252 passenger cars and trucks in use throughout the United States, 1,691,236, or 22.2 per cent. more than on New Year's Day, 1920. There is encouragement here for the dealer and work enough to keep every service station, garage and repair shop in the country going at full tilt the year around.

Yet the period of depression in the closing days of 1920 was long enough to offset the abnormal business of the early year and indicates that the marketing of 1,691,236 trucks was a feat that can be repeated this year. Another basis on which to look for business in equal or greater volume in 1921 is the wonderful strides made within 12 months in grounding into the public mind the utility of both truck and car. The business man knows now—what he but faintly suspected a year back—that his car is not only an adjunct to the speed and efficiency of his operations, but an absolute essential, which he cannot afford to be without. The truck, too, has won a place which no other agency can fill.

The last, lingering doubt as to the business economy of car and truck has been obliterated, which is perhaps the greatest forward stride the industry has achieved. There is no longer uncertainty as to whether the motor vehicle is a successful unit in modern business. The only question today is: "Can I Afford to Get One?" The only answer is: "Can You Afford Not to Get One?"

In the running down of business when the pendulum swings to the zero hour in the spring the progressive business man is not going to be handicapped with a back number car. The new demand founded on the teaching of automotive utility and the natural call, plus replacement, is bound to create an impetus that will plant every branch of the automobile business on solid ground.

In looking for signs that point to a prosperous future for the automotive industry, the Goodrich figures hold naught but brightest auguries. Every state in the Union showed a gain during the year, Virginia leading with 51.1 per cent., and Montana lowest with 2.2 per cent. Eight states have more automobiles than all of Europe, a fact that points to a vast field for export business.

One of the most significant statements in the report is that if the entire country had the same proportion of cars to population as Nebraska, one to every 5·9 persons, there would be 17,912,000 cars and trucks in use today. Who will say that the people of the other states do not need and desire motor vehicles as do the people of Nebraska? Who will deny the fact that they are going to get them at an early day?

Then "what's the matter with the automobile business?" The reply is that there isn't a single thing the matter with it and that all whose energies are engaged have an outlook commensurate with their vision, ability and energy. It's a business for trained, forward-looking men, however, and now is a good time for the laggard and sluggard to pick a stepping-off point. It's a field in which success is only for the deserving.

Business is hovering on the edge of a mighty upward surge. A roll call of conditions reveals a response for every element for an advance movement, save possibly two. One of these is the tardiness of the cut in the cost of labor, a situation which is gradually, but certainly being readjusted. When the price of labor strikes a proper balance building construction will begin all along the line and general buying and selling will be resumed.

To ensure spring delivery of normal business, commerce and industry must concentrate their forces and preach the gospel of good times. The hard luck disciple must be eliminated. The man who sees rainbows should have his inning. All this must be backed by action, quick, certain and decisive.

The automotive trade, second in majesty among the nation's industries, is equipped as none other to help the tide of prosperity roll back the shifting sands on which business has been temporarily stranded. Every last unit of this machine must be geared up to the work in hand. The manufacturer cannot do it alone. Single-handed the dealer cannot go far. Supported at every twist and turn by the service station, garage and repair man, the merged interests of the industry can be a power in restoring the business of creating, distributing and maintaining the motor wagon to the peak the product and its handlers merit.

The manufacturer looks for intensive cooperation from those who market his products. He expects unity of action throughout the entire manufacturing and merchandising operation. Furthermore, he gets it.

Dealers are taking a common sense view of the situation and are meeting conditions manfully. Most of them accept the better outlook in textile, steel, iron and financial lines as a forerunner of brighter days. They have decided that the storm has spent itself and are preparing to bask in the sunlight of coming prosperity.

The manufacturer must recognize that the duty he owes to the dealer has been accentuated by adversity. The backing which the factory owes in theory must be paid in fact. It must be actual and constructive. The bond between the two cannot be too close. The dealer needs the manufacturer more than ever and the factory needs the distributor at his highest productive point.

Team work that is clock-like in its perfection is the essential element that the times demand. The spark must fire at the proper cycle of the piston or the engine will stall. Both ends must serve to the limit of their capacity at the critical turn in the road or a spill threatens. Business is rounding the corner and success is just beyond the bend if the manufacturer and dealer will work in effective unison.

The owners of distribution franchises, service stations, garages and repair shops make up an integral part of the industry they serve. On their proper functioning depends the entire structure. The manufacturer knows his dependence on this department of the trade is an asset beyond price. He has faith in his associates and they must have faith in him, his product and the industry. The distribution or maintenance man should be "sold" on his industry and should stay "sold." He's on the right road now. A detour will bring him nowhere. Straight ahead at full speed leads to that somewhere for which we all strive.

NOTES OF INDUSTRY AND TRADE

Splitdorf's New Sales Building at Chicago

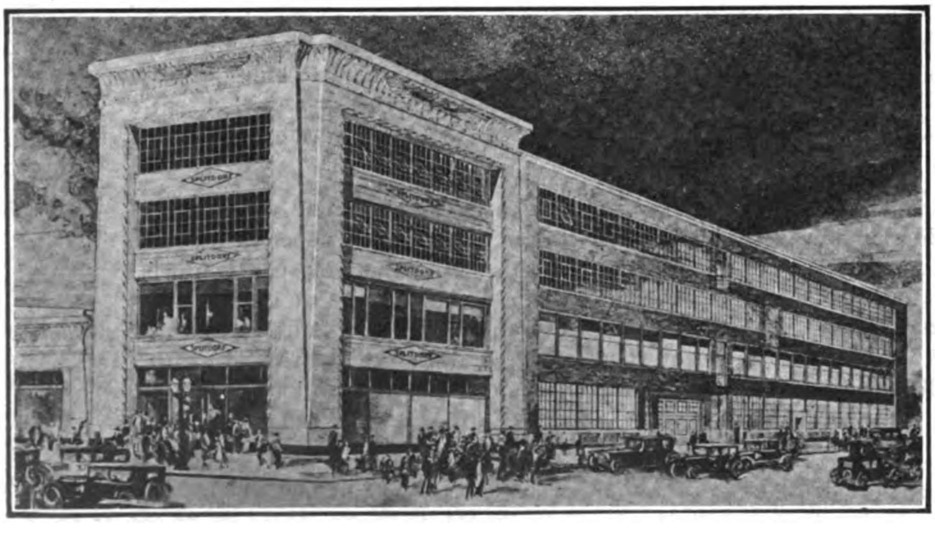
The Splitdorf Electrical Co., Newark, N. J., recently opened a new service and sales building in Chicago, Ill., at the corner of 29th street and South Michigan avenue. This structure is 40 feet wide and 178 feet four inches long and consists of basement and four stories above ground. The lower or street floor has been converted into a sales department and display room with a large garage in the rear and also includes a spacious shipping room.

On the second floor are the general offices, rest rooms, private offices of the central district and conference rooms. The third floor is entirely taken up by the repair shop and stock room. On the fourth floor is the store room for completed apparatus and parts.

The building is serviced by a commodious passenger elevator and a freight elevator for trucks.

The architecture is of the Egyptian type, both inside and out. In order to eliminate the use of artificial light as much as possible the front of the building on South Michigan avenue and the 29th street side are of patented construction embodying large glass windows. The balance of the building is steel and concrete throughout with terra cotta finish on the front and pressed brick used in the construction of the sides. No expense has been spared to install the most modern office and shop facilities.

This new building houses the headquarters for the central district of the Splitdorf Electrical Co., now known as the Splitdorf Electrical Co. of Illinois, which controls branches in Detroit, Kansas City, Minneapolis and Dallas.

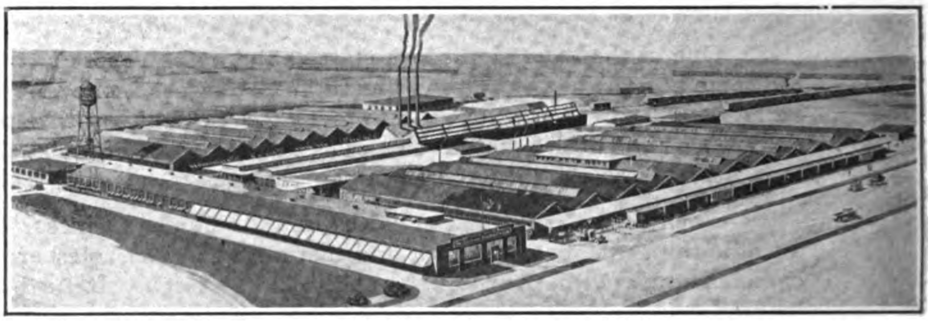


New Service and Sales Building of Splitdorf Electrical Co. Recently Opened at Chicago.

KING CO. MOVES INTO NEW PLANT.

The King Motor Car Co. has moved into its new plant on Conant avenue, Detroit, which affords greatly increased manufacturing space and permits the concentration of activities under one roof instead of being divided in three separate plants. The company, according to an announcement by its new owners, Charles A. Finnegan, A. Weber and Eugene Hofeller of Buffalo, will positively be operated as a going concern. No change will be made in the construction of the eight-cylinder chassis, but new executives will be placed in charge of certain departments and some of the policies will be somewhat revamped.

A. Weber is the new president and general manager; S. J. Feldman of New York is to have charge of the eastern and export business, and it is reported that H. C. Bradfield, who was, for a number of years, advertising manager of the company, will be associated with the new owners as advertising counsel, handling the publicity of the company through his advertising agency.



Plant of Cleveland Tractor Co. at Cleveland, O.

PLANT OF CLEVELAND TRACTOR CO.

Although the Cleveland Tractor Co. has only been building tractors since 1917, in that time the demand has grown so rapidly, both in this country and Canada, and in more than 60 foreign lands, that its factory has increased from a small experimental shed to a great industrial plant, occupying a quarter of a million square feet of floor space entirely devoted to the building of this tank-type tractor.

The home of the Cletrac is equipped with the most modern labor saving machinery, and the motor plant, shown in the right foreground, which is the newest addition to the factory, is an example of efficiency in factory construction equipment and operation, which is not excelled in the automotive industry.

YELLOW CAB CO. TO MAKE CARS AND TRUCKS.

With the opening of the new year a big automotive industry was added to the activities of Chicago. John Hertz, president of the Yellow Cab Manufacturing Co., which for several years has been making the well known line of cabs which bears its name, has just announced that his organization will begin immediately the manufacture and distribution on a large scale of passenger cars and light trucks.

Manufacture will be in the great new factory of the Yellow Cab Co., Menard and Dickens streets, northwest, and will mean an investment of several million dollars and the employment of several hundred more workers within a few months.

The star of the line will be a 12-cylinder car, called the Ambassador, which Mr. Hertz characterizes as "the most beautiful car ever made." Several of these big machines already have been made and are in use in the city. The Ambassador will be made in touring, closed, sports and imperial sedan models. It will be of two, four and seven-passenger sizes.

Production, however, will be largely concentrated on a four-cylinder car of moderate price, worked out on the Yellow Cab chassis. This line will consist of coupe, sedan, touring car and roadster.

To complete the line the Yellow Cab Manufacturing Co. will get out a one-ton speed wagon truck and 1¼ speed truck.

Types of all these cars will, it is stated, be ready for exhibition at the Chicago automobile show, Jan. 29-Feb. 5. The Ambassador will be shown at the New Drake hotel and also at the show rooms of Esch & Hammond, 2216 South Michigan avenue, which has been chosen as distributor for the big car.

Optimistic Outlook for Ring Makers

An exceedingly optimistic outlook for the piston ring business during 1921, based on trade conditions in the field, was the prevailing opinion expressed by the district sales managers of the American Hammered Piston Ring Co. at its recent annual sales conference.

This conference, which covered a period of five days, during which time every phase of American Hammered sales policy and plans was discussed, was the first meeting of this kind held since 1919.

The sales manager from each district in the United States attended and gave the home office a very clear idea of business conditions in his own particular field. Optimism was the key note of all the sessions.

Each man's idea of selling and of developing his territory was outlined and the exchange of thoughts proved helpful to every one present.

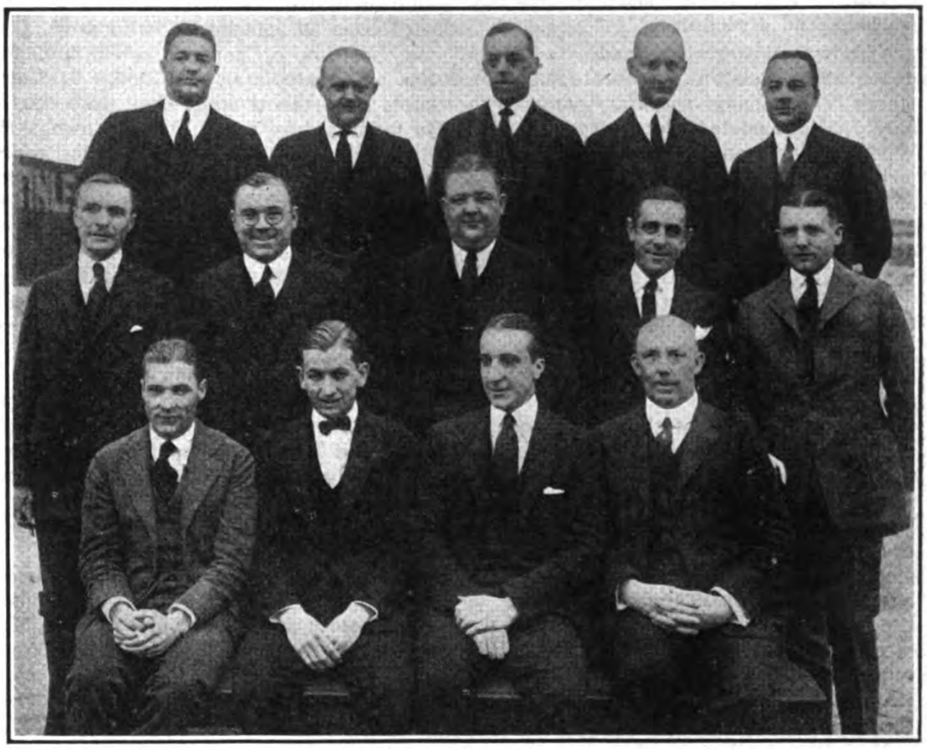
An outstanding feature of the sales conference was the fact that no changes were found necessary in the sales policy of American Hammered Piston Ring Co. notwithstanding the changed economic situation prevailing.

The group photograph reproduced herewith shows the following officials who were present at the conference:

Front row, left to right—Joseph S. Jacobs, manager advertising department; W. R. Tupps, manager sales promotion department; T. S. Blakiston, district sales manager, southern district; P. C. Little, district sales manager, New England and New York district.

Second row, left to right—C. B. Cook, advertising department; Paul Fay, district sales manager north middle and western states; J. H. Quackenbush, assistant general sales manager; H. S. Greene, south middle western states; B. H. Wolfe, Philadelphia and Pittsburgh district.

Third row, left to right—T. Latimer Ford, assistant secretary and treasurer; D. T. Preyer, district sales manager, Chicago district; C. F. Hockley, president; Walter P. Coghlan, general sales manager; C. A. Gilbert, district sales manager far western district.



Sales Managers of American Hammered Piston Ring Co. at Recent Sales Conference.

VICTOR GASKETS IN BOXES.

Having in mind the greater convenience of the trade in the handling of gaskets, the Victor Manufacturing & Gasket Co. is now sending out all cylinder head gaskets packed in heavy fiber boxes. On the end of each box is printed the name of the motor for which the gasket is designed, the gasket number and also the names of all the cars in which that motor is used.

In addition to making the gaskets easier to stock, these boxes protect them from injury until they are used.

Victor Ford gasket assortments are packed in substantial wooden boxes in quantities proportioned to the calls the dealer has for each type of gasket.

ATTRACTIVE DISPLAY OF LOX-ON PRODUCTS.

A very attractive exhibit which drew especial interest at the New York show was that of the Automatic Safety Tire Valve Corporation, space D-41, on the fourth floor.

This exhibitor showed for the first time many new items, which included a complete family of Lox-On air hose chucks. This comprised the model AA for all standard hose couplings, model B in a fluted stem solid cast body design, especially adapted to manufacturers' standard factory equipment purposes; model C, a solid bronze chuck with an overhead acting lever engaged and released by a simple easy pressure of the thumb up or down and intended for use in the case of pumps or air compressors not having a tank or air reservoir, and the Lox-On Junior model chuck, a neat, little heavy pressed steel body hose connection with a solid brass piston and engaged to the valve stem by bringing the thumb and index finger together and released by reversing the operation. This latter has been adopted as standard factory equipment by 14 prominent manufacturers of foot pumps and light portable garage equipment.

The Automatic Safety Tire Valve Corporation has also announced that the Converse Rubber Shoe Co., Tire Division, Malden, Mass., has adopted the Whistler, the automatic pressure regulator manufactured by the Automatic Corporation, as standard factory equipment on the Converse heavy duty inner tubes.

Dodge Brothers, Detroit, has distributed bonuses in excess of $2,000,000 to employees of five years' service, the rate being 10 to 15 per cent of salary.

Development of Wolke Batteries Co.

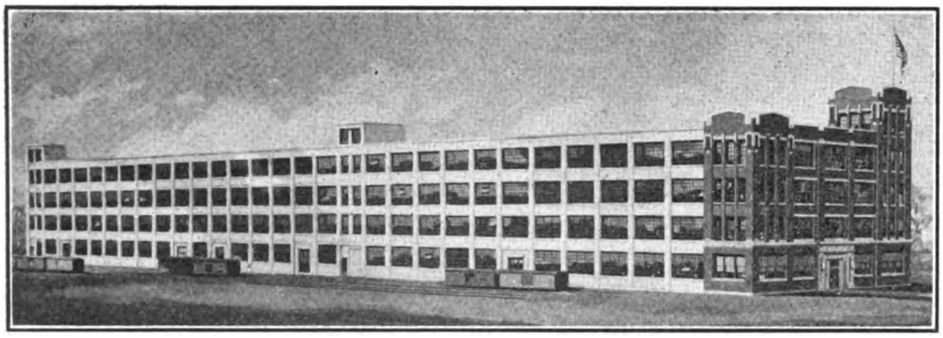
Louisville, Ky., is the home of a battery company which, in point of production and number of dealers and distributors is stated to rank about fifth among the battery companies doing business in the United States. This is the Wolke Lead Batteries Co., maker of the "Wolkee" Red Cap storage batteries, located at 914 to 920 East Main street. From plans already under consideration the company will soon expand to one of the largest of its kind in the country, and will own its home on one of the railroad tracks entering the city.

During the past year the Wolke Lead Batteries company purchased its present home, but the business has grown to such an extent that this home has been entirely outgrown.

Sales of the company for this year should run well over a million dollars, the managers state, basing their belief on the amount of business carried on during 1920.

PURITAN ADDS CAR TO ORPHAN PARTS LIST.

The Puritan Machine Co., Detroit, Mich., has added another car to its already long list of orphan cars which it is prepared to service. This is the Moore car, formerly made by the Moore Motor Vehicle Co., Danville, Ill. The entire stock of repair and service parts is being moved to the headquarters of the Puritan company at Detroit, Mich., from which Moore car owners may be supplied in the future.



Factory of Cleveland Automobile Co, Now Being Built in Cleveland, O.; Estimated Capacity, 40,000 Cars a Year.

NEW PERSONNEL OF DODGE BROS.

The recent announcement of the election of Frederick J. Haynes as president and general manager of Dodge Brothers, Detroit, to succeed the late Horace E. Dodge, is followed by the selection of a complete board of new executives and directors.

Arthur T. Waterfall is made vice president and assistant general manager, Harry V. Popeney, secretary, and Reginald J. Fry, assistant secretary. Charles W. Matheson has been advanced to the position of general sales manager. Howard B. Bloomer is made chairman of the new board of directors. The other directors are Frederick J. Haynes, Arthur T. Waterfall and John Ballantyne.

Mr. Haynes' association with the two Dodge brothers covers a period of over 21 years. During this time he was not only chief executive of their great business, but was also a close personal friend. By reason of this long association there is no one more familiar with their aims and principles or more admirably qualified to carry on their work. Immediately after the death of Mr. John Dodge a year ago, Mr. Haynes was elected vice president and general manager, and has been the active head of the business during the illness of the late Horace E. Dodge. It was Mr. Dodge's request, just before his death, that Mr. Haynes be elected to the presidency of the institution.

Mr. Waterfall was for many years superintendent of the Russell Wheel and Foundry Co. of Detroit, and later vice president and director of traffic for the Detroit Board of Commerce.

Mr. Popeney joined Dodge Brothers about 10 years ago, and since that time has occupied various positions of responsibility. For some years he was assistant to the former secretary of the company.

Mr. Fry's association with Dodge brothers dates back to 1910, and he, too, has developed with the company. In recent years he has occupied positions as auditor and office manager.

Charles W. Matheson, who now takes the position of general sales manager, has been associated with Dodge Brothers' sales department since they first started to manufacture a car of their own. He first acted as New York district representative and later as director of service at the factory. Since the resignation of the former sales manager he has been the acting head of Dodge Brothers' sales department. Mr. Matheson has been connected with the industry since the inception of it, and was for 12 years a manufacturer of one of the high priced cars.

Mr. Bloomer, chairman of the board of directors, was for many years the close personal friend and legal advisor of both John and Horace Dodge. He has been a member of the board since the reorganization which followed the death of John F. Dodge last January. He is a prominent Detroit attorney.

Shortly before Horace Dodge's death, John Ballantyne was elected to the board of directors. He is president of the Merchants National bank of Detroit. For a great many years he has been a close personal friend and confidential advisor to Horace Dodge.

DETROIT CONSOLIDATED SALES CO.

The Detroit Consolidated Sales Co., Inc., has been organized, with offices at 2631 Woodward avenue, Detroit, Mich., bv E. H. Herman, C. H. Hinckley, J. F. Nebrick and W. G. Sparling, to act as selling agents for manufacturers of equipment for the automotive trade.

This firm will operate in Minnesota, Iowa, Missouri, Arkansa, Louisiana and all the territory east thereof to the coast. It is officered by former members of the Universal Tool Co. and in addition to the products of that firm it will distribute exclusively to the jobbing trade other products made by the Electric Machine Co., Indianapolis, Ind., and the Federal Screw Works, Detroit.

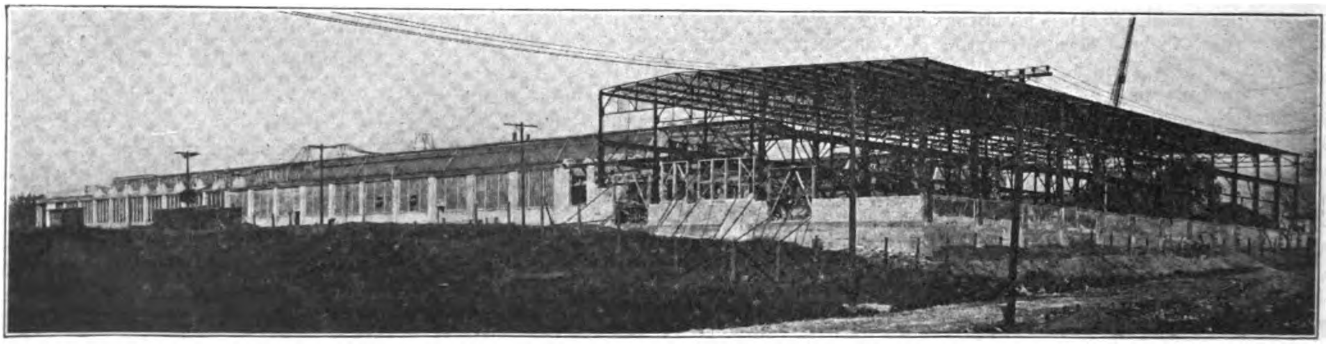
MAXWELL-CHALMERS REORGANIZATION.

The reorganization plan of the Maxwell-Chalmers Motor Co., which has been under consideration for some time, has been declared operative as originally formulated by the managing and reorganization committee headed by Walter P. Chrysler and J. R. Harbeck. This assures an additional capital of $15,000,000 and puts the company under powerful management with a new and strong organization. More than 87 per cent. of the outstanding stock of the two companies has been deposited under the plan, but the committee is extending until Feb. 1 the time under which deposits of stock and unsecured claims can be made without penalty.

It is stated by Mr. Harbeck of the reorganization committee that "the new company is now placed in an extremely fortunate position to face the conditions confronting the automobile industry. The net outstanding obligations of the Maxwell and Chalmers companies have been reduced, through liquidation, by approximately $11,000,000.

"The new company's balance sheet shows net current assets of about $41,000,000 after depreciation, and net current liabilities of about $6,000,000, the ratio of current assets to current liabilities being approximately seven to one. Inventories have been substantially written down, so that the reorganized company will not be handicapped by having to take into 1921 operations losses chargeable to previous years.

"The reorganized company may be regarded as being upon a sound basis for profitable operation on the basis of reduced sale prices. During the reorganization period points of contact with the public have been more than doubled through establishment of additional selling agencies and branches."



Latest Addition to Plant of Heil Co., Milwaukee, Wis., Which Makes This the Largest Steel Dump Body and Hydraulic Hoist Plant in the World.

Personal News of Industry and Trade

Death of Stevens-Duryea Executive

R. B. Jones, sales and advertising manager for Stevens Duryea, Inc., of Chicopee Falls, Mass., was killed the evening of Jan. 5 when the automobile in which he was a passenger was in collision with a taxicab in Springfield, Mass. Mr. Jones, who was returning from his office, was thrown against a building when the machines came together and did not regain consciousness. Both cars were turned over, the drivers escaping with slight injuries. The accident, said to have been unavoidable, was caused by the slippery condition of the pavement, due to heavy rain that was freezing as it fell. Mr. Jones was a prominent member of the younger social set in Springfield, where he lived at the Nyassat club. He was also a prominent athlete, having been known as one of the best football men who ever attended the University of Pennsylvania, from which institution he was graduated. Although in 1915, still under 30, Mr. Jones had made an enviable reputation in the business world, having been an electrical engineer with Stone & Webster of Boston and assistant sales promotion manager of the Willys-Overland Co., resigning the latter position in August, 1920, to take the one which he held at the time of his death. Entering government service at the beginning of the war, he was assigned to the coast artillery school at Fortress Monroe with the rank of captain. While engaged at this station as instructor he compiled a 300-page text book on internal combustion engines which was accepted as an authority by the United States government. He was the son of Mr. and Mrs. O. T. Jones of Sumner, Ill., who survive him.

H. M. Daniels, Manager New York Branch, Four Wheel Drive Co.

Ralph B. Jones, Sales and Advertising Manager, Stevens-Duryea Co.

H. M. Daniels, who is back after an absence of more than 18 months abroad in the interests of the export business of the Four Wheel Drive Auto Co., Clintonville, Wis., has been appointed manager of the New York branch of the company. Before joining the Four Wheel Co.'s organization he was in the Motor Equipment section of the United States Ordnance department, where he acquired a practical knowledge of automotive equipment.

Frank B. Willis has been made sales manager of the Duplex Truck Co., Lansing, Mich. He has been continuously connected with the automotive business since its inception, having served in every branch. During recent years he has been specializing on the merchandising of motor trucks and his methods and policies led to his appointment with the Duplex Co.

J. A. Young, Vice-President and General Manager, Dunkirk Axle Corporation.

Young Will Manage New Axle Concern

James E. Young, a former executive of the Sheldon Axle and Spring Co., is the general manager and vice president of the Dunkirk Axle Co., recently organized to take over the business of the Empire Axle Co., Dunkirk, N. Y. The new corporation is reported to have been formed by interests connected with the Watson Products Corporation, Canastota, N. Y., and is expected to go into quantity production by spring. The officers, in addition to Mr. Young, are: President, A. A. Keesler; secretary-treasurer, William A. Poad.

Horace E. Dodge, former president of the Dodge Brothers Co., Detroit, who died a few weeks ago, according to his will, filed for probate, leaves the bulk of his estate, estimated at $50,000,000, to his wife, Mrs. Anna Thomson Dodge, and upon her death the estate is to go to two children, Horace E. Dodge, Jr., and Mrs. Delphine Dodge Cromwell.

Frank B. Willis, Sales Manager, Duplex Truck Co.

W. J. Surre has been appointed by the Seiss Manufacturing Co., Toledo, O., as its direct house representative, covering at present the territory east of Denver, Col., and the products of the Seiss company are now to be sold exclusively through jobbers. The company will, however, continue its service department, the functions of which are to assist the dealer in the sale and application of Seiss horns and other products.

Edsel B. Ford, president of the Ford Motor Co., Detroit, Mich., on Jan. 17 underwent an operation for appendicitis.

H. L. Hurley has been appointed by H. C. Gardner general sales manager of the Willard Storage Battery Co., Cleveland, O., as manager of the St. Louis distributing agency of the Willard company.

Sherriff Is District Sales Manager

Guy M. Sherriff has been appointed district sales manager of the Automatic Safety Tire Valve Corporation in charge of sales which, after Feb. 1, will be handled direct from the New York office of the company, 1753-55 Broadway. The Automatic Safety Tire Valve Co.'s products have been marketed through the well known manufacturers' representative, Asch & Co., 16 West 61st street.

Ernest M. Culver has been appointed assistant sales manager of Willys-Overland, Inc., Toledo, O. He has been for the past three years division manager of the company, supervising the entire southern division, with headquarters at Atlanta, Ga. He started as a clerk in the parts department 10 years ago and after entering the sales department as a sales representative, covered the territories of North and South Carolina, Wisconsin, Ohio and Indiana respectively. He was then made special representative, covering the territory from Baltimore to New Orleans, and was appointed manager of the southern zone five years ago. Later he became southern district manager, with headquarters at Toledo.

J. I. Krall, Treasurer, Cleveland Automobile Co., Cleveland, O.

L. H. Amrine, formerly vice president and general manager of the Scudder Motor Truck Co., has joined the sales organization of the Dorris Motor Car Co., St. Louis, Mo.

W. G. Jarman has resigned the position of general manager and secretary-treasurer of the Hamilton Motors Co., Grand Haven, Mich., maker of the Panhard motor truck. Mr. Jarman was sales manager of the Jackson Automobile Co., and before that was Canadian manager for the Briscoe company, and earlier still was connected with the Maxwell-Briscoe and Ford organizations.

A. R. Johnson, Assistant Sales Manager, Auburn Automobile Co.

A. R. Johnson has been added to the executive staff of the Auburn Automobile Co., Auburn, Ind., in the capacity of assistant sales manager, supplementing the work of J. I. Farley, vice president in charge of sales. Mr. Johnson was in the selling and advertising departments of the Cadillac Motor Car Co. for three years, subsequent to which he was in the sales department of the Hyatt Roller Bearing Co.

Thomas H. Bingham is now production manager of the Matthews Engineering Co., Sandusky, O., which is preparing to enlarge its manufacturing schedule with the completion of its new factory additions. For the past five years Mr. Bingham has been general superintendent of the Akron works of the International Harvester Co.

J. G. Sinclair, 110 East Kelsey street, Bloomington, Ill., has announced his resignation as chief engineer of the Illinois Tractor Co. of that city and states that his future plans are not as yet defined.

~~Sid~~ J. Black, Vice President in Charge of Sales, Cleveland Automobile Co.

Prof. Tilden Directs Highway Work

C. T. Tilden, professor of engineering mechanics at Yale university, and one of the best known engineering educators in the United States, has been named as director of the work of the National Highway and Highway Transport Education committee, with headquarters at Washington, D. C. He has been granted a year's leave of absence by Yale to devote his attention to his new duties of suggesting and formulating a comprehensive programme for courses in highway and highway transport education. The membership of the committee also includes P. P. Claxton, commissioner of education, as chairman; T. H. McDonald, chief of the Bureau of Public Roads; Paul F. Sargent, president of the American Association of State Highway Officials; Roy D. Chapin of the National Automobile Chamber of Commerce; H. S. Firestone of the Rubber Association of America; Mason M. Patrick of the War Department, and F. L. Bishop, secretary, Society for the Promotion of Engineering Education.

J. V. Whitbeck, President and Designer of New Cleveland Automobile.

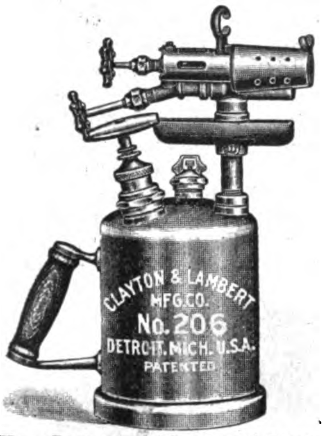
Millard S. Binney was recently appointed a member of the staff of the Ross-Gould Advertising Agency, 10th and Olive streets, St Louis, Mo. Mr. Binney was recently advertising manager of the Traffic Motor Truck Co., St. Louis, and prior to that was connected with the Chalmers organization. He will specialize in automotive accounts with the Ross-Gould agency.

L. G. Hartdorn, for several years with the Emil Grossman Manufacturing Corporation, Brooklyn, N. Y., and for the last two with the Beckley-Ralston Co., New York city, is to cover Greater New York and Long Island for the E. G. Manufacturing Co., 250 West 54th street, New York city.

H. L. Van Wyck, advertising manager for the Mitchell Co., has resigned.

CLAYTON & LAMBERT BLOW TORCH.

The new and improved double blunt needle blow torches recently introduced by the Clayton & Lambert Manufacturing Co., Detroit, Mich., are made in three sizes, two quart, quart and pint capacity. The two quart torch, No. 206, herewith illustrated, is of special interest to all who require a heavy duty torch. The burner is extra large and powerful; the maker claims it produces about 300 degrees more heat than any other blow torch and burns with a pure blue flame remarkable for its intensity and "pep"—either gasoline or kerosene can be used in operating it. The No. 206 torch is recommended by the maker for preheating, brazing, tempering and annealing and, in fact, for all kinds of heavy work. It is also stated to be a most excellent torch for automobile repair work, such as heating and straightening axles and frames and brazing brake rods, etc. This torch is also equally satisfactory for use outdoors in extremely cold or windy weather.



New Improved Clayton & Lambert No. 206 Double-Needle Blow Torch.

Three very important features are combined in its construction and use, maximum efficiency, minimum cost of operation and nominal expense for upkeep. This is due to the improved double blunt needle construction of the burner, which causes perfect combustion of the fuel and at the same time prevents the vital parts of the burner from being destroyed by the carelessness of the operator. The lower needle is a shut-off and the upper a cleaner needle, which automatically removes any obstruction in the orifice, thus making a clear passage for the gas under all conditions. The burner orifice cannot be enlarged by forcing the needle.

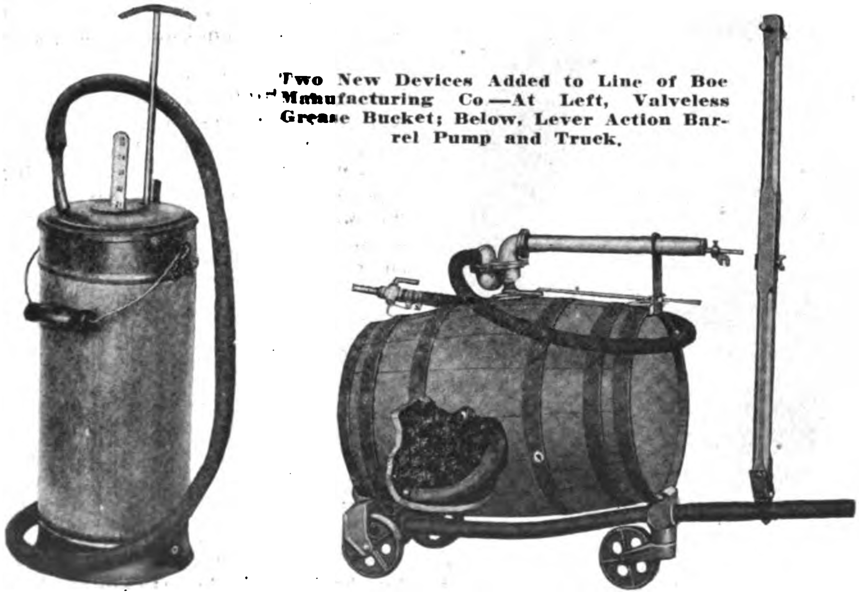
Complete information, together with a catalogue showing the full line of Clayton & Lambert torches and fire pots can be secured by writing the manufacturer.

BOE CO. AUGMENTING LINE.

The Boe Manufacturing Co., Minneapolis, Minn., is adding two new devices to its well known line of automatic and repeater grease and oil pumps. These are the Boe lever action barrel pump and truck and the Boe valveless grease bucket, illustrations of which are shown herewith.

In the former the entire truck and pump can be set up ready for business in a few seconds. The truck tongue acts as a pump handle for operating the pump. The piston stroke is adjustable to dispense one-half pound or one-half pint to each stroke. It obviates the lifting and rolling of heavy barrels, as the truck may be rolled up to the barrel, the barrel hooked on and laid down. It has the same patented piston plunger construction as is used in the Boe valveless bucket. It has extra large choke-proof valves, 1⅛ inches in diameter, and six feet of one-inch discharge hose is included. The barrel pump is suitable for attaching to either wood or steel barrels, from 25 to 60-gallon capacity. It easily handles grease up to such consistencies as will barely flow or gravitate.

The Boe valveless grease bucket is extremely simple in construction. There are no valves to stick, the piston is air tight and the entire lower end of the pump cylinder is wide open on the intake stroke, but closes automatically on the discharge stroke. It is equipped with a three-way pump. It has a unique measuring indicator graduated to show both pounds and pints, and thus inspires the customer's confidence. It strains the grease. The lubricant can be pumped out or into the bucket. and other gear lubricant can be handled without disturbing the contents of the bucket.



Two New Devices Added to Line of Boe Manufacturing Co—At Left, Valveless Grease Bucket; Below, Lever Action Barrel Pump and Truck.

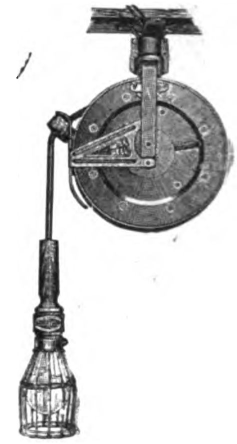
The price of the Boe valveless grease bucket, 20 by eight-inch heavy iron, 25 pounds capacity, is $15. The Boe lever action barrel pump, complete, with heavy all iron truck, is listed at $40.

AUTEX AUTOMATIC EXTENSION REEL.

In the Autex Automatic Extension Reel for electric lamps, the Cincinnati Specialty Manufacturing Co., Inc., Powers street at Sylvan avenue, Cincinnati, O., offers a device that is stated to combine the advantages of safety, economy and convenience. It is particularly designed for use in garages, machine shops, factories and all places where an extension lamp is required.

The illustration shows the Autex reel in position for use. Its actual size is 9¼ inches in diameter by two inches in width and is equipped with 25 feet of reinforced weather proof cord. The "head" is provided with a swivel joint, enabling the lamp to be carried in any direction from the reel, while an automatic lock permits a positive stop at any desired point.

To operate, grasp the lamp handle and walk in any direction from the reel to the desired distance, when a slow movement backward causes the automatic lock to catch and hold the cord at that point. To release, give a slight pull. This unlocks the latch and the cord is automatically rewound as the operator walks towards the reel with lamp in hand. Each reel is equipped with 25 feet of packing house cord, weather proof socket, handle and lamp guard (less globe), all complete for installing.



Autex Automatic Extension Reel.

The Cincinnati company, after one year's experimental work, has provided a type of extension reel for electric lamps that carries 50 feet of cord, the operation of which is stated to be as successful as the regular type, which carries 25 feet. This reel is being used by railroads in machine shops, round houses and loading platforms and is especially adapted for use where an unusually long extension is required. The reel is an exact counterpart of the 25 foot type with the exception that it has a disc measuring 12 inches, and is made proportionally as large in all other parts.

The Autex reel has been approved and listed as standard by the National Board of Underwriters.

Cincinnati Specialty Co. will furnish full particulars and prices on request.

JORGENSEN VAPOR PRIMER.

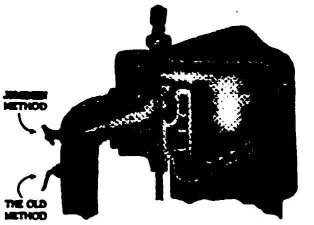
The need of some device which will insure the instantaneous and never-failing starting of the motor is recognized by every motorist as a cold weather necessity. Gasoline of itself will not vaporize below a certain temperature and therefore the need of some means of warming and vaporizing it, when the car is to be operated in low temperature, is manifest.

The Jorgensen vapor primer, which is being distributed by the United Motors Service, Inc., Detroit, Mich., not only provides a highly efficient means of warming and vaporizing the gasoline, but it also meets the demand for a device that makes a very neat application to either the instrument board or the dash board, and requires the least possible inconvenience to operate. By lifting the plunger stem of the pump a charge of gasoline is drawn from the main supply, and on the down stroke this is forced through the connections to the special spraying nozzles, which are inserted in the intake manifold, as shown in the diagram. Here the gasoline is both warmed and vaporized at the same time, being forced directly over and against the intake valves as shown in the cut. With this rich gas mixture at the most effective point, starting on the first or second quarter turn of the motor is stated to be a positive result in the coldest weather.

Jorgensen Vapor Primer, Slant Style No. A 3, for Dash Boards.

Another point in its favor is that the present day low grade of fuel can be successfully used and at the same time equal power and a surer and easier start are obtained.

The secret of the simplicity, neatness and ease with which the Jorgensen Vapor Primer is operated is found in its patented combination cutting off valve. This combination being made as a part of the lower end of plunger stem, allows of several parts being made in one, at the same time enclosing all on the inside of pump. A positive means is thus provided for shutting off connections from both the motor and the gasoline line at one time, and the several parts that one is generally obliged to operate are reduced to only the large thumb screw on upper end of plunger stem.



Interior View Showing Operation of Jorgensen Vapor Primer.

It is made in two styles, both being practically flush mounted. Style Slant No. A 3, which is shown, is generally used on dash boards, while Style Straight No. A 4 is especially designed for instrument boards.

The finest of workmanship is incorporated in it and it is handsomely finished in nickel plate. It is guaranteed to give permanent satisfaction.

The price, complete, with tubing and fitting, is $5. When ordering the style wanted should be given and the outside diameter of the main gasoline line tubing. Connections are furnished for one-quarter, 5/16 or ⅜-inch gasoline line or special connections for vacuum tanks or Ford cars.

FOSTER TIRE DISPLAY RACK.

The Foster Brothers Manufacturing Co., Utica, N. Y., offers, in the Foster tire display rack, a practical device for the attractive showing of 25 to 40 tires. It affords the advantage of keeping the stock clean and dry and prevents deterioration. It is substantially constructed of steel tubing and angle iron and constitutes a desirable and permanent store fixture. It takes up but little room and can easily be moved about. The list price is $20.

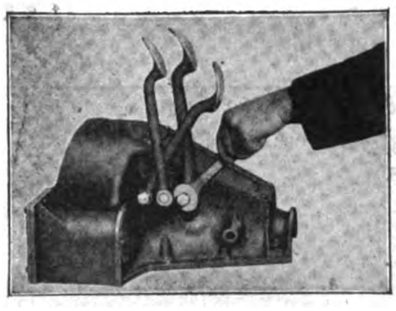
Foster Auto Repair Creeper.

The Foster Brothers Manufacturing Co. is also marketing the Foster Auto Repair Creeper for garages and automobile repair shops. It is stated to be the logical equipment for its purpose in that its frame is strongly built of metal and therefore practically indestructible. The bed is of link spring construction and, therefore, resilient, affording comfort to the repair man while in use. It is equipped with ball bearing casters of large size, which make the device freely movable. It can, moreover, be anchored in any position by a positive locking device which enables the workman to get a sufficient purchase when turning a stubborn nut.

The list price of the Foster Auto Repair Creeper is $5.

NEW FORD ACCESSORY OFFERED BY MICHON CO.

One of the most recent and useful accessories offered in the Ford car field is a brake and reverse band adjusting device, manufactured by the Michon Manufacturing Co., Toledo, O. By the use of this device the maker claims that it is not necessary for the Ford owner or driver to remove the transmission case cover to effect an adjustment of the brake and reverse bands, as the adjusting lock nuts for both bands, are carried through on a shaft to the outside of the transmission case—as is done with the clutch band adjustment only, on the Ford car as manufactured. In this way all three bands can be adjusted by the mere application of a wrench to the proper bolts outside the transmission case.

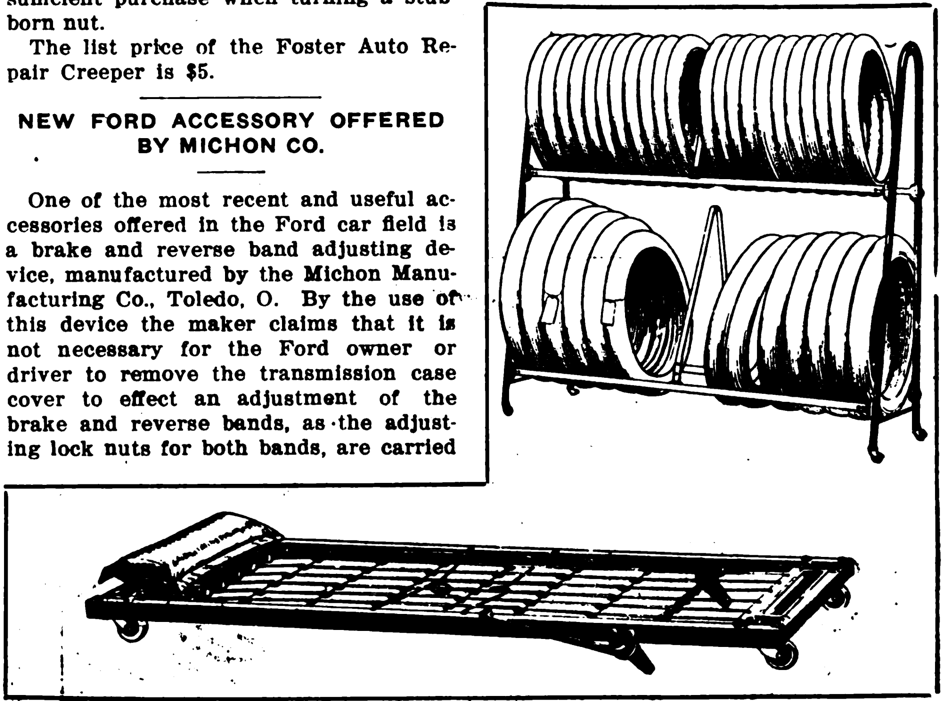


Michon Brake and Band Adjusting Device for Fords.

"We thus eliminate," states Mr. Michon, president of the company, "the dirtiest job on a Ford, that of removing the transmission cover and plunging the hand and a small wrench into the oily recesses of the housing and attempting to connect with the proper lock nut before the wrench slips from the fingers and disappears into the delicate mechanism of the transmission, clutch, flywheel and magneto. Every garage and repair man knows of scores of instances where this exceedingly aggravating accident has happened, necessitating, as it does, the tearing down of the whole Ford transmission housing in order to retrieve the wrench before one dares to start the motor."

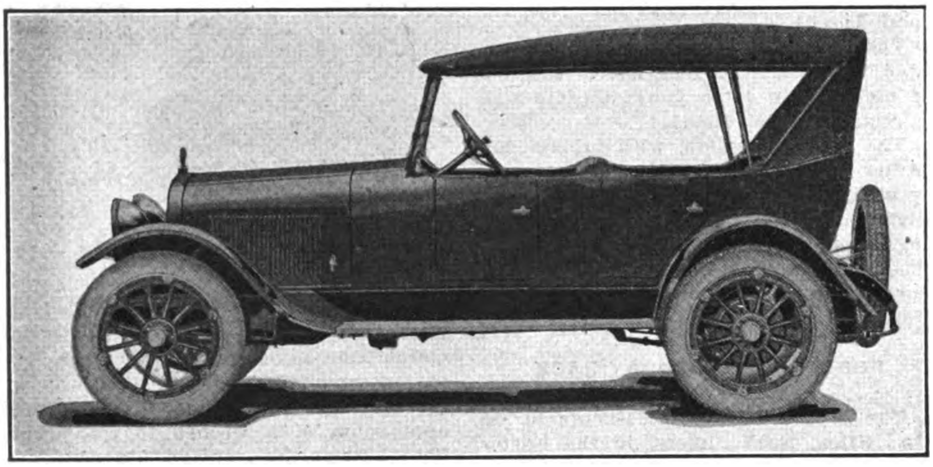
The Michon Manufacturing Co. is now in production on this device, which is being distributed to motorists through garage and accessory dealers the country over.

California has more motor cars than entire registration of European countries.



Garage Equipment Being Featured by Foster Manufacturing Co.—Above, Foster Tire Display Rack; Below, Foster Auto Re pair Creeper

New Models of 1921 Cars, Trucks and



Stanwood Six Model A Touring Car, Made by Stanwood Motor Car Co., St. Louis, Mo.; Price, $2050.

NEW STANWOOD SIX CAR.

Motor—Continental Red Seal, six-cylinder, 3¼ by 4½, 25.3 horsepower, S. A. E.

Lubrication—Full pressure feed.

Cooling—Centrigugal water pump.

Carburetor—Stromberg.

Clutch—Borg & Beck, 10-inch.

Transmission—Grant-Lees selective, three speeds and reverse.

Starting and Lighting—Westinghouse, two-unit.

Ignition—Atwater Kent.

Battery—Willard, six volts.

Drive—Hotchkiss.

Brakes—Service and emergency.

Wheels—Wood, artillery type demountable rims. **Tires**—Firestone, 33 by 4.

Body—Five-passenger, streamline.

Wheelbase—118 inches.

Finish—Body, Brewster green; upholstered in genuine leather.

Equipment—Motor driven Kellogg tire pump; rain vision windshield; Klaxon horn; duplex head lights, Rex tonneau light; Neverleak De Luxe top, door-opening curtains; motometer; foot rest in tonneau; robe straps; set of tools; jack; extra rim and tire carrier.

* * *

KELSEY SIX-CYLINDER CAR.

Engine—Six-cylinder Falls, valve-in-head, 3⅛ by 4¼, 23.44 horsepower, S. A. E.

Lubrication—Pump and splash.

Carburetor—Tillotson.

Fuel Supply—Stewart vacuum; 14-gallon rear tank.

Ignition—Atwater Kent.

Starting and Lighting—Bijur, six-volt, two-unit.

Battery—Willard, six-volt, 94 ampere.

Transmission and Clutch—Patented Kelsey friction.

Brakes—Service external on rear wheel drums and emergency on jackshaft.

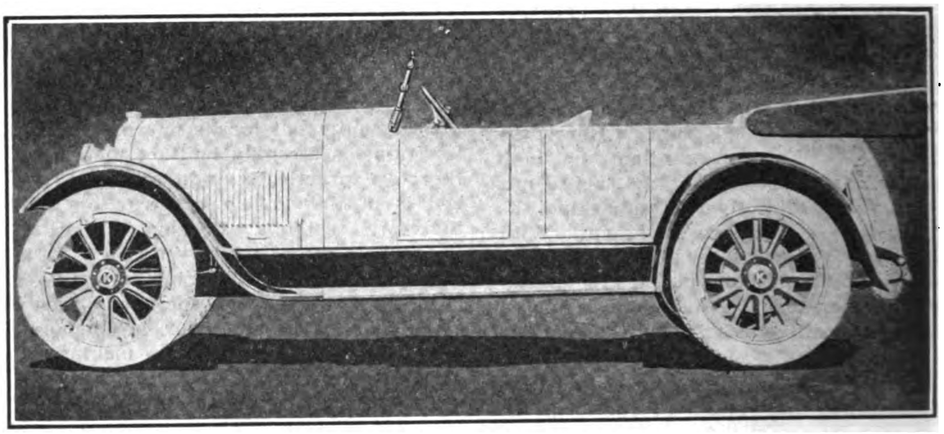
Wheels—Artillery. Timken roller bearings. **Tires**—Fisk 32 by 4, non-skid rear **Rims**—Stanweld split type.

Wheelbase—116 inches; road clearance, 10 inches.

inish—Dark green; upholstery, real leather tan Spanish, French pleats. Sedan. French gray cloth.

Equipment—One-man Neverleak top; 75-mile Stewart-Warner speedometer; spare rim; tool kit; jack; pump; tire repair kit; starting crank; rim wrench; switch keys; curtain rods.

Price—Touring car, $1800; Runabout, $1750; Sedan, $2700.



Kelsey Touring Car, Made by Kelsey Motor Co., Newark, N. J.

* * *

NEW GLOBE FOUR.

Engine—Supreme four-cylinder, en bloc, L-head, 3⅝ by 4, 18.2 horsepower, S. A. E.

Lubrication—Force.

Ignition—Delco.

Starting and Lighting—Delco.

Clutch—Borg & Beck.

Transmission—Special Warren; three speeds forward and reverse.

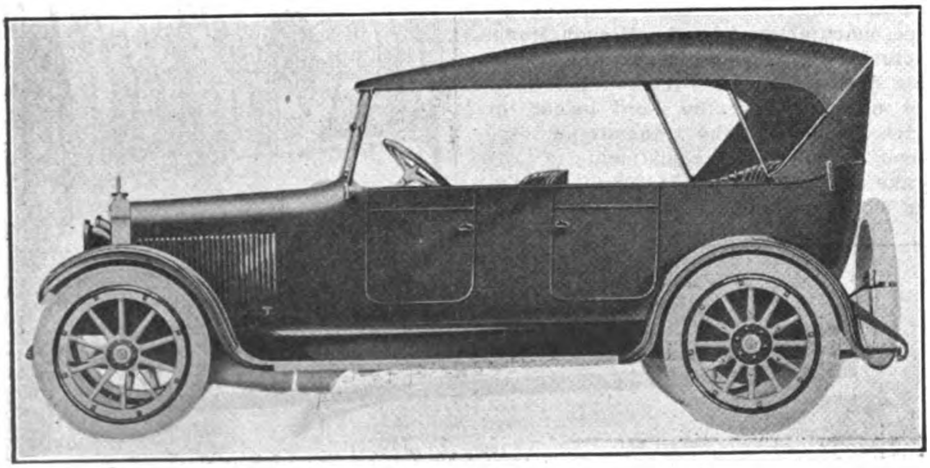
Wheels—Wood, artillery type. **Tires**—Firestone, 32 by 4, oversize cord. **Rims**—Firestone.

Body—Five-passenger touring, two-passenger roadster.

Wheelbase—115 inches.

Finish—Holland blue, natural wood wheels, or English vermillion red wheels; upholstery, finest quality, extra cut leather, Marshall springs.

Equipment—Extra heavy Neverleak top; side curtains contained in compartment back of front seat; black walnut instrument board; electric motor driven horn; speedometer; motometer; extra tire and tube; tire repair kit, jack and tools.

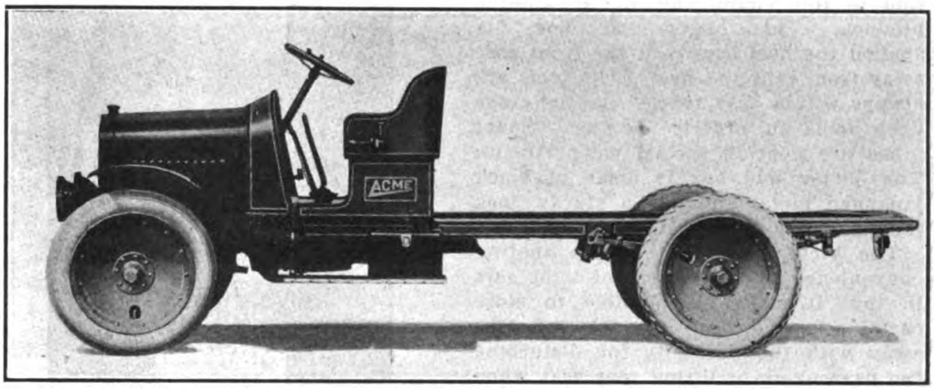


Globe Five-Passenger Touring Car, Made by Globe Motors Co., Cleveland, O.

Tractors Now Being Offered to Trade

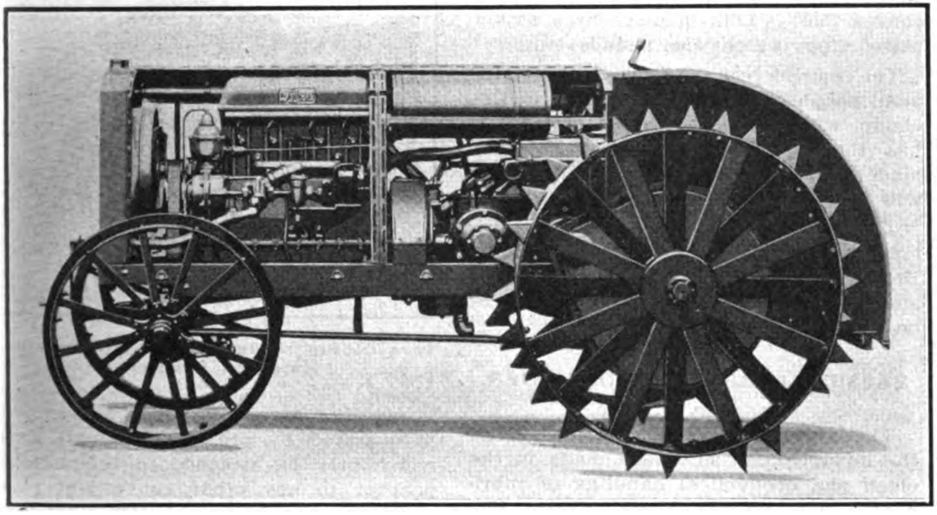
NEW ACME SPEED TRUCK IN PRODUCTION.

Engine—Continental, Model N, Red Seal. Bore, 3¾ by 5 inches, S. A. E. rating, 22.50 horsepower; actual 35 horsepower block test.
Wheelbase—120 inches.
Wheels—Steel disc, regular.
Tires—34 by 5 inch, pneumatic.
Rear Axle—Timken worm, semi-floating type.
Price—$1790 f. o. b. Cadillac, Mich.



Acme Model G Truck, Manufactured by Acme Motor Truck Co., Cadillac, Mich.

◆



Model 12-25 Tractor, Manufactured by John Lauson Manufacturing Co, New Holstein, Wis.

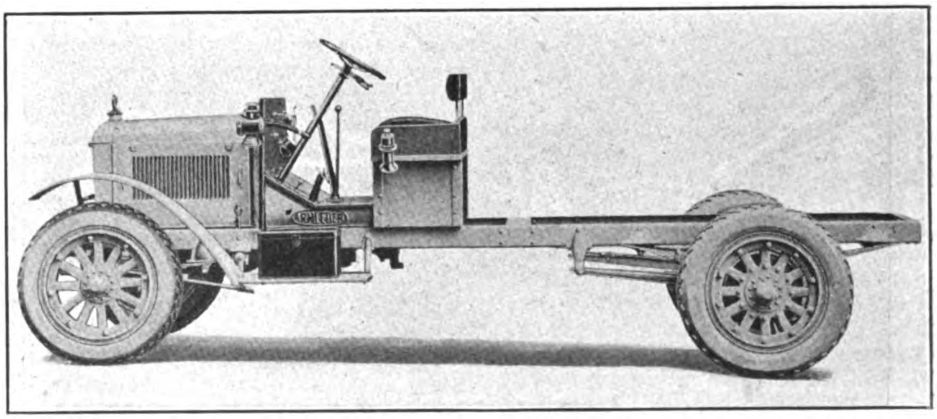
NEW THREE-PLOW 12-25 LAUSON TRACTOR.

Engine—Lauson four-cylinder, valve-in-head type. Develops 30 horsepower at belt, 20 horsepower at draw bar.
Plowing Speed—Slow, two to 2½ miles an hour; high, 2½ to 3¾ miles an hour.
Speed—Controlled by Taco ball bearing governor.
Cooling—Water pump and fan.
Price—$1595 f. o. b.

◆

ARMLEDER ONE-TON TRUCK CHASSIS.

Engine—Cast en bloc. Bore, 3¾ inches. Stroke, 5¼ inches. S. A. E. rating, 22.50 horsepower; actual, 30 horsepower at 1500 revolutions.
Wheelbase—148 inches.
Tires—Solid, 34 by 3½ inches front, 34 by 5 inches rear.
Rear Axle—Full floating, worm type.

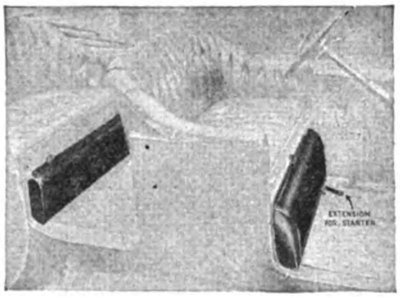


Armleder Model 20 Speed Truck, Equipped with Oversize Pneumatic Cord Tires; Made by O. Armleder Co., Cincinnati, O.

TWO NEW CORCORAN VICTOR PRODUCTS.

The Victor tool box is the latest addition to the Victor line of automotive products. This handy tool box fits against the heel boards of the front seat away from rain and dust. The tools are always within easy reach. Special trays keep tools in orderly manner. Spare tubes are kept in special compartment. The Victor tool box is made of black japanned metal and has a sturdy lock that makes contents safe from theft.

The Victor curtain holder is another convenience to the drivers of light cars in that it makes it possible to store curtains in an orderly manner, and does away with the necessity for disturbing the passengers or lifting rear seat when curtains are needed. The curtains are held in two neat rolls and are protected from tearing or twisting. The Victor curtain holder is made of black japanned metal and is attached to the heel boards of the rear seat by two screws. It is especially adapted for Ford, Chevrolet and Overland cars.



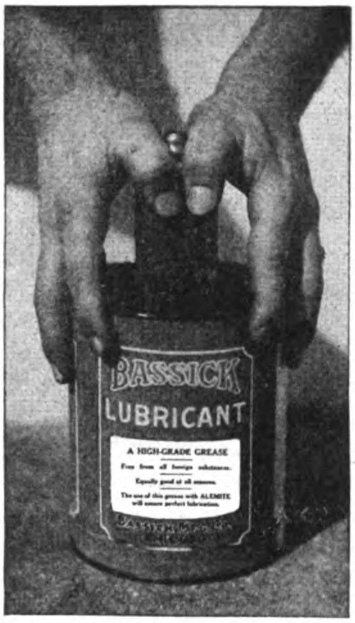
Corcoran Victor Tool Box at Right and Curtain Holder at Left.

Both of these products are manufactured by the Corcoran-Victor Co., Cincinnati, O., and prices and literature will be furnished on request.

CINCINNATI INNER CONTROL SPOT LIGHT.

The Cincinnati Inner Control spot light is designed so as to be controlled from closed cars of the sedan and curtain types, eliminating all inconvenience in cold or wet weather.

The bracket, designed for attachment to sedans of all models, is all brass, nickel plated, with the exception of the handle, which is polished aluminum. All reflectors are spun from 22-gauge brass, silver plated and highly polished. The convex lens is held in place by a nickel plated ring; weight two pounds.



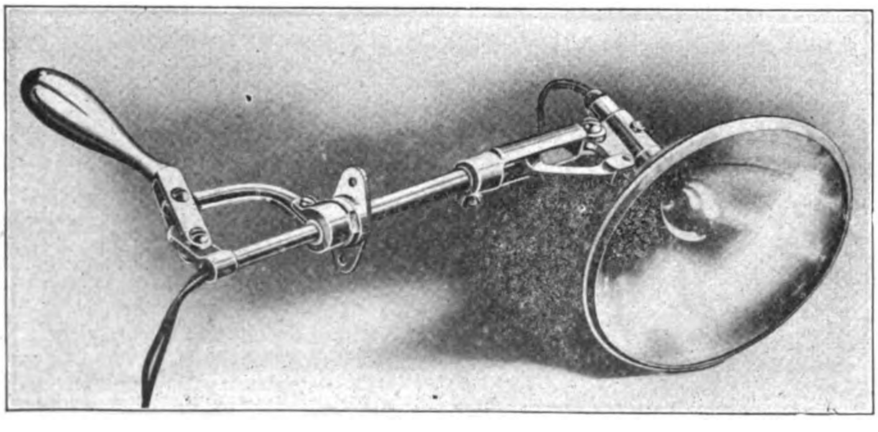
Bassick Lubricant Container.

The touring car bracket is of aluminum, polished, with the exception of the clamp, which is brass, nickel plated. It has the same reflector as the sedan model, and its weight is two pounds. It will fit all types of touring cars.

The Inner Control Spot Lights are manufactured by the Cincinnati Lamp & Bracket Co., northwest corner of Third and Race streets. Prices and literature on request.

BASSICK LUBRICANT CONTAINER.

The accompanying illustration shows the advance that has been made in the clean and economical handling of lubricants. The Bassick Manufacturing Co., Chicago, Ill., is marketing the Bassick lubricant can or container, which is made with a cone shaped plunger. It is designed to fill the compressor of a high pressure lubricating system. By simply pressing down firmly with both hands the lubricant is forced into the cylinder until it is completely filled and ready for use. The tube is operated in the same manner as a tube of tooth paste; by rolling the lower end of the tube the grease is forced into the compressor, which fits over the top of the cylinder.

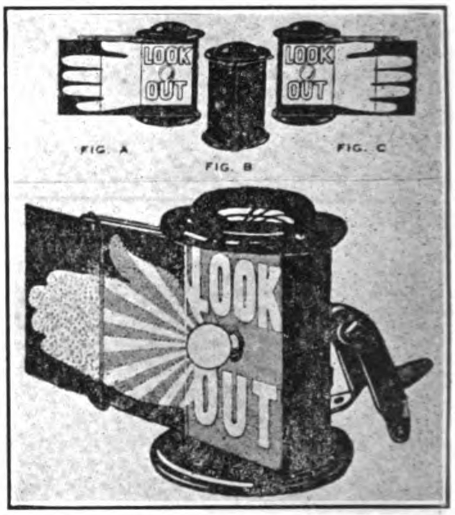


Cincinnati Inner Control Spot Light, with Sedan Bracket.

THE TURN-O-STOP SIGNAL.

Among the many devices that have been designed to supplant the necessity of a car driver signalling with his hand his intention to turn or stop, one of the most ingenious, and it is claimed, effective, is the Turn-O-Stop, now being manufactured by the Turn-O-Stop Manufacturing Corporation and distributed by Mitchell & Livingston, 21st street and Fifth avenue, New York city.

The Turn-O-Stop consists of two electric safety signal lamps fastened on the rear mud guards of the car. When not in use they are closed as in figure B. It is operated by pressing a small lever, which may be attached to the steering post or to any other convenient place within the driver's reach. For right turn, press lever to right; right hand signal snaps open, flashes a hand, warning letters, electric light and emits a buzzing sound. (Fig. C.) For left turn, press lever to left; left hand signal snaps open with similar warnings. (Fig. A.) For full stop, press lever down; both signals snap open.



Turn-O-Stop Signal, Showing Closed and Extended Positions.

It would seem to be impossible, even to the least observant, to mistake the meaning of the direction pointing, flaring hand, with light and sound signal.

A careless operator cannot leave the switch on after the turn has been made, as the sound of his own signal will warn him of his error. Turn-O-Stop cannot be trifled with while the owner is absent, as the lever is easily removed like any switch key.

It works in all kinds of weather, day or night. It is indorsed and recommended by insurance companies and safety experts.

The outfit includes signal lamps, cable connections, switch key, bolts, etc. Each set is guaranteed. Price, $25 a set, complete, including installation.

Remarkable Record of Automobile Industry

By Charles Clifton, President National Automobile Chamber of Commerce.

THIS will be a transportation year. Every business and every product is called upon to face its part in the reconstruction. Waste must be cut. Extravagance must be eliminated. Efficient methods must prevail.

This is to be a year of conservatism, when the weak will go to the wall and the strong will add to his strength.

Fundamental Business Conditions Sound.

Let us examine the fundamental business conditions. The country is rich. Products abound. Eventual prosperity is inevitable. The 1920 harvests have been better than average. Labor is more plentiful and more efficient than during the war and post-war years. The foreign exchange situation is improving. Railroads are better able to handle long haul business. Cars and trucks are available in greater numbers than ever before.

Business contraction has been due to a shortage of credits, not to a lack of goods. After the war, after the high prices and speculation, a period of pruning was inevitable. When one looks back to 1873 and 1903, one realizes that the readjustment has come with surprisingly small discomfort. Price declines have taken place rapidly, and as soon as the public realizes that the lowest price levels have been reached there will be a resurge of trade.

With these factors in mind it is clear that the industries which are guided by keen minds and serve a useful purpose will go forward.

Automobile Industry's Record Remarkable.

The degree of business ability to be found among manufacturers of cars and trucks is shown by growth of industry. For twenty years the making of motor vehicles has been gaining steadily. One exception is to be found in the year 1918 when the producers of passenger cars voluntarily curtailed their output in order to make air planes, parts and other instruments of war. Here is the record:

Manufacture of Cars and Trucks.

Year	Number
1899	3,700
1903	11,000
1904	21,975
1905	25,000
1906	34,000
1907	44,000
1908	65,000
1909	127,731
1910	187,000
1911	210,000
1912	378,000
1913	485,000
1914	569,045
1915	892,618
1916	1,583,617
1917	1,868,947
1918	1 153,637
1919	1,974,016
1920	2,240,000*

---

*Estimated.

In 1903 general business conditions were bad, but motor vehicle production advanced over the only preceding year for which statistics had been gathered (1899), and probably showed some gain over 1902, although there were no records kept for 1900, 1901, 1902. The 1899 figure is from the government census, whereas not until 1903 did the manufacturers collect statistics for the industry as a whole.

In 1907 the output of many industries was heavily curtailed, but all records for the making of automobiles were broken. This gives some idea of the vitality of the automobile industry, causing it to advance in times of depression.

This stamina is not due solely to the creative brains of the automobile industry. It rests on an even firmer basis: The insistent demand of modern civilization for better transportation, coupled with the break down of street railway lines in many suburban communities.

There are 7,000,000 cars in the country and about 800,000 trucks. The passenger mileage of automobiles in 1919 was 68,000,000,000, whereas the passenger mileage of railroads was 46,000,000,000. Of the motor cars 90 per cent. are used more or less for business. 60 per cent. of the mileage is utilitarian, and the full service of trucks, of course, is devoted to commercial efficiency.

When one looks forward, therefore, into 1921 with its readjusted finances, its storehouses filled with goods, one must read there a steady demand for automotive products. Especially is this so when it is realized that automobile salesmanship is in the early stages of development.

Fully as significant are the facts that are being brought to light concerning the productive use of the passenger car.

The compiled testimony of thousands of car owners shows that the user increases his productivity 57 per cent. as a result of owning an automobile.

Official records of New York city show that 154,700 cars and trucks enter and leave the Metropolis daily, bringing 420,000 persons for their errands in and out of New York.

The trend of population to the cities is certain to make the suburban market for cars an important factor in the industry.

This is but one consideration, however, in the growth of the automobile industry. Various classes of business and professions are finding out that cars are essential. The degree to which the automobile is useful to some of the major occupations may be seen in the following figures averaged from the reports of car owners in these groups:

Occupation	Increased Efficiency
Real estate and insurance	113%
Doctors	104%
Salesmen	103%
Clergymen	98%
County superintendents	72%
Farmers	68%
Contractors	51%
Manufacturers	33%
Bankers (incl. rural)	33%
Merchants	25%
Lawyers	23%

These figures speak for themselves as an index of the business field for passenger cars and trucks.

Modernized Rolling Stock Essential.

Keeping the rolling stock in modern condition will be another factor in the automobile business of 1921. Obsolete cars must be replaced by new cars. One of the worst ravages of the war in Germany was manifest in the depleted condition of its railroad equipment, and in its breakdown in motor transportation.

A people who live in peace and prosperity will keep the avenues of communication in good condition.

If we assume that the life of an automobile is five years, the entire output of 1916 (1,583,617) will need replacement during the coming year. It should be remembered, however, that the cars of the past several years have been great improvements over earlier models and consequently will not need as rapid replacement, so the need from this source may not pass the million mark.

The export market has hardly been touched. The foreign shipments of motor vehicles in the fiscal year 1920 was nine times as large as any pre-war year. The ratio of cars to population in the United States is one to 14, in Great Britain it is one to 180.

But the business appeal is not the sole claim of the car.

The fact that the automobile is a vital transportation unit serves as a firm foundation for the industry. It assures stability in the times of commercial upset, and it entitles the car and truck to the highest consideration in the public mind. The utility of the car and truck is a fact to which we may point with pride.

But the car wins its way into the heart of the people also because it aids them in the fundamental right of the pursuit of happiness.

The family car is one of the greatest relaxations for our high speed civilization. I have no patience with those who wish to cut out healthful play. The emphasis today is too much in the other direction. It is splendid to think of the car adding to the efficiency of over 7,000,000 owners; but it is fully as gratifying to think of these families thereby gaining a relaxation and recreation to which they are justly entitled.

The car is also in demand in governmental departments. We find 30,000 cars and trucks owned and operated by states and 10,000 automobiles serving municipalities.

For work or play the car has its place. Just now the world has its coat off and 1921 will be a year when motor vehicles will serve primarily a business purpose; but incidentally the whole social fabric will benefit from healthful recreation, and from that fact that each car owning citizen will have a fuller knowledge of how the country surrounding him lives and grows.

SALESROOM AND SERVICE STATION

A Fire-Proof Four-Story and Basement Structure Equipped with Every Facility for Display, Storage and Restoration and Repair.

THE accompanying drawings illustrate a building that would be suitable for the combination of a sales room and service station. The layout presented is four stories with basement, although a plan for a basement is not shown, owing to the limitation of space and also the fact that no difficulty should present itself in providing for this.

The structure is designed to have 100 feet frontage and 90 feet depth and to be located on a street with a court or drive at the right side to afford egress and ingress of machines.

The basement could be used for storage of a general nature, receiving and shipping room, storage of parts, oils, greases, etc.; a large boiler room and the other units that logically should be located in that part of the structure.

On the street floor, flanking the entire front of the building, is a show and sales room, which has two separate entrances, one on either side of the large central window.

In conjunction with the sales room there is an office for the sales manager, located at the rear of the show room. A toilet for members of the sales organization has also been provided.

There is a passenger elevator running from the basement to the top floor, a stairway from the basement to the top floor, and also a stairway from the show room to the second floor.

At the rear is a general garage section, with an entrance from the court or side street. There is an elevator for hoisting cars to all floors, and alongside of the elevator there extends a stairway from the basement to the room. A wash stand will be found on this floor.

The second floor is devoted partly to the main office, which is located at the front end, directly above the show room. There is a women's toilet in connection with the office. This toilet leads from the waiting room at the head of the stairs. The passenger elevator opens into the waiting room as shown.

Provision has been made for a large stock room, where parts and accessories may be kept on hand at all times, so that the needs of customers for repairs and renewals of equipment may be met as they are developed.

There is a storage space for new cars awaiting owners' call, and adequate area can also be provided for used cars that are for sale. This affords in reality a sub-show room and yet has the utility of a storage department for cars. A large toilet is also in this section. This is lighted and ventilated from a court or light shaft.

The third floor is generally given over to repair work. Here is located the general repair department, where all kinds of work may be done. There is an engine repair section, where engines may be overhauled and tuned up.

An electrical department is also illustrated, where batteries, magnetos, etc., may be rebuilt or repaired.

At the rear of this floor are three units that form the heart of the service departments. These are the machine shop, the forging department and the welding section.

A tool room has been shown in connection with the machine shop. By having a system of record of the issuance of all of the tools and that will necessitate their return to the tool room when the workmen are through with them, excessive losses of tools can be avoided. A toilet and a wash stand are shown.

The entire fourth floor is turned over to the finishing department. This floor has a wood working section, a trim department, where all kinds of leather work is done; a general paint shop, two varnish rooms and one enamel room.

The general paint shop occupies the larger portion of the floor. Immediately at the rear of this floor are located the varnish and enamel rooms.

The construction is of reinforced concrete throughout, with brick, granite or artificial stone. The same treatment as that of the trimmings for the first story is to be used for the manufacture of the cornice and inserts in same.

Electric lamps have been placed on either side of the entrance doors, adding much to the appearance and greatly conveniencing ingress and egress at night. A large sign has been incorporated into the design, something just a little different from most signs.

Instead of the unsightly, common place steel frame, an endeavor has been made to weave in a little refinement, and, therefore, the ornamental iron frame work shown. Exceptional individuality may be attained in this respect, and it is believed greater consideration should be given such projects. The cost is a little more, but is well worth it.

The building is fireproof. Steel sash, wire glass, metal doors, etc., are used throughout, complying with the fire prevention laws.

The cost of such a structure would be from $60,000 to $75,000.

Any further information relative to this plan will be supplied on application to the Architectural Department of this publication.

NEW CONCERNS RECENTLY INCORPORATED

Monthly Record of New Business Houses for Which Charters Have Been Issued in the Various States and Classified According to Nature of Business.

DEALERS IN MOTOR CARS, TRUCKS, TRACTORS, ETC.

Arkansas.

Ft. Smith—Light Car Sales Co., buy and sell autos and accessories; $10,000; W. A. Strozier, J. C. and J. C. McCord, J. C. McGann.

Jonesboro—Griffith Motor & Sales Co.; $50,000.

California.

Ft. Bragg—M. S. M. Motor Co., motor vehicles; $15,000.

Marysville—Sam Britton Auto Co, cars and accessories; $75,000.

Connecticut.

Waterbury—Main Motor Sales Corp.; $5000; Leonardo Lorusso, J. N. and Einera Wallace.

Delaware.

Dover—Supreme Motor Co.; $50,000; F. R. Hansell, J. Vernon Pimm, E. M. McFarland. Philadelphia, Pa.

Wilmington:

- Alenglander Motor Co.; $500,000; C. T. Cohee, C. B. Outten, S. L. Mackey.
- Cole-Wilmington Motor Car Co.. autos; $100,000.
- Coulter Motors; $325,000; T. L. Croteau, M. A. Bruce, S. E. Dill.
- Homer O. Robinson, autos; $25,000; Kenneth L. and Harry Emmons, A. L. Dorsey.
- United Auto Elec. Service Corp., autos, etc.; $200,000; Cornelius A. Cole, Robt. A. Van Voorhis, Arthur R. Oakley.

Idaho.

Pocatello—Mutual Motors & Implement Co.; $1,000,000.

Illinois.

Chicago:

- Harding Motor Sales Co.; $20,000; Alfred Loeser, Jacob Kaplan, Harry G. Wexler.
- Movie Parts Co. of America, autos, supplies, etc.; $6000; B. J. Weisbrodt, S. A. Guthrie, C. Y. Freeman.

Joliet—Illinois Apex Sales Co.; $25,000; Robt. E. Manley, Albin Peterson, Jacob Mintnick.

Ziegler—Ziegler Motor Sales Co., Owen's Garage.

Indiana.

Cloverdale—Morrison Bros., agricultural implements.

Iowa.

Shenandoah—Varley & Smith Implement Co.; $25,000.

Kansas.

Atchison—Atchison Motor Co.; $40,000; H. M. Robbins, J. C. Killarney, R. C Garvin, Atchison; Jas. Patrick Smith, Earl L. Robbins, Kansas City, Mo.

Hutchinson—Southwestern Motor Co.; $100,000; Elmer J. Negry, Geo. Moliter, J. H. Tuder, Chas. S. Fulton, Frank Sutton.

Minneola—McPhaill Motor Co., Ford agency, Losey Bldg.

Kentucky.

Frankfort—A. C. Morrise & Co., Inc., implements; $15,000; A. C. Morrise, John P. Stewart, B W. Whittaker.

Louisville:

- Indiana-Brocar Truck Co.; $25,000; Thos. H. and Florence M. Brocar, Geo. M. Royce.
- Roth Motor Co.; $30,000; J. E. and Albert Roth, Ray B. Myers.

Massachusetts.

Belmont—Oakley Garage Co., auto business; $50,000; Fred H. and Mabel E. Conant, Arthur G. Carver.

Boston:

- Cape Ann Omnibus Co., auto and general freight business; $25,000; Wm Costa, Antoine A. Silva, Roy Chandler Davis.
- A. C. Jones Co., Inc., autos; $20,000; Arnold H., Albert C. and Edith A. Jones.
- C. J. Mann & Co., Inc., autos and auto equipment; $5000. Directors: President, Chas. Grossman; treasurer, Jack D. Grossman; Isidor Saltz.
- Murray Mac Motor Co., Inc., autos and accessories; $20,000; John J. McCarthy, Frank A. Hannon, Frank E. Rosendorf, Hugh J. Lally.
- Spadola Motors Co., Inc., motor vehicles; $2,000,000; Jos. Spadafora, Saml. H. Lewis, Harold A. Rudnick, Anthony J. Caldarine.

Fall River—Overland Fall River Corp., autos; $60,000; John Hall, Alban J. Gagnon, Arthur J. B. Cartier.

Lowell—Pentucker Motors Co., autos; $30,000; J. Munn, Isabel H. Andrews and Leonard J. Bartel.

Medford—Middlesex Motor Service, Inc., autos; $100,000; Chas. N. March, Guy C. Carpenter, Alson C. Smith.

Pittsfield—Cadillac Pittsfield Co.; $25,000; Fred. H. Thorp, Rigobert McFarlane, Matthew MacIntyre.

Michigan.

Bay City—Fletcher Auto Sales Co.; $100,000; R. H. Fletcher, Sr., R. H. Fletcher, Jr., Walter Fitzhugh.

Detroit—Eastern Motor Sales Co.; $30,000; Albert Shomaker, Detroit; Geo. M Lieberman, Macomb County; L. A. Poundstone, Indianapolis, Ind.

Perrinton—Beckwith, Hardeb & Morrow, Inc., farm implements, etc.

Minnesota.

Argyle—Crummy Implement Co., Inc., farm implements, autos, tractors, etc.; $50,000; Geo. F., Francis C. and Albert Crummy.

Lake City—Lake City Motor Co.; $35,000; John A. Duffus, Milton Erickson, Fred C. Fick.

Missouri.

Independence—Select Motor Co.; $5000.

Joplin:

- Hickman Motor Co., 314 W. 4th St., Hupmobile agency; T. E. Hickman, Kansas City.
- Hudson-Hughes Motor Co.; $50,000; Jas. T. Hughes, W. H. Withrow, G. C. James.

Kansas City:

- Bird-Sykes-Bunker Co., Paige distributor; Arthur S. Bunker, manager.
- Front Drive Motor Co.; $20,000.
- Kagey Motor Co.; $100,000.
- Kirkland Gravens Motors Co.; $500,000.

St. Louis:

- Boehl Motor Truck Co., Denby trucks, 3104-6 Locust St.; $25,000; pres. and treas., J. L. Boehl; vice pres., P. H. Fuchs; sec., T. Wagner; sales mgr., H. Teichman; atty., S. T. G. Smith, 1018 Federal Reserve Bank Bldg.
- Holmes Motors, Inc.; $50,000.
- Strauss Motor Car Co., Ford sales and service station, 1121-25 Pine St.

Trenton—Trenton Buick Co.; $25,000; Arthur H. Hyde.

Nebraska.

Wood River—Wood River Implement Co.

New Jersey.

Camden—S. Jersey Supply & Transportation Co., autos; $125,000; Saml. H. Beamer, Wm. McLaughlin, Camden; Geo. C. Stout, Philadelphia, Pa.

Clifton—Lexington Ave. Garage, autos; $30,000; John Arweiler, Florence E. and Edgar M. Baker.

Jersey City—Hudson County Oakland Sales Corp., autos; $10,000; H. F., Fred and Henry C. Drewes.

Newark:

- Daniel Auto Co. of N. J., autos; $100,000; Wm. W. Bingham, Benj. Newman, John Mines.
- Newark Omnibus Co., vehicles; $100,000; John Morning, John Reid, Harry Bornstein.

Paterson—Motor Car & Supply Co., general auto business; $100,000.

W. Hoboken—B. L. D. Motors Corp., autos; $100,000; Pauline Paul, Weehawken; John H. Sheridan, Edgewater; Jos. P. Briody, Jersey City.

New York.

Bayside, Queen's Co.—Genuine Auto Sales Co.; $25,000; G. Mercer, F. Hebeler, W. J. Schmelz, 557 W. 40th St.

Brooklyn:

- Armleder Motor Truck Co. of N. Y.; $100,000; C. W. Steele, J. S. Hyatt, A. Scheve, 171 3rd Ave.
- Flannery, Hale & Zimmer, motor cars; $22,500; J. Flannery, L. W. Hale, C. F. Zimmer, 273 Kingston Ave.
- Jack Roth's Auto Service, autos, merchandising and trading; $5000; J. Keating, L. Groves, J. Roth, 2056 Bath Ave.

Buffalo—Autopawn; $30,000; H. H. Schumacher, H. J. Reese. R. W. Warner.

Jamestown—Sullivan-Lounsbury, autos; $15,000; C. L. Rowery, S. H. Lounsbury, P. R. Sullivan.

New York City:

- Clinton Truck Sales Corporation, Manhattan; $150,000; A. J. Furth, S. Newman, H. H. Waller, 36 Vesey St.
- Foreign Motors Corp., Manhattan; $150,000; W. De Bille, A. B. Primrose, A. E. Foster, 49 Wall St.
- A. G. Griese, Manhattan, motor cars, boats and tractors; $40,000; A. Pollak, F. A. Connolly, A. G. Griess, Yonkers.
- H. & D. Motors Co.; $500,000; G. F. McKay. A. A. Hayes, C. J. Cahill.
- Hope Motors; $100,000; F. N. Post, M. Holmes, J. P. Orteig.
- Houdaile Co. of Del., autos and accessories; $200,000; rep., H. S. Gould, 37 Wall St.
- King Tire Co., Manhattan, autos; $50,000; P. Turk, J. and L. Werthelmer, 214 W. 69th St.
- Harry Lee, Manhattan, autos; $5000; A. Caron, H. & J. Lee, 100 St. Nicholas Ave.
- Jas. Martin Corp., Manhattan, autos, hardware and wearing apparel; $750,000; J. E. Ankus, G. and J. Martin, 105 W. 52nd St.
- Norman Trading Corp., Manhattan, autos, hardware and mill supplies; $10,000; S. Kaplan, N. J. Cowles, A. Lewis, 228 Utica Ave., Brolyn.
- Julius Weil & Co., Bronx, autos; $10,000; I. Odler, I. Oppenheimer, J. Weil, 789 166th St.

Rochester:

- Ellis & Shafer, auto business; $15,000; T. J. Nigham, C. A. Shafer, W. H. Ellis.
- Miller Lee Motors; $75,000; R. G. Miller, B. C. and G. C. Lee, Hilton, N. Y.
- Mortimore-Manley Motor Car Co.; $160,000; R. C. Schaefer, G. N. Mortimore. A. L. Manley.
- Swope-Stanley Motors; $75,000; E. E. Fairchild, J. E. Swope, O. W. Stanley.

Troy—Troy Franklin Motor Sales Co.; $10,000; R. E. and H. R. Bachan, G. W. Clum.

Yonkers—Jefferson Trucking Corp., auto trucks; $20,000; E. A. and C. Alexander, J. Andrea.

North Carolina.

Charlotte—Caldwell, Tredenic & Lambeth, Inc., autos; $200,000; Chas. E. Lambeth, T. F. Caldwell, T. S. Tredenick.

Greenville—Greenville Storage Battery Co., autos and accessories; $50,000; W. G. Downing.

North Dakota.

Bismarck—Bismarck Implement Co.; $25,000; J Willis Jones, Geo. P. Schutz, John W. Loftus.

Lansford—O'Keefe Implement Co., Inc.; $25,000; John D. and Amandan P. O'Keefe, Paul A. Reardon.

Ohio.

Covington—Morgan Motor Car Co.; $30,000; Thos. R. Morgan, L. M. Webb, F. L. Garrison.

Cuyahoga Falls—Fox-Buick Sales Co, autos and service; $100,000.

Dayton—Elliott Motors Co.; $20,000; P. C. Elliott, C. W. Lang, A. F. Purviance, A. A. Hortsman, N. F. Nolan.

Warren—Western Reserve Motor Car Co. $150,000; R. K. Johnson, L. C. Keckle.

Youngstown—Wick Ave. Motor Co., Hudson, Essex and Marmon cars.

Oklahoma.

Ardmore—Mechanics' Motor Co.; $100,000; W. F. Oakley, M. T. Steele, J. C. Nelson.

Henryetta—Chappell Truck Co.; $25,000; G. W. Chappell, B. O. Beemer, L. G. Gosper.

Oklahoma City:

- Hickman-Smith Auto Co.; $15,000; E. A. Hickman, H. E. and F. W. Smith.

Frank Miller Motor Co.; $10,000; Frank and Louise Miller, Edward Hirsch.

Patrick Truck Co.; $10,000; M. H. Adams, Roy Leffingwell, Gustave A. Erixson.

Tulsa—Tulhoma Motor Co.; $1000; Jas. Coburn, V. Goble, C. E. Olander.

Pennsylvania.

Philadelphia—Langan & Phillips, autos; $10,000; J. E. Phillips; Thos. E. Barhony, Philadelphia; Thos. Gilroy, Narberth, Pa.

Rhode Island.

Providence:

Indiana Motor Sales Co., autos and accessories; $100,000.

Luff Motors, Inc., autos; $10,000; Abraham Luff, Joshua Bell, J. C. Semenoff.

Tennessee.

Nashville—Motor Shop, Shelby county; $5000; L. B. Lowenstein, Leroy Friedlander, Leo Goodman, Auvergne Williams, W. L. Loeb.

Texas.

Amarillo—Markham Motor Co.; $100,000; W. M. Williams

Beaumont—Nash East Texas Co., successor to Lester Auto Co.; pres. and mgr., W. H. Romeser.

Dallas—Indiana Truck Corp.; $10,000; W. V. Giffen, Chas. D. Turner, J. W. Stephenson.

Eastland—Lone Star Motor Co.; $25,000; Clyde Garrett, Geo. Phillips.

El Paso:

El Paso Packard Motor Co., Packard cars and trucks, 601 Texas St.; A. S. Tatum, Z. U. Mason, Ed. Dugan.

J. C. Jarrett Motor & Finance Co.; $20,000; J. C. Jarrett, A. E. Kingston, D. C. Stelson.

Houston—Sherwood Auto Market; $350,000; W. C. Roberts, E. P. Maynard.

San Antonio:

Lewis-Morris-Costley Co.; $50,000; L. D. Lewis, John B. Morris, W. G. Costley

Paige Motor Co.; $50,000; F. O. and Mary A. Davidson, J. A. Treadway.

Teague—Alderman-Clark Motor Co.; $12,000; Dave Alderman, Townsend Clark, R. M. Thompson.

Waco—Brazos Motor Co.; $20,000; Ed., L. G. and G. W. McCullough.

Yorktown—Yorktown Motor Co.; $10,000; H. R. and J. R. Frobese, S. Schiwetz.

Vermont.

Burlington—Brodie & Niles, Inc.; $50,000; C. A. Niles, J. W. O'Neill, E. A. Brodie.

Washington.

Wenatchee—Wenatchee Truck & Tractor Co., tractors, implements and motor trucks.

West Virginia.

Huntington—Harmon-Dean Co., Westcott cars.

Wisconsin.

Ashland—Du Pont Motors Co., Inc $20,000.

Madison—Cadillac-Oldsmobile Co., 325 W. Johnson St.; N. O. Newburg, J. I. McFarland.

Milwaukee—Wm. F. Sims Motor Co., Lincoln car, 539 Milwaukee St.

Racine—Eastman Sales Co.; $20,000; Arthur S. and E. W. Eastman, Arthur Albrecht.

Sheboygan—Paige Car Sales & Service Co., 1129 Indiana Ave., Paige cars and Paige and Saxon parts; Harry Black, Geo. Roux.

Stevens Point—Motor Sales Co., Inc.; $25,000.

Waupan—Walters & Haase, implement business; Albert H. Haase, O. J. Walters.

MANUFACTURERS OF MOTOR CARS, TRUCKS, TRACTORS, ETC.

California.

Denuba—United Hardware & Implement Co.; $50,000.

Oakland—Tunison Motors Co., autos; $2,500,000; C. W. Lineker, I. W. Green, Jas. M. Oliver, Oakland; Elbert W. Davis, Berkeley.

Delaware.

Dover:

Canvas Inner Tube Co., autos; $1,000,000; M. L. Rogers, L. A. Irwin, W. G. Singer, Wilmington.

Kansas Truck & Motor Co.; $1,000,000; C. T. Cohee, C. B. Outten, S. L. Mackey, Wilmington.

Otovic Products Corp., autos and parts; $2,000,000; Harry and Kenneth L. Emmons. S. L. Dorsey, Wilmington.

Philadelphia Motorcycle Corp.; $50 000; J. M. and J. A. Frere, M. A. Alexander, Wilmington.

Wilmington:

Drexel Motors Co.; $5,030,000; T. L. Croteau, M. A. Bruce, S. E. Dill.

Du Pont Securities Co.; $7,000,000; pres., Pierre S. du Pont; vice pres., Geo. H. Gardner; sec. and treas., John J. Raskob.

Reliable Auto Parts Co.; make and sell motor trucks, etc.; $100,000.

Illinois.

Galesburg—Martin Metal Products Co., implements; $60,000; J. A. Martin, F. E. Hazlett, R. Burnside, G. Graig, L. W. Bassett.

Indiana.

Evansville—Hercules Corp., merger of Hercules Body Mfg. Co., Hercules Buggy Co., Hercules Wheel Co., Hercules Gas Engine Works and Indiana Color & Varnish Co.; $8,000,000; pres., Wm. H. McCurdy.

Ft. Wayne—Ft. Wayne Motor Car Co., autos and accessories; $150,000; directors, W. J. Filer, J. B. Renshaw, L. F. Crosby, C. G. Nickols.

Indianapolis—Auto Farm Light Co., farm electric plants and tractors; $150,000; J. D. Oldham, O. L. Kestle, V. B. Korner.

Maryland.

Frederick—Star Motor Co., implements, tractors and passenger cars; $200,000; G. H. Staley, J. M. Dronenburg, W. W. Doud.

Michigan.

May Schultz, 658 Lincoln Ave.; 1-story frame garage.

J. H. and Fannie Schwartz, 4694 Rapid Run Road; 1-story frame garage.

Geo. L. Smith, 1619 Otte Ave.; 1-story frame garage.

George Supper, 324 Lilenanthal St.; 1-story frame garage.

E. Cleveland—Thomas Herrobir, Easton Road and Shaker Blvd.; 1-story garage, at 15915 Euclid Ave.; Allendale Garage Co., 15915 Euclid Ave.

Lorain—John Kuczewski; 1-story brick garage, 50x116, at 1769-71 Broadway, for W. Hough, care Broadway Market House No. 1; $10,000.

Toledo—Hiram Miller, 408 Machine St.; 1-story brick garage, 50x50, rear 617-21 State St., for Samuel Davis, Elmand and Utica Sts.

West Park—Henry Davis, 3400 W. 122nd St., Cleveland, O.; 1-story garage and repair shop, 50x115, at Loraine and 122nd Sts.; $18,000.

Oklahoma.

Sapulpa—F. E. Shaffer; 1-story brick and concrete garage, for H. Bartlerr; $5000.

Pennsylvania.

Harrisburg—John J. Hare, 1136 Jonestown Road; 1-story garage, 24x64, for David E. Hocker, 1935 N. 6th St.

Philadelphia:

Gorner Butler; 1-story garage, 16x54; $1200.

M. J. Connelly; 1-story garage, 17.6x64, at 6219 Chelwynde Ave. $1500.

A. W. Corney; 1-story garage, 20x20, at 5752 Frankford Ave.; $700.

Philip D'Audaria; 1-story garage, 23x23, at 208 E. Sharpnack St.; $1000.

James Dykes; 1-story garage, 17x20, at 1437 E. Oxford St., for David Bitzer; $800.

William H. E. Eddelman & Sons; 1-story garage, 22x17, at 6937 Ridge Ave., for Green Valley Country Club; $3000.

P. J. Esmond; 1-story garage 14x24, at 3430 Amber St.; $1500.

William A. Faries; 2-story garage, 18x20, at 2449 artha St.; for A. Sanicola; $600.

J. D. Fisher; 1-story garage, 17x16, S. E. Cor. 57th & Arch Sts., for William F. Jones; $1000.

Frank & Kaiser; 2-story garage, 52x120, at 707-11 Tasker St.; $30,000.

Walter Freas; 1-story garage, 18x20, at 9532 Bustleton Ave.; $500.

M. J. Graham, 1-story garage, 16x36; $900.

Thomas J. Hamilton; 1-story garage, 16x24, at 614 N. 40th St.; $700.

Jacoby & Son Co.; 1-story garage, 20x8, at 3100 W. Penn St.; $350.

S. Jarniks, 1-story garage, 17x46, rear 2020 Arch St., for George W. Hynes; $1200.

D. H. Jenkins; 1-story garage 51x68, at 1826-30 E. Cambria St.; $6000.

Charles D. Land; 1-story garage, 16x57.6, with wing, 16x25.6 $2500.

Ralph Lomax; 1-story garage, 18x81, S. W. Cor. 17th and Luzerne Sts. $3500.

M. Moister Co; 1-story garage, 8x17, at 226 W. Mt. Pleasant Ave.; $210. Also 1-story metal garage, 16x20, for M. Delucca; $700.

D. Moutella; 1-story garage, 73.9x73, at 623-29 Christian St.; $9000.

H. Platzgret; 1-story garage, 14x56, at 5035 Tacony St.; $2500.

Ralph Robbins; 1-story garage, 16x80, at 4730 N. 12th St.; $3000.

P. Savar; 1-story garage, 86.6x128, S. E. Cor. American and Noble Sts.; $30,000.

A. Sokolowski; 1-story garage, 48x140, at 3161-65 Almond St.; $6000.

Steward & Stevens Iron Works; 1-story garage, 20x20, at 562 E Levering Ave., for W. A. Lindsay; $500.

Isadore Vatalo; 1-story garage in rear 1024 South St. for Frank Campo; $2100.

Fred Walker; 1-story garage, 21x24, at 629 Church Lane, for F. J. Stokes.

H. Z. Will; 1-story garage, 20x106, rear 5542-46 Ridge Ave.; $3000.

Pittsburgh—Rose Fisher, 821 Penn Ave.; 1-story garage, 68x31, rear 901 Penn Ave., for Williams Ib Co, 901 Penn Ave.

Texas.

El Campo—Magnolia Oil Co.; oil and gasoline filling station, Jackson St.

Miami—Cooperative Oil Co.; filling station and storage tank; man., C. P. Pursley.

Seymour—F. L. Knight; remodel garage.

Weatherford—R. E. Knox; show room and service repair shop, York Ave. and Bridge Sts., for Oscar Jones, dealer in Dodge Bros. cars.

Virginia.

Alexandria—H. Herfurth, Jr., St. Asoph and Madison Sts.; 1-story garage, 52x118.

West Virginia.

Clarksburg—I. F. Lauran; 2-story garage, 60x75, for F. G. Bland; $25,000.

Logan—J. W. Fisher; 1-story brick garage, 40x86.

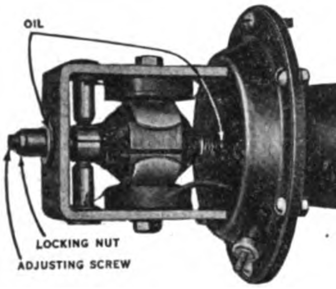
Wisconsin.

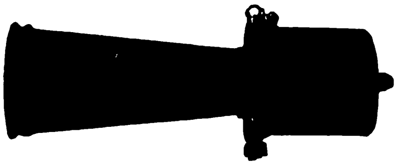
Milwaukee—Otto Klingbell, 680 Delaware Ave; 1-story garage, 45x102, for P. J. Fisher, 241 Rusk Ave.; $12,000.

Shawano—F. J. Schoenrock & Sons, New London, Wis.; 1-story garage and sales room, 70x150, for Shawano Motor Car Co.; $15,000.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The North East Horn, an electric motor driven component, designed with special reference to reliability of operation and effectiveness of warning power, is now offered to the retail trade, having been available for some time to car manufacturers exclusively. Claim is made that the horn is designed and constructed in keeping with the best manufacturing principles and will stand up under the most exacting tests. The motor, small and compact, is very powerful, and the construction of the armature prevents stopping on dead center. In other words, there is no danger that the horn will "go dead" at critical times.



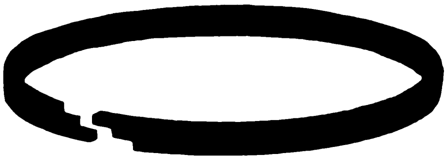


The real distinguishing feature of the horn, however, is said to be its tone. Commanding, yet courteous, it gets attention without giving offense, and in spite of its volume and carrying power is very pleasing.

It is understood that jobbers and dealers throughout the country have taken over the sale of the article with every evidence of a large future business.

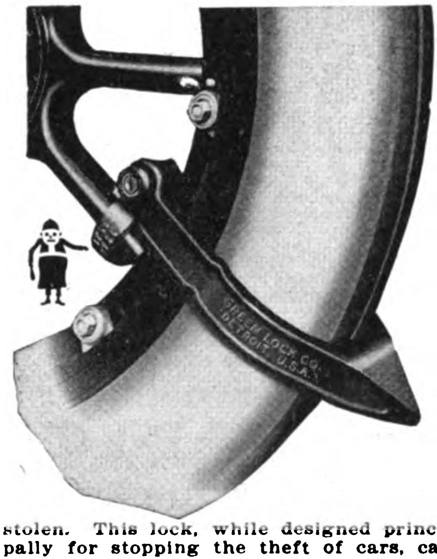
Manufactured by the North East Electric Co., Rochester, N. Y. Retail price, complete with bracket, push button and wire, $16.

The Cloud Piston Ring for Ford Cars, as shown in the accompanying illustration, has a double-step cut joint which causes it to fit perfectly and prevents any leakage. The outside of the ring has a specially developed surface, consisting of a series of exceedingly small ridges, the action of which on the smooth cylinder walls causes the ring to become seated more readily than some other types according to the manufacturers. Claim is made that the ring has many high class features not usually found on popular priced rings.



Manufactured by Cloud Accessories Corporation, 1408 South Wabash Avenue, Chicago, Ill. Price, 75 cents.

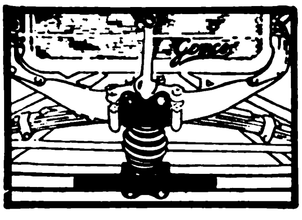
The Stop Thief Car Lock, as the cut shows, has an improved "spoke grip," which makes it impossible for the thief to change its position and drive off with the car. It is highly spoken of by those who have used it, and the "non-pickable lock," with which it is supplied, makes it practically thief proof. It is made of the best steel and is painted a bright green and can be applied in a moment without tools of any sort. The manufacturer has a standing offer of $100 reward for any car so equipped that is stolen. This lock, while designed principally for stopping the theft of cars, can also be used to hold the spare tire and, in addition, makes a very effective "sprag" or cleat for getting a stalled car out of mud or snow.



GREEN LOCK CO.
DETROIT U.S.A.

Manufactured by the Green Lock Co., Detroit, Mich. Priced from $7.50 to $12.50.

The Gemco Tri-Chek consists of a strong spiral spring which attaches to the front of a Ford car between the radiator and the center of the front axle. Claim is made that this device, formerly known as the Clark Equalizer Spring, effectually keeps the entire frame of the car from rocking. The Tri-Chek is said to be especially suited for heavy Ford trucks and delivery cars where the weight of a heavy load is often unequally distributed.



Manufactured by Gemco Manufacturing Co., Milwaukee, Wis. Retail price, $5.30.

The Broughton Steel Blow-Out Boots are used on tires to strengthen weak spots or blow-outs, and by the use of several at a time they are claimed to prevent the car from skidding.

Steel blow-out boots are designed only for clincher tires and fasten under the clincher edge of the rim. They are made entirely of metal, presenting a smooth surface to the road, while provision is made in the side members for adjusting the boot to different sized tires. Placed close together they form a protection for a blow-out, enabling the motorist to drive the car, even when a bad blow-out has occurred.

Flexible Carbon Scraper. This is a set of three tools for the garage or service station repairer, each composed of six oil-tempered, spring-steel wires firmly secured in a handle, and shaped and sharpened so as to easily reach all parts of the combustion chamber, the manufacturer states. It removes the carbon accumulation without dismantling the engine. The large number of scraping fingers not only adds to the flexibility of the tool, but also permits them to conform to the surface and to clean a path its entire width.

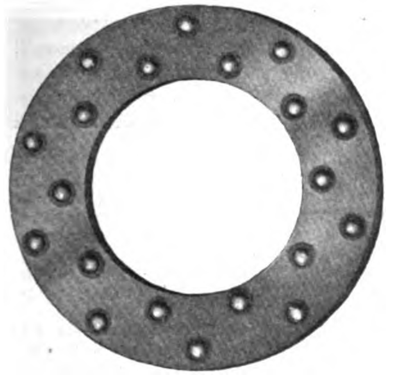
Manufactured by the Flexible Carbon Scraper Co., 1421 West Washington Street, Los Angeles, Cal. Prices on request.

The C-H Charging Rheostat, shown in the illustration, is said to stand up exceptionally well, even under severe conditions, and is easily installed and operated.

The name plate bears the directions for charging. The rheostat is connected in one of the lines from the 32-volt generating set and in series with the battery to be charged. A dial plate underneath the operating handle is marked to indicate the proper setting for charging certain numbers of cells. The handle is moved until the arrow is at the proper point on the dial plate, after which the battery circuit is closed and the charge begins. An ammeter to measure the charging current is not necessary, as the current will be of the proper value (approximately five amperes) when the handle is in the right position as indicated on the dial. The dial may be provided with marks for batteries consisting of three, six, nine and 12 cells.

Manufactured by the Cutter-Hammer Manufacturing Co., Milwaukee, Wis.

The Staggard One-Piece Ball Bearing Thrust Washer is designed to eliminate Ford and Chevrolet rear end troubles, stop noise and grinding, and generally make for more efficient power transmission. The most vital part of small car mechanism, the rear axle, is frequently run on thrust washers of plain babbitt. Babbitt when run with steel bearings will frequently cause gears to wear quickly, it is claimed, and the invention is said to correct this trouble in great measure. It is stated that the washer is made with 13/64 inch best Hoover steel balls set in 3/32 inch solid cast white brass or bronze plate, and is the exact size to replace the regular babbitt washer without change.



Manufactured by the Pittsburgh Casting and Heater Co., Pittsburgh, Pa. Price, bronze, $2; white brass, $1.50.

The Nacto Cleaning Products include such well known articles as Nacto spot remover and cleaner, Nacto carbon remover and Nacto tar remover. Each article is especially compounded for the purpose for which it is named and is stated to be excellent for that purpose.

The Perfect cleaner and spot remover is claimed to easily remove oil, grease, tar, paint, varnish, chewing gum, candle grease, etc., from cloth and fabrics without damage or injury to them.

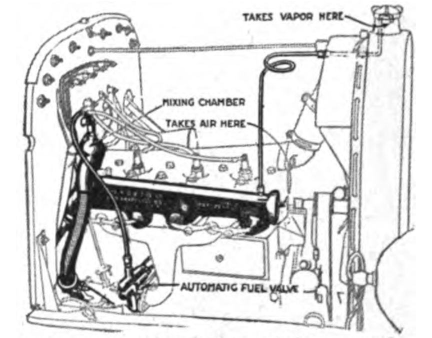
Nacto carbon remover is stated to remove all carbon from the combustion chambers of the internal combustion engine, and is guaranteed not to injure the metal, or to impair the lubricating oil, as it will not mix with or dilute engine oil.

GO CLEAN THRU THE WORLD WITH NACTO CLEANERS
TRADE MARK

Nacto tar remover is a positive solvent for tar and oil and is guaranteed to remove all tar or road oil from the finished surfaces of the automobile without injury to the paint or varnish.

Manufactured by the Nacto Cleaner Corporation, Madison Avenue, corner 136th Street, New York City. Prices and literature on request.

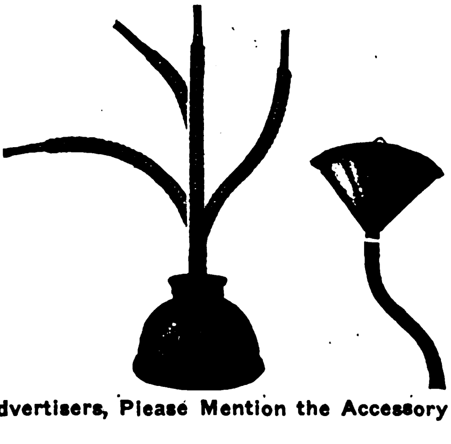
The Ideal Vaporator for Ford Cars and Trucks is offered to the public with a written guarantee that its use will save 50 per cent. of the fuel used. The claim is made that the use of the device will give more than 30 miles to the gallon, made possible by a unique principle which introduces preheated moisture and air with a small amount of gasoline into the combustion chamber in such a manner as to produce a highly combustible fuel.

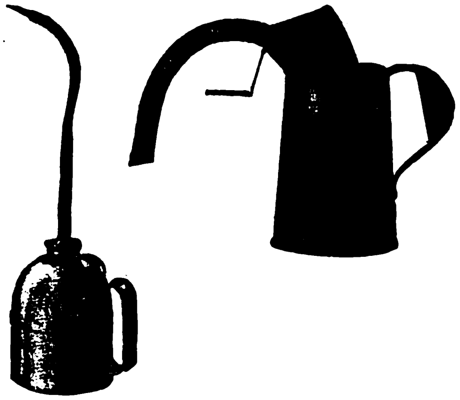


Exclusive agencies are being established and a great amount of missionary work is being carried on in various territories.

Manufactured by the H-O-B Manufacturing Co., Indianapolis, Ind. Price, $25.

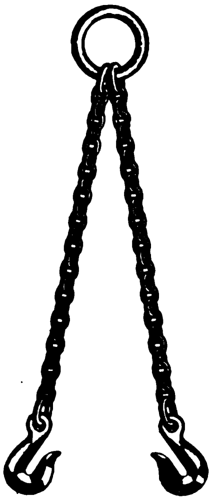
The Flex-Spout Oilers, Tunnels and Filling Cans are of special interest to the service station and garage trade, as they fill a long felt want. Flexible spouts are attached to the various devices offered by this manufacturer which makes them unusually convenient for applying oil to the crankcase, oiling hard-to-reach places about the car and the many small openings where oil is used exclusively. The various devices to which flexible spouts are attached are made of steel heavily coppered, while the spouts themselves are made of the same material and are guaranteed not to break, loosen or leak even if stepped on, and when flexed the manufacturer states will stay flexed until straightened again.





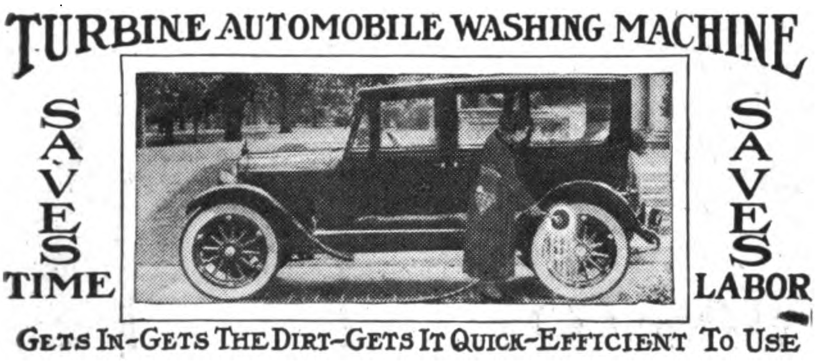
Manufactured by J. M. Dickson, 30 Church Street, New York. Prices and literature on request.

The Acco Automobile Sling Chain is designed for service in the garage and repair shop for the lifting of motors and transmissions from the chassis, raising the front or rear end when replacing springs or removing axles and many other odd jobs of heavy lifting where absolute safety is the first essential. These sling chains, used in connection with a block and tackle, or a portable crane, make a complete hoisting outfit that will save many hours of labor and prevent accidents, as they do not easily wear out or get cut as does the ordinary rope equipment. They may also be used for general utility work such as emergency towing or binding chains, etc.



They are made in two sizes: One 5/16 inch tested for a safe working load of 1300 pounds; length of each branch, 9 2/3 feet over all; weight, 21 pounds; designed for the largest and heaviest motors. And the other ¼ inch, tested for a safe working load of 750 pounds, for medium sized motors, such as the Ford, Dodge, Maxwell, Reo, etc.; length of each branch is 5½ feet over all and the weight, 8¼ pounds. The material is proof tested welded coil chain with a ring on one end and a grab hook on each free end. The finish is self-colored. Each outfit is packed in a strong canvas bag.

Manufactured by the American Chain Co., Inc., Bridgeport, Conn. List price, ¼ inch size, $3 each; 5/16 inch size, $6.50 each.



TURBINE AUTOMOBILE WASHING MACHINE
SAVES TIME
SAVES LABOR
GETS IN-GETS THE DIRT-GETS IT QUICK-EFFICIENT TO USE

The Turbine Auto Washer is said to make the washing of automobiles an easy matter. It combines a soft brush and a hose in one unit, and claim is made that a quick wash with the turbine and a rub with the chamois is all that is needed to insure a clean car. The manufacturer claims to be meeting an unusual demand for the washer with the advent of cold weather, and ambitious sales plans seem to point to a universal distribution throughout the country.

Manufactured by Turbine Auto Washer Co., Three Rivers, Mich. Retail price, $5.

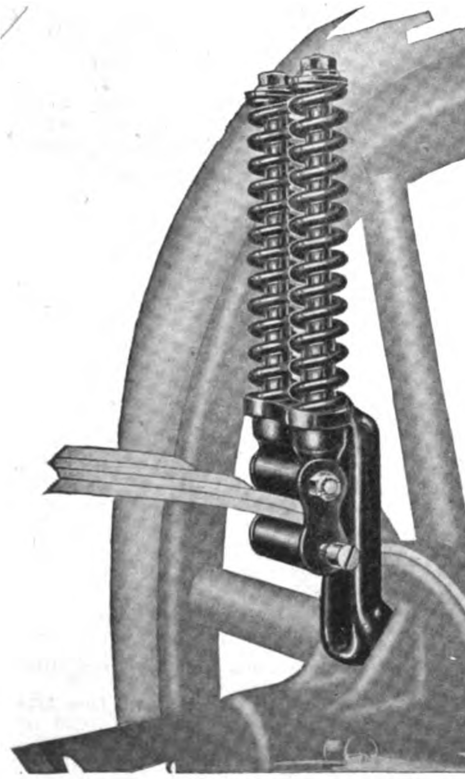
STATIONARY HORSE HAIR BRUSH
IMPELLER
REVOLVING HAIRBRUSH-ATTACHED TO IMPELLER TRAVELS AT HIGH SPEED. PLENTY OF POWER.

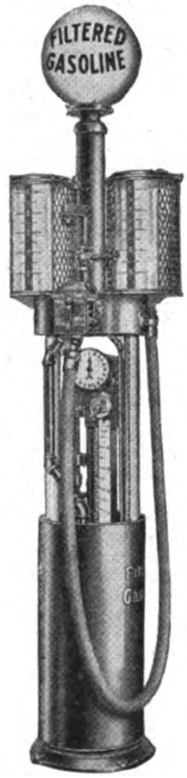
The Luxury Shock Absorbers for Ford Cars consists of two coiled springs parallel with each other, supported in a vertical position by means of a special perch which is fastened to the brake drum disc. Special shackles are supplied which join the end of the spring to the absorber, which allow the coiled springs to carry the weight of the car body and its load independent of the axle. It is stated that the Luxury shock absorber greatly improves the riding qualities of a Ford passenger car and prevents the nuts from loosening on the various parts of the chassis.



All parts of the Luxury shock absorber are made of the best of materials obtainable, and it can be easily fitted on to the car by the motorist in a few minutes time without drilling additional holes.

Manufactured by the Specialty Device Co., Cincinnati, O. Prices and literature on request.

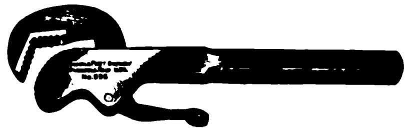
The Wayne Super-Visible Gasoline Pump, which has recently been placed on the market, is said to possess many distinctly new features of design and operation. The gasoline is contained in two glass receptacles correctly marked, and the customer and dealer are assured of exact measure by the operation of the Wayne Five-Way valve, which effectively prevents the return of any gasoline to the underground tank. The pump employs no motor, thus eliminating all danger of fire, and general economy of operation is gained by an exclusive device which automatically fills one container as the other empties. Greater efficiency is obtained by an exclusive filtering device which delivers the fuel free from air and sediment, and the danger of loss of gasoline by spilling is minimized by the shut-off valve, which may be operated instantly.



The model shown is 28¾ inches top diameter, 20½ inches base diameter and nine feet seven inches in height. It is constructed of brass, sheet steel, heavy cast iron and black iron, and the valves are brass, carefully machined and ground to fit. The pump delivers five gallons with 15 strokes, and has a capacity of 20 gallons a minute.

Manufactured by the Wayne Oil Tank Co., Fort Wayne, Ind. Printed matter containing more specific details may be had by addressing the manufacturer.

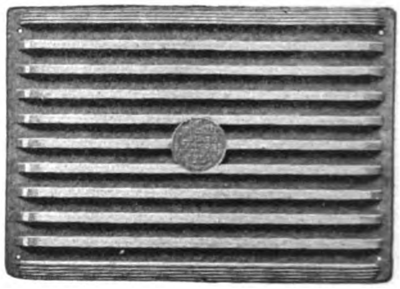
The Chauffeurs' Universal Wrench is self-adjusting for any size square or hexagon nut up to ⅝ inches and will hold round pipe up to ½ inch. The jaws are opened by pressing the trigger, and automatically closed by means of a spring. It will firmly grip any size piece within its capacity, according to claim made by the manufacturer, and the entire tool is strongly made from steel with hardened jaws. The handle is especially shaped to give a good grip. The length over all is seven inches and the net weight is eight ounces.



Manufactured by Goodell-Pratt Co., Greenfield, Mass. Price, $2.50.

The Stanwood Safety Step Plates are manufactured exclusively for the automobile trade and embody several features that recommend them to discriminating buyers. The base of the plate is metal, while the corrugated rubber surface is vulcanized to the metal base, making a step plate which the manufacturer claims cannot buckle or warp.

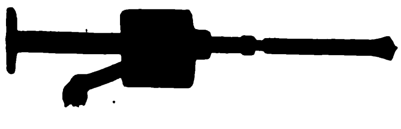
Rubber, exposed to the weather, warps and stretches, and especially so when subjected to such treatment that a step plate ordinarily receives. Tests have proved that rubber used in the form of matting for a step plate buckles between the fasteners that hold it to the running board, soon rendering it useless.



The metal rubber cover is an exclusive feature of Stanwood Safety Step plates and is fully protected by patents.

Manufactured by the Stanwood Equipment Co., 308 North Michigan boulevard, Chicago, Ill. Prices and literature on request.

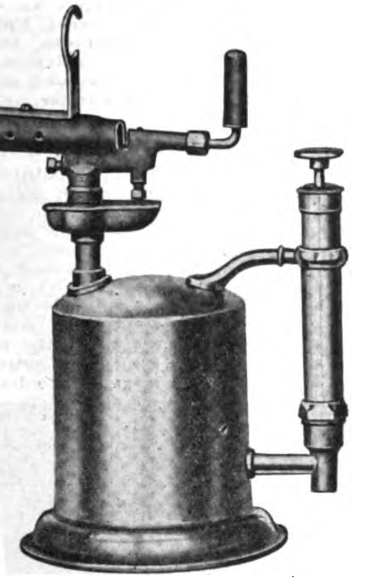
The Autoquip Valve Grinder is a device by which a simple gear and rack mechanical movement performs a ⅝ reciprocating motion, operated by the continuous turning of a crank, and claim is made that anyone can successfully use it. It has no parts to get out of order, is substantially made and is guaranteed to last a life time. The manufacturer announces that many of these grinders have been sold to individual owners as well as to garage men.



Manufactured by Autoquip Manufacturing Co., Inc., Rochester, N. Y. Price, $5.

Vesuvius Blow Torches are made in pint and quart sizes and consist of two lines. The one has a heavy seamless brass tank, and the other a seamless steel tank, which is tinned after fabrication, protecting the steel in a very effective way from coming in contact with the fuel.

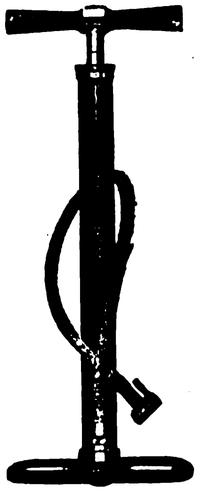
A stamped drip cup of ample size and a powerful pump with never failing check valve are features that are claimed to have created the great popularity of the Vesuvius blow torches. The burner head is all brass except the hook, which is made of stamped steel and can be adjusted to take different sizes of soldering or branding irons.



The torch is filled through the bottom, which is shaped like a funnel, making filling easy. Each torch is tested under a far higher pressure than it would be put to under ordinary use, so that any leaks should develop before it reaches the user.

Manufactured by the American Stove Co., St. Louis, Mo. Sold to the trade through the various divisions. Prices and literature on request.

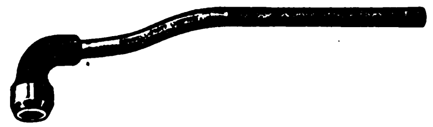
The Anthony Tire Pump has been placed on the market to meet the demand for a first class, single-acting, single-cylinder pump. With this type of pump it is claimed that the tire can be filled with less effort than with other pumps and that the plunger is so arranged that it cannot strike the bottom of the pump cylinder, while the thrust is taken care of by a heavy brass cap. It is stated that the valve cannot stick or leak, thus all of the compressed air is permanently imprisoned, none returning with the upstroke of the piston to waste time and energy in recompression.



The materials used are of a high grade, such as a hard wood handle, cold rolled steel rod, solid brass fittings, best selected leather, seamless steel barrel, malleable iron base, five-ply rubber tubing and a lever-locking, slip-on tire connection.

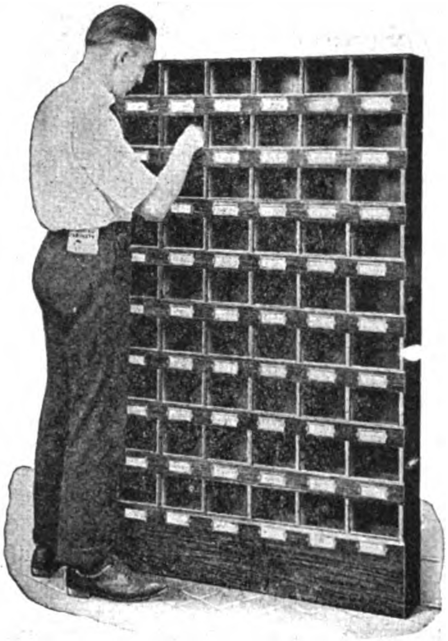
Manufactured by the Anthony Co., Long Island City, N. Y. Prices and literature on request.

Offset Socket Wrench—This wrench can be used in many places where an ordinary wrench will not reach. It is said to be especially useful as equipment in a Ford car. The handle, of polished steel, is knurled to give a good grip. The socket is very strong and is broached to exact ⅝-inch hexagon size. The length over all is 10½ inches and the weight is 11 ounces.



Manufactured by Goodell-Pratt Co., Greenfield, Mass. Price, 90 cents.

A One-Half Size Stock and Accessory Bin has just been put on the market which has many labor saving features. It is well made of oak and steel, and can be used sectionally, new units being supplied on demand. The compartments are six inches wide, six inches high and eight inches deep, with a specially designed hand entrance, and should prove to be a convenience to small garages and accessory dealers.

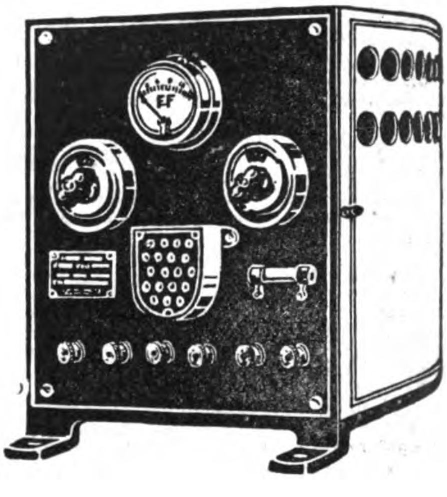


Manufactured by Hobart Brothers Co., Troy, N. Y.

The Balcrank Stabilizer for Small Cars, recently marketed, has met with instant approval according to the manufacturer, and it is expected that the current year will see a great number of the devices in use. Mechanically, the stabilizer is said to be almost ideal, being developed along principles long considered to be correct by engineers, and owners in the Ford, Chevrolet and Overland class report that it is giving complete satisfaction. It has an oil-tempered master spring, adjustable to any tension, which is attached by four set screws to the forward axle of the car where it exerts an even, constant pressure on the front wheels, tending to keep them in a straight line. In commenting on its general efficiency the claim is made that one owner drove his car several miles after the radius rod had broken, the stabilizer being sufficient to hold the wheels true despite the absence of the missing part.

Manufactured by the Cincinnati Ball Crank Co., Cincinnati, O. Retail price, $6.75.

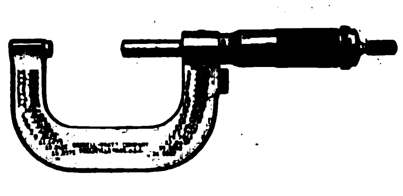
The F. F. Rotary Rectifier operates upon the principle of the older forms of heavy charging apparatus with what is claimed to be a combination of all good features, with the elimination of inherent defects. The alternating current is passed through a revolving switch mounted on ball bearings, which serves to reverse the direction of the negative alternations so that they flow in the same direction as the positive alternations, thus producing a full wave, pulsating, charging current, made possible by reason of the fact that all current is delivered to the battery.



It is claimed that the voltage and current regulator are adjustable to any number of batteries and that the current may be set at any desired value and raised or lowered gradually, regardless of the number of batteries being charged.

Manufactured by the France Manufacturing Co, Berea Road and West 104th Street, Cleveland, O.

Two-Inch Micrometer Caliper with Ratchet Stop—This micrometer is graduated to read by 1/1000 inch from one to two inches, either diameters or lengths. Decimal equivalents are etched on the frame, which is drop forged from a solid steel bar. An eccentric locking device is provided, which holds the screw in any desired position. There is also a ratchet mechanism on the thimble in a position where it can be easily reached by the fingers of the operator. The end of the thimble is provided with a speeder by means of which the screw can be rapidly run back and forth.



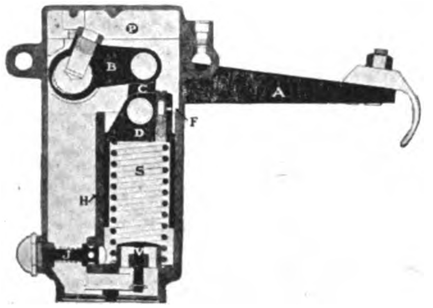
Manufactured by Goodell-Pratt Co., Greenfield, Mass. Price, $12; leather case, $1.80.

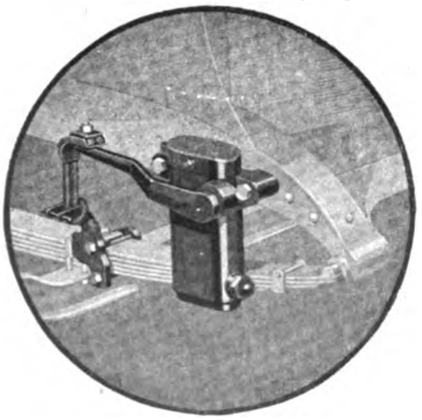
Motorkool Oil, designed to eliminate carbon, and for which strong claims are made as to its efficiency, is guaranteed by the manufacturer to be free from acid, ether, naptholine, camphor or other injurious substances. Claim is made that it effectively lubricates that part of the cylinder walls above the piston rings, thus doing away to a great extent with friction and consequent cylinder scoring. It is economical, being introduced into the gasoline at the proportion of one ounce to each five gallons of oil, each can containing 32 fluid ounces, enough to treat 160 gallons.

MOTORKOOL OIL
PRESERVES, PROTECTS AND LUBRICATES THE CYLINDER
MOTORKOOL OIL COMPANY

Manufactured by the Motorkool Oil Co., 20 East Jackson Boulevard, Chicago, Ill. Price, $2.50 a can.

Lovejoy Shock Absorbers are easily attached to any make of car and, it is stated, will greatly improve the riding qualities. It consists of a container which holds the liquid, usually oil, that will stand freezing temperatures, and a slidable piston, skirted at the sides and sliding inside of a cylinder. The piston is actuated by a heavy coiled spring which is enclosed by the piston skirts. A mushroom type valve is fitted at the bottom which admits oil to the piston cylinder, while a bypass for the oil under compression is provided at the top of piston at one side. A short arm connects the piston to a cross shaft which extends out at one side of the container and to this cross arm is fitted the longer arm, which in turn is connected by means of a strap to the clip fastened to the spring of the car. The container is bolted to the side frame of the car and is held rigid.



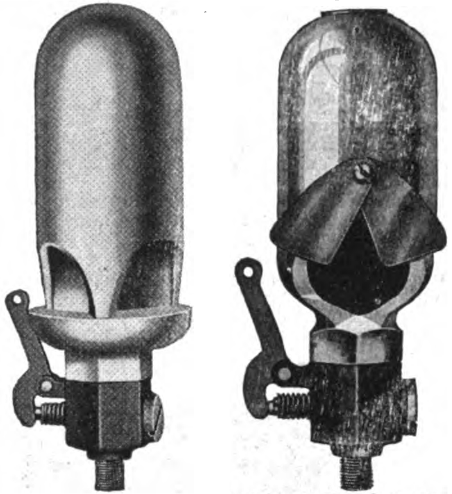


The action of the absorber is stated to be apparently automatic and the manufacturer claims that riding comfort is assured at all times, regardless of the speed of the car or the condition of the road and that adjustments are never required.

The maker guarantees satisfaction to the user or the purchase price will be refunded.

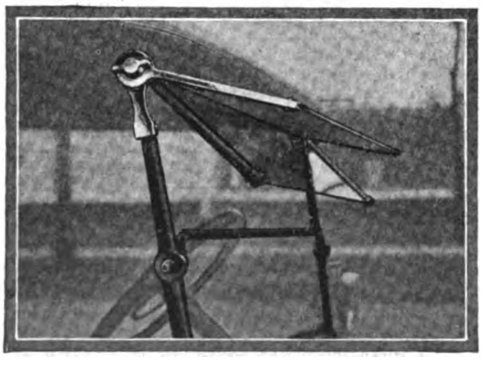
Manufactured by the Packard Engineering Co., 1824 Euclid Avenue, Cleveland, O. Price, four absorbers to the set, $115, with an additional charge for attaching. Jobber and dealer propositions are solicited.

B. & B. Compression Whistles are manufactured for use on either passenger cars or trucks and are operated from the compression in one of the engine cylinders. Usually compression whistles are attached to L type engines by simply unscrewing one of the relief cocks and screwing the whistle in its place. A cord is run to the steering wheel by which the driver is able to blow the whistle. B. & B. whistles are made in two types, one a tri-tone and the second a single tone. These whistles are constructed of the best of material throughout and are fitted with check valves which prevent the compression gases from weakening the compression of the cylinder to which the whistle is attached.



Manufactured by the B. & B. Manufacturing Co., 2823-25 Arsenal Street, St. Louis, Mo. Prices on request.

The Detroit Auto Visor Shield is stated to be constructed of the finest imitation leather obtainable and is provided with a flap that fits snugly between the top and the windshield. The fittings are of steel finished in black enamel. The shield is light in weight, yet is of substantial construction and cannot rattle or work loose, the manufacturer states.



The Auto Visor Shield, it is claimed, can be attached to the car in about three minutes time without the use of special tools, bolts or nuts. On Buick, Hudson, Cadillac and all cars having windshield adjustment at top of uprights, all that is necessary to be done is simply to loosen the wing nuts, slip on the visor and replace the nuts. On the Nash and a few other cars with the shield adjustment set low on the uprights the visor is stepped up by means of a special extension which will be furnished when specified. For Dodge, Ford and other closed cars a special design is furnished complete with fittings.

The Detroit Auto Visor is adjustable from the driver's seat; a partial turn of the wing nuts loosens the visor enough to allow it to be swung up or down to the desired position.

Manufactured by the Detroit Auto Visor Co., 302-306 Woodbridge Street, East Detroit, Mich. Price, complete, for any model or size, $12. When ordering, state make, model and year of car and give exact width of windshield outside at upper adjustment screw.

Buckeye Cleanser is a soap that is claimed to clean and polish painted surfaces, removing all traces of grease as well as the dust and dirt, leaving the surface in a highly finished condition, similar to the finish when new.

It is stated that clear water simply removes the dust and dirt, but will not remove grease spots, leaving the finish dull and lusterless. Ordinary soap will remove the grease but leaves the surface with a dull, smoky, dingy appearance.

Buckeye Cleanser is stated to have the quality of acting as a solvent for grease and grime, carrying it off in a rich, creamy suds and, at the same time, imparting a glow to the finish, restoring the original luster and keeping the car looking like new.

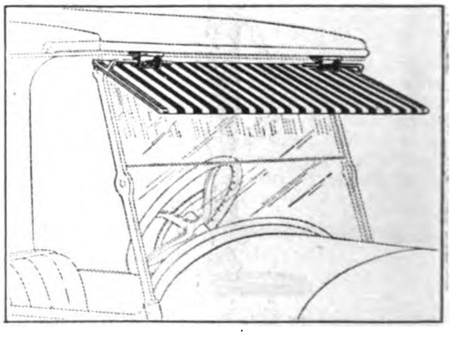
"BUCKEYE" CLEANSER
DAYTON OHIO
DAVIES-YOUNG SOAP CO.
BUCKEYE CLEANSER
DAYTON, OHIO
THE DAVIES-YOUNG SOAP CO.
BUCKEYE CLEANSER
DAYTON, OHIO

Buckeye Cleanser is claimed to be a pure vegetable oil soap, which lathers freely in cold, hard water, rinses readily and removes dirt, grease and grime quickly. Checking of the painted surface, it is stated, is obviated when this soap is used and the life of the surface is prolonged.

Manufactured by the Davies-Young Soap Co., Dayton, O. Sold only through the jobbing trade.

The Auto Mayer Visor has been designed for passenger cars and is attached to the top of the windshield or the under side of the bow, acting as a protection from the sun, rain or snow. It is made in only one size and is adjustable to fit any car. Two small set screws make it quickly set and held at any angle.

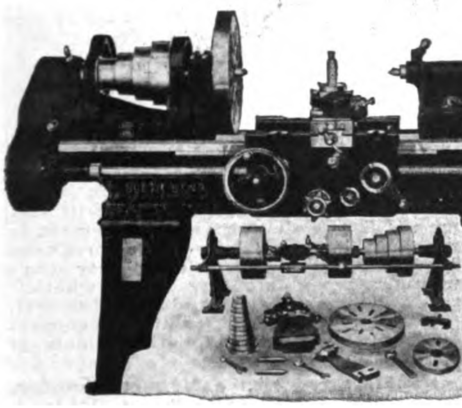


The visor consists of a steel frame, reinforced and braced at the center, making it rigid so that it will not sag or buckle, while the covers are of heavy, double-thickness awning duck.

Manufactured by the Essenkay Products Co., Essenkay building, Superior at Franklin Street, Chicago, Ill. Price, $5.

No. 40 16-inch South Bend Screw Cutting Lathe is stated to be especially designed for machine shops and service stations where a heavy, reliable lathe is required that is capable of taking powerful cuts with high-speed steel, at the same time being able to handle the general run of all-around work.

The South Bend Screw Cutting Lathe No. 40 is completely equipped, as shown in cut, with large and small face plates, compound rest, two steel centers, center rest, follower rest, change gears, adjustable stop for screw cutting, a set of feed gears, gear guards, semi-machined chuck back, necessary wrenches and double friction countershaft. Other special features of the lathe are a very rigid bed, cross ribbed by heavy box braces cast in at short intervals; head stock equipped with improved reverse; spindle stock equipped with four steps for two-inch belt; tail stock is offset to allow compound rest to swivel parallel to the bed and is provided with a set-over for turning taper; tail stock center is self-ejecting. The carriage is strong, with a wide, deep bridge and is fitted with T slots for clamping work for milling and boring.



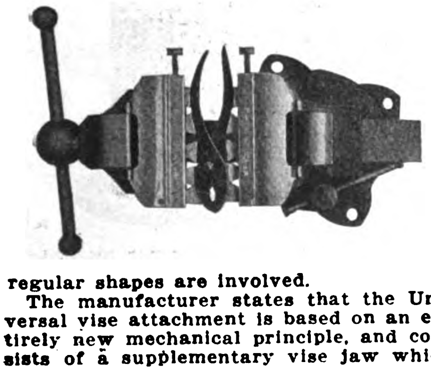
The lathe is indexed to cut standard threads from four to 40, right or left, including 11½-inch pipe thread. The compound rest is graduated in degrees, while the cross feed screw has a graduated micrometer collar reading in one thousandths of an inch.

Extras may be purchased for the No. 40 lathe, which enable it to perform milling and key-way cutting operations, etc.

Manufactured by the South Bend Lathe Works, 425 East Madison Street, South Bend, Ind. Prices and catalogue on request.

The Universal Vise Attachment appeals to repairers in service stations and repair shops from the fact that irregularly shaped articles can be clamped between the jaws of any vise equipped with it, the manufacturer stating that the articles will be held as firmly as if a special type of vise were used.

The device is constructed of cold rolled, tempered tool steel, electrically welded, and, it is claimed, will reduce the working time of any vise operation where irregular shapes are involved.



The manufacturer states that the Universal vise attachment is based on an entirely new mechanical principle, and consists of a supplementary vise jaw which adapts itself to any shape or form of material whether oblong, cylindrical, hexagonal, conical or polygonal.

By its use an ordinary square jawed vise is quickly changed into a tool of a thousand purposes, through the independent action of each tooth or gripper of the Universal jaw in clasping the form or shape upon which work is to be done.

This device, it is stated, has been already tried out and is in successful use in many of the automobile passenger car factories, and is indorsed by many of the large automotive manufacturing plants throughout the country.

Manufactured by the Universal Equaliser Co., Cincinnati, O. Price, four-inch set, $8; five-inch set, $9. Sent on trial if desired.

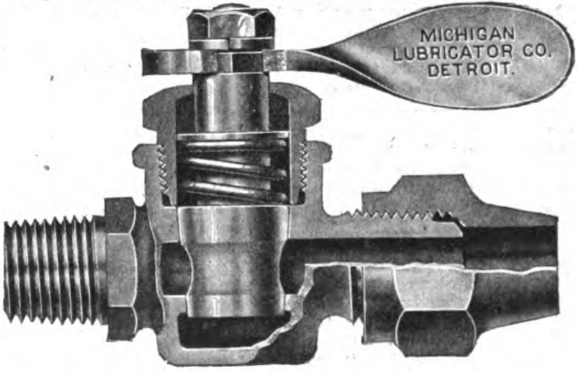
Hercules Spark Plugs are manufactured for passenger car, truck and tractor engines and in a variety of styles for each purpose, while a special long shank, ½-inch Ford plug is also made.

Hercules spark plugs have been on the market for many years and need no introduction, as they are well known to the trade, being sold only through jobbers and dealers. The necessity of a gasket between the shoulder of the porcelain and the lock nut is eliminated and a gland fits over the porcelain beneath the upper lock nut, its lower flange riding on top of the tapered shoulder of the plug. Chances of loosening the lock nut are therefore eliminated, it is stated, and the plug will continue to hold compression for a much longer period.

Two stationary points are provided at opposite sides of the shell, while the center electrode passes through the porcelain insulator fitting equidistant between the two fixed electrodes. The electrodes and center stem are turned from a special high-resistance, non-fusable alloy, of free conductivity, and it is stated that they will not pit or distort under heat and are non-corrosive.

Manufactured by the Eclipse Manufacturing Co., Indianapolis, Ind. Prices on request.

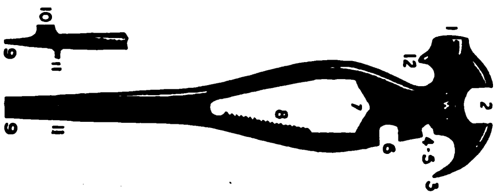
The Michigan Kant-Leak Gasoline Cocks, it is stated, are absolutely proof against leaks by reason of their improved design. There is no opening at the bottom of the cock, and, consequently, there can be no leak at this point, while the stem is packed, preventing any leaks around the top. The packing is woven asbestos, graphited and having a metal insert. The tapered plug is turned on precision machines to a glass finish, insuring a perfect seat. The plug is inserted through the top of the cock while a coiled spring is placed over the stem and plug and on top of this is placed the packing and the packing nut. Thus the spring presses down on the plug, holding it to its seat, and at the same time presses against the packing, compressing it against the stem.



Kant-Leak gasoline cocks are very neat and compact in design and are strongly built. The large stamped handle affords a very convenient grasp and is stated not to be affected by vibration.

Manufactured by the Michigan Lubricator Co., Detroit, Mich. Prices and literature on request.

The Williams "Vulcan" Auto Tool is a combination tool which gives convenience, service and durability. It is drop forged from carefully selected steel, milled and ground to correct sizes of opening, tempered, polished and blued.



The tool is packed in a neat canvas bag and soon becomes an unusually adaptable hip pocket companion for the motorist. According to the numbers given on the cut, No. 1 is a hammer, 2 tire lug wrench, 3 cotter pin puller, 4 gas tank wrench, 5 wire insulation scraper, 6 air tank wrench, 7 spark plug wrench, 8 alligator wrench, 9, 10 and 11 cotter pin spreader and three screw drivers, 12 bottle opener.

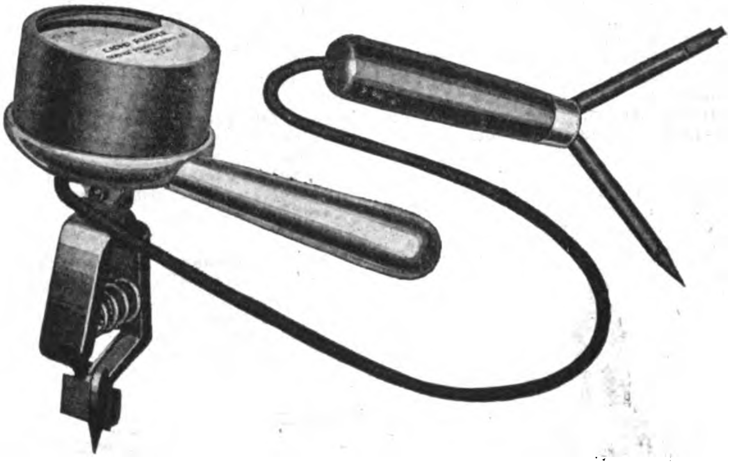
Manufactured by the J. H. Williams & Co., Brooklyn, N. Y. Prices, black, hammer surfaces polished, 60 cents each; blued or nickel plated, each, $1.

The North Star Glare Shield is fitted across the headlight glass from top to bottom and is claimed to dim the rays from the parobolic reflector from which the glare originates, and allows the driving rays to pass to the sides of the shield on to the road ahead, while the rays passing through the prismatic glass are deflected to the sides of the road and amplify the side light.

It is stated that the North Star glare deflector is approved in the following states having headlight laws: California, Pennsylvania, New York and Wisconsin, and bears the indorsement of the Electrical Testing Laboratories of New York.

Manufactured by the S. & M. Manufacturing Co., 2332 Michigan Avenue, Chicago, Ill. Prices and literature on request.

The Hyrate Cadmo Reader is a high-grade voltmeter with a combination handle and base, designed for many uses in connection with work on storage batteries, among the principal of which may be mentioned the following: Voltage test of cells on charge or discharge; cadmium test to accurately determine the state of charge of either or both groups of positive and negative plates; polarity test to insure the proper assembly and direction of the charging current.



It is stated that a cadmium test of a storage battery is the only method of determining which group of plates fails to give its capacity output or to become charged, and that it will locate defects, such as lack of porosity in the active material, which is not always in evidence when inspecting the plates.

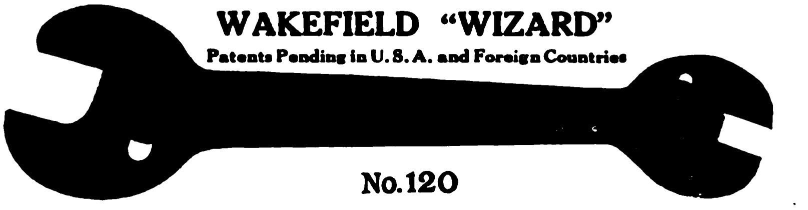
It is claimed that the Hyrate Cadmo Reader is convenient to handle; the meter has two reading scales, one for cadmium and one for voltage, and that it is also particularly marked for its superior adaptability. A feature of its construction is that the stationary spike, the supporting clip, as well as the flexible conductors, cadmium and conductor contact points, are integral with the instrument itself, but can be easily renewed when necessary.

No change in the "set up" or readjustment of the fixed parts is necessary when changing from cadmium to voltage tests or vice versa. When making the cadmium test the supporting clip is attached to the positive post and the cadmium stick is placed in the electrolyte. When testing for voltage, the point of the stationary spike is placed upon the positive post and the flexible lead point upon the negative post.

One striking advantage stated to be afforded by the Hyrate Cadmo Reader is its means of self-support while tests are being made, leaving the right hand free for recording readings or other use. The apparatus is guaranteed for accuracy, adaptability and high-grade construction.

Manufactured by the Service Station Supply Co., 30-32 East Larned Street, Detroit, Mich. Prices and literature sent on request.

The Wakefield Wizard Wrench, with adjustable open end, is stated to take the place of five ordinary double-end wrenches. It requires no knurl adjustment and there is no chance for back lash. The adjustment can be made almost instantaneously, to get any one of 10 different sizes, by simply lifting the jaw, sliding to the desired size and dropping into mesh. It is stated to be rugged, perfectly balanced and practical for use in any of its register sizes. Every opening is absolutely positive. It is hardened, polished and mottle finished. Its length is 7¾ inches, thickness ⅜ of an inch, width 2⅛ inches and its angle is 22½ degrees.



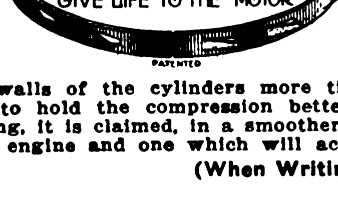
WAKEFIELD "WIZARD"
Patents Pending in U. S. A. and Foreign Countries
No.120

The range of adjustment afforded by the Wakefield Wizard Adjustable Open-End Wrench is as follows: ¼, 5/16, ⅜, 7/16, ½, 9/16, 19/32, 11/16, 25/32 and ⅞ of an inch; 10 United States standard sizes, five S. A. E. standard sizes, six United States standard cap screw sizes and four set screw sizes.

Wizard wrenches are packed singly in a cardboard carton, or lots of 144, 250, 288 or 500 in wooden boxes. Every wrench is thoroughly greased before packing to prevent rust.

Manufactured by Clarence E. Wakefield, Worcester, Mass. List price, $1.75 each.

Nu-Life Piston Ring Expanders are designed for use in either old or new gasoline engines, and are easily placed behind the piston rings, causing them to fit the walls of the cylinders more tightly and to hold the compression better resulting, it is claimed, in a smoother running engine and one which will accelerate more rapidly when the throttle is opened, thus giving greater power.

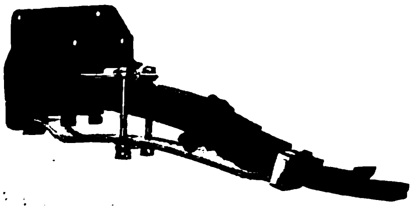


The expanders are provided with resilient shoulders which push the piston rings outward into the correct position, making perfect contact with the walls of the cylinders. It is stated that by using Nu-Life Piston Ring Expanders oil and gasoline are saved and carbon deposits are reduced, while piston slaps do not have a chance to develop.

Full directions for installing accompany each set and any motorist experienced in mechanical work will have no difficulty in placing the expanders in position.

Manufactured by the American Auto Products Co., 1319 L Street, Northwest, Washington, D. C. Prices on request.

The Stewart Shock Absorber for Chevrolet 490 Cars is stated to be the only device of the kind on the market that is manufactured specially for this car and employs features found only in a few other absorbers. By removing one or two short leaves from each spring the spring is made more resilient and it does not transmit as severe a shock as the stiff spring would, the manufacturers claim. The lower shock preventer plate acts as a counter-acting spring, which checks the rebound and over action of the springs. When the wheels hit a bump these springs give more freely, having a tendency to flatten. The rebound action, after the wheels leave the ground, is counteracted by the lower shock preventer leaf, which is pulled up at a tension as shown. These shock preventers, it is claimed, will last for the life of the car and replacement is guaranteed on all reasonable breakage due to inferior materials or poor tempering. When ordering state whether the attachment is desired for the 1917, 1918, 1919 or 1920 car, as the preventers differ in construction for the models of different years.



Manufactured by the Stewart Manufacturing Co., 1536 Franklin Street, Oakland, Cal. Price, per set of four, front and rear, $22.50.

No. 32 Gasoline Torch is one quart in size and is especially adapted for the service station and repair shop. It gives an efficient flame whether used in doors or out, in hard wind or extreme cold. A strong blast heat is generated by a powerful burner, resulting in an effective blue flame, which will, the manufacturer states, heat a copper soldering iron to soldering heat in a very few minutes time.

The torch uses a very small amount of fuel and is stated to be unusually well built throughout of the best of materials obtainable. A hook and support are attached to the top of the burner by which the repairer is able to heat soldering coppers, while a powerful air pump is fitted at the side, which compresses air, causing a very intense flame.

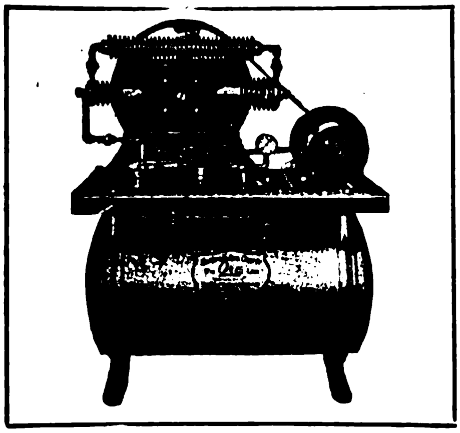
C & L
No. 32
DETROIT

Manufactured by Clayton & Lambert Manufacturing Co., 1370-80 Beaubien Street, Detroit, Mich. Prices and literature on request.

Complete and Modern Line of Air Compressors

A COMPLETE and modern line of air compressors to supply the now well known "filtered air" to motorists has just been designed and brought out by the Auto Compressor Co. of Wilmington, O.

For more than 10 years this company has made and marketed the Model O compressor, which is known to the trade from Maine to California. The new line presents a complete list of sizes, capacities and pressures in single and two-stage types to take care of every need of the trade.

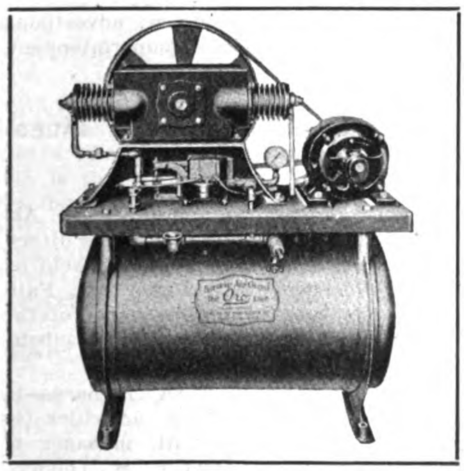


Model A-25.

The new models range all the way from a small, portable, direct connected outfit for the private garage to a big. two-stage compressor supplying air at 300 pounds pressure for a large garage housing pneumatic tired trucks. Most of the models are offered only as complete outfits with motor, compressor. piping. tanks and gauges, although Model O may be had, as heretofore, as a separate compressor.

All tanks are designed to carry a special filtering fluid, which removes oil. dust and dirt from the air and delivers it to the tires in a pure state so as not to cause any deterioration in the rubber of the inner tubes.

These compressors are made in the single-stage type where practical machines are desired in either large or small capacity that will be low in first cost and have all the dependability of the best material and good workmanship. The two-stage outfits are designed to compress air with the utmost economy in consumption of power and with every possible convenience for 24-hour operation without attendance.



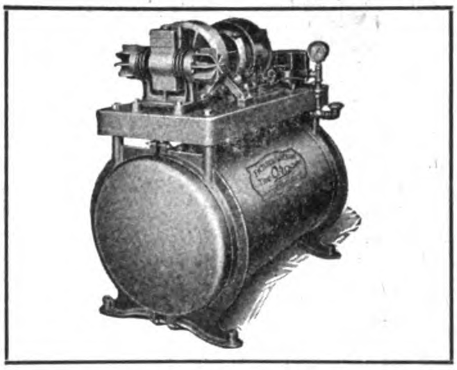
Model A-27.

The Model O still leads the line. It is a single-cylinder, single-acting, single-stage compressor with one three-inch bore, four-inch stroke cylinder, which compresses 6½ feet of air to 300 pounds pressure at 400 revolutions per minute. It requires a 1½ horsepower motor.

Model A 25 is another two-stage machine complete with tank, gauge, motor and fittings, and is intended to supply air at from 120 to 150 pounds pressure, giving 24-hour service without any attention. The cylinders are 2½ inches bore with 2½ inches stroke on the low pressure cylinder. The same type and size of compressor is furnished to supply air for large truck tires up to 300 pounds.

Model B 35 is similar to A 25 in every respect except as to size, being intended for the modern large garage housing hundreds of cars and requiring a large volume of air.

Model A 27 is a compressor of the same size for the same purposes as A 25. giving 24-hour automatic service for moderate requirements, but it is a single-stage instead of double-stage type. It has two cylinders of similar size, each working up to full pressure. B-37 is a single stage. outfit, similar in other respects to B-35.



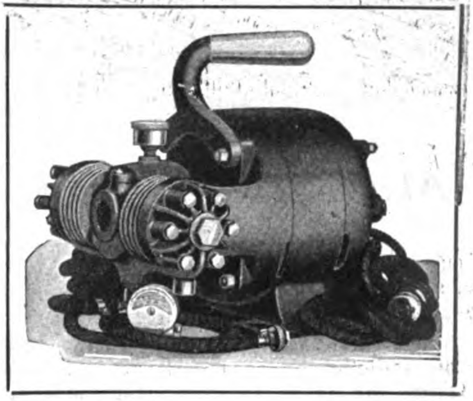
Model F-14.

For truck garages serving pneumatic tire equipped trucks, there is a compresser similar to B-35, but equipped with a larger motor to supply air up to 250 pounds pressure.

Model 10 is a little compressor for private garages. It weighs only 35 pounds. The plug can be screwed into any light socket and in a minute the ordinary tire is fully inflated. This compressor has opposed cylinders, 1⅝-inch bore by ¾-inch stroke, and a capacity of 2.6 cubic feet of free air a minute. It works up to 100 pounds pressure.

A new type of compressor, Model F-14, chiefly remarkable for its compactness and the small space into which it compresses a fully equipped automatic 24-hour service outfit. It has double opposed cylinders 1⅝ inches bore by one-inch stroke and provides 150 pounds pressure at 1140 revolutions a minute. Model F is the same type of compressor set up in a portable form.

In addition to this line of compressors the Auto Compressor Co. announces a new line of tools, which includes a spark plug and cylinder head cap screw wrench for Fords, an adjustable open-end wrench made in a number of sizes, and a set of slip joint pliers which are also made in a variety of sizes. A chain valve spring lifter for all makes of cars is also included in the line.

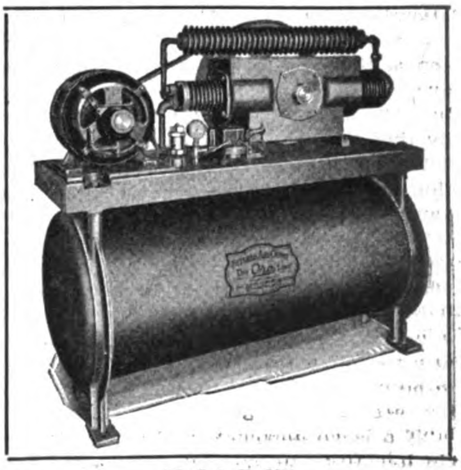


Model 10.

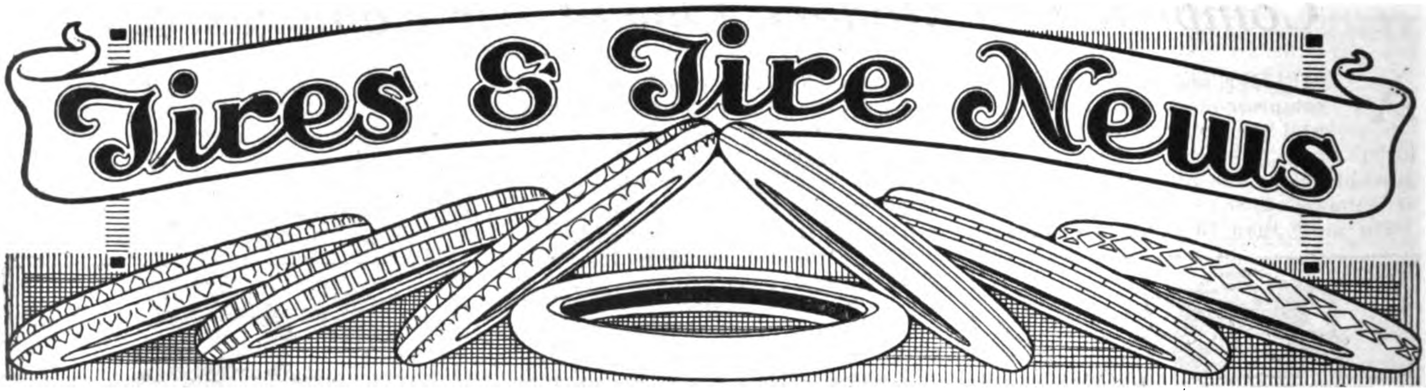
PENNSYLANIA AND ATLANTIC SEABOARD HARDWARE SHOW.

The 20th annual exhibition of the Pennsylvania & Atlantic Seaboard association will be held at the Commercial Museum, Philadelphia, Feb. 8-11. This association comprises approximately 1400 hardware dealers in the states of Pennsylvania, New Jersey, Delaware and Maryland. It has always maintained that the hardware store is one of the most consistent channels for the distribution of automobile accessories and advises its members to handle this line of goods. The motto is stated to be "Buy of the Exhibitors."

The secretary of the association, Sharon E. Jones, 1314 Fulton building, Pittsburgh, Pa., will gladly supply a diagram of floor spaces and other show information.



Model B-351.



Tires & Tire News

Akron Tire Officials Are Optimistic

Officials of the Akron rubber companies are optimistic regarding the outlook for 1921. They point out that the rubber industry was one of the first of the large industries to sense the retrenchment movement and curtail production accordingly, and hence will be one of the first to be favorably affected when normal conditions return.

"During the past few months since tire manufacturers curtailed production," says the B. F. Goodrich Rubber Co., "consumption of tires has greatly exceeded production. Great inroads have been made into the surplus of 10,000,000 tires which was said to exist Sept. 1.

"According to 1920 automobile registration figures, there are now 9,295,252 motor vehicles in use. Figuring conservatively, each car uses 3½ tires a year. In other words, about 32,000,000 tires are needed annually, or about 2,710,000 each month, exclusive of those needed to equip new cars.

"Production since last September has been at the rate of not more than 8,000,000 tires a year, or about 660,000 each month. Consequently, 2,000,000 more tires are being consumed each month than are being manufactured—the production rate being just about one-fourth the rate of consumption. The surplus stocks which existed last fall are rapidly dwindling as a result. How long it will be before they disappear entirely can easily be computed.

"Recent reductions in tire prices have stimulated buying. Experienced motorists recognize that this is the right season of the year to buy tires. Those who are waiting for warm weather may not be able to purchase standard makes, as by that time the full effect of the 2,000,000-a-month difference between production and consumption will be come apparent.

"The surplus of last fall cannot be counted upon to ward off a shortage when the full buying movement starts. It has been greatly depleted already and it must be remembered that there must be a normal surplus of over 5,000,000 tires to permit the functioning of the distribution system.

"If a large percentage of motorists begin buying simultaneously, there will not be enough tires to go around. Whatever surplus of tires may exist prior to that time will be exhausted, dealers' stocks will be depleted and many motorists will have to wait until production again catches up with consumption.

"The possibility of a spring tire shortage is greatly increased by the open winter. Countless motorists are driving their cars this winter who formerly placed them in storage. If the weather continues mild it can be safely estimated that several million more tires will be required in the spring than if the weather had been severe."

Lynn Harvey, Head of New Export Department of India Tire Co.

Harvey Heads India's Export Dept.

The export business of the India Tire & Rubber Co. of Akron is stated to have reached such proportions as to necessitate the establishment of an export department, and it is in charge of Lynn Harvey of Akron. Mr. Harvey brings to his new duties the experience of a good many years spent in the export business. He was formerly assistant export manager for the Miller Rubber Co. of Akron, with which organization he was connected for three years. For six years previous to that he was with the H. K. Porter Co., Pittsburgh's well known locomotive manufacturers.

Mr. Harvey returned about two months ago from a year's trip abroad in the interests of the Miller Co. He covered Australia, Tasmania, New Zealand and Hawaii, and reports business very good.

PRODUCTION STARTED IN NEW BLEKRE PLANT.

The Blekre Tire & Rubber Co. recently organized with a capital of $4,500,000, has started production in its new plant at St. Paul, Minn. The company will manufacture high grade cord and fabric tires and tubes. The plant has a capacity of 2000 tires a day and will employ 250 operatives.

The officers of the company are: President, E. O. Blekre; vice president and treasurer, S. E. Blekre; secretary, G. W. Wells; vice president and general sales manager, S. A. Rheihstrom; advertising manager, G. O. Ludcke; superintendent, W. E. Greer.

L. G. Fairbanks, Director of Sales for Firestone Tire & Rubber Co.

FAIRBANKS IS FIRESTONE SALES DIRECTOR.

The Firestone Tire & Rubber Co., Akron, O., has made L. G. Fairbanks director of sales, a position heretofore held by Vice President Partridge. Mr. Fairbanks has been general manager of the Firestone Steel Products Co., a subsidiary of the tire company.

He has appointed G. A. Richards in charge of all Firestone activities in Michigan; George Burkitt, manager of the Detroit branch, and P. M. Thomas, office manager of the Detroit branch.

New Officers of Tire Companies

Ohio State Rubber Tire Co., Port Clintin, O.—President, A. Schroeder, Cleveland; vice president, J. F. Langenau, Cleveland; secretary, Harman Hankammer, Port Clinton; directors, W. S. Lee of Bellevue, E. P. Reichert and S. E. Ferner of Port Clinton, in addition to Messrs. Schroeder and Langenau.

Northeastern Rubber Co., New York—President and treasurer, Richard G. Bryant, Racine, Wis.; director and vice president, Ludwig T. Kuehl. Racine, succeeding George G. Bryant. Milwaukee; director and secretary, Charles E. Davis.

McGraw Tire & Rubber Co., Cleveland, O.—President, John Morgan (re-elected); secretary and treasurer, William S. Marlatt; directors, John Morgan, L. M. Kyes, Chas. W. Wheeler, Wm. S. Marlatt, W. S. Quinlan, Maynard H. Murch, Mac S. Bethel, Geo. E. Randles.

NEW DIRECTOR OF SALES FOR FISK.

The Fisk Rubber Co., Chicopee Falls, Mass., has promoted its sales manager, Fred H. Ayers, to be director of sales in charge of the sales, advertising and publicity departments. His successor as sales manager will be William Weild, formerly assistant in this position. Leon N. Southmayd and Charles H. Gage have been made assistant sales managers. Karl S. Chamberlin, formerly assistant manger of export sales, has been made manager of this department.

STEPHENS CO. OPENS AT LITTLE ROCK.

The A. J. Stephens Rubber Co., Inc., Kansas City, Mo., has opened a branch at Fourth and Center streets, Little Rock, Ark., under the management of E. K. Matthews.

A wholesale and retail distributing branch is also to be opened at 609 Francis street, St. Joseph, Mo., in charge of F. C. Kraus, formerly supervisor of sales of the Keystone Tire & Rubber Co. of New York city.

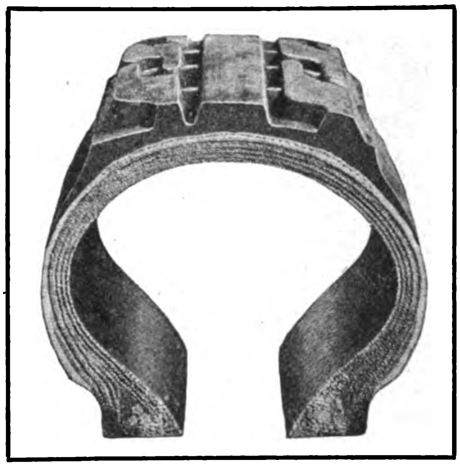
The Topeka, Kan., branch is located at 916 Kansas avenue.

REPUBLIC RUBBER RESUMES.

It is announced by President E. F. Jones that all of the tire and tube departments of the Republic Rubber Corporation in the factories at Youngstown. O., resumed operations on Jan. 10 and will work on three eight-hour shifts. The mechanical goods department resumed Jan. 17. The plant had been closed since Dec. 23 for inventory and repairs.

MARTIN TO MAKE TRUCK TIRES.

The Martin Tire Corporation of New York city, which has been specializing on passenger car tires, is planning to increase its line by the addition of larger sizes for trucks.



Cross Section of New Syra-Cord Truck Tire.

SYRA-CORD TIRES FOR TRUCKS.

Syra-Cord pneumatic truck tires in the larger sizes are now being made in the plant of the Syracuse Rubber Co., Syracuse, N. Y. The cross section of the 36 by six-inch size, illustrated above, shows the construction. The tread is made wide and heavy at the edges, both to furnish greater wear and give the truck greater traction in starting and when under way. It is claimed that a tread of this type takes hold of the road more easily than a more rounded one.

NEW FACTORY FOR LATEX CO.

The Latex Tire & Rubber Co., Fond du Lac, Wis., is to build a two-story factory addition, 60 by 80 feet, in that city, to cost about $45,000 equipped. The company's present plant was finished less than nine months ago and has been crowded beyond capacity since June.

BERGOUGNAN UNITS COMPLETED.

The Bergougnan Rubber Corporation has finished work on its factory units at Trenton, N. J., and is now in a position to enter on a full production schedule of pneumatic tires for passenger cars, trucks and motorcycles, as well as tubes.

VICTOR'S PRODUCTION SCHEDULE.

The plant of the Victor Rubber Co., Springfield, O., is reported as having gone on to a production schedule of 300 tires a day on Jan. 17, and that 140 men are at work, with increases later.

Unique Granville Floating Tire

Bernard Granville, a widely known consulting engineer, has invented what is characterized as a trouble proof pneumatic tire, under the trade name of the Granville Floating Tire, which is designed on the unique principle of a rubber treaded steel band protecting the shoe or casing, containing the inner tube. Its construction is claimed to be such as to render it proof against puncture, blow outs, rim cuts, sand blisters and stone bruises. Other advantages are stated to be that there can be no separation of fabric, because the area of flexing of the casing is much greater than in the ordinary pneumatic tire, thus obviating any abrupt bending of the fabric; there is no heating because the heat generated by road friction is radiated through the edges of the steel band, which are exposed to the air as the tire revolves and act as a fan, keeping the casing and tube always cool and that its floating principle keeps the travel of the axle in the same plane regardless of inequalities of road surface, because the movement of the shoe is from the inside outward instead of from outside inwards.

The Granville floating tire is the result of six years of experimentation and has been tested for several years, it is stated, by the most trying tests on the road. It is constructed with beads of standard size and shape and is made in all sizes adopted by the United States standardization board.

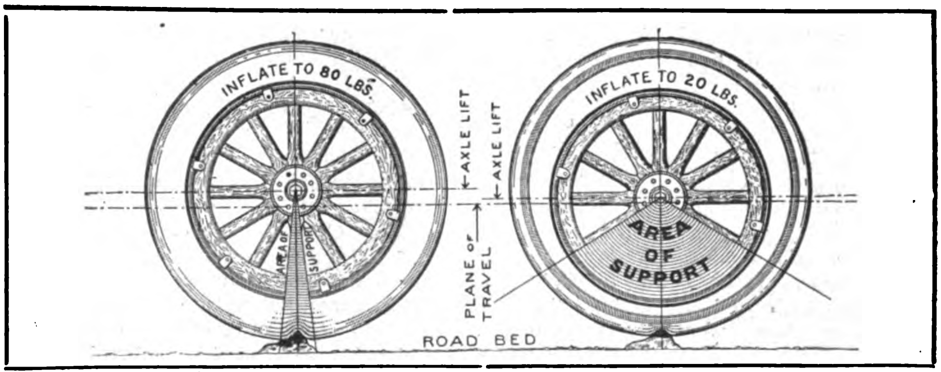
It is being offered by the Granville Tire Co., 1926 Broadway, New York city, recently incorporated with an authorized capital of $15,000,000.b

NORWALK'S NEW YORK DISTRIBUTOR.

Wilbur Hobbs, who is well known in the Metropolitan automotive district, is to open a branch at 332 West 58th street, New York city, for the Norwalk Tire & Rubber Co., Norwalk, Conn.

MASTER RUBBER CO. RESUMES OPERATIONS.

The Master Rubber Co., Dayton, O., has resumed operations with a full force after a lay-off of six weeks.



Sketches Showing Comparison Between Granville Floating Tire and Ordinary Type.

Optimistic Outlook for Tire Dealer

John Hausam, secretary and treasurer of the Lambert Tire & Rubber Co., Akron, O., who recently returned from a 2500-mile trip embracing points from Kansas City east to New York city, from his observations at such representative places as St Louis, Kansas City, St. Joseph, Chicago, New York and Washington, D. C., reports that there is a solid ground for the spirit of optimism throughout the country.

"There is a splendid opportunity ahead for the legitimate tire and honest dealer," said Mr. Hausam, "and nearer than some of us have perhaps been thinking.

"For the dealer who has kept his name and the reputation of his product unsullied the way for good business is pretty well cleared, because the cheap, and in many cases inferior, tires which have been dumped in the market in the past few months have been largely disposed of. The consumer who bought them is now disillusioned and, as a result, the dealer who sold them discovers himself flat on his back.

"It is a little hard to feel sorry for such dealers, because they are simply lying in beds of their own making. They chose to pick up some easy money while they could and now their opportunity has passed.

"All of this renders the future of the honest, conservative dealer a bright one. If he has built well and without the semblance of misrepresentation, the name of his tire remains standard in the consumer's mind and is synonymous still with quality and reliability. The success of his business is assured; in fact, it has become all the more certain by reason of the temporary prosperity of the 'boomers' and the 'fly-by-nights.'"

DUNN HEADS AMERICAN RUBBER ASSOCIATION.

At the annual meeting of the directors of the Rubber Association of America, held in New York city, Jan. 14, Harry T. Dunn, president of the Fisk Rubber Co., was chosen president, suceeding Homer E. Thayer of the United States Rubber Co., who had served two terms.

The other officers chosen were: First vice president, F. A. Seiberling, president of the Goodyear Tire & Rubber Co.; second vice president, Horace DeLisser, chairman of the board of the Ajax Rubber Co.; secretary and general manager, A. L. Viles; treasurer, William C. Cox.

Prior to the meeting of the directors the organization elected five directors who were: Messrs. Seiberling, Dunn, DeLisser, William O'Neill, vice president of the Central Tire & Rubber Co., and F. R. Henderson, president of F. R. Henderson Rubber Co., dealer in crude.

MILLER ANNOUNCES DECREASE.

The Charles E. Miller Rubber Works, Anderson, Ind., has announced a general readjustment of tire prices downward, which includes an especial reduction in cord tires, and one of 15 per cent. applying to Catalogue No. 28, comprising tire molds, cores, vulcanizers, complete equipment for tire and rubber repair shops, rubber repair stocks, vulcanizing and rubber workers' supplies, etc.

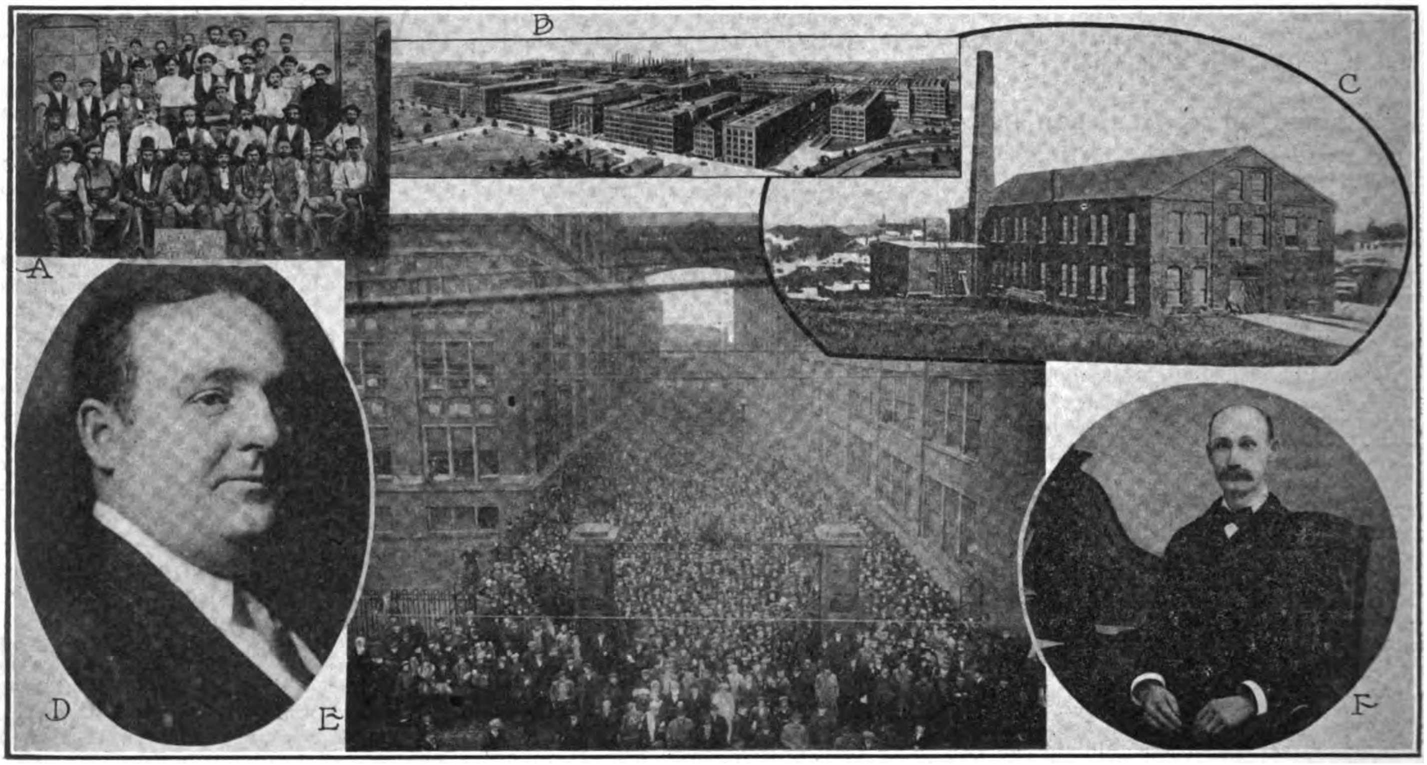
Golden Anniversary of Goodrich Co.

Fifty years ago, Dec. 31, 1870, saw the incorporation of the B. F. Goodrich Rubber Co., Akron, O., the pioneer rubber factory of the Rubber City. The founder, Dr. B. F. Goodrich, was a physician by profession, and became interested in the industry by having acquired a small rubber factory at Hastings-on-the-Hudson, N. Y., in a real estate deal.

As a result of a quest for financial help he finally went to Akron and located in a small two-story brick building with a force of 25 employees. This little factory of 50 years ago has grown until today it comprises 63 buildings of brick and steel, covering 110 acres of ground.

The first product Goodrich ever made was fire hose. Article after article was then added to its list of manufactured goods until today approximately 30,000 rubber products are made. The next step in its growth came with the development of the bicycle, for which Goodrich designed and manufactured pneumatic tires. Before this period, however, the company had taken the initial step in the evolution of rubber shod wheels by perfecting the solid rubber tire for carriages. The success of this tire, followed by that of the pneumatic tire for bicycles, naturally led to consideration being given for auto tires.

The Goodrich company is commemorating the anniversary by publishing a 48-page booklet called the "Golden Year of Goodrich," telling of the romance of the rubber industry, its history and its progress.



Golden Anniversary of B. F. Goodrich Rubber Co, Akron, O.: A—Goodrich Factory Force in 1870; B—Bird's-Eye View of Plant, 1920; C—First Goodrich Building, 1870; D—B. G. Work, President of B. F. Goodrich Co.; E—Employees Leaving Plant in 1920; F—Dr. B. F. Goodrich, Founder of B. F. Goodrich Rubber Co.

Delion Co. Marketing Two New Tires

The Delion Tire & Rubber Co., Baltimore, Md., signalized the opening of the new year by the offering to the public of two new models, one a cord and the other a fabric tire, which, it is claimed, embody the most recent tested improvements in design, construction and processes of manufacture.

The new Delion cord tire is cured over air bags, under a constant pressure, to stretch cut any possible buckles in the fabric, the frequent cause of fabric separation. It has the new jet black, crown tread, which affords an unusual broad, practically flat, non-skid wearing surface, and which distributes road strain evenly throughout the carcass. The husky tread and the broad white band on the side wall make this tire as attractive on the car as it is flexible, resilient and strong.

The new fabric tire is the wrapped tread model with jet black, clover leaf tread, contrasting with white side walls. Its broad tread was designed to afford the maximum non-skid protection combined with long wear.

Both of these tires are stated to be made of the finest quality material it is possible to buy. They are permanently cured by a process which has been worked out through years of study by the company's chemists. Every step in their manufacture is given the continual supervision of experienced engineers.

After its seven years of successful business experience the Delion Tire & Rubber Co. has now moved to its new plant in Baltimore, where improved machinery and the most modern tire building equipment make this what is claimed to be one of the most up-to-the-minute tire factories in the country.

The present persommel of the company is as follows: John W. Price, president, is a man who has achieved an enviable reputation in the fields of law and of big business. Robert B. Arnold, vice president, in charge of production, is chief chemist and a master in his profession. He has devoted years of intensive study to the manufacture of rubber and rubber compounds. W. C. Price, vice president, in charge of purchase and sales, is well known to the trade, through his long association with the Delion company. He has behind him 20 years of successful experience in his particular branch of executive work.

R. L. Swats, sales manager, is a sales veteran, having been identified with the mechanical rubber goods and tire industry for 18 years. Earle E. Harrington, general superintendent of the plant, is a native of Akron, O., and has held positions of importance in the Marathon, Firestone and Goodyear companies.

The branch managers of the company, H. F. Seltzer of Washington, D .C., Wm. J. Wilson of New York and Charles B. Lynch of Philadelphia are boosters well known to the trade in their respective territories.

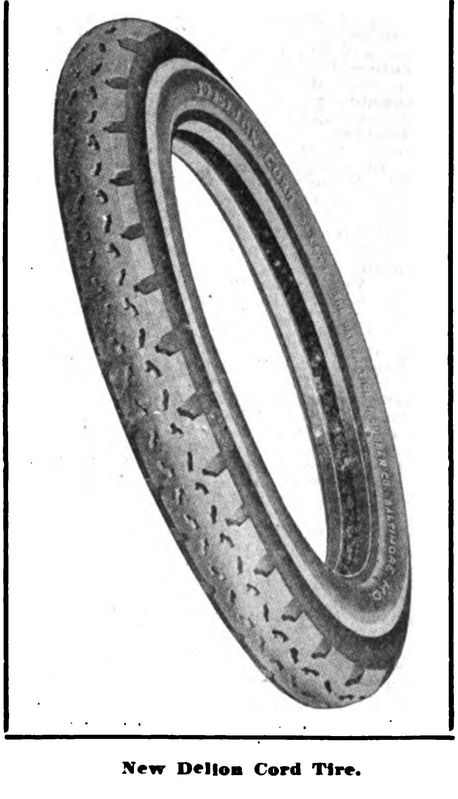
C. L. Mason, Who Has Just Been Appointed Sales Manager of the Denman Myers Cord Tire Co.

New House Organ.

The Delion company has just issued the first number of a magazine for Delion dealers. The January issue of this crisp little 16-page book is printed in two colors, on high quality stock, and is full of attractive illustrations and interesting information for the tire dealer. It is named "Free Air."

Any tire dealer may have this publication sent to him regularly by mailing his request to the Delion Tire & Rubber Co., Baltimore, Md.

The India Tire & Rubber Co., Akron, O., has declared a quarterly dividend of 1¾ per cent. on preferred stock and two per cent. on common, payable Jan. 3.



New Delion Cord Tire.

Mason Becomes Sales Manager

The Denman Myers Cord Tire Co., with general offices at Cleveland, O., and factory at Warren, O., has just announced the appointment of C. L. Mason as sales manager.

Mr. Mason was selected by the executive committee of the Denman Myers Co. from a long list of applicants for this important position, being considered particularly qualified from his long and successful experience in the rubber industry. He has held the office of sales manager for one or two of the largest rubber companies in Akron.

Mr. Denman, general manager of the company, also announces that within a very few weeks the factory output will be more than doubled.

BRIEF FINANCIAL NOTES.

Wilson Tire & Rubber Co., Springfield, Ill., is reported to have voted to pass dividends for the year 1921.

Kelly-Springfield Tire Co., New York city, has declared dividends of $1 and three per cent. in stock on common stock, payable Feb. 1, and a quarterly dividend of $2 on preferred stock, payable Feb. 15.

United States Rubber Co. will pay a regular quarterly dividend of $2 a share on its first preferred, and $2 a share on common stock on Jan. 31.

Keystone Tire Co. has decided to pass its quarterly dividend of three per cent. due at this time in order to conserve its cash resources and to take advantage of the present low price of crude rubber and fabric. Since the latter part of 1916 quarterly dividends of three per cent. have been paid on the common. In 1918 a stock dividend of 33 1/3 per cent. was declared, followed by two stock dividends of 15 per cent. each in March and July last year.

The Boston Woven Hose and Rubber Co., Cambridge, Mass, has issued a financial statement as of Aug. 31, 1920, which gives total assets of $10,448,348 as compared to $7,340,409 of a year ago. Merchandise is $4,926,299 as against $2,675,-255 of a year ago, while cash and debts receivable are $2,506,938 compared to $1,809,192 for the year before. Accounts and notes payable are given at $3,336,352 compared to $1,460,026, while the surplus is recorded as being $2,161,996 against $2,030,383 for the previous year.

Doss Rubber & Tube Co., Atlanta, Ga., has filed a petition for permission to increase its capital to $1,000,000.

ADDITIONAL FUNDS FOR AMERICAN DUNLOP.

The Dunlop Rubber Co. of London, England, has announced that it has assumed the responsibility for providing additional funds to place its American subsidiary in a position to complete construction work on its $15,000,000 plant at Buffalo, N. Y., and to provide working capital.

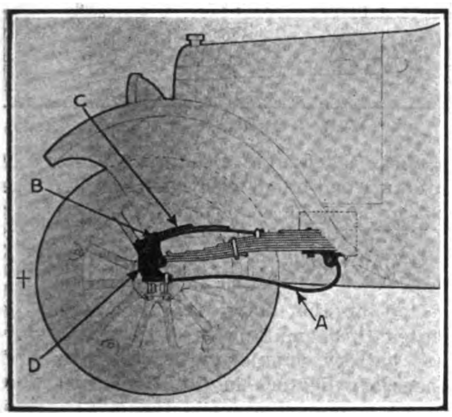
Picher, Okla.—A. L. McKinney, Netta St. Garage, 201 S. Netta St., to build new garage near 3rd and Connell Ave.

NEW MARVEL SHOCK ABSORBER.

A shock absorber known as the Marvel, Type C, designed for cars having cantilever springs, the product of the Marvel Shock Absorber Corporation, 6520 Carnegie avenue, Cleveland, O., is a new addition to the automobile accessory field.

The Marvel is unique and original in design in that the cantilever spring of a car is lifted off the axle and suspended in a full floating hanger free to move. A radius rod of spring steel is employed parallel to and under the main car spring. The weight of the car is still on the cantilever spring, but the propelling force pushing the axle is in the radius rod, A, shown in cut.

Thus a shock to reach the body of the car must pass from the axle to the pivotal hanger, D, then the force is shunted directly to the roller bearing in the pendulum hanger, B, and is drawn off by the sensitive equalizer springs, C, thus absorbing approximately 75 per cent. of all road shocks.



Type C, Marvel Shock Absorber: A, Radius Rod; B, Pendulum Leverage Hanger; C, Vibration Equalizer Spring; D, Pivotal Hanger.

The manufacturer states that an exclusive feature of the Type C Marvel Shock Absorbers lies in the fact that they produce vertical or up and down resilience similar to all snubbers and shock absorbers, and that in addition they cushion longitudinal or head-on thrusts due to the slight slipping action of the main cantilever springs of the car within the pendulum hangers.

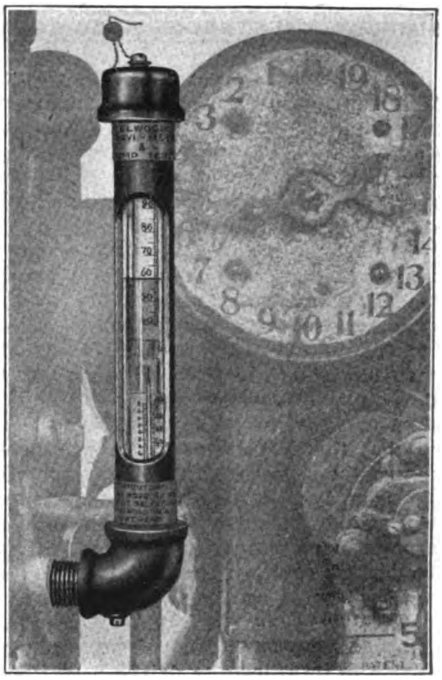
The Marvel Shock Absorber Corporation was originally a western concern, conducting a plant at Portland, Ore., for the past year having manufactured and distributed 5000 sets of type A and B models almost exclusively on the Pacific coast. A modern factory was recently opened in Cleveland, which will render possible the distribution of the Marvel product over a wider territory.

The several cars equipped with cantilever springs, and to which Marvel shock absorbers are applicable, are the Chevrolet, Buick, Dort, Mitchell, Haynes, Saxon and Paige. A complete set of Marvels, front and rear, for 490 model Chevrolet, sells for $35.

ELWOOD GRAVITY GAUGE.

The Elwood Gravity Gauge Sales Corporation, Elwood, Ind., after several years of experimental work by Billy Tidmarsh, the ex-auto race driver, is offering to the public a gauge termed the Elwood Gravi-Meter and Pump Tester, that is claimed to be unique in its field. It is stated to follow a scientific principle and to be right not only theoretically, but gives practical proof of its utility in every day use. The manufacturer also claims that this gauge will afford protection to the buying public inasmuch, as is shown in the cut, it shows the actual test of the gasoline. This is stated to be accurate regardless of weather conditions and, being easily read, it enables the buyer to determine its quality. If air is being given instead of liquid, it also is detected by the appearance of small bubbles which arise in the Gravi-Meter, this air taking the place of the liquid and leaving the gauge dry as pressure is applied to the pump. This gauge not only enables the operator to detect in his system any leaky foot valves, loose connections, cuts, but also to determine when the tank is pumped dry. It turns a non-visible pump into a visible one, as the gasoline is visible in the gauge moving up and down as it is being discharged. It is fool proof in every respect.

It is manufactured by the Elwood Gravity Gauge Co. and distributed by Elwood Gravity Gauge Sales Corporation, Elwood, Ind. Prices and distributors' proposition and literature will be furnished upon request.



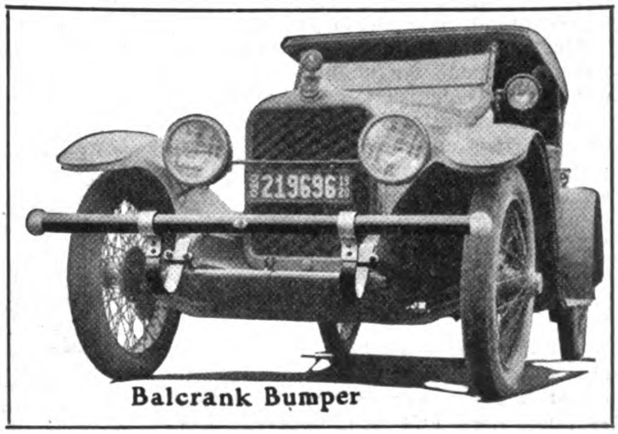
Elwood Gravity Gauge—Liquid Visible in Gravi-Meter at All Times Insures Correct Measure.

CINCINNATI BALCRANK BUMPER.

One of the accessories that was exhibited for the first time at the Chicago and later at the St. Louis and Cincinnati automotive equipment shows, and occasioned a considerable amount of favorable comment was the Balcrank Bumper, which is manufactured by the Cincinnati Ball Crank Co., Cincinnati, O.

The Balcrank Bumper is not the development of any particular idea, but is the result of considerable research work from the engineering and experimental side to develop a bumper that would give complete protection. It was found that a straight rigid bar of the proper length, supported by spring steel strips, permitted of universal attachment, and at the same time gave protection. The general principle of the bumper having been determined it was turned over to a number of artists and designers to be developed so as to look well on the car. The result is a bumper which is said to improve the appearance of the car, and at the same time give thorough protection.

The Cincinnati Ball Crank Co., does not confine its activities exclusively to the manufacture of Ford accessories, but furnishes the Balcrank Bumper in a number of different styles and finishes suitable for practically every make of car. Jobbers' and dealers' proposition will be furnished upon request.



Balcrank Bumper

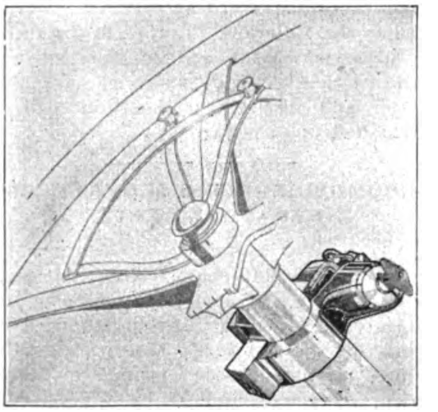
LOCOMOBILE REPRESENTATION IN NEW YORK STATE.

The Locomobile car, one of the products of Hare's Motors, is now to be represented in central and northern New York by the T. N. C. Motor Sales Co., which maintains sales rooms in Watertown, Syracuse and Utica. This company, which was organized in October with a capitalization of $250,000, is officered as follows: President, F. H. Taylor; treasurer, J. R. Newton, and secretary, L. W. Quick, all of Watertown. The Watertown headquarters are at 181 Arsenal street. The Syracuse branch is managed by Malcolm Dorion and is located temporarily at 111 West Taylor street. The Utica branch, at 465 South Genesee street, is managed by E. L. O'Donohue.

SIMPLEX THEFTPROOF AUTO LOCK.

The Simplex Corporation, 2214 South Michigan avenue, Chicago, Ill., maker of the Simplex steering wheel lock for Ford, Dodge, Overland and Chevrolet cars, has added to its line the Theftproof Auto Lock, formerly made by the Hershey Manufacturing Co., Denver, Col.

The Simplex Theftproof Auto Lock consists of a neat nickel plated ring, attached permanently and rigidly to the steering post of an automobile. When lock is in a closed position, a strong, case hardened steel pin passes through the outside steering column into the steering tube and holds the steering gear so that the position of the front wheels cannot be changed. This prevents the car from being driven or towed. A Corbin cylinder lock of the most approved type is used which, it is stated, cannot be picked or forced open. This device can be locked and unlocked in a second's time, right from the driver's seat. It is so convenient that from the very day it is installed the driver uses it unconsciously every time he leaves the car, just as naturally as he switches off his ignition. This is very important, for it has been proven that locks which require more time to operate and which soil the hands and clothes, lead the average driver to "take a chance," if planning to stop only a moment—and in that moment the car is stolen. The Simplex Theftproof Lock is self-adjusting. You simply close the lever, turn the key and step out of the car. The moment a joy rider or a thief turns the wheel the pin snaps into place and the front wheels are locked in "straight ahead position."

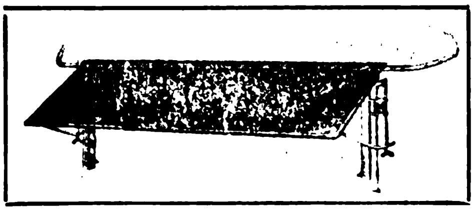


Simplex Theftproof Auto Lock.

The lock is attached permanently and rigidly, without the slightest change in the original construction of the car. Any mechanic can attach it with the use of a screw driver and breast drill. It is approved by the Underwriters' Laboratory, securing a reduction of 15 per cent. in insurance premiums. The price at retail is $15.

SEE-WEL WINDSHIELD CANOPY.

The See-Wel Windshield Canopy is designed to shield the eyes from the sun, street lights or approaching head lights of other cars, and to protect the windshield from rain, snow and sleet, giving the driver and occupants of the car a clear vision across the full length of the windshield in any weather, day or night.



See-Wel Windshield Canopy.

The See-Wel is made in two sizes to fit all open and closed cars, is easily attached in a few minutes and is stated to add a touch of refinement and beauty, as well as serving a needed comfort and convenience.

It does not interfere with the operation of the windshield, spot light, side wings, rear view mirror or top of car, and can be instantly adjusted to any angle to suit the vision when driving.

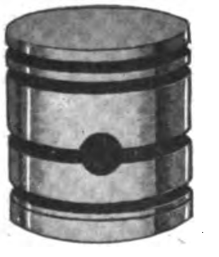
The See-Wel is attached with Universal clamps, which fit any shape of windshield post; it can also be attached to Ford touring cars and roadsters by the use of extension bars, and does not interfere with the operation of the windshield or top. Closed car models are screwed to the body of the car and can also be attached in the same manner to cars already equipped with glass rain shields, without interfering with the operation of either.

The See-Wel is furnished complete with proper fittings ready to attach. It is manufactured by the Model & Metalwork Manufacturing Co., 120 Opera place, Cincinnati, O. The retail price in the standard finish (black top and under side) is $8.50; de luxe finish (black top and green under side), $10.

SPECIAL WAINWRIGHT PISTONS.

Among the special types of pistons now being featured by the Wainwright Engineering Corporation, Connersville, Ind., is one especially designed for Oakland, Olds and Scripps-Booth cars, which are equipped with Northway motors. This is an especially light weight design to replace aluminum and weighs but 14½ ounces. The wide oil relief groove entirely around the piston at the level of the piston pin hole may be particularly mentioned; also the oil grooves in the piston pin bearing, which insure ample lubrication of the piston pin.

Another special type is one for the Ford motor, which is made from the finest gray iron, ground to a glass surface and guaranteed to be absolutely accurate in every detail. The dome shaped head increases its strength and prevents the accumulation of carbon.



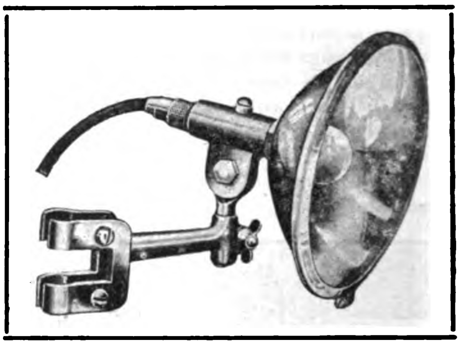
Special Light Weight for Olds and Oakland "6."

The Wainwright Engineering Corporation is making pistons for all the other popular makes of cars in standard sizes and oversizes.

K-D DELIGHT SPOT LAMP.

One of the products that is now being featured by the K-D Lamp Co., 108 West Third street, Cincinnati, O., maker of the well known K-D line of automobile lamps, is the Delight Spot Lamp, which is illustrated herewith. The lamp is of the latest form of construction, single shell type. The reflector is pressed from brass, of proper gauge, polished and silver plated. The glass is convex, held securely in place by a nickel plated band. The bracket is K-D special design, made from brass and nickel plated. As it will be noted that all parts of this lamp are made from brass and nickel plated it is therefore rust proof.

The bulb is 6-8-volt, 21 candlepower Mazda "C," double circuit. Five feet of cord are supplied with each outfit. The list price is $9.



K-D Delight Spot Lamp.

UNIVERSAL POST CONNECTION.

One of the many features which is stated to be making the Cincinnati storage battery popular with motorists and accessory dealers is the Universal post connection. The Cincinnati Storage Battery Co. states that this device assures a positive terminal connection in all cases where dealers are called upon to replace batteries with the "Cincinnati."

The Universal post connection consists of a patent locking nut and sleeve, the sleeve being firmly welded to the top of the center post and holding the locking nut in position when it is drawn into place.

It is furnished with various sized tapered posts to make a perfect fit with any terminal, no shims are required, and thus the connections cannot come loose through vibration. This feature makes it possible to instantly replace all standard batteries with the Cincinnati storage battery.

A letter or post card, addressed to the Cincinnati Storage Battery Co., Moorman avenue, Cincinnati, O., will bring full information concerning the product.

ECLIPSE TAKES OVER SAVIDGE.

The Eclipse Manufacturing Co., Indianapolis, Ind., manufacturer of the Hercules line of spark plugs, has announced the taking over of the distribution and sale of Savidge valve lathes and reamers, made by the A. C. Savidge Co. of Indianapolis.

Directory of Passenger Car Manufacturers

Trade Names of Vehicles, Names of Makers and Their Addresses, by Cities and States, of Principal Concerns Now Actively Engaged in the Industry

The Basis of This Directory Is the Trade Names, Which Are Alphabetically Arranged, and Each Individual Group Is Identified by a Letter, So That Reference to Any One Can Be Made Almost Instantly. The Models Produced by These Concerns Are Included in the Mechanical Specifications That Appear on the Following Pages.

Trade Name	Manufacturer	Address
Allen	Allen Motor Co.	Fostoria, O.
Alsace	Automotive Products Corp.	New York, N. Y.
American Beauty	Pan American Motors Corp.	Decatur, Ill.
American	American Motors Corp.	Plainfield, N. J.
Anderson	Anderson Motor Co.	Rock Hill, S. C.
Apperson	Apperson Brothers Automobile Co.	Kokomo, Ind.
Argonne	Argonne Motor Car Co.	Jersey City, N. J.
Auburn	Auburn Automobile Co.	Auburn, Ind.
Austin	Austin Automobile Co.	Grand Rapids, Mich.
Beggs	Beggs Motor Car Co.	Kansas City, Mo.
Bell	Bell Motor Car Co., Inc.	York, Pa.
Biddle	Biddle Motor Car Co.	Philadelphia, Pa.
Birch	Birch Motor Cars, Inc.	Chicago, Ill.
Bour-Davis	Louisiana Motor Car Co., Inc.	Shreveport, La.
Brewster	Brewster & Co.	L. Island City, N. Y.
Briscoe	Briscoe Motor Corp.	Jackson, Mich.
Buick	Buick Motor Co.	Flint, Mich.
Bush	Bush Motor Co.	Chicago, Ill.
Cadillac	Cadillac Motor Car Co.	Detroit, Mich.
Cameron	Cameron Motors Corp.	Stamford, Conn.
Campbell	Campbell Motor Car Co.	Kingston, N. Y.
Case	J. I. Case Threshing Machine Co.	Racine, Wis.
Chalmers	Chalmers Motor Co.	Detroit, Mich.
Champion	Direct Drive Motor Co.	Philadelphia, Pa.
Chandler	Chandler Motor Car Co.	Cleveland, O.
Chevrolet	Chevrolet Motor Co.	New York, N. Y.
Cleveland	Cleveland Motor Co.	Cleveland, O.
Climber	Climber Motor Corp	Little Rock, Ark.
Cole	Cole Motor Car Co.	Indianapolis, Ind.
Colonial	Colonial Automobile Co.	Indianapolis, Ind.
Columbia	Columbia Motors Co.	Detroit, Mich.
Comet	Comet Automobile Co.	Decatur, Ill.
Commonwealth	Commonwealth Motors Co.	Chicago, Ill.
Crawford	Crawford Automobile Co.	Hagerstown, Md.
Crow-Elkhart	Crow-Elkhart Motor Co.	Elkhart, Ind.
Cunningham	James Cunningham Son & Co.	Rochester, N. Y.
Daniels	Daniels Motor Car Co.	Reading, Pa.
Davis	George W. Davis Motor Car Co.	Richmond, Ind.
Disbrow	Disbrow Motor Co.	Cleveland, O.
Dispatch	Dispatch Motor Car Co.	Minneapolis, Minn.
Dixie Flyer	Dixie Motor Car Co., Inc.	Louisville, Ky.
Dodge Brothers	Dodge Brothers	Detroit, Mich
Dorris	Dorris Motor Car Co.	St. Louis, Mo.
Dort	Dort Motor Car Co.	Flint, Mich.

Trade Name	Manufacturer	Address
Douglas	Douglas Motors Corp.	Omaha, Neb.
Du Pont	Du Pont Motor Mfg. Corp.	Wilmington, Del.
Duryea Gem	Duryea Motors, Inc.	Baltimore. Md.
Economy	Economy Motor Co.	Tiffin, O.
Elcar	Elkhart Carriage & Motor Car Co.	Elkhart, Ind.
Elgin	Elgin Motor Car Corp.	Chicago, Ill.
Erie	Erie Motor Co.	Painesville, O.
Essex	Essex Motors, Inc.	Detroit, Mich.
Ferris	Ohio Motor Vehicle Co.	Cleveland, O.
Fiat	F. I. A. T.	New York, N. Y.
Ford	Ford Motor Co.	Highland Park, Mich.
Franklin	H. H. Franklin Mfg. Co.	Syracuse, N. Y.
Gardner	Gardner Motor Co.	St. Louis, Mo.
Geneva	Geneva Wagon Co.	Geneva, N. Y.
Geronimo	Geronimo Motor Car Co.	Enid, Okla.
Globe Four	Globe Motors Co.	Cleveland, O.
Grant	Grant Motor Car Corp.	Cleveland, O.
Hackett	Hackett Motor Car Co.	Jackson, Mich.
Halladay	Haladay Motor Car Co.	Mansfield, O.
Hamlin-Holmes	Holmes Automobile Co.	Canton. O.
Handley-Knight	Handley-Knight Co.	Kalamazoo, Mich.
Hanson	Hanson Motor Co.	Atlanta, Ga.
Harroun	Harroun Motors Corporation	Wayne, Mich.
Harvard	Harvard-Pioneer Motor Car Corp.	Troy, N. Y.
Hatfield	Cortland Cart & Carriage Co.	Sidney, N. Y.
Haynes	Haynes Automobile Co.	Kokomo, Ind.
Hollier	Lewis Spring & Axle Co.	Chelsea, Mich.
Holmes	Holmes Automobile Co.	Canton, O.
Hudson Super-Six	Hudson Motor Car Co.	Detroit, Mich.
Hupmobile	Hupp Motor Car Corp.	Detroit, Mich.
Jones	Jones Motor Car Co.	Wichita, Kan.
Jordan	Jordan Motor Car Co.	Cleveland, O.
King	King Motor Car Co.	Detroit, Mich.
KisselKar	Kissel Motor Car Co.	Hartford, Wis.
Kline Kar	Kline Car Corp.	Richmond, Va.
Lafayette	Lafayette Motor Co.	Indianapolis, Ind.
La Marne	La Marne Motor Car Co.	Cleveland, O.
Laurel	Laurel Motor Corp.	Anderson, Ind.
Lenox	Lenox Motor Car Co.	Hyde Park, Mass.
Lexington	Lexington Motor Co.	Connersville, Ind.

Trade Name	Manufacturer	Address
Liberty	Liberty Motor Car Co.	Detroit, Mich.
Lozier	Lozier Motor Car Co.	Detroit, Mich.
Locomobile	Locomobile Co. of America	Bridgeport, Conn.
Lorraine	Lorraine Motors Corp.	Grand Rapids, Mich.
Madison	Bull Tractor-Madison Motors Corp.	Anderson, Ind.
Malbohm	Malbohm Motors Co.	Sandusky, O.
Marion Handley	Mutual Motor Co.	N. Tonawanda, N. Y.
Martin-Wasp	Martin-Wasp Corp.	Bennington, Vt.
Marmon	Nordyke & Marmon Co.	Indianapolis, Ind.
Marshall	Marshall Mfg. Co.	Chicago, Ill.
Maxwell	Maxwell Motor Co.	Detroit, Mich.

Brief Facts and Features of the Automobile Industry in 1920

By Alfred Reeves, General Manager, National Automobile Chamber of Commerce.

AUTOMOBILE USE.

Automobiles registered in U. S. (approx.)	8,500,000
Passenger cars registered in U. S.	7,600,000
Motor trucks registered in U. S.	900,000
Cars and trucks owned by farmers	2,500,000
Per cent. of registration in towns of 5,000 population or less	55%
Per cent. of registration in towns of 1,000 population or less	33%
Per cent. of 1920 output bought by agricultural districts	60%
Passenger cars owned by doctors	110,000
State-owned cars and trucks	30,125
Municipally-owned cars and trucks	10,314
Cars and trucks entering and leaving New York city daily	154,725
Persons carried to and from New York daily by car and truck	420,095
Trucks owned by farmers	80,000
Labor saving value of truck to each farmer annually	$150
Saving in transport charges to each farmer annually through use of truck	$240

AUTOMOBILE'S PART IN NATION'S BUSINESS.

Amount of special taxes paid annually by industry to Federal government	$257,000,000
Registration fees paid by car users	$81,000 000
Per cent. of all cars used more or less for business	90%
Per cent. of total mileage used for business	60%
Gain business efficiency from use of car as reported by average owner	57%
Average increase in doctors efficiency through use of car	104%
Per cent. of steel supply used by automobile industry	4%
Amount paid by industry to railroads for freight on shipments of finished motor vehicles	$100,000,000

PRODUCTION IN 1920.

Cars and trucks produced	2,241,000
Passenger cars produced	1,906,000
Motor trucks produced	335,000
Wholesale value of cars and trucks produced	$2,136,183,676
Wholesale value of passenger cars produced	$1,703,437,213
Wholesale value of motor trucks produced	$432,746,463
Average wholesale price of passenger cars produced	$897
Average wholesale price of motor trucks produced	$1.273
Motor truck manufacturers in production	170
Passenger car manufacturers in production	90
States in which factories are located	32
Employees engaged in car and truck manufacture	300,000
Automobile tires manufactured	32,400,000
Increase in gasoline production over 1919	19%

AUTOMOBILE EXPORTS IN 1920.

Value of motor vehicles and parts exported, including engines and tires	338,000,000
Number of passenger automobiles exported	153,000
Increase in number of passenger cars exported	120%
Value of passenger cars exported	$155,000,000
Number of motor trucks exported	27,000
Increase in number of trucks exported	60%
Value of motor trucks exported	$45,000,000
Number of countries to which automobiles were exported during year	114

DEALERS AND GARAGES IN U. S.

Passenger car dealers	36,210
Motor truck dealers	20,596
Garages	38,538
Repair shops	47,556

Ford Factories Resume Operations

(Continued from Page 30.)

new units of production in fields into which he had never before ventured. He was all prepared for the commencement of the fulfillment of his vision.

But he spent the millions at a time when the inflow of cash into the Ford coffers was growing scantier, and he became cramped for ready money as so many successful enterprises have before. And who shall say, in the light of past achievements, that Henry Ford may not eventually realize this latest and most astounding project?

Marvellous Development of Ford Industry.

The development of the Ford Motor Car Co. in the last decade is unparalleled in the industrial history of the world, as the following brief sketch of its growth and statement of its present immense activities will show.

The Ford Motor Co. was organized June 16, 1903. In the first fiscal year only 1708 cars were made and sold, and it was not until 1909 that the phenomenal growth began, when the production had reached 10,607 cars. In 1913 a new high water mark was reached with 168,200 Fords turned out; 1914 saw an even greater achievement in a production of 248,307, and the output thereafter increased by leaps and bounds, until it is reported that the plant at Highland Park reached the astounding figure of 941,042 cars during the fiscal year ending July 31, 1920. The Ford Motor Co. of Canada made 55,618 cars in its plant at Ford, Ont., during the same period, bringing the total production for the year only 3400 short of the million mark. To this may be added that during the same 12 months the company made 79,008 tractors, and there were made at the Ontario plant 2647 more, an aggregate of 81,655.

The officials of the Ford company had set its production programme for the calendar year, 1920, at 1,000,000 cars and trucks, and this stupendous figure was exceeded by almost 25,000, the actual figures being 1,023,552, of which 153,532 were trucks. The production mark was set at the beginning of this year at 1,250,000 cars for 1921.

Extent of Detroit Property.

The following facts are culled from an interesting booklet, Factory Facts from Ford, published by the Ford company, and are illuminating as to the extensive scope of the concern's activities. The entire Detroit property comprises a plot of ground containing 305 acres; there are 88.22 acres of floor space actually under roof. The annual business approximated $350,000,000 at the time the pamphlet was compiled, which means that each acre of floor space produced at the rate of $4,000,000 annually. The average number of employees was around 36,000 on the factory payroll regularly, and wages and share of profits to workmen averaged $4,498,570 a month.

The buildings are as follows: Administration, a four-story structure which contains the general offices. This is 300 feet long and 65 in width, and the average number on the pay roll is 950, averaging about $115,000 a month, exclusive of executives and department managers. North of the administration building is the power house, in the construction of which 5200 tons of structural steel were used, equivalent to that needed in the erection of a modern 20-story sky scraper. Nine engines housed here give a combined horsepower of 54,500.

The main factory buildings are 900 feet long and 300 wide, four stories in height and of fireproof construction. In the rear of the main plant are four six-story buildings officially designated W, X, Y and Z buildings, each 60 feet wide by 845 feet long, built parallel to each other and connected by a crane way 40 feet wide, the full length and height of the buildings. These buildings are of reinforced concrete, steel doors and sash being used throughout. Their erection increased the factory floor space by 1,376,560 square feet, and involved an expenditure of about $2,500,000.

Parallelling these four six-story buildings and connected by covered courts, are four single-story structures. Building No. 5, which adjoins Z building, is 60 feet wide and 1140 feet long; Nos. 3 and 4 each measures 64 feet in width by 1200 feet in length; while Nos. 1 and 2 are each 72 feet by 363 feet. These five buildings with the connecting courts add 465,000 square feet to the floor space.

Other buildings include a garage housing 64 cars, for the use of the officials of the company, tool construction shop, affording 96,000 feet of floor space, boiler house and foundry, and it is needless to say that all hospital, emergency and welfare departments are generously provided for. The company has also worked out its own plan of profit sharing and bonus features and was among the first in the country to give attention to the housing problem.

At the period Ford Factory Facts was issued, the Ford organization included, besides the main plant at Detroit, a factory in Ontario, Canada, and another in Manchester, England. Thirty assembling plants were maintained, all housed in substantial and commodious buildings of factory construction.

The wholesale branches are located in 40 of the largest cities of the United States, serving all sections of the country, and this organization is supplemented by more than 10,000 agents in this country alone, and there is hardly a city or town in the Union in which Ford service cannot be promptly secured.

The foreign department has its headquarters at 17 Battery place, New York city, and foreign branches and service stations are maintained in Bordeaux, France; Buenos Aires, Argentine Republic; Calgary, Alta., Can.; Hamilton, Ont.; London, Eng.; London, Ont.; Manchester, Eng.; Melbourne, Australia; Montreal, Quebec; Paris, France; Saskatoon, Sask., Can.; St. John, N. B.; Toronto, Ont.; Vancouver, B. C., and Winnipeg.

Calendar of Coming Events

Feb. 5-12—Minneapolis, Minn., Annual Winter Automobile Show, Minneapolis Automobile Trade Association. Walter R. Wilmot, Manager, 709 Andrus Building.

Feb. 6-12—Newburgh, N. Y., Annual Automobile Show, Benefit Companies E and L, State Armory. J. J. Callahan, Manager.

Feb. 7-12—Columbus, O., National Tractor Show, Columbus Tractor and Implement Club, Ohio State Fair Grounds.

Feb. 7-12—Parsons, Kan., Fifth Annual Automobile and Accessory Dealers' Association Show, Passenger Cars, Trucks, Tractors and Accessories. W. N. Chapman, Secretary, 1818 Broadway.

Feb. 8-10—Oklahoma Hardware and Implement Association Convention, Oklahoma City. W. B. Porch, Secretary-Treasurer, Oklahoma City.

Feb. 10—Columbus, O., Tractor Meeting, Association of Automotive Engineers.

Feb. 12-19—Kansas City, Mo., Annual Passenger Car and Truck Show, Kansas City Motor Car Dealers' Association. Ed. E. Peake, Manager.

Feb. 14-19—St. Louis, Mo., 14th Annual Show, Passenger Cars, Trucks and Accessories. Robert E. Lee, Manager, 3124 Locust Street.

Feb. 18-28—San Bernardino, Cal., Show, Passenger Cars, Trucks, Tractors and Accessories. Fred M. Renfro, Manager, Chamber of Commerce Building.

Feb. 19-26—Newark, N. J., Passenger Car, Truck and Accessory Show, Newark Auto Trade Association, First Regiment Armory. Claude E. Holgate, Manager.

Feb. 21-26—Deadwood, S. D., Eighth Annual Automobile Show, Auditorium, Passenger Cars, Trucks, Tractors and Accessories.

Feb. 21-26—Bethlehem, Pa., Seventh Annual Show, Passenger Cars and Accessories, Coliseum, Broadway and Montclair streets. J. L. Elliott, Manager, 1038 Norway Place.

Feb. 21-26—Elmira, N. Y., 11th Annual Passenger Car Show, Elmira Auto Club, State Armory. H. S. Bryan, Manager, 210 East Water Street.

Feb. 28-March 5—Bethlehem, Pa., Truck and Tractor Show, Coliseum, Broadway and Montclair Streets, J. L. Elliott, Manager, 1038 Norway Place.

March 1-5—Quincy, Ill., Third Annual Auto Show, Passenger Cars, Trucks and Accessories. J. W. Hart, Secretary, Whig Journal.

March 7-12—Indianapolis, Ind., 22nd Semi-Annual Show, Passenger Cars, Trucks, Accessories and Farm Lighting Outfits. John B. Orman, Manager, 338 North Delaware Avenue.

March 7-12—Paterson, N. J., Fifth Annual Show, Passenger Cars, Trucks, Tractors and Accessories, Fifth Regiment Armory. H. MacGinley, Manager.

March 7-12—Scranton, Pa., 11th Annual Show, Passenger Cars, Trucks, Tractors and Accessories. Hugh B. Anderson, Manager, Board of Trade Building.

March 12-19—Boston, Mass., 18th Annual Automobile Show, Boston Automobile Dealers' Association, Mechanics' Building. Chester I. Campbell, Manager, 5 Park Square.

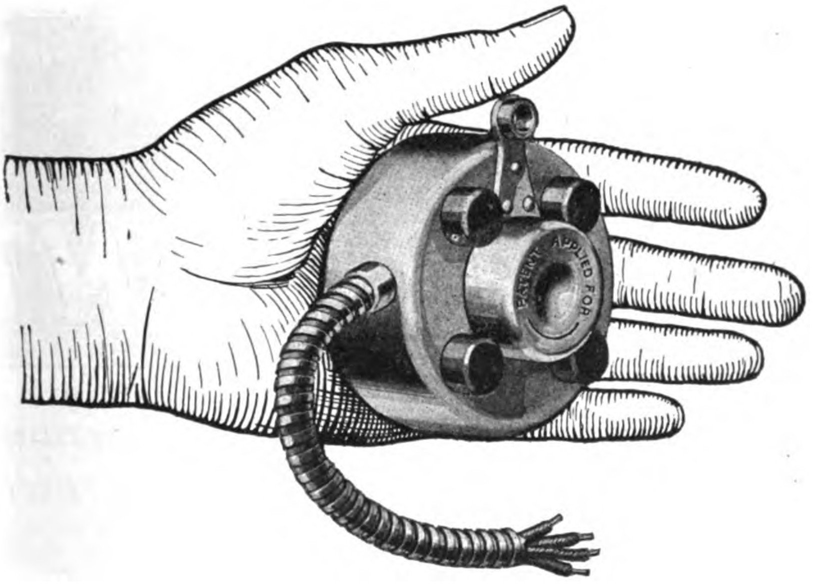
March 14-19—Trenton, N. J., Sixth Annual Passenger Car and Truck Show, Trenton Automobile Trade Association, Second Regiment Armory. Frederick Perry, Jr., Manager, West, State and Willow Streets.

March 15—Fort Worth, Tex., 24th Annual Southwestern Exposition and Fat Stock Show. Passenger Cars, Trucks and Tractors. M. Sasson, Jr., Secretary.

March 20-26—Torrington, Conn., Show, Company M, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

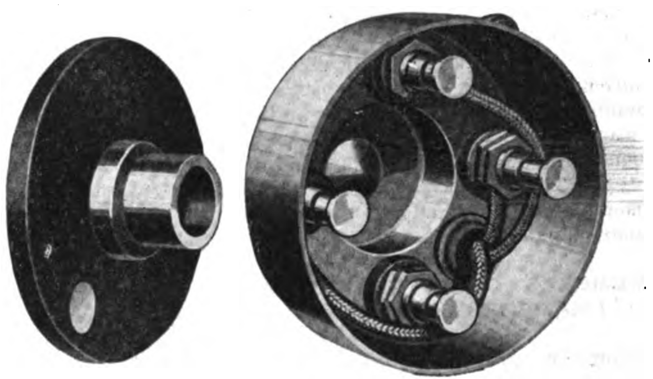
March 25—York, Pa., Passenger Car, Truck and Tractor Show, York Auto Dealers' Association.

April 3-9—Gloversville, N. Y., Annual Gloversville-Johnstown Automobile Show, State Armory. J. J. Callahan, Manager.



THE SCHOFIELD TIMER FOR FORD CARS

Built Like a Magneto



THIS TIMER HAS THESE ADVANTAGES

1—All wire connections are inside of the timer shell---no terminals are exposed---there can be no accidental short circuit --- connections cannot work loose from vibration.

2—Contact surfaces are generously large---timing is positive and accurately synchronized to give maximum power with minimum fuel consumption; also preventing knocking and excessive wear of bearings.

3—Delivers to the coil the full volume of current coming from the generator---thus fully energizing the coil and producing a big, hot spark---*at the right time.*

4—Has few parts to wear, none to get out of adjustment. The rotator is in *one* piece and is *not* subjected to mechanical shock---it makes perfect contact even when camshaft is loose or "wobbly."

5—All four wires are protected by flexible metal conduit from timer to coil. There is no abrasion, no insulation rotted by oil and moisture, no chance of failure by reason of unprotected wires.

6—The user gets a Timer that really *gives service.* For this reason, the "Schofield" is a good Timer to *sell.* The retail list price is $4.00 for Timer conplete with wires and conduit.

Discounts are attractive. Territory is now being allotted. Write for Dealer's proposition.

1917 East 61st Street Cleveland, Ohio

EXPORT DEPARTMENT
W.

National Chamber Favors Lower Duty

The foreign trade committee of the National Automobile Chamber of Commerce, meeting at New York, Jan. 11, reaffirmed its position relative to a lowering of United States duty from 45 to 30 per cent. to cover all automobiles, and for a scientific tariff arrangement which will both prevent discrimination against American products shipped abroad and provide for mutual advantages in a greater exchange of commodities between foreign countries and the United States. This plan will be urged in a presentation to be made to the National House Ways and Means committee.

MEMBERS OF INTERNATIONAL CHAMBER OF COMMERCE.

American participation in the International Chamber of Commerce has become fully organized by the appointment of the American committee by Joseph H. Defrees, president of the Chamber of Commerce of the United States, ocmposed of 57 of the leading business men of the country.

The board includes a number of leading officials closely associated with the automotive industries, as follows, in addition to A. C. Bedford, chairman, who is chairman of the board of directors of the Standard Oil Co. of New York:

Harry A. Black, president, Black Hardware Co., Galveston, Tex.; William Butterworth, president, Deere & Co., Molina, Ill.; E. M. Herr, president, Westingnouse Electric & Manufacturing Co., East Pittsburgh, Pa.; Alexander Legg, vice president and general manager, International Harvester Co., Chicago, Ill.; John J. Raskob, vice president, E. I. Dupont de Nemours & Co., Wilmington, Del.

IMPORTATION OF CARS TO PORTUGAL.

An order recently issued by the Portuguese government stipulates that all permits for importation of passenger automobiles, complete or incomplete, which had not been made use of previous to the date of the order because of inability to dispatch such goods, whatever may have been the alleged reason, shall be void.

These permits, however, may be revalidated when the commission appointed for that purpose considers that circumstances warrant it. In the meantime, even in these cases, petitions for re validation will be granted only when they contain all the details about the automobiles involved. These permits are not transferable and notice is to be sent to the respective customs authorities after the arrival of the vehicles.

RUBBER ASSOCIATION TO HAVE EXPORT DEPARTMENT.

The directors of the Rubber Association of America has decided to go ahead at once on the work of organizing a foreign trade department which was recommended at the general meeting of the association show week and referred to the directors for final action. The object of the new section is stated to be to aid member manufacturers of tires and rubber goods in the exploitation of the foreign field.

An export manager will be employed and the activities gotten under way at once. These will consist of research, publicity advisory and similar lines.

An additional programme of expansion, to be considered later, includes the establishment of departments of publicity, cost accounting, industrial relations, research, statistics and technical and standardization.

CONNECTICUT IGNITION IN ENGLAND.

The use of American ignition as standard equipment on European automobiles is reported as rapidly increasing, and this is exemplified by the statement that no less than three manufacturers in Englaid, the Cubitt, Phoenix and Castle, are using the Connecticut system, made by the Connecticut Telephone and Electric Co., Meriden, Conn., which are in production on a scale rather above the average for manufacturers on the other side. Still further use of the Connecticut system is being made by smaller cars. Certain British manufacturers of generators, in supplying complete electrical systems, are also using Connecticut ignition.

The number of automobiles owned in Sweden is estimated at 8600, and motorcycles at 9059.

Trade Opportunities ni Foreign Field

Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce and its district and co-operative offices upon written request by opportunity number.

32,424—An importing firm in India desires to be placed in touch with manufacturers and exporters for the purchase of hardware, cutlery, machinery, electrical goods; cotton mill, gin, press and railway stores; glassware, kitchen and household goods, metals and metal products, pipes and fittings, boiler fittings, harnesses, motor cars, bicycles and accessories, watches and clocks, musical instruments, food products, stationery, hosiery, second hand clothing, velvets, laces, piece goods, woolens, boots and shoes and sundries. Reference.

34,328—A commercial agent in Argentina desires to secure the representation of firms for the sale of general lines of hardware, automobile accessories and paper of all kinds. Quotations should be given f. a. s. New York or c. i. f. Buenos Aires. References.

32,494—A trading company in the Netherlands desires to secure an agency for the sale of motor cycles, bicycles, bicycle frames and accessories, sewing and knitting machines and similar articles. Quotations should be given c. i. f. Amsterdam or Rotterdam. Payment to be made upon receipt of goods. Reference.

34,295—A commission company in Maderia desires to secure agencies for the sale of pneumatic tires, paste shoe polish, textiles, hosiery, suspenders, linens, varnish, rice, flour and scissors. Correspondence should be in Portuguese. Reference.

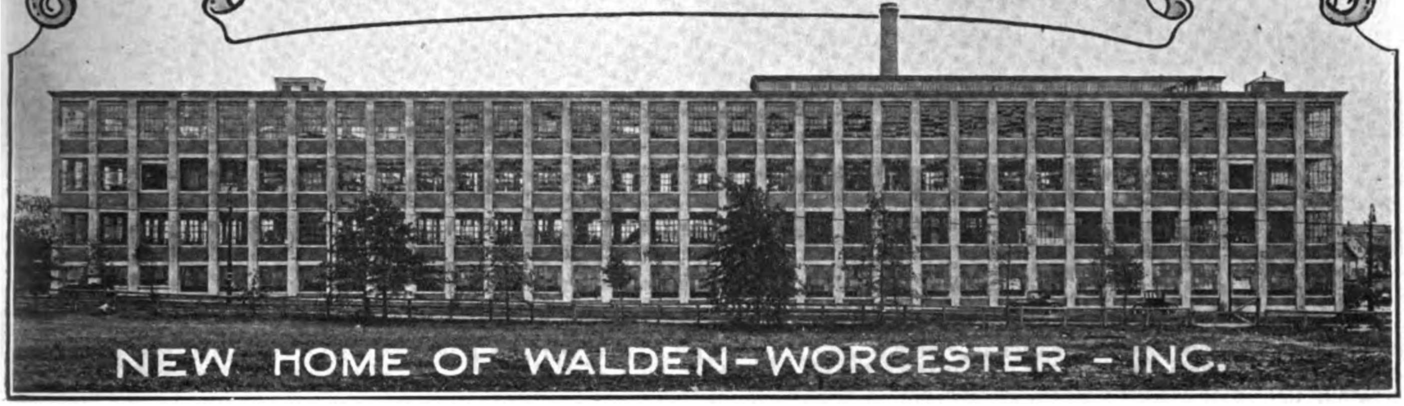
34,299—A mercantile company in Norway desires to secure an agency for the sale of machinery, automobiles, accessories and electric specialties. Quotations should be given c. i. f. Norwegian port. Payment to be made through banks in Norway and in New York. References.

34,334—A New Zealand purchasing agent who is at present in the United States desires to secure agencies for electrical appliances, including electric household devices and automobile accessories, hardware and office appliances. References.

STEEL RACE COURSE IN GERMANY.

The building of a steel-surfaced automobile race course is contemplated in Hanover, Germany. The circumference will be five miles, and the track is to be about 140 feet in width. The foundation will be of trussed concrete, and steel plates are to be laid on top of the concrete. The plans also call for numerous buildings to be erected within the diameter of the track, including a gigantic structure containing private assembling plants and testing laboratories.

Accessory and Garage Journal



NEW HOME OF WALDEN-WORCESTER - INC.

WALDEN-WORCESTER,

INCORPORATED

FIFTEEN years have rolled by since the start of Walden-Worcester, Inc., then known as Walden Manufacturing Co. From a business consisting of one small invention, employing three men, it has grown to a large modern factory employing 300.

To consider the actual growth of the company by comparison of employees hardly gives a real conception of its extension. In 1906 the production of wrenches, which included one type of ratchet wrench, was not in excess of 5000. In 1920 the 4,500,000 mark was reached.

If it were possible to turn back time for a moment to 1906, and make inquiries of a thousand dealers or jobbers whether they knew Walden-Worcester or what they manufactured, the prevailing answer would be in the negative. If the same 1000 dealers and jobbers are asked today about Walden-Worcester, these two words would be instantly connected with the word wrenches.

It might be well at this point to say a few words of the history of the company during the past 15 years. The corporation was organized and incorporated in 1906 by F. E. Walden and associates. Mr. Walden was the patentee of the wire handle ratchet wrench. The corporation was organized to manufacture that tool. Wire handle ratchet wrenches today do not represent more than two per cent. of the actual production.

In 1907 Mr. Warren S. Bellows bought out F. E. Walden and associates. On Dec. 31, 1916, the name of the concern was changed to Walden-Worcester, Inc., but there was no change in personnel.

Warren S. Bellows, General Manager, Walden-Worcester

From the small beginning of a few types of tools, the history of the company shows many additions, among these such leaders as the original "Tomahawk," and the fourth connecting rod wrench for Ford cars. Probably most everyone has used a so-called single-loop tee handle wrench on demountable rims. This wrench was designed by Walden-Worcester and has been sold to rim companies since 1913. A more detailed resume of the history of the company would prove to the general public that the line as now sold is entirely of original Walden-Worcester design.

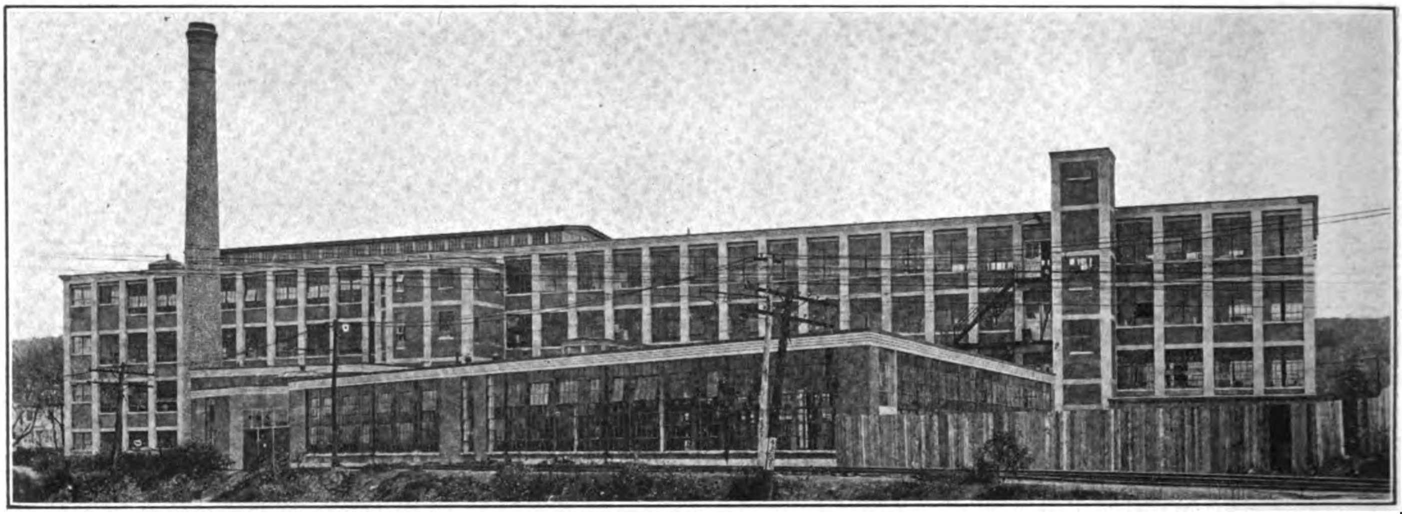
In 1919 the growth of the business was such that the concern was operating in 15 small buildings. It was therefore decided to build a large building and have the plant all under one roof. In September, 1919, ground was broken for building and completion of the structure promised Jan. 1, 1920. It was not, however, until October, 1920, that partial occupancy of the new building was possible.

The factory is particularly well situated, facing on a double boulevard 120 feet wide, serving as a main artery of travel between Boston and New York. Directly behind the plant the Boston & Albany tracks furnish a through western line connecting with the New York Central railroad. This assures a spur track being laid in the near future, drawing having already been approved.

The building has approximately 2½ acres of floor space, equal to one city block. The main building is 330 feet long and four stories high. It is made of slow burning mill type construction with concrete piers, brick walls, wood cross beams and floors. All floors are given ample light by the use of Lupton glass sash aided by mill white paint.

A one-story addition in the rear, running parallel to the main factory, is used for plating, finishing, heat treatment, garage, boilers and electric transformer room.

On the fourth floor of the main building the general offices of the plant are located. They are somewhat novel in arrangement, having the small offices of certain departments on each side of the building and through the center, a space of 14 by 100 feet, the general offices. These offices are used for such work as orders, invoices and clerical work, and are lighted from a monitor above, which



Rear View of Modern Factory of Walden-Worcester, Inc. This Four-Story Plant Contains Every Facility for the Efficient Manufacture of Socket Wrenches.

furnishes ventilation by automatically worked windows. This gives each person equal light and air.

In one end of the upper floor is located the restaurant, recreation room and kitchen. The latter has capacity to serve the employees of the factory.

The office is designed to take care of the company's growth for the next five years. It was planned that the manufacturing part of the business could be extended by lengthening the building.

There is located in one end of the building a fireproof tower 10 by 20 feet, separated from the main building by 14 inches of hollow tile. This arrangement gives a fireproof vault on each floor. On the fourth floor this is used as the active filing department, on the third for inactive files, on the second as an engineering department, and also for safe keeping of valuable tracings, and on the first to store maintainance supplies.

The third floor is occupied by the shipping and finished stock room. Finished stock is carried in steel racks, covering a space of 300 by 20 feet. Each rack is 19 feet long, having four shelves. The floors are divided into bays, each one numbered, which allows finished stock to be placed systematically in the same rotation as the orders are entered. Shipping more than 150 different types of wrenches, this method is necessary for proper handling of the orders.

Special mention should be made of the tremendous quantity of paper cartons necessary for boxing wrenches.

One million boxes were made last year by our special metal staying machines. The use of a metal edge box has greatly helped the strength of the boxes and improved the looks of the boxes on the jobbers' and dealers' shelves. Paper box material is carried in stock, flat, properly lithographed, which eliminates old fashioned methods of pasting on labels.

Orders are assembled on special trucks which are rolled directly to the packers.

Each case as completed is placed on a spiral gravity chute, which carries it to a covered loading platform on the ground floor or directly into freight cars. The loading platform permits two trucks to load at the same time. With the system now practised wrenches flow without interruption from finished stock bins to carriers.

On the second floor the most important part of the manufacturing is carried on. The equipment of this floor embodies ideas which have taken years to perfect. Special bending machines, socket assemblers, milling, drilling and working machinery, included with equipment, have been especially adapted for the manufacture of socket wrenches. This floor also carries the tool crib, which keeps special jigs and fixtures for drills and milling machines, as well as a very well equipped tool room to make jigs, fixtures and special tools.

Factory offices are located in one end of this floor, which include works manager and superintendent's office, drafting, cost department, time keeping and other departments. A large, airy, clean locker room, with all modern appliances for washing up takes up the remainder of the space on this floor. Each employee has an individual locker in which he keeps his clothes, lunch and other of his things that he may desire.

On the first floor is located the unfinished stock, receiving department, automatic screw machines, presses, rod cutters and other miscellaneous machinery.

Passenger elevators, freight elevators, electric controlled clocks and time recorders are included in the regular equipment of the plant. There is also a great deal of special equipment, such as box trucks, overhead trolley track and conveyor.

Running lengthwise of the building above the center aisle is a one-ton capacity overhead trolley track and hoists. Two methods are used in the factory to hold material, one a wheel box truck about two feet long by 18 inches wide by 18 inches deep and the other is small metal piling, or "tote" pans. Both trucks and pans are moved with help of trolley track and hoist.

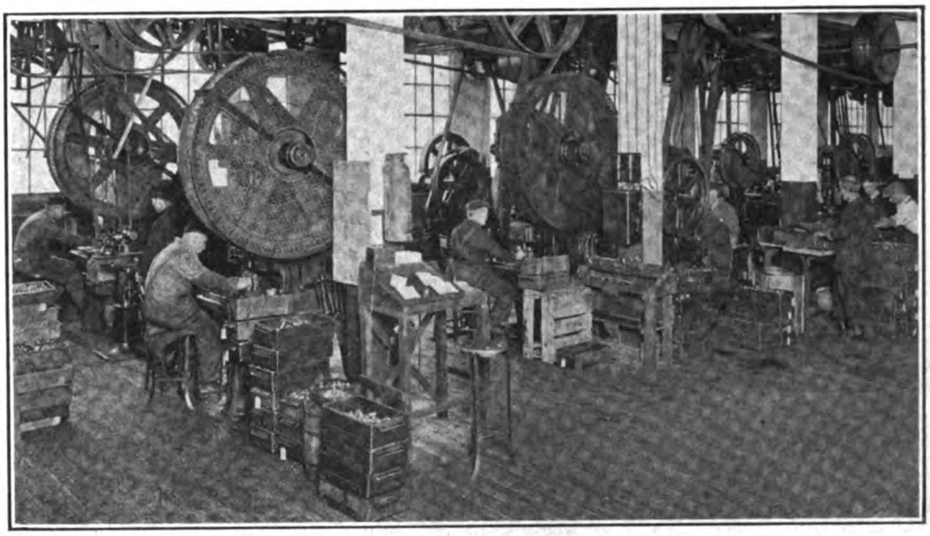
A special electric belt type conveyor carries tools to be finished from the second floor of factory through a water proof tunnel underground to the first floor of the rear building. Tools are then nickel plated and sent by conveyor underground and up to third floor of main building for shipment or stock.

A dumb waiter connects floors one, two and three with stock room, giving quick service to each floor.

Product.

Walden-Worcester's principle product

The Main Offices Are Ideally Arranged and Admit Ample Light and Air.



Power Press Room. Note the Screen-Like Arrangement, Which Prevents Accident to Operator.

consists of socket wrenches, although it includes valve grinders and a few stamped open end wrenches. The term socket wrench may not mean a great deal to most people, although every automobile owner who has changed a tire on cars equipped with demountable rims, knows that it is a socket wrench which he uses to remove the nuts which clamp the rim to the wheel. Walden-Worcester furnishes more than half the rim tools which are used for equipment on new cars. A brace socket wrench or tee handle socket wrench comes as equipment with almost every make of car, because it is the fastest tool which may be used to remove these many nuts. With some car owners the use for a socket wrench ends here, but many others, and all garage mechanics know that the application of socket wrenches to most all forms of assembly or disassembly work saves time and insures long life to the nut or bolt head.

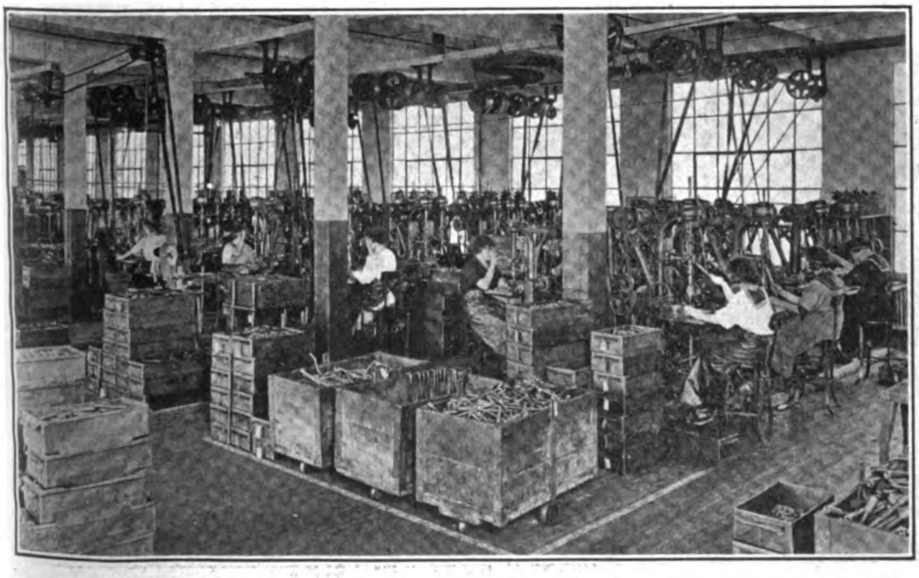
The automobile is the most popular example of modern compact machinery. In the building of compact machinery some parts are bound to be quite inaccessible, and whereas it would be impossible to use an ordinary adjustable, or open end wrench on many of these parts, the wire handled socket wrench may be used. This is true because the socket wrench grips the nut on every side so that the six thin walls of the socket replace the two heavy jaws of adjustable or open end wrenches; also because the wire handle may be bent into any desired shape and good leverage may be obtained, that would be impossible with any other type of wrench.

So it may be seen that socket wrenches have two great uses. First, to speed up work in accessible places by the use of brace socket wrenches or tee handled socket wrenches, and second, to reach the inaccessible nuts and bolts by special types of offset handles.

The first wire handled socket set which was offered to the automotive trade was that for the Ford car. This met with so great a demand that car sets were added to the line for the Overland, Buick and Dodge cars, then still later sets were added for the Chevrolet, Maxwell and the Fordson tractor. These sets were composed of from four to six tools. Although these particular tools were designed for use on these certain makes of cars, some of the tools were applicable to certain places on other makes of cars. Besides the automotive work, which has been the largest field with Walden-Worcester, they have made wrenches for companies manufacturing looms, steel sash, steel vaults, Pullman cars, automatic screw machines, air compressors, mining engines, etc.

How Wrenches Are Made.

It will probably be interesting to tell some of the operations through which the tools pass in the making. The 10-foot bars of steel are placed in Gridley automatic screw machines and are turned, drilled and cut off, coming out almost a finished socket except for the broaching. These screw machine parts pass from the automatic screw machines to the high powered presses, which broach or punch the hex or square opening, as well as the opposite end of the sockets to receive the handle, such as the tee and speed wrenches. The other type of sockets, such as used on the Tomahawk or double end offset wrenches, are drilled in the side to receive the handle.



Drill Press Room. Conveyors in Foreground Are Used to Carry Product to Different Departments.

Those sockets which are to be heat treated then go to the heat treating department under the direction of a metallurgist, being treated in one of the latest type of automatic movable floor furnaces. After heat treating these sockets are sent to the assembling department.

In the meantime the handles are prepared to receive the sockets as follows: The wire for the handles comes in the form of large coils, which necessitates that the wire should be run through a straightening and cutting machine in which the wire is cut into the proper lengths.

Next the rod is slabbed to receive the socket. It is then marked with the stamp of the manufacturer. These rods are then formed on powerful benders in the shape of speed wrenches, tee handle wrenches or whatever shape or form they are to take. Then the sockets are pressed on to these handles and securely fastened.

These tools are then conveyed by an automatic conveyor to the plating department. Here is installed the most complete plating equipment that can be obtained. This machine is one of five in the whole United States and having been the last one built has many qualities not found in the others. The cost of this particular installation was approximately $30,000, and it has a capacity of 40,000 tools a day.

The tools are automatically conveyed from one vat to another so that the wrenches receive successive coats of zinc, copper and nickel. The result is a finished product that presents a clean looking and most attractive nickel finish in keeping with the high character of the tools. These tools again go to the automatic conveyor, which carries them to the stock bins.

Stock Room and Shipping Department. Wrenches in Foreground Have Just Come from Nickeling Bath.

Sales.

Walden-Worcester sales can be divided into three classes: Manufacturers, jobbers and export.

Manufacturers' Sales.

Manufacturers' sales, although representing a small portion of the total volume, take a largely diversified class of industries. Manufacturers' business can be divided into three main groups: Assembly, equipment and service. By assembly is meant tools for assembling machines. By equipment is meant operator tools for adjustment of machines, or rim tools that go with an automobile. Under the heading of service work are tools used for repair work, generally sold through regular jobbers, although sometimes recommended by manufacturers.

The possibilities of tools for use as equipment are greater than the average conception. Such machines as screw machines, lathes, looms and others all need tools for minor adjustments. Manufacturer's equipment work is only in its infancy with this concern.

Jobbers' Sales.

The sale of standard wrenches to automotive and hardware jobbers in the country represents the volume of Walden-Worcester business. Selling approximately 750 jobbers, located in every state in the country, it is very easy to see the possibilities of this branch of sales work. The jobbing business covering the United States so thoroughly keeps fairly constant in volume, as it is not local in its character. This branch of business represents 80 per cent. of Walden-Worcester's total volume.

In order to carry out this work and get the best cooperation from wholesalers, the company has branch offices located in New York, San Francisco, Chicago and Winnipeg, and from these offices travel 14 salesmen, who call on the jobbers. The work of the salesmen is not only to sell wrenches, but to give the jobber service, see that he has the proper stock on his shelves, assist him in taking stock, and to work with his sales manager and advertising manager to see that the product is sold and the proper turnover is obtained.

Each one of these branch offices is supplied with copies of orders and invoices as sent out by the home office. The home office and the branch offices exchange copies of all correspondence so that each branch office has a complete file of the business in its territory. Besides regular salesmen the company travels missionary men whose duty it is to give information to dealers as to the various uses of Walden-Worcester wrenches and by explaining additional uses of tools, help to increase the sales for jobbers. These missionary men will also assist dealers in making up special window displays, suggestions of which they will have in the form of pictures of displays. This particular work is only of recent inception, but from results obtained so satisfactory that this feature has been planned on a much larger scale.

It is perhaps well at this point to call attention to one predominant feature of Walden-Worcester's sales policy. Each tool is guaranteed to give satisfactory service. All defective or imperfect tools are always replaced or repaired free of charge. The guarantee is broad enough so that there is no possibility for any misunderstanding.

Walden-Worcester's biggest distributing city is St. Louis, although cities of Chicago and San Francisco are the next in importance. Merely because they are distributing cities does not necessarily mean that the tools are sold there, for some of the large hardware and automotive equipment houses in these cities sell to all parts of the country.

Export Sales.

Walden-Worcester, Inc., almost from its very organization has been keenly alert to the possibilities and the advantages of the widest possible distribution of its products. It was but natural therefore that attention was early given to the opportunity for sales extension in America's oversea markets.

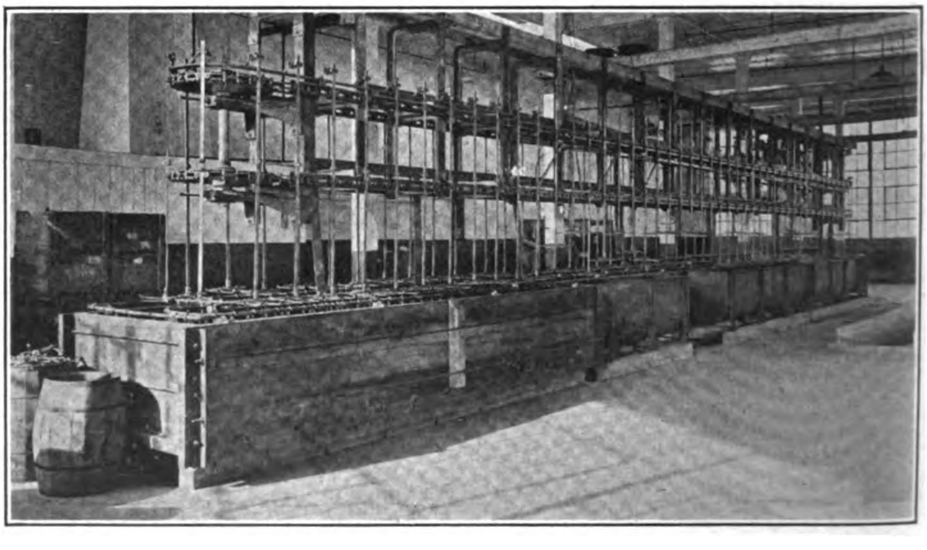
During the period of the world war these efforts were necessarily much restricted in many directions. Difficulties in securing sufficient supplies of raw materials, and the shortage of shipping space to most countries that were then good prospective markets, imposed a serious handicap and made it almost out of the question to carry out any general plan for the extension of foreign sales.

However, almost immediately after the signing of the armistice in November, 1918, steps were taken to organize an export department. The measure of all the principal oversea markets was taken and aggressive development started along the lines of a well defined, consistent, liberal export sales policy.

Wherever American automotive equipment or other mechanical equipment has been introduced—there one will also find a market for Walden-Worcester motor, mechanics', garage and engineers' hand tools.

As a result the volume of Walden-Worcester wrenches that now goes abroad represents quite an appreciable percentage of the company's total sales.

Last year shipments were made to over 40 different countries—the large volume going to the important markets of



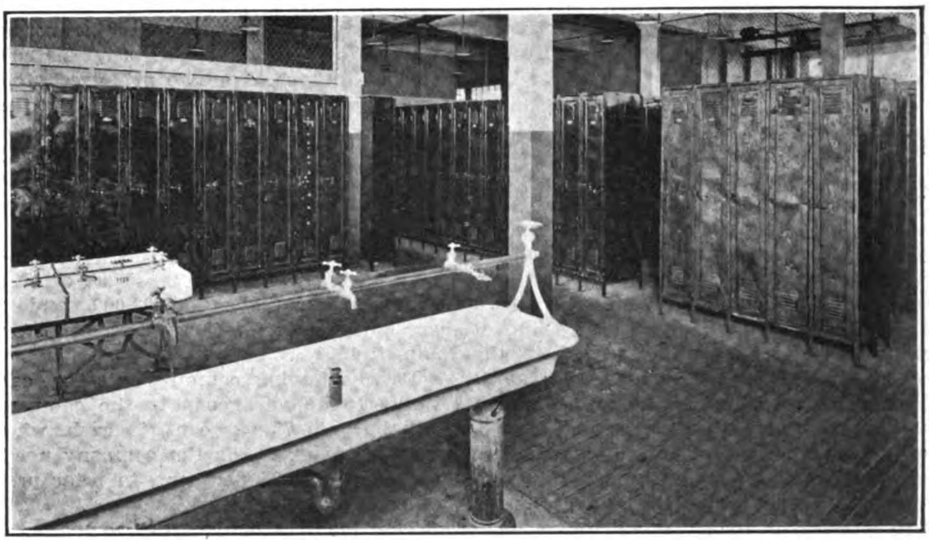
The Nickel Plating Bath Is of Modern Construction. It Does Work for Which 30 Men Were Formerly Required.

Scandinavia, New Zealand, Australia, South Africa, the West Indies and South American countries. Other smaller, but quite as important shipments went to many less frequently thought of territories, such as Siam, Algeria, Poland, Morocco, Arabia and others.

The Walden-Worcester idea of quality, service and fair treatment that has brought success in the domestic market has proven equally successful in the conquest of the more distant fields. It bids fair for a truly world wide distribution with the gradual return of business confidence now evident throughout the world.

Advertising and Promotion.

The Walden-Worcester display board has been a leader in advertising the wrenches and making sales for the dealer; a silent salesman that almost talks. The display board, six feet high by two feet wide, with black and goldenrod strippings on a metal panel, set off by the Walden-Worcester "Bull's Eye," holding approximately 100 tools suspended from hooks, has become a recognized fixture in 20,000 dealers' stores. The trade mark, a goldenrod and black bull's eye of Walden-Worcester, has been registered in the United States and approximately 50 foreign countries.



This Well Appointed Lavatory and Coat Room Is Greatly Appreciated by Employees.

The educational phase has been no small part of advertising propaganda and to this end a total of 50,000 booklets of 128 pages were distributed last year, showing use of wrenches on Ford cars, trucks and Fordson tractors. The Ford manual is a most complete instruction book and the illustrations mark a new departure in instruction books.

Educational work has become an established part of advertising and is the pioneer effort of the sales force to teach its potential customers what they should look for in wrench equipment.

Plan of Reorganization of Goodyear Stated to Be Agreed On.

IT IS reported on good authority that the various creditors interested in the financial rehabilitation of the Goodyear Tire & Rubber Co. have reached an agreement under which a plan of reorganization will be carried out. The proposed programme of procedure is said to involve the creation of a first mortgage bond and probably an issue of debenture bonds and first preferred stock.

It is also understood that new interests will be brought into the company to look after its financial readjustment and that several of the present officials may retire from active management.

A special meeting of the stockholders of the Goodyear Tire & Rubber Co. has been called by F. A. Seiberling, president, to act on plans for recapitalization and readjustment of the company's finances. The meeting will be held in Akron, O., on March 4.

In a letter addressed to the stockholders Mr. Seiberling said: "The plan for readjusting the debt and capitalization of the company has been approved by the board of directors and already many of the largest creditors and holders of a majority of common stock have indicated their assent to it.

"As will be seen from the statement of the company's indebtedness set forth in the plan, the position of the company is exceedingly precarious. Since the annual statement of Oct. 31, 1920, the company's indebtedness (including contingent liabilities most of which will have to be met) has increased to nearly $66,000,000.

"Notwithstanding the discouragements of the early months of the current fiscal year, it is expected that if the plan is consummated, operations of the recapitalized company for the remainder of the fiscal year will show a considerable margin of profit over all fixed charges, including contemplated sinking funds, and over dividends on prior preference stock."

Main Issue for Action by Stockholders.

The call for the March 4 meeting is also stated to set out the following eight main issues which will be submitted to the stockholders for action:

F. A. Sieberling, President, Goodyear Tire & Rubber Co.

Ratification of the reduction of the common stock of 1,000,000 shares of a present par value of $100 each to a new amount of common stock, not to exceed 1,500,000 shares, of no par value.

Approval of the reorganization of the company under the laws of Ohio regulating the formation and reorganizations of corporations with common stock without par value.

To authorize the creation, issue and sale of not to exceed $65,000,000 of bonds and debentures of the company, to mature in not more than 30 years, and to bear eight per cent. interest.

To authorize the mortgage of all the company's property, now owned or hereafter acquired, to secure the payment of the bonds and debentures.

To authorize, in connection with the sale or said bonds or debentures, the issue, sale or other disposal of all or any part of the prior preferred stock, management stock, preferred stock and common stock of the company.

To approve the appropriation and reservation, by the board of directors, of prior preferred, management, preferred or common stock of the company for any purpose.

To authorize the sale of the entire company and its assets to a person, association or corporation, organized or to be organized, under the laws of Ohio or of any other state.

To authorize and consent to any plan or agreement pertaining to the financing of the company or for the readjustment of its debt and capitalization.

The clause about the sale of the company means merely that, if the new financial plan drawn up by officials of the company, bankers and merchandise creditors is not practical under the laws of Ohio, according to legal advice given at the meeting, a new corporation will be organized under the laws of some other state, and its assets and property be turned over to that corporation.

Under the reorganization clause the stockholders of the company will be asked to approve the following plans for the issuance of new stock:

Prior preference stock of par value of $100 per share, to be issued in the amount directed by the stockholders. It will be entitled to receive dividends of eight per cent. yearly, cumulative before Jan. 1, before any dividends are paid on preferred, management or common stock and before the redemption of any preferred stock. It will be redeemable at the company's option at 110 per cent. of par value, with accrued dividends.

Upon any dissolution, if voluntary, it will be entitled to receive 110 per cent. of the par value, or, if involuntary, the par value—in either case, with accrued unpaid dividends, before any distribution of the assets to the preferred stock or the common stock, but entitled to no further participation in such distribution. Holders of such stock will vote as a class, subject to the prior right of the management stock to elect a majority of the board of directors.

To Pay Merchandise Creditors.

It is understood that the issue of prior preference will be $35,000,000, and to present merchandise creditors of before Jan. 1, 1921.

Parties having commitments or contracts to deliver goods to the company will be paid 75 per cent. in cash, when delivery is made, as the company needs material, and 25 per cent. in prior preference stock.

The financial plan of the company, as originally understood, calls for the issuance and sale of $25,000,000 worth of 20-year eight per cent. bonds, and for the issuance and sale of $25,000,000 worth of 10-year eight per cent. debentures, or notes.

Goodyear Increasing Production Schedule.

In this connection it is significant to note the report that the Goodyear plant at Akron has just gone on to a five-day-a-week production schedule, and that the output will be increased to 60,000 tires a week, the factory working eight hours a day. A few additional men have been put on, but increased production is obtained largely by employees working longer. This action is stated to be the first of a series of increases in production which, it is announced, will follow the completion of the refinancing plan.

CANADA CO. REPORTS INCREASED ASSETS.

Indications of a widening scope to its activities are revealed in the balance sheet of the Goodyear Tire & Rubber Co. of Canada, Ltd., for the year ended Sept. 30 last, which shows total assets amounting to $19,100,754. This is an increase of $8,208,354 over the assets reported at the end of the year preceding.

United States Mail Delivery Over 50 Per Cent. Motorized

According to the report of Postmaster-General Burleson for 1920, more motor vehicles are used in the delivery of the United States mails than ever before. In brief, he states that over 50 per cent. of the vehicles in the postal service are automobiles, government owned motor vehicle service has been established in 163 cities and 839 rural routes are using either cars or trucks.

"The growing use of the automobile," says the Burleson report, "for commercial purposes has made its impression on the handling of the mail in vehicles. Considerably more than 50 per cent. of the aggregate number of vehicles employed in the postal service are of the auto type, and the apparent tendency is toward the complete absorption of the service by mechanically driven equipment.

"The efficiency of the government owned motor vehicle service," says the report, "was demonstrated during the past winter and spring when unusual conditions developed in a number of the larger cities as the result of severe storms, strikes of express and railroad employees, and the action of express companies in placing embargoes on the acceptance of packages under a certain weight.

"The interruptions and failures in the rural and star route service which during the periods of bad weather continue to occur with too great frequency, are evidence that the successful operation of these services is dependent upon the character of the highways on which they are performed, and therefore the department is deeply concerned in the improvement of the highways not only because of the economy of the operation, but because it would permit the more rapid extension of the service to all possible rural patrons and insure to them the delivery and collection of their mail on expeditious, dependable and uninterrupted schedules.

Could Move More Food.

"Through such improvement of the highways and their use in the transportation of foodstuffs it would be possible to convey an average of not less than 1800 pounds a day per route, as compared with 24 pounds at present conveyed. It is only through the efficient use of improved highways that the postal service may perform adequate service to the people."

5500 Trucks from War Department.

One great addition to the equipment of the department during the past year was the receipt of 5500 trucks and 1071 motorcycles from the War Department. The trucks are being refitted for postal service and 1444 of them have already been put into active service.

"The introduction of motorcycles into the city delivery and collection service," says the report, "more extensively than heretofore, it is believed, marks an epoch of improvement in the vehicular facilities employed by the department at the numerous postoffices where the conditions appear to be favorable."

Individual postmen, as well as the department, believe the introduction of the automobile to be a great gain.

Among the answers to questionnaires sent to thousands of car owners by the National Automobile Chamber of Commerce were the replies of a number of postmen. Although the number answering in this class was too small to make the average of their figures a sure index of the experience of the entire class, yet this compilation suggests some of the possibilities of motor transport for the mail carrier, as follows:

Annual mileage	7434
Annual mileage in business	5880
Per cent. mileage in business	79%
Increase in business due to use of car	48%
Per cent. of mail carriers improving living conditions from use of car	33%

AJAX CO. DECIDES TO PASS DIVIDEND.

The directors of the Ajax Rubber Co., New York city, at the recent annual meeting voted to pass the quarterly dividend of one per cent. on the common stock. Three months ago the company reduced it from $1.50 to $1 a share, the higher rate having been paid since August of 1917. In 1920 the company paid $5.50 per share, as compared with $6 in both 1919 and 1918. This action on the part of the directors, according to reports, was influenced by the poor showing of 1920 earnings, the company having a deficit.

At the annual meeting of the stockholders the retiring directors were re-elected with the exception of Harold W. Stimpson, who declined re-election. Benjamin Briscoe was elected a director in his place. Horace de Lissar, chairman of the board of directors, following the dividend meeting is credited with the following statement in regard to passing the dividend:

"The decision was reached by the directors after a most careful survey of the situation. They concluded that because of the near approach to the spring demand for tires they felt that all resources should be conserved in order to finance business to meet the demand, which, because of the drop in production during the last several months, will, in their judgment, exceed any supply at present existing."

New England Section Ready for Big Business Revival

Indicated by Unprecedented Interest in Boston's Automobile Show

IT IS the consensus of opinion of those who are best qualified to judge that the New England section of the country was perhaps never more on the qui vive for the opening of the automobile season than at the present time. For dealers and buyers in this field have carefully followed the trend of the business awakening which was inaugurated at New York and promulgated throughout the West by the Chicago and other big exhibitions, and have gained inspiration from the optimistic cooperation of all the various branches that make up the mammoth automotive industry of the country.

Thus, when the doors of the Mechanics' building swing open on Saturday, March 12, for the inauguration of the big 19th annual Boston Automobile Show, there is no question that the banners which enthusiastically herald the return of normal big business will be caught up and triumphantly borne aloft by the representatives of the industry and trade in this influential eastern field.

The encouraging outlook is well expressed in the statement of General Manager Chester I. Campbell. "This is not the time to boast," he says, "but the extraordinary demand for space indicates that the entire motor industry is looking towards New England to give the first sign of returning prosperity. The dealers all over New England apparently have the same view, for hundreds of them have written in asking our organization to make hotel reservations for them. All of these signs indicate to me that "show week" in Boston is going to attract a big crowd."

An innovation this year will be a supplementary display of enclosed cars in the ball room of the Copley Plaza Hotel, under the same management. This is stated as indicative of the proportions that will be attained by this season's offerings of passenger cars, commercial motor vehicles and accessories, **when it is remembered that the mammoth Mechanics' building, which will house the main show, affords 105,000 square feet of exhibition floor space.**

Eighty-seven different makers of passenger cars, showing more than 350 distinct models, 57 manufacturers of trucks, with a probable showing of some 236 models, and 358 exhibits of accessories is a summary of the magnitude of this signal 1921 event. Eight cars new to the Boston show will be seen, the Wills-St. Claire, Dixie Flyer, Dorris, DuPont, Gardner, Hanson, Kelsey and Handley-Knight. The following makes of trucks are new to Boston show attendants: Facto, Lansden, Old Hickory, Rainier and Ajax.

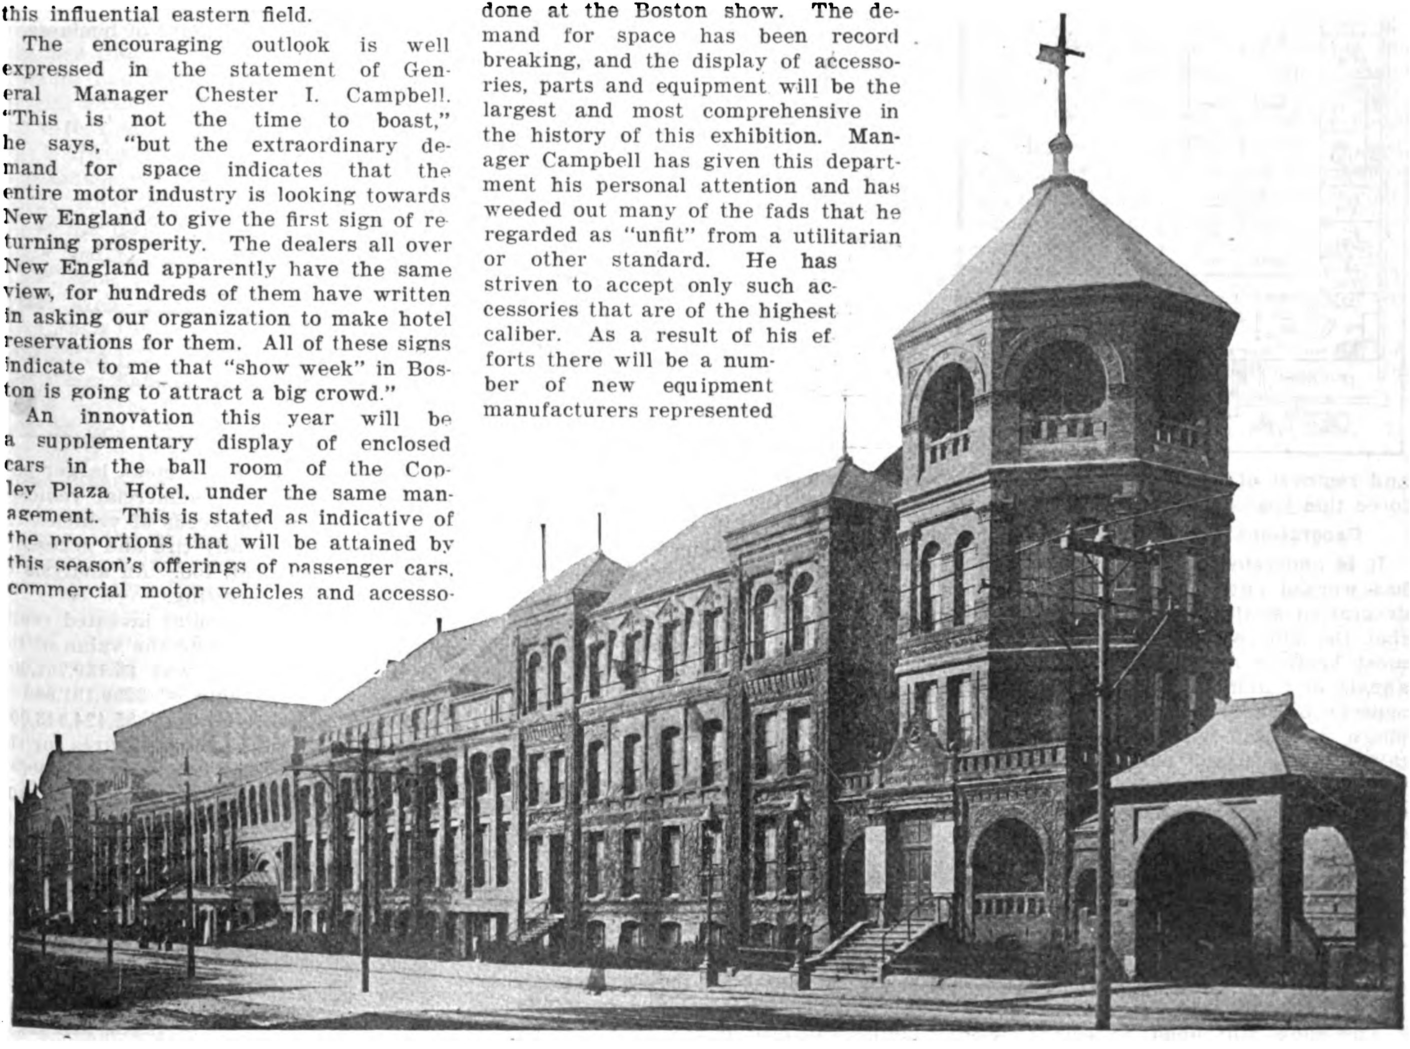
The accessory department has been somewhat of a problem to the management because of the extraordinarily large number of manufacturers and agents who have motor equipment which they wish to introduce to the New England public and realize that it can best be done at the Boston show. The demand for space has been record breaking, and the display of accessories, parts and equipment will be the largest and most comprehensive in the history of this exhibition. Manager Campbell has given this department his personal attention and has weeded out many of the fads that he regarded as "unfit" from a utilitarian or other standard. He has striven to accept only such accessories that are of the highest caliber. As a result of his efforts there will be a number of new equipment manufacturers represented **here for the first time. The great majority of the exhibitors in this department are said to be members of the Accessory Manufacturers' association.**

The location of the Mechanics' building on Huntington avenue is well known to thousands who have been following up these shows in the past and it is hardly necessary to call attention to the fact that the Copley-Plaza hotel on Copley square, where the overflow closed car show is to be staged, is within a few minutes' walk of the scene of the main exhibition.

Location of Exhibits.

The exhibits will be well classified this year as in the past and located according to classification in departments, as follows:

Department A comprises spaces 1 to 38, inclusive, and will be occupied by passenger cars only. Department B includes spaces 100 to 151, inclusive, and is also to be exclusively occupied by pas-



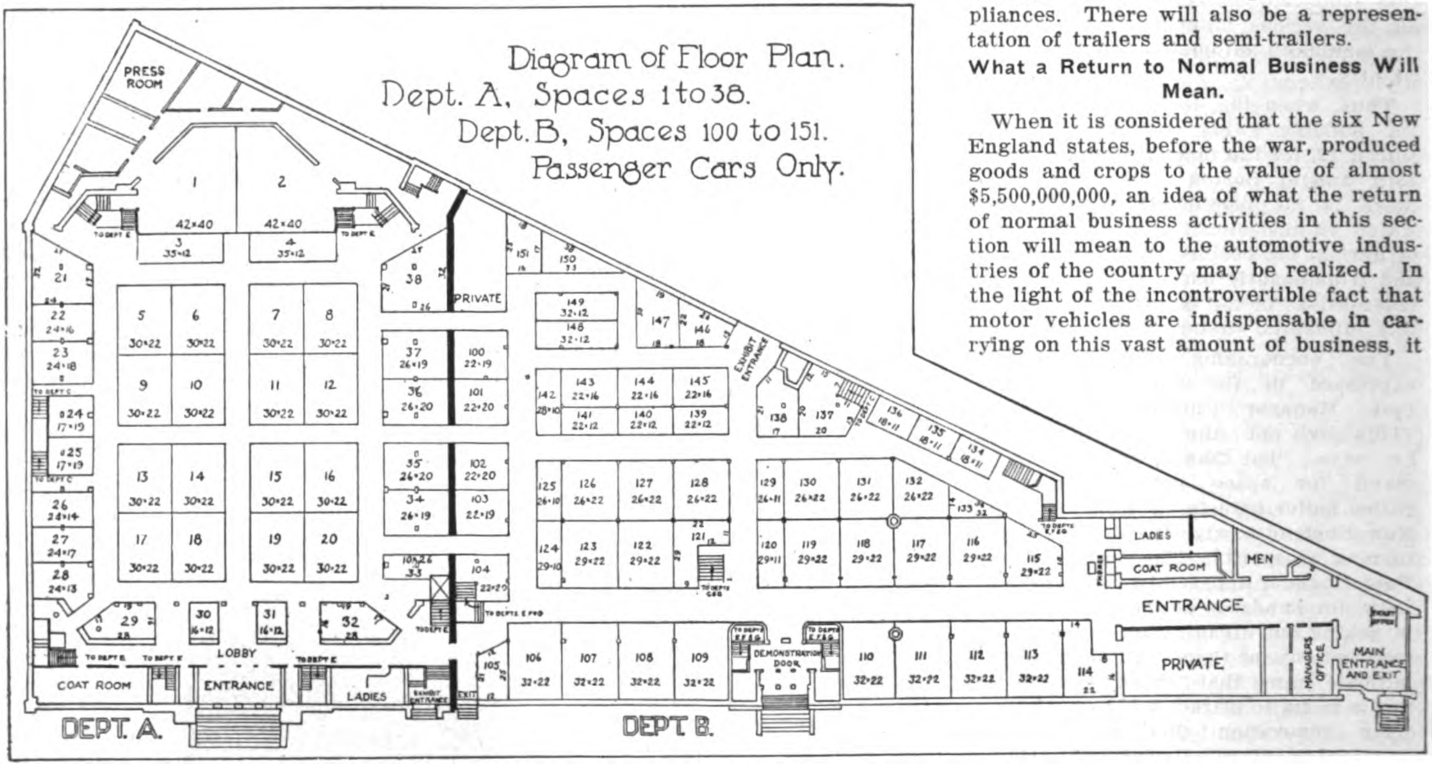
Huntington Avenue Front of Mechanics' Building Looking South, Where Boston Automobile Show Is Held.

senger cars. These are on the main floor of the building.

Departments C and D are on the basement floor. The former comprises spaces 200 to 271, inclusive, and is for the showing of commercial motor vehicles. The latter, spaces 300 to 436, inclusive, is for the exhibit of passenger cars, commercial vehicles, sundries and machinery.

Departments E, F and G are on the balcony floor. In E, which overlooks Department A, are spaces 400 to 450 inclusive and will contain exhibits of passenger cars only and accessories. Department F, spaces 500 to 564, inclusive, will house automobile accessory displays. Department G includes spaces 600 to 632 and 700 to 733 inclusive, and are for the exhibit of automobile accessories.

No second-hand or rebuilt car will be shown and the same rules in regard to sub-letting of spaces, signs, admission and removal of displays, etc., will be in force this year as heretofore.



Decorations and Other Features.

It is understood that the management has worked out an especially elaborate decorative setting of unique design and that the aim will be to make this the most brilliant affair of the kind in the annals of automobile showdom from all aspects, but at the same time the atmosphere of strict business will be maintained. The usual fine musical attractions may be expected in the various sections, and the social side will not be neglected, although no calendar of special days has as yet been announced.

The admission of exhibitors and employees will be on the double-check system, and jobbers' tickets will be issued under special arrangements. Regular single admission to the hall will be 75 cents, including war tax.

The show will open Saturday, March 12, at 2 p. m. and will be open every day thereafter, excepting Sunday, from 10 a. m. to 10:30 p. m., until and including Saturday, March 19.

This annual show is again for the 19th season under the competent management of Chester I. Campbell, and all the refinements and distinctively pleasing features that have characterized the Boston event in the past will be in evidence at this time.

The exhibition is held under the combined auspices of the Boston Automobile Dealers' and the Boston Commercial Motor Vehicle associations. The directors of the former are: J. W. Bowman, J. S. Donovan, C. E. Fay, J. H. Johnson, F. A. Hinchcliffe, G. B. Kimball, J. H. MacAlman, J. W. Maguire, R. B. Nettleton, C. P. Rockwell and F. E. Wing, with J. H. MacAlman as president and F. A. Hinchcliffe as treasurer.

The directors of the Commercial Vehicle association are as follows: P. S. Aultman, E. Day Baker, W. H. Baker, J. S. Hathaway, N. H. Halliday, J. H. MacAlman, J. W. Maguire, C. P. Rockwell, L. B. Sanders. The officers are: President, J. S. Hathaway; vice president, J. W. McGuire; treasurer, E. Day Baker.

Chester I. Campbell is secretary of both bodies.

A Buyer's Show.

This is expected to be pre-eminently a buyers' show, as the New England territory is probably as alive to the growing possibilities of the use of the motor vehicle, both pleasure and commercial, as any section of the country, and the big Boston show is always the opening impetus in the selling campaign.

The motor truck department will have an unusually large and varied display. Every kind of body for commercial purposes, with the latest and most efficient methods of loading and unloading will be shown. This will be housed in the basement of the Mechanics' building, as has been the custom in the past. It is stated that it will easily be the largest commercial car show of the year held anywhere. For instance, more than twice as many models are scheduled to be seen as were at the exclusive New York truck show.

Many of the trucks will be shown completely equipped with bodies, pneumatic tires and every necessary accessory. The special bodies will comprise many for farm use, including the convertible type, some of which are designed to serve eight different purposes on a single chassis. In addition to the gasoline models a number of electric trucks will be shown.

The fact that the New England section is continually becoming more and more aware of the utility and adaptability of motor driven farm equipment is demonstrated by the fact that considerable space will be devoted to the showing of tractors and other agricultural appliances. There will also be a representation of trailers and semi-trailers.

What a Return to Normal Business Will Mean.

When it is considered that the six New England states, before the war, produced goods and crops to the value of almost $5,500,000,000, an idea of what the return of normal business activities in this section will mean to the automotive industries of the country may be realized. In the light of the incontrovertible fact that motor vehicles are indispensable in carrying on this vast amount of business, it will be seen that it will mean larger purchases of cars and commercial vehicles, not to mention the needs of vehicles for recreation. Naturally tire and accessory dealers will benefit, too. An analysis of the figures is interesting.

Industrially the capital invested represents $3,909,809,000, and the value of the product turned out was $5,136,761,000. When the crop value of $298,191,000 is added it gives a total of $5,424,943,000.

That total is taken from figures for the year 1916. Of course the war speeded up a lot of production later and many new industries were added. Some of these will go out of existence. Others will return to their regular lines. They are making the readjustments now, and the conservative spirit of New England will keep them on their feet as going concerns.

Vehicles in New England.

At the present time there are regis-

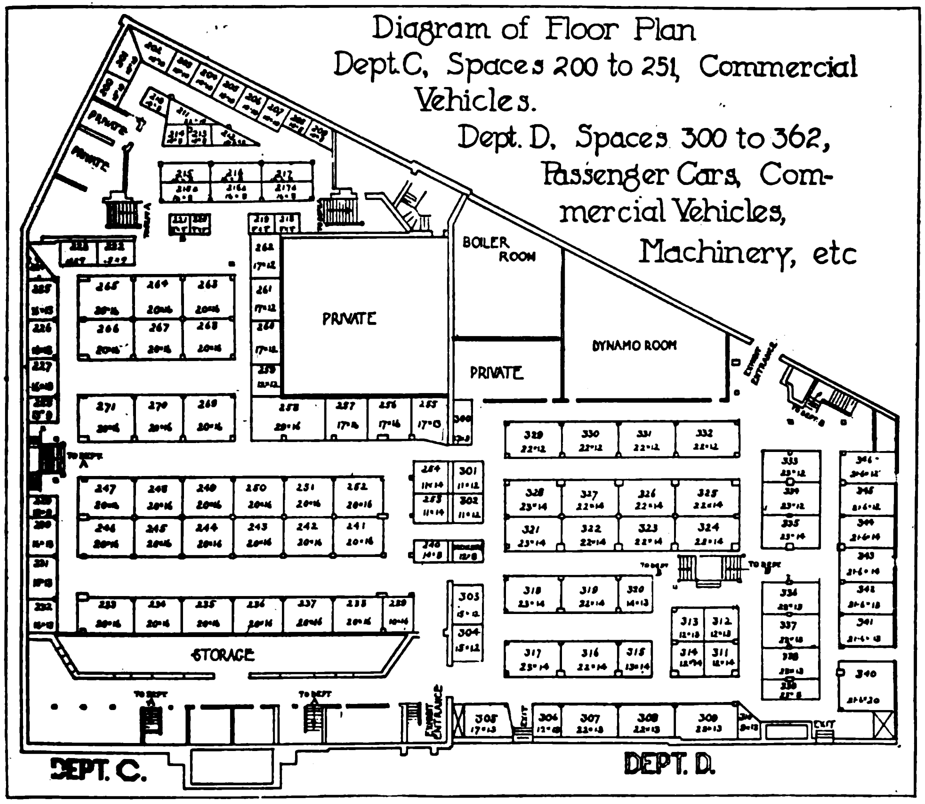


Diagram of Floor Plan
Dept. C, Spaces 200 to 251, Commercial Vehicles.
Dept. D, Spaces 300 to 362, Passenger Cars, Commercial Vehicles, Machinery, etc

tered in New England approximately 603,352 motor vehicles. They comprise 506,428 passenger cars and 96,924 commercial vehicles. That is not enough to reach a saturation point. Many will be scrapped this year.

Maine has 55,395 cars and 7512 commercial vehicles; New Hampshire, 30,240 and 4440, total 34,680; Vermont, not making a distinction, has 31,625 vehicles; Massachusetts, 253,245 cars and 51,386 trucks, total 304,631; Rhode Island, 40,800 of the former and 9575 of the latter, total 50,375; Connecticut, 95,123 and 24,011, total 119,134.

The New England total shows that more than 50 per cent. are owned in Massachusetts. That is natural, because this state leads the others industrially, and is second only to Maine in crops. Also its total population is some 50 per cent. of that of all New England.

Salesmanship and Cooperation Necessary.

It is recognized, however, that in order to secure the greatest measure of success in this field a real campaign of sales must be carried on. This is realized alike by manufacturer, distributor, dealer and salesman, and this campaign is not to be limited to any one period of the year, but should continue throughout the entire 12 months.

The days when people called and begged for cars are over forever. It was an unhealthy condition, but could not be foreseen or handled any other way than that adopted by the men in the industry. They have had the experience of the hungry months during the war, when there were few, if any, cars to sell, and this gave them an opportunity to get some effective business methods established. Therefore the readjustment period finds them prepared for what they are facing now.

Salesmen will be taught to study prospective lines for new customers and there are many prospects for cars in New England.

The matter of cooperation between the manufacturer and dealer is being given more consideration than ever before. The factory executives feel that they now have more time to give to problems arising from distribution.

They are not rushed with orders. Factory resumption is going on slowly. And the effects of the policy of manufacturer and dealer meeting each other half way to their mutual advantage, which was informally inaugurated at New York during show week, and more officially discussed at the conventions in Chicago, are beginning to be felt.

Definite ideas about production and distribution are being gained and disseminated on which can be based estimates for future business.

With the factory men cooperating with the distributors, and the latter with the dealers, there will be a better feeling all along the line. This does not mean that there has not been cooperation in the past.

However, there were times in the rush of work and the changing of executives that caused matters to arise that were not attended to as speedily as they might have been. With everyone selling vehicles and the demand greater than production, it was felt that the lack of cooperation did not amount to very much in the general results. But all this is changed now.

With this cooperation established on a firm basis it means that the buyer will be given adequate service.

Some of the Boston men prominent in the industry and trade are making renewed efforts toward carrying this matter of cooperation out in regard to the relations between distributor and dealer, employer and employee, with beneficial effects, and this will undoubtedly be the keynote of many of the conventions, conferences and other get-together events which contribute so largely in making Boston the Mecca of all New England and the eastern interests at this time.

Location of Exhibits.

By referring to the list of exhibitors on the following pages and locating the space number on the plan views given herewith, any desired concern or product may be readily found. It will be noted that the concern making the exhibit, which is usually the Boston distributing concern, is listed, but that the various makes of cars and trucks are also listed alphabetically so that it is possible to locate any desired vehicle display by referring to the trade name of the car alone.

The factory addresses of many of the principal makers of accessories and equipment are also included.

Dept. G, Spaces 600 to 627, Automobile Accessories.

Partial List of Exhibitors at Boston Automobile Show

Space	Name	Address
505	Able Manufacturing Co	San Francisco, Cal.
33	Acker, Inc., Edward G	Boston
548-549	Acme Die Casting Corp	Brooklyn
205-209 Inc. & 212	Acme Truck	Boston
300	Ajax Motor Sales Co	Boston
300	Ajax Trucks	Boston
526	Alemite Lubricator Co. of N. E	Bridgeport
424	American Car	Boston
506-507	American Chain Co., Inc	Bridgeport
606	American Mutual Liability Insur. Co	Boston
405	American Storage Battery Co	Boston
146	Anthony & Co., F. P	Boston
522	Apco Manufacturing Co	Providence, R. I.
503	Apollo Magneto Corp	Kingston, N. Y.
605	Arrow Grip Mfg. Co	Glens Falls, N. Y.
412	Ashton-De Vere, Inc	Boston
340-341-342	Atlas Truck	Boston
134-135-136	Auburn Car	W. Somerville, Mass.
323-324-325-326	Autocar Sales and Service Co	Boston
323-324-325-326	Autocar Truck	Boston
605AA	Automatic Air Cushion Co., The	Boston
700	Automatic Safety Signal Co	Portland, Me.
602	Automobile Legal Association	Boston
620	Automobile Mutual Fire Ins. Co	Boston
621	Automobile Mutual Liability Ins. Co	Boston
517	Automotive Gear Works	Atlanta, Ga.
228AA-229AA	Babcock Sales Co	Boston
309-310	Baker Co., Inc., Day	Boston
336-337-338	Baker Motor Sales Co., Inc	Boston
	Bassick Mfg. Co., The	Chicago, Ill.
14-18	Beacon Motor Co., The	Boston
439	Bearings Specialty Co	Boston
22-23	Becker-Stutz Automobile Co	Boston
303-304	Beeman Garden Tractors	Boston
30-31	Biddle Car	Boston
524	Biflex Products Co	Waukegan, Ill.
608	Blanchard, H. H	Boston
704-705	Boston Auto Top Co	Boston
411	Boston Blacking Co	East Cambridge
140-144 Inc.	Boston Buick Co	Boston
139-145-307	Boston Oldsmobile Co	Boston
5-9	Bowman Co., J. W	Boston
24-25	Brewster Car	Boston
137	Brisco Car	Boston
243-250	Brisco Truck	Boston
531-532	Brooks-Skinner Co., Inc	Weymouth, Mass.
220-221-220AA-221AA	Buda Co., The	Harvey, Ill.
140-144 Inc.	Buick Car	Boston
435	Bunting Brass and Bronze Co, The	Toledo, O
601	Burditt & Williams Co	Boston
527	Burton-Rogers Co	Boston
232-233-234	Boston Federal Truck Co	Cambridge
2	Cadillac Automobile Co. of Boston	Boston
440	Cadillac Automobile Co. of Boston	Boston
2	Cadillac Car	Boston
3	Caldwell, Inc., Frederick J	Boston
614	Campbell Co., A. S	East Boston
544	Campbell Motors Corp	Boston
24-25	Canterbury, Inc., George W	Boston
719	Carleton Co., The	Boston
414	Carroll Mfg. Co	Arlington
611	Central Automobile Tire Co	Boston
117-118-132	Chalmers Car	Boston
502	Champion Ignition Co	Flint, Mich.
420	Champion Spark Plug Co	Toledo, O.
122A-123-124	Chandler Car	Boston
122A-123-124	Chandler Motors of N. E	Boston
115-116-308	Chevrolet Car	Boston
115-116-308	Chevrolet Motor Car of N. E	Boston
215-216-217-215A-216A-217A	Clark Equipment Co	Buchanan, Mich.
708	Carlisle-Ayer Co	N. Boston
303-304	Cletrac Tractors	Boston
122A-123-124	Cleveland Car	Boston
340-341-342	Clydesdale Truck	Boston
36-37	Cole Car	Boston
113	Columbia Car	Allston, Mass.
542-543	Connell Co., W. J	Boston
129-130-131	Connell & McKone Co	Boston
709	Copithorn Mfg. Co	Boston
500-501	Coward Auto Supply Co	Boston
415	Crew-Levick Co	Cambridge, Mass.
333	C-T Electric Truck	S. Boston
329	Cunningham Hearse and Ambulance	Boston
4	Cunningham Car	Boston
4-329	Cunningham Son & Co., James	Boston
703	Curtis Pneumatic Machinery Co	St. Louis, Mo.
5-9	Daniels Car	Boston
410	Davis Chemical Mfg. Co	Brockton, Mass.
630	Davis-Lyon Storage Battery Co	Lynn, Mass.
631	Davis-Watson Mfg. Co	Nashua, N. H
409	De-Lite Mfg. Co	Dorchester, Mass.
560	Derf Mfg. Co., Inc., The	New York
417	Detroit Pressed Steel Co	Detroit, Mich.
413	Dickerson, C. A	Chicago, Ill
732-733	Dixie Flyer Car	Boston
108-109	Dodge Brothers Car	Boston
301-302	Dodge Brothers Truck	Boston
111-112	Donovan Motor Car Co	Boston
30-31	Dorris Car	Boston
138	Dort Car	Boston
515	Double Seal Ring Co	Chicago, Ill.
702	Duby, John F	Mattapan, Mass.

Accessory Interests Share in Business Revival Manifest at Chicago Show

IN THE innumerable pages that might be written concerning the salutary influence that the big national shows have exerted on the revival and stimulation of the automotive industries, the part that the accessory and equipment dealers and manufacturers have played should by no means be overlooked. These interests have nobly rallied to the support of the motor vehicle makers and trade throughout the exigencies of the business situation, and this spirit of cooperation was even more markedly in evidence at the Chicago than at the initial event in New York.

At the close of the New York show all eyes were turned towards Chicago with the feeling that at that time a closer estimate of the business for the coming year could be made. As a consequence, all the various automotive interests were more strongly in evidence than ever before. Material manufacturers were there in force and foundry, forge shop and mill representatives were lined up with the car manufacturers and dealers. The idea was to get at the status of the industry as well as to take actual orders. This resulted in the possibility of obtaining a more tangible indication of the manufacturing situation in the country as a whole than before since the present business complications started. And it is thus now conservatively estimated that the car manufacturing schedule of the principal concerns of the country will for the next three months average 60 per cent. of that for the same period of 1920, and that the total production should reach 1,300,000 cars for the present year. This is without taking into consideration some five of the larger manufacturers, who have internal complications in the way of the reorganization of finances or personnel to adjust or, because of a period of forced production, have an unusual large stock of cars in their distributors' hands.

Show Exceeded Former Records.

This year the Chicago show exceeded its record in several respects. It has always been pre-eminently a business show, but this year there has been an unusual determination manifested in every branch of the industry represented. There was much constructive work all along the line, as everyone was disposed to get business no matter how hard it might be necessary to fight for it, and it was felt that the opening guns must be fired in the dealers' sales rooms.

While the actual retail sales were only about two-thirds of what they were a year ago, the big attendance and unusual number of live prospects which were developed justified this determined spirit of cooperation, as well as the feeling of optimism which was transmitted, together with the majority of the exhibits, from the earlier New York event. There was an unprecedented volume of selling a year ago, but conditions then were widely different from what they are today. This year the attitude of the buying public is manifestly changed. It presents a clientele of an investigating turn of mind which is not buying haphazardly, but wants to be shown and needs to be convinced.

Although weather conditions were unfavorable, the paid attendance was 18 or 20 per cent. better than last year, and after the first day practically all admissions were paid. The booths were so crowded during the middle days of the week that the selling organizations were forced to postpone all discussions of any length for continuation in the sales room later on. And those in attendance were not as a whole prompted by mere idle curiosity, but were conscientious in their interest and were essentially made up of car owners, present or prospective.

In estimating that the list of prospects is some 50 per cent. larger than last year, only those are considered who indicated their interest in the cars to the extent of leaving their names and addresses.

Decorations Most Lavish.

The most lavish decorations in the 21 years of history of the Chicago automobile show converted the vast exposition buildings into bowers of colorful beauty; 250 art glass shades, suspended from the lofty ceilings, cast a soft glow on the $100,000,000 display of automobile creations. The various makes of cars were divided off by high pillared sections, crowned with vases of rare flowers.

Cameos along the gallery fronts depicted the evolution of transportation, from the ancient days of the cave man to the modern sight seeing buses.

More than 200 manufactures and dealers of accessories, devices and articles lending additional comfort, utility and economy to driving had displays in the galleries and basements.

Judged from an engineering and manufacturing standpoint, it may be said that no new cars appeared at the Chicago show. The three cars shown which are new to the general public, are all assembled products, incorporating units with which the industry is familiar. These new cars are the Winther Six put out by the manufacturers of the Winther truck, the Ambassador, which is a product of Shaw of Yellow Taxi fame, and the third is the Sterling Knight, of which the initial product was exhibited at the salon and for which there are as yet no factory or manufacturing plans. The car is the design of Engineer Sterling, formerly of the B. F. Stearns Co.

DEALER'S CONTRACT DISCUSSED.

One of the principal features of the various conventions and get-together meetings that were, as usual, held during Show Week, was the annual meeting of the National Automobile Dealers' Association, in the course of which was discussed the much-mooted question of contract relations with manufacturers.

This discussion was prefaced by a letter to Manager Harry G. Moock of the N. A. D. A. from C. W. Nash of the Nash Motors Co., in which he set forth his ideas of dealer-factory relations. Following this Robert J. Schmunk, vice president and general sales manager of the Peerless Motor Car Co., appeared in person before the association and outlined his ideas as to what the attitude of the factory toward the dealer should be. Following these messages from leading manufacturers, the meeting was thrown open for discussion, terminating in the authorization of a committee and the invitation to the manufacturers to cooperate.

With the entire trade and industry made aware of all the facts in the case, it is believed the matter will work itself out almost automatically.

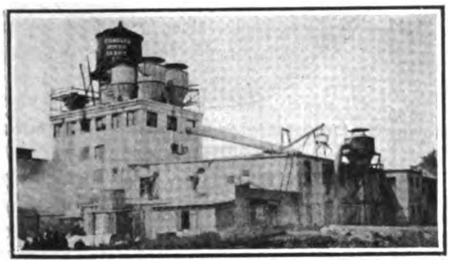
Multibestos—A Brake Lining

STORY OF A NEW ENGLAND ORGANIZATION AND A PRODUCT WHICH FOR 20 YEARS HAS SUCCESSFULLY MET EVERY FORWARD STRIDE AND KEPT ABREAST OF AUTOMOTIVE PROGRESS.

(By S. G. SWIFT.)

IT DOES not seem extravagant to state that few among the many drivers of the 8,500,000 motor vehicles registered in the United States ever give more than a passing thought to the exhaustive tests, and years of research and experiment, that were necessary to produce the efficient brake linings which now make it possible for them to operate their cars with safety to passenger and pedestrian.

Much attention has been paid to the development of the mechanical features of the automobile and truck, and nearly every car owner can give an abstract review of the principles of the power plant, but there are few who know anything about the construction of the all important brake lining. It does its work well, and is accepted for what it accomplishes, but what it is, or how it has been evolved the average person does not know.



Front View of Dust Collecting System.

The traffic officer, with a wave of his white-gloved hand, halts the speeding car, and the skilled driver grinds on his brakes and knows from experience that they will hold, though neither he nor the policeman has ever stopped to analyze the reason for the never failing grip that, like a giant hand, quickly brings the machine to a standstill.

But the story of the stiff, black band of rough material is interesting and belongs in the mental library of the educated owner and driver of automobiles and trucks.

In the infancy of the automotive industry which at the present time uses a yearly total of 60,000,000 feet of brake lining—car builders equipped their machines with brakes of the metal to metal type. This practise was universal, chiefly because no satisfactory facing was then known.

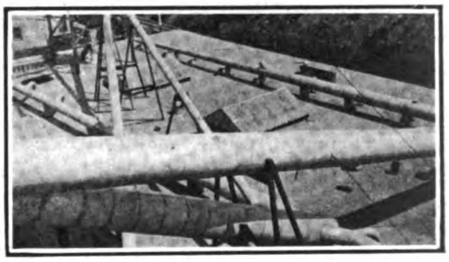
Stoughton Bell, President

Fabric First Used for Facing in 1900.

At the beginning of the 20th century automobile brakes were faced with fabric of different kinds, and leather was also employed. These methods, however, were not satisfactory, as the substance wore quickly and failed to clamp the brake drums satisfactorily. It also became charred and brittle through the heat engendered by the application of the brakes, and when saturated with oil and gasoline was rapidly cut by the sand and dust that sifted onto the surfaces.

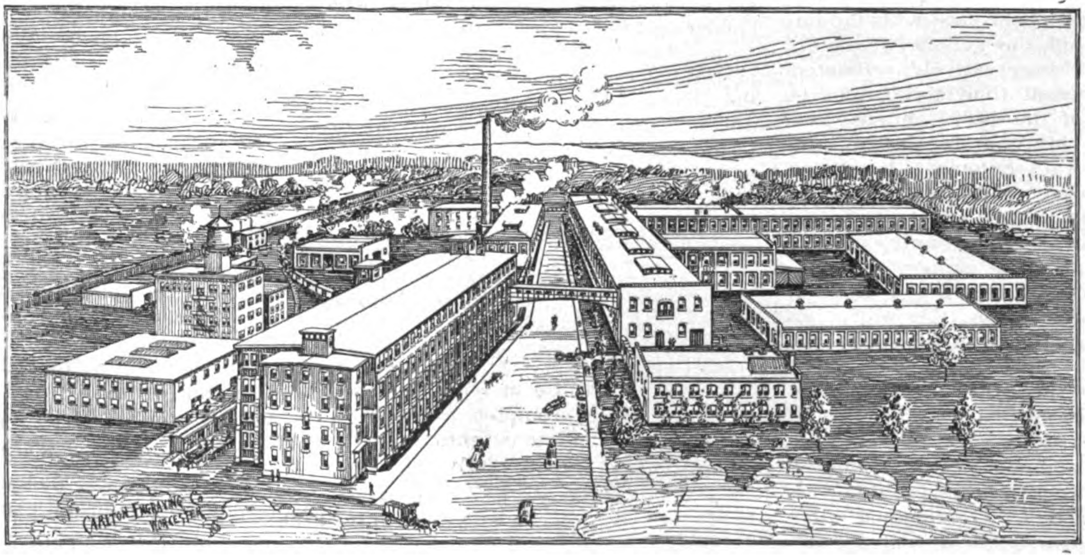
As the speed, power and weight of the motor vehicle became greater it was seen that cotton or leather compounds would not do at all, and the industry sought a friction material that would adequately meet its requirements. Engineers tried various compounds and combinations without success, until it was finally discovered that asbestos offered the solution to the perplexing problem.

This mineral has exceedingly great heat resistance, which is the vital principle of construction in obtaining a satisfactory brake lining. The real problem, however, lay in adapting it to the purpose in hand. In its original state it was difficult to utilize it as it was found that it readily disintegrated under pressure, and had decided tendencies to glaze and wear unevenly.



Rear View of Dust Collecting System.

Among those who experimented with the problem of adapting asbestos for brake linings were the engineers of the Multiple Woven Hose and Rubber Co. now incorporated



Modern Plant at Walpole, Mass., Where Multibestos, a World Known Product, Is Manufactured.

under the name of Multibestos Co., which in its plant at Worcester, Mass., was engaged in the manufacture of solid multiple fire hose fabrics and solid cotton belting.

Company Specially Qualified for the Work.

This company was especially well qualified to undertake work along the lines of development proposed, as its equipment included weaving and treating machinery, and among its personnel of executives were men thoroughly versed in the construction and adaption of special machinery.

After the experiment the engineers employed by the company successfully worked out the practical solution of making asbestos suitable for brake linings by weaving it on special looms, in combination with brass strands, and they also compounded special formulae for treating the fabric.

Thomas J. Daley, Secretary.

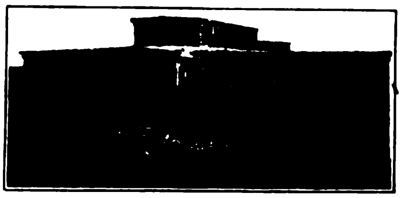
As a result it began the construction of Multibestos, a brake lining that is said to be standard equipment for more than 60 per cent. of all cars manufactured in the United States. The demand for the material has fully kept pace with the immense growth of the automobile industry, and it is conservatively estimated that at the present time Multibestos is sold by most of the 40,000 garages and supply houses in America, and is supplied as renewal equipment by 25,000 repair shops when specified.

The product also enjoys a healthy sale in foreign countries, where the demand is proportionally as great as it is in the United States. Exports during the war were unusually large, and even at the present low rate of foreign exchange the company still does business with European markets.

The basic reason for the success with which the product has been acclaimed, is partly suggested in the name. Multibestos is a coined trade-name, the first half of which implies that the fabric is of multiple, or many, weaves, while the last half suggests the asbestos from which it is made. By multiple weave is meant the solid weave by which every thread is tightly bound in a solid mass, having no loose plies to break under the stress of suddenly applied brakes. This manner of weaving makes one piece of the band, and does not depend on "stuffers," the trade expression for layers of loose thread placed between outer plies, for the sole purpose of making the material appear thicker than its weave warrants.

Photo by Bachrach.

E. O. Christiansen, Treasurer and General Manager.



The Cradle of Multibestos. Worcester Factory 1910.

Features of Multibestos.

In Multibestos the different thicknesses are obtained wholly by the number of solid weaves of the fabric, which makes an interlocking weave of asbestos yarn. The trade generally gives Multibestos the credit of being the pioneer in the asbestos brake lining field, and certain it is that the company was the first to manufacture real asbestos yarn for the purpose.

MULTIBESTOS REG.U.S.PAT.OFF.

The Business End of the Brake.

At the outset the manufacture of brake lining was merely a small part of the business done by the company, whereas today this class of product constitutes more than 95 per cent. of all manufacture. Inasmuch as the automotive industry was in its infancy at the time the company started making Multibestos, it was not thought that the product would ever assume any very large proportions, but as the automobile became more universally used the company was forced by circumstances to keep making a larger and still larger output, and in 1913, having entirely outgrown the Worcester plant, an entirely new factory was erected at Framingham and the business was removed to that location. The new building had 50,000 feet of floor space and was thoroughly modern, being adequately equipped to handle all business that might come, in the opinion of the executives.

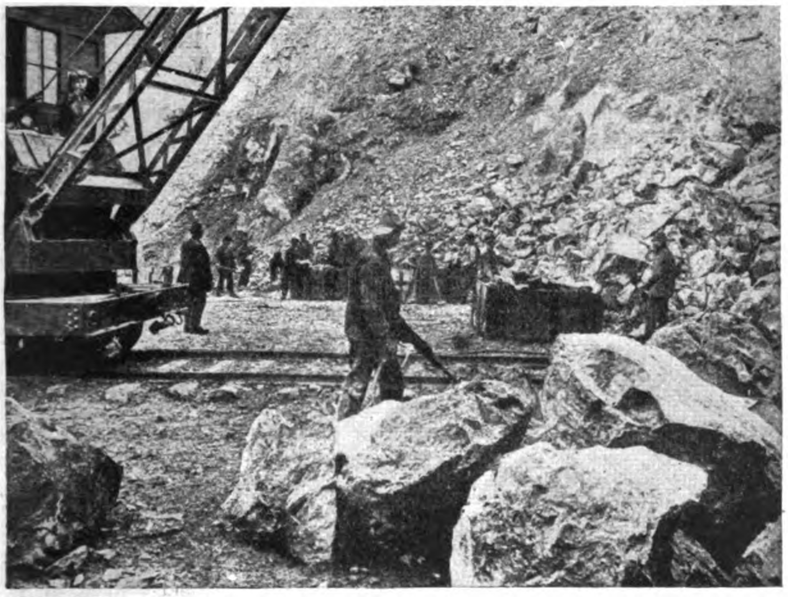
John C. Donnelly, Sales and Advertising Manager.

But the sojourn at the new plant was of short duration. The business of supplying the world with Multibestos required still larger and better facilities for manufacture, and there came a time when it was imperative that another factory be obtained. With this decision began the third and latest chapter in the story of Multibestos.

The Plant at Walpole.

While considering the addition of new buildings at Framingham sufficient to triple the capacity of the factory, it was learned that at Walpole, Mass., about 15 miles away, was a highly organized and comparatively new plant, peculiarly suited to the manufacture of brake lining and mechanical rubber goods, the company at that time manufacturing a line of the latter product.

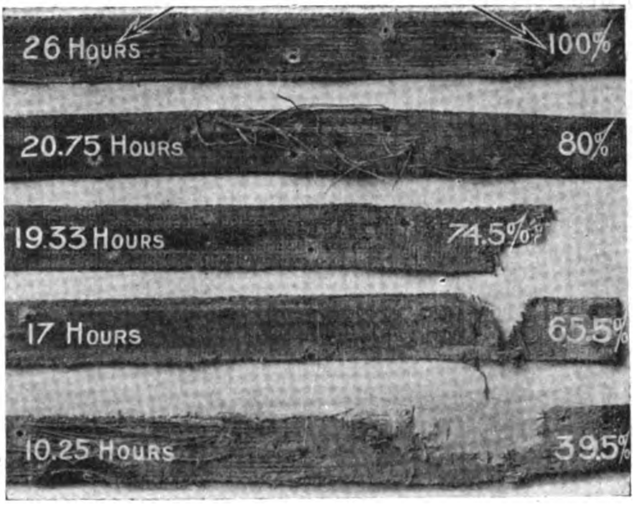
This plant, comprising 175,000 feet of floor space, and including 75 acres of land available for future expansion, had been developed for the Walpole Tire and Rubber Co., which had ceased opera-



Typical Asbestos Mine, Thetford, Province of Quebec.

tions. Recognizing the opportunity the company purchased the property, and abandoned the idea of enlarging the Framingham plant, as sorely needed production could be started at the Walpole plant immediately, which would not have been possible had the proposed additions been built at Framingham.

The present Multibestos factory, ideally suited for the purpose in hand when purchased, has been further improved, and today contains the finest possible labor saving equipment that could be devised by engineers who have been allied with the different stages of manufacturing improvement for more than 20 years. The plant is ideally located in a town renowned for its skilled labor, and has unusual shipping facilities, being adjacent to two railroads, one of which runs within a few feet of the property.



Engineers' Report, Showing Strength of Various Kinds of Brake Lining.

Processes in the Manufacture of Multibestos.

The Multibestos company is one of the few manufacturers of brake and clutch linings owning and controlling every process of manufacture. Every operation is performed in its own factory, even to the making of the asbestos yarn.

The process by which brake linings are manufactured is very interesting. The asbestos rock used by this company is especially mined and comes from a small area at Thetford, in the province of Quebec. It is first crushed between heavy rollers, after which it is carefully screened to free it from grit and foreign substances. The cleaned stock automatically passes into a small room at the rear of the screening department, and is then blown through a large pipe to the second floor, where the carding machines are located.

The carding equipment, which does much to metamorphose the rock into the yielding fabric, is of standard design, and is similar to that used in the cotton and woolen industries. Briefly, this carding of the fibers consists in their being passed through rapidly revolving rollers with wire teeth, which causes them all to lie in the same direction, after which they are spun into the soft yarn known as "roving."

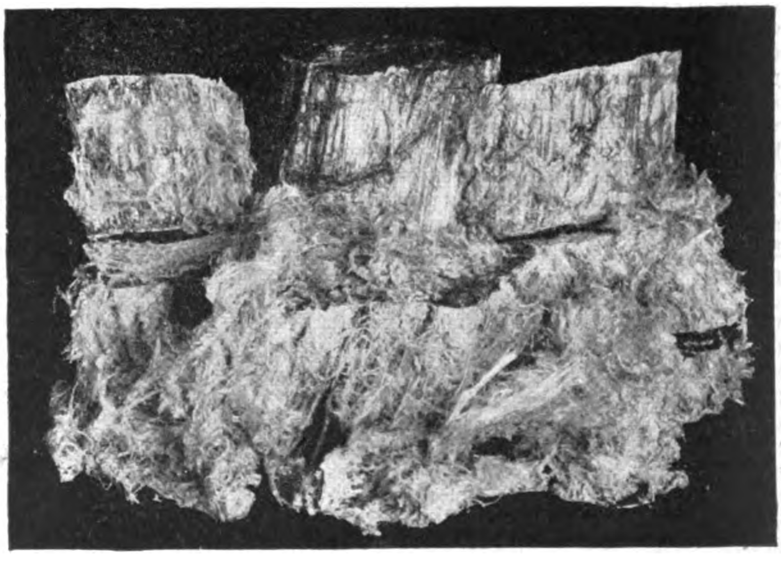
This loosely spun yarn, having little about it to remind one of the rock from which it was made, now goes to a mule spinning frame, where it is twisted into stronger yarn. The next operation is that of combining the asbestos yarn with brass wire. This is done by means of special machinery, and gives added tensile strength which assures a firm bond for holding in place by riveting.

The finished yarn is next woven. This part of the manufacture is done by means of heavy, narrow fabric looms, which are so made as to admit of the weaving of a number of belts or strips at the same time. Weaving is the critical period of brake lining manufacture. Inexperienced, or careless operators can weave the fabric in a manner that will absolutely spoil it for use. With this understood, the company guards against it by playing safe. They allow none but specially trained workers to attend to this part of the manufacture, and the value of this is seen in the small amount of rejected material found by the inspectors, who so carefully watch each step in the manufacture of Multibestos.

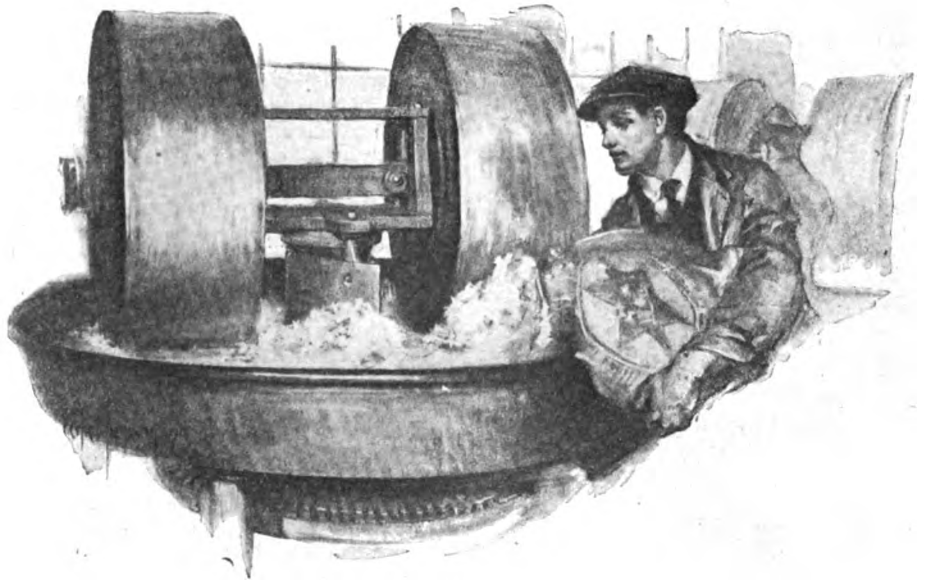
An idea of the flexibility of these looms and their capacity can be gathered from a study of the various dimensions of the fabric turned out. As Multibestos is used as brake and clutch linings in every kind of motor vehicle, including airplanes, and is also extensively used in the manufacture of certain units connected with heavy hauling, it follows that a wide variety of sizes is necessary.

These various sizes are gained by having the looms so made as to be adjustable, and materials may be woven on them varying in thickness from ⅛ to ¾ inches, and by ¾ to 20 inches, cross measurement. This variation is obtained solely by increasing the number of threads, and not by artificial padding or stuffing. In other words, the inside of a piece of Multibestos, if exposed with a hack saw will be found to be made of the same material as the outer surfaces, which fact has much to do with its wearing qualities.

One of the manufacturing economies that the makers of Multibestos employ in obtaining quantity production is the method of feeding the yarn to the looms



The Crude Asbestos Closely Resembles Vegetable Fiber.



Heavy Rollers Separate the Asbestos Fibers.

from "beams" or huge metal spools. These spools hold very large quantities of yarn, and naturally save time in weaving as the operators do not have to stop to "thread up" so often.

Multibestos Is Treated with Chemical Bath.

As the fabric is woven it is automatically wound onto reels for convenience in handling, and is then sent to the treating department, where it is immersed in a special chemical compound which permeates every fiber and makes the fabric impervious to heat, dust, water, oil and grease. At this point the processes of making brake linings and clutch linings differ somewhat.

The reels of fabric are placed on revolving axles and fed into the baths, that which is intended for brake linings going into one solution, while the clutch linings are dipped into another. After a long treatment in the impregnating bath, the rolls of fabric are placed in the drier, which is directly behind the baths.

Calendering and Stamping of Trade Mark One Operation.

From this department the fabric is fed through gravity elevators to the calender and stock departments on the ground floor. This process, which consists of pressing the fabric between heavy steel rollers, is coupled with a stamping device, which stencils the name "Multibestos" on the material and also stencils white marks at lengths of every foot. These marks not only identify the material as Multibestos, but are also a great help to the dealer in dispensing the product.

From the time Multibestos, as raw material, is received at the factory until the finished fabric is packed for shipment, it is constantly subjected to rigid inspections. While being fed into the treating compound every inch of the material is reinspected, as it unrolls before the watchful eyes of the inspectors. Other men watch it just as closely as it comes from the elevators to the calendering department, and the men in charge of the calendering and stenciling process again inspect it. The final inspection of all comes when the finished product is sent to the stock room, where the clerks inspect each individual roll to see that the markings and trade-mark have been properly recorded.

As a result of these many inspections there is very little low grade Multibestos that has to be thrown out, and this is not marked as seconds, nor is it sold under another name. It is simply thrown on the refuse pile, as the rigid policy of the company does not pass anything but standard products to its many customers. Multibestos, as a trade name, has become known as synonymous with quality, and the executives of this modern business do not intend that the name shall ever be placed in jeopardy by the use of inferior products.

High Quality of Multibestos Assured by Constant Tests.

The unvarying quality of Multibestos, in-built as the result of basic experimental tests, is kept at a continuous high standard by laboratory tests of a special nature. These tests are most exhaustive and show the manner in which the lining stands up under actual road tests. An illustration of one of the test boards is shown, which gives an idea of their thoroughness.

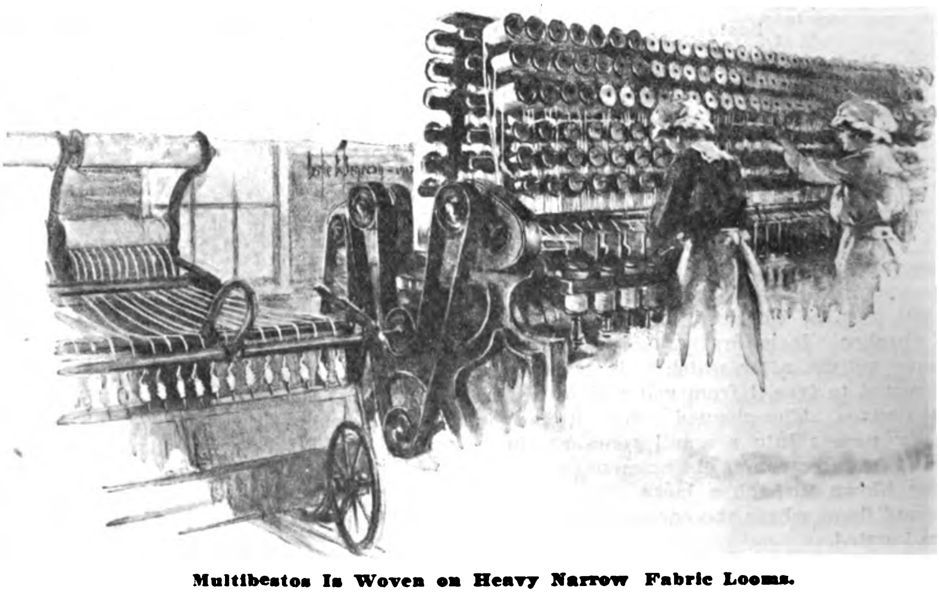
In this department, which is equipped with specially designed apparatus, experiments are made to determine the coefficient of friction, the pressure required to determine the resisting motion of contacting surfaces, speed, temperature, chatter and all other factors that can determine the wearing qualities of the materials. One part of the apparatus is designed to determine the result of applying the brakes on an automobile running at varying speeds, and another makes competitive tests of different makes of brake linings manufactured by other companies.

All of these results are charted on a revolving drum and furnish a constant study to the engineers of the company. It would seem that Multibestos has been developed to the highest degree of efficiency, and yet the management spends many thousands of dollars annually in trying to discover new processes, or to evolve new machinery that will benefit the users of brake lining.

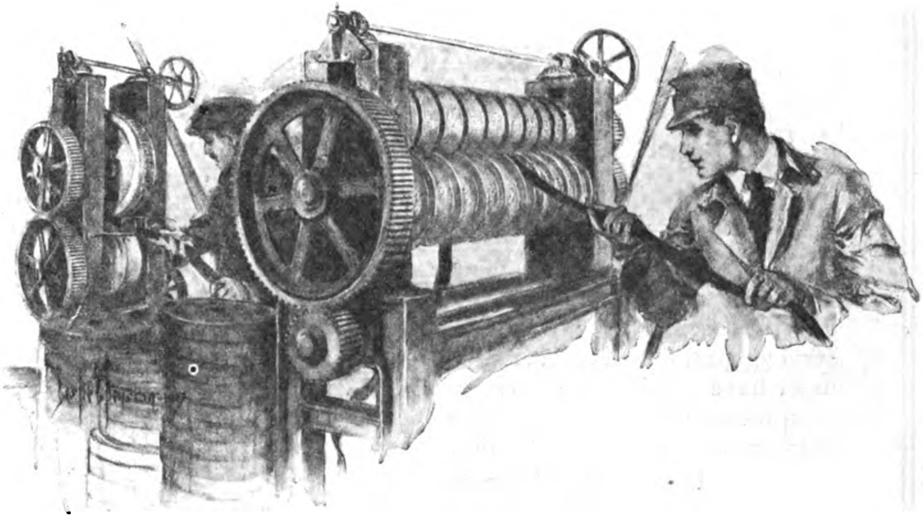
The Multibestos company also manufactures disc and cone clutch linings, transmission linings for Ford cars and brake blocks and shoes for heavy hoisting machinery.

President Stoughton Bell, to whose untiring efforts the company's success is mainly due, has well defined ideas on the subject of selling and has surrounded himself with officials who believe as he does.

In setting forth the principles of the company Mr. Bell in a recent interview said, "Multibestos and the company behind it stand for quality and service. Quality of organization, quality of men and quality of product. Service like charity, begins at home. We must render first, one to another, man to man and department to department. Only then can we serve our customers and the public. Quality and service are built on honesty and frankness. As we are sincere and honest one with another, so shall we be with those with whom we do



Multibestos Is Woven on Heavy Narrow Fabric Looms.



Calendering the Finished Product and Stamping Trade Mark.

business. The policy of the company is based on definite honesty standards. These standards are now and must always be in advance of past achievements, but our aims must not be so high that they cannot be attained within the time and under the conditions set for their accomplishment."

As a matter of fact the entire policy of the company may be summed up in Mr. Bell's New Year's greeting to the trade. This message was sent in the form of an illuminated card, and embodies principles that would be useful in any business. The text of the message is as follows:

"We are committed to work toward a standard product of sufficiently high excellence to be a source of pride to us, and the means of creating an impelling demand for our customers. A standard of price that will show a fair return on the investment and expense involved, yet not so high as to hamper the sale of our products and with the best return to the customer for the money he invests. A standard of workmanship and individual effort which shall command the respect of our fellow workers and the business of others. A standard of action, of courtesy and manner which shall gain for us the hearty welcome extended to friends. A standard of work to be done or quota to be reached which shall spur us to extra effort. A standard of working conditions which shall be fair to all and not a burden either to the individual or to the organization. In working toward these goals let us not forget that quality and service are not limited to them alone, or to the big things. They take even more account of the smaller acts—of the little things done in a generous way. Striving to hold always to these standards with the spirit of true cooperation towards one another and those outside we will hold and strengthen the dominant position that we have reached in our field."

The phenomenal growth of the Multibestos company is accounted for by its policy of fair dealing. There is no doubt but what any other product, given equal merit, would show similar growth under the same policies pursued by the company, and no one hesitates to give due credit to its efficient personnel of executives, which is as follows: President, Stoughton Bell; treasurer and general manager, E. O. Christiansen; assistant treasurer, C. W. Bunker; secretary, T. J. Daley; sales and advertising manager, J. C. Donnelly; superintendent, T. H. Bateson; purchasing agent, J. Posternock.

A list of the cars and trucks, tractors, axles and motorcycles equipped originally with Multibestos was recently compiled and given to the trade. It follows:

Passenger Cars.

Beggs, Biddle, Briscoe, Chandler, Cleveland, Columbia, Commonwealth, Crow-Elkhart, Cunningham, Daniels, Detroit-Electric, Dixie, Dodge Bros., Dorris, Hanson, Haynes, Hupmobile, Jones, Jordan, Liberty, Maibohm, Marmon, Maxwell, McFarlan Six, McLaughlin, Milburn Electric, Mitchell, Moore, Noma, Olympian, Owen-Magnetic, Pan-American, Piedmont, Pierce-Arrow, Re Vere, Saxon, Seneca, Shaw, Simplex, Standard, Stanley, Studebaker, Texan, Velie, Westcott.

Trucks.

Acason, Ace, Acme, All Power, American La France, Armleder, Atco, Atterbury, Available, Beaver, Brockway, Buffalo, Capitol, Clydesdale, Collier, Concord, Conestoga, Day-Elder, Dearborn, Dependable, Detroit, Diamond T, Dodge Bros., Dorris, Dort, Fageol, Federal, Ford, Gabriel, Garford, GMC, Giant, H. Tractors.

Avery, Bailor, Boring, Chase, Dauch, Emerson-Brantingham, G-O, Hart-Parr, Illinois Super Drive, Indiana, Liberty, Massey-Harris, Moline-Universal, Monarch, National, Parrett, Samson, Waterloo Boy.

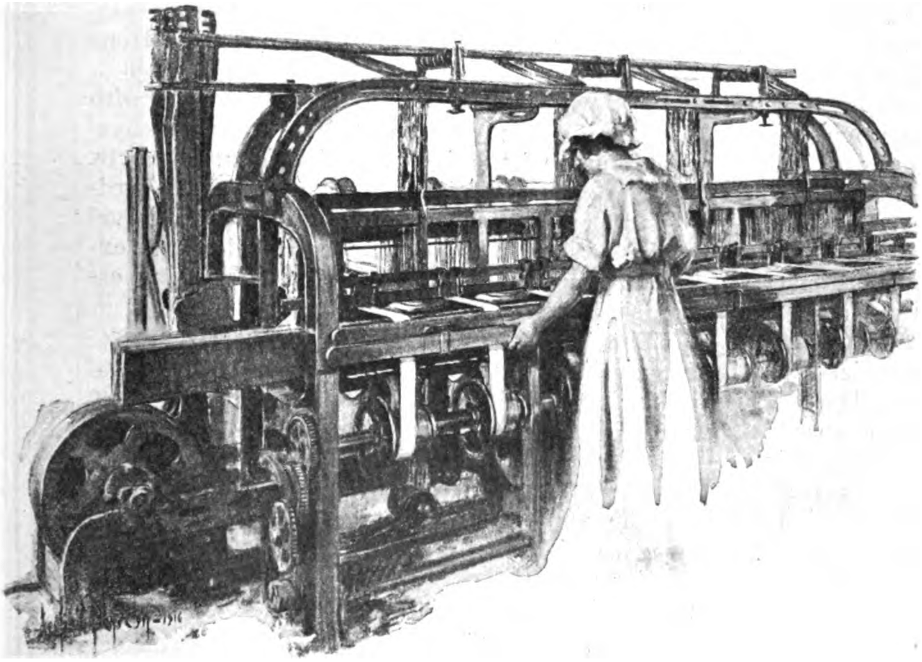
Axles.

Eaton, Peru, Salisbury, Spacke. Standard, Timken-Detroit, Vulcan, Wisconsin.

Motorcycles.

Excelsior, Harley-Davidson.

Multibestos, like many another automotive product, is not sold direct to the dealer, but is handled through jobbers. The company has branch offices and salesrooms in Chicago, New York, Kansas City and Chattanooga, and its salesmen cover every state in the Union. The company is an extensive user of advertising, and gets out many sales helps for dealers' distribution, in the form of pamphlets and booklets, but the product is as much a staple as the shoes one wears, and because of its high quality needs no elaborate selling campaign. All of which means that it has stood the test and has not been found wanting.



Twisting and Spinning the Crude Asbestos Fibre.

TRUCK AND CAR SERVICE STATION

A Fire-Proof Single Story Structure Equipped with Every Facility, with Foundation on Which Additional Stories Can Be Built If Needed.

IN THE accompanying plan an endeavor has been made to illustrate how closely related are the garage or storage department and the service station. A service station to be ideal must have facility that is essential for serving its customers efficiently. It must be designed so that economical administration is practical.

Dimensions of the Building.

The building shown measures 100 by 100 feet and is designed to face on a main street. It is a one-story type, the entire structure being devoted exclusively to the handling of automobiles, their accessories and repairs. The general appearance of the exterior or front should add greatly to any locality and improve the valuation of surrounding property.

Directly on centre and in the front of the building is located an office for the transaction of general business. Access may be had to this office from the garage proper located at the rear, or directly from the street. Adjoining the office at the left is the wash stand, this space being less valuable than any other owing to its proximity to the large door. Oil tanks and greases will also be found at this place; their accessibility to the transient trade being a point to be considered.

Large Repair Department Provided.

The general repair department is directly at the rear, with work benches and pits for working underneath large vehicles. Tool closets are provided at the left wall of repair shop where valuable tools may be kept under lock and key at all times when not in use. Adjoining the repair shop is the machine shop, the heart of the service station, a place where parts may be repaired, or if necessary made, which should have a complete equipment of machine and hand tools.

Just in front of the repair department is situated the storage area for trucks and cars, which is 14 feet in the clear from the bottom of the beams to the floor level. In size it is approximately 30 by 100 feet, with the exception of a small space occupied by the office. This space is fully lighted and ventilated by two huge skylights as shown, measuring 16 feet by 22 feet in size. They are constructed of galvanized metal on a steel frame with ribbed wire glass. The few columns that have been used are so spaced as to minimize inside manoeuvering of the vehicles for positions in line.

A boiler room is reached by a flight of stairs leading from the toilet and wash room, it occupying the area beneath the stock room and toilet. Provision has been made in the washroom to meet the requirements of shop of this size with adequate equipment for all purposes. The stockroom is amply large to carry all the parts necessary for a first class shop and access is had to it from both shop and garage proper.

Slow Burning Mill Construction.

The construction planned for is the slow burning mill type, which will be found extremely satisfactory for buildings where there is more or less danger from fire hazard.

The foundation would be of concrete sufficient in size and depth to carry all loads placed upon it. Provision for future expansion can be made at the beginning or laying of the foundation at a very small cost over the original figure, which can be made sufficient in size to carry two or three future stories.

The super-structure is comprised of brick with terra cotta trimmings. As there are numerous kinds of brick and some of which may be more easily obtainable than others in different localities, no statement is made of just what the size or color of these may be, but that a brick of a hard nature be used is recommended, as the harder the brick the smaller the percentage of absorption of water, and recommendation is with the object of minimizing dampness that might result from the use of inferior products.

General Details of Finish.

Terra cotta of a glazed or dull finish may be used, or concrete stone may be substituted in its place. Granolithic floors are provided and drained as shown, laid on a bed of five-inch concrete, the finished floor being one inch in thickness, composed of a mixture of one part cement and one part sand.

The windows are of the metal sash type with wire glass, complying with the underwriter's specifications and the fire laws of different districts.

The roof is of plank supported by steel girders and wood purlins. A five-ply tar and gravel roof is advised, this having been found to give excellent results in many large manufacturing establishments.

The drainage of the roof should be given careful consideration, the roof sloping one-quarter of an inch to the front. Lead flashing should be used throughout. For heating, steam with wall radiation is advised, using the pipe system or regular radiators if the owner so desires.

The approximate cost of a building of this type would be about $15,000.

For any further details regarding this structure write to the Architectural Department of this publication.

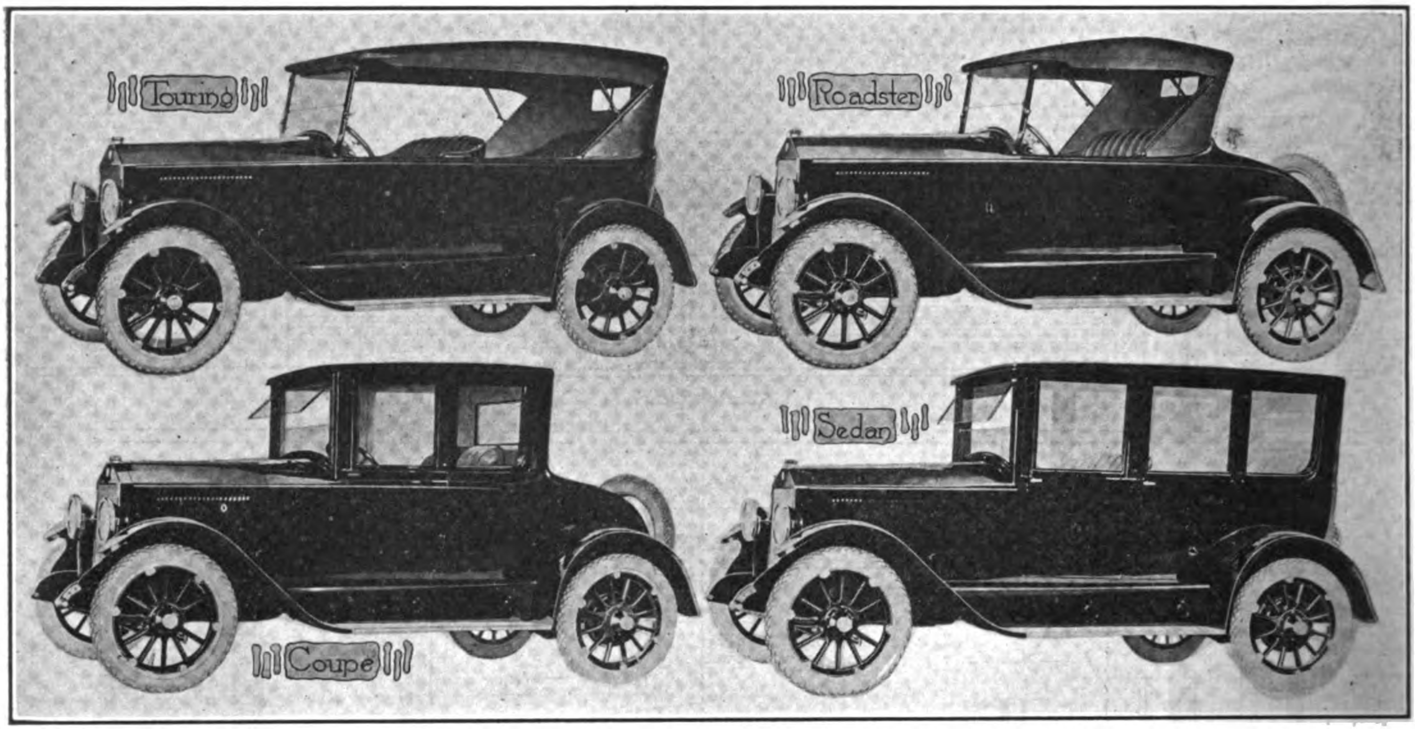
FLOOR PLAN

New Models of 1921 Cars, Trucks and



New Models of Dort Cars, Made by the Dort Motor Car Co., Flint, Mich., First Seen at This Season's National Shows.

SPECIFICATIONS OF NEW DORT MODELS.

Engine—Four-cylinder, L-head, Lycoming, en bloc; 3½ by 5, S. A. E. rating, 19.60 horsepower.

Lubrication—Pump and splash.

Cooling—Thermo-syphon.

Carburetor—Carter improved side outlet.

Fuel Supply—Stewart vacuum, 13-gallon rear tank.

Ignition—Connecticut battery.

Starting and Lighting—Westinghouse; Bendix drive.

Transmission and Clutch—Selective, three speeds forward, one reverse, in unit with motor; leather faced cone clutch.

Brakes—Emergency, internal expanding, hand lever; service, external contracting, pedal.

Wheels—Artillery, Timken roller bearings; demountable rims. **Tires**—Goodyear, 31 by 4, non-skid.

Wheelbase—108 inches.

Finish—Dort green; chassis and fenders enamelled black; hood and radiator same color as body.

Equipment—One-man top, side curtains open with doors; double adjustable windshield; electric horn; Stewart speedometer; silver finished dome lights in enclosed models; standard tool kit in bag, with jack, tire pump and tire repair outfit.

Price—Five-passenger touring, $1215; roadster, $1215; sedan, $1995; coupe, $1865.

PAIGE 6-66 SERIES.

Engine—Six-cylinder, L-head, Continental, 3¾ by 5, S. A. E. rating, 33.75 horsepower.

Lubrication—Pump and splash.

Cooling—Centrifugal water pump.

Carburetor—Rayfield.

Fuel Supply—Stewart vacuum; 23-gallon rear tank.

Ignition—Atwater Kent.

Starting and Lighting—Gray & Davis separate generator.

Battery—Willard, six-volt.

Drive—Hotchkiss.

Transmission and Clutch—Conventional, three speeds forward and reverse, special Paige transmission lock; Borg & Beck 12-inch, three-plate dry clutch.

Brakes—Two sets working on steel drums; brake drums two-inch face.

Wheels—Artillery. **Tires**—Firestone cord, 33 by 4½.

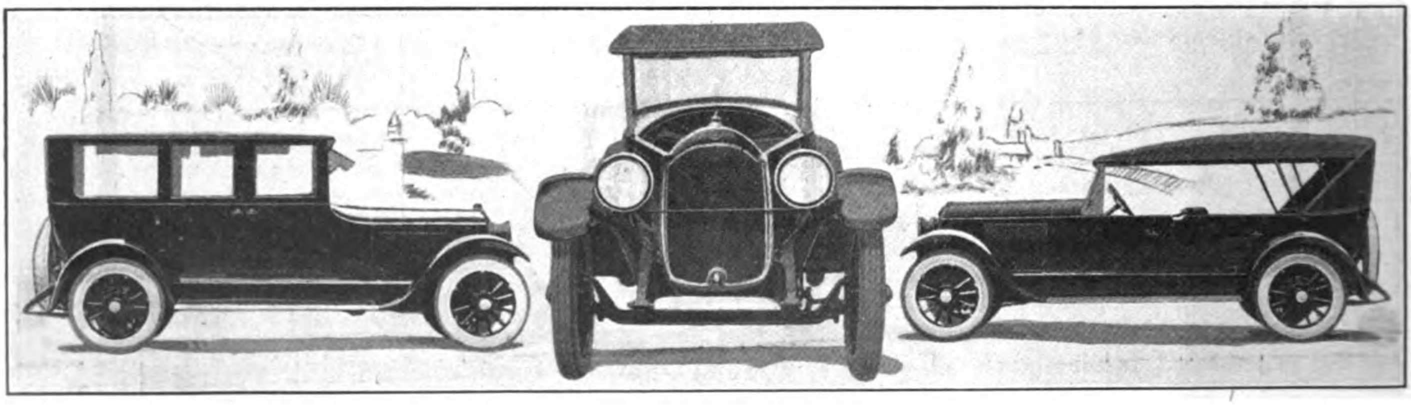
Wheelbase—131 inches inches; standard tread, 56 inches.

Finish—Paige blue with black leather upholstery on open models; alternative for four-passenger Larchmont, moleskin gray body with deep pencil grained genuine leather upholstery; sedan, brown broadcloth.

Bodies—Four and seven-passenger open and seven-passenger sedan.

Equipment—Three-piece, front-vision windshield, triangular side wings; tonneau light has cord with spring reel for use as trouble light; sedan model has vanity case, smoking set and windows fitted with mechanical lifts; dome, dash and rear quarter reading and step light at right rear door; cowl ventilator for front seats and heater in tonneau floor; headlights have Macbeth lenses. All other usual equipment.

Price—Seven-passenger touring, $2795; sport, $2895; seven-passenger sedan, $3650.

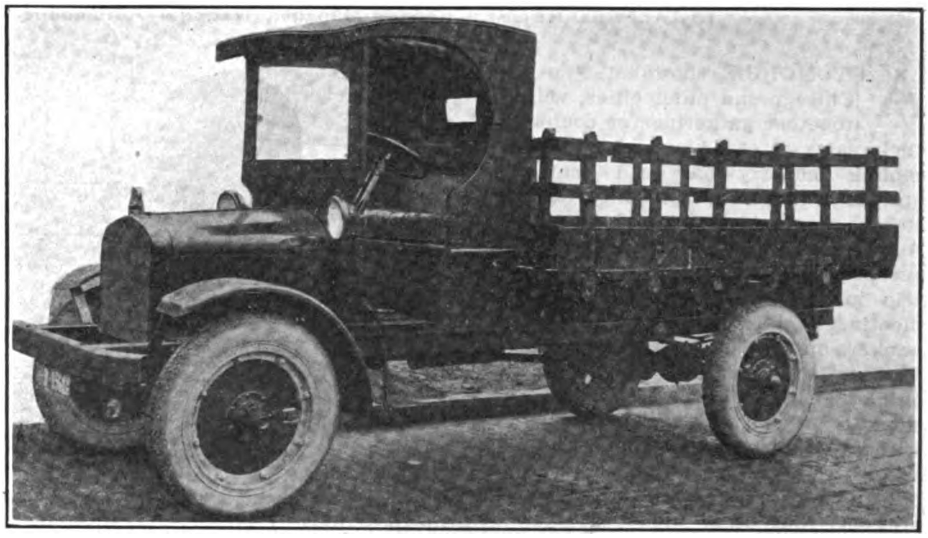


Typical Models of New Large Six Series of Paige Cars, Manufactured by Paige-Detroit Motor Car Co., Detroit.

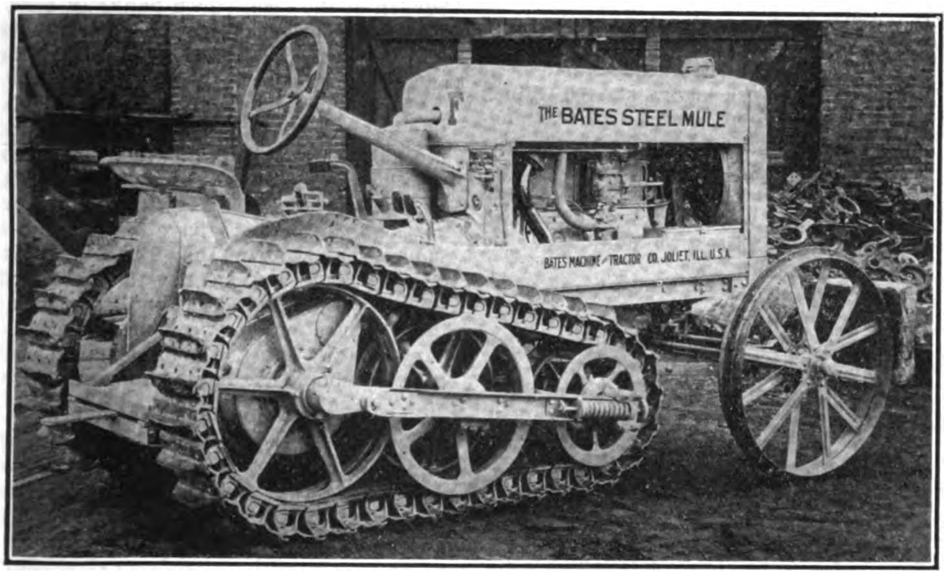
Tractors Now Being Offered to Trade

CYCLONE MODEL "A," 1½-TON TRUCK.

Engine—Herschell-Spillman unit type.
Cylinders—Cast en bloc.
Bore—3½ inches.
Stroke—Five inches.
Horsepower—35 at 1800 revolutions a minute.
Cooling—Thermo-syphon.
Carburetor—Schebler.
Starting and Lighting System—Westinghouse.
Steering Gear—Ross.
Clutch—Dry disc, multiple type.
Transmission—Warner selective, three speeds forward, one reverse.
Rear Axle—Torbensen internal gear type.
Wheelbase—136 inches.
Tread—56 inches.



Cyclone 1½-Ton Truck, Made by Cyclone Starter & Truck Co., Greenfield, S. C.



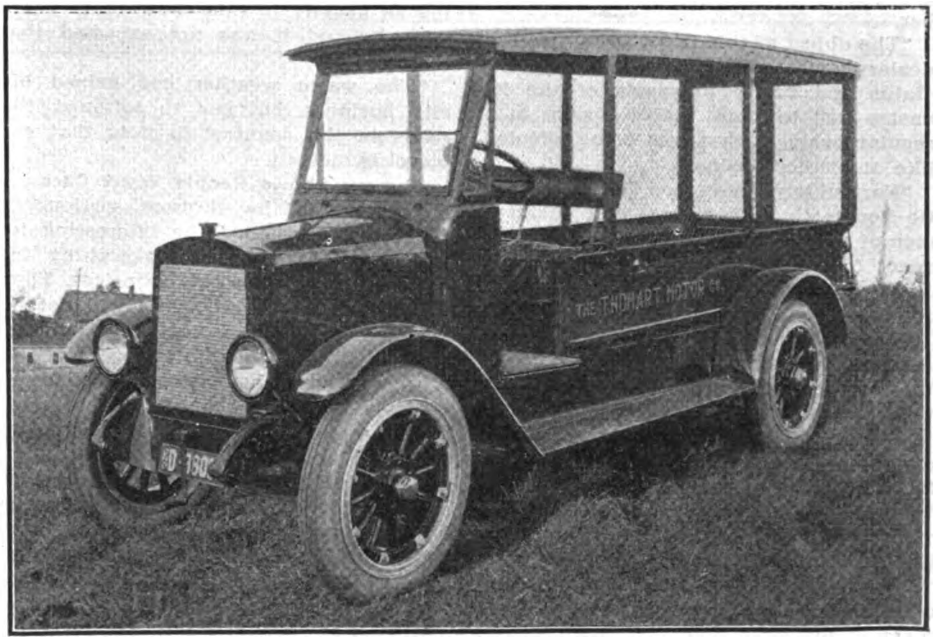
Bates Model F Crawler, Made by Bates Machine & Tractor Co., Joliet, Ill.

BATES STEEL MULE, MODEL "F."

Engine—Bates-Midwest.
Cylinders—Cast en bloc.
Bore—4¼ inches.
Stroke—Six inches.
Speed—800 revolutions a minute.
Horsepower—Draw bar, 18; belt, 25.
Lubrication—Force.
Cooling—Pump.
Carburetor—Bates.
Ignition—Splitdorf high-tension.
Clutch—Friction.
Transmission—Bates.
Final Drive—Crawlers.
Rear Axle—Bates, Timken bearings.
Length Over All—108 inches.
Width Over All—61½ inches.

AKRON ONE-TON MULTI-TRUCK.

Engine—Hinkley.
Cylinders—Cast en bloc.
Bore—Four inches.
Stroke—5½ inches.
Horsepower—S. A. E. rating, 25.6.
Cooling—Water pump.
Carburetor—Stromberg.
Starting and Lighting—Westinghouse.
Steering—Jacox.
Clutch—Dry disc, multiple type.
Transmission—Warner selective, three speeds forward, one reverse.
Rear Axle—Spiral bevel.
Wheelbase—133½ inches.
Tread—56 inches.



Akron Multi-Truck, Made by Thomart Motor Co., Akron, O.

Shows Took Automotive Industry Off Dead Center

(By ALFRED REEVES, General Manager, National Automobile Chamber of Commerce.)

AUTOMOBILE shows at New York, Chicago and other cities, with get-together gatherings of dealers and their sales forces, have taken the automobile industry off dead center and started it forward, according to Alfred Reeves, general manager of the National Automobile Chamber of Commerce, who recently returned from a three weeks' trip in the West, where he addressed meetings of dealers, manufacturers and bankers in Wisconsin, Illinois, Missouri, Iowa and Nebraska. He reports encouraging signs of returning business, which should continue for a number of months, with an appreciation that, after the spring trade, future progress in automobile industry will depend largely on the progress that other industries make in returning to normal.

Information gathered on this trip, coupled with reports from other sections of the country presented to the directors of the National Automobile Chamber of Commerce at their Chicago meeting, indicated that the best trade in cars and trucks at present is along the Atlantic and Pacific coast. It is somewhat spotty in other parts of the country.

New York, Pennsylvania, California, Ohio, Illinois and Wisconsin seem to show the best sales, while the poorest sections appear to be through the South, particularly Texas, in the Dakotas and in Iowa and Nebraska, although with a general upward turn everywhere.

"As in 1917, 1914 and 1919, the automobile shows have marked the return of buying in this country and a change of spirit not alone in our own industry, but among business men generally," said Mr. Reeves. "In those sections that have had the benefit of an automobile show the trade has started on an upward trend that is decidedly helpful in view of the small business of November and December.

"The object of this trip was to give the dealers and their bankers the present status and future prospects of the industry and to show that we were in a regular business that was being affected like any other business.

"Fortunately, there has been very little bombastic talk of late and business men of the country have a wholesome respect for the manner in which our industry is adjusting itself to the changed conditions.

"After addressing them on the subject of their industry at these meetings, I answered questions for an hour or more. You may be sure some highly interesting questions were asked and answered. To make it easy for the dealers to obtain facts, they had only to ask questions from their seats or they could send the questions on slips of paper. It gave us a fine contact with the dealers, to learn their problems and to have them appreciate the problems which the manufacturer is solving.

"While some manufacturers have grievances against dealers and some dealers have grievances against manufacturers, the whole spirit seems to be that closer cooperation will help to solve the difficulties of a year when trade is slower than usual.

New York Show the Start.

"The New York show started things off in good fashion, although the attendance was some 10 or 12 per cent. short of last year. Shows at Cleveland, Milwaukee and other places, however, were far beyond last year in attendance, showing continued interest in motor cars by the general public.

"Chicago made new records for attendance, Saturday showing a 20 per per cent. increase, and Monday 10 per cent., both days exceeding the first and second days of the New York show. Tuesday the increase was 12 per cent and Wednesday the paid attendance was 23½ per cent. better than last year, it being the largest day in the history of Chicago shows.

"Retail sales at Chicago and in other show cities were highly satisfactory. Because of tight money among the small town banks the dealers were not ordering as heavily in this show as in years gone by and it was not expected that they would.

"The warm weather has helped big city business, but has so softened the roads in the country districts that car travel is difficult.

Survey Shows People Want Cars.

"Surveys in the different sections of the country supplied the interesting information that buyers are waiting for lower prices or more stable prices. They want to be sure that prices will not be changed within the next few months. Almost all say they intend to buy another car and when asked the kind invariably mention a car of higher prices than the one they are using.

"Trade on the Atlantic coast and on the Pacific coast seems to be in the best shape. Wisconsin is doing well because her dairy products bring cash every day. Constantly improving trade is reported from Ohio and Illinois. Poor trade is reported from the South, especially Texas and from sections of Nebraska, Iowa and the Dakotas.

"We find dealers with their houses in order and in the right spirit for a spring sales campaign. They have some grievances against the manufacturers, just as the manufacturers occasionally have grievances against the dealers. That there is a fine spirit of cooperation, however, is evidenced by the acceptance by the directors of the National Automobile Chamber of Commerce of the suggestion by the National Automobile Dealers' Association for a conference of committees to review trade conditions to see what can be done in a cooperative way that will be mutually helpful.

Bankers Doing Their Share.

"Our meetings with the bankers showed that the big city banks are doing their share in carrying the distributors and big dealers. Because of the heavy burden of the small town banks in carrying the crops of the farmers, they have not been able to do much to help the small town dealers.

"Everywhere we find a high appreciation of the need for the motor car and the substantial basis on which the automobile business has been built. Our investigation shows that with a few exceptions the bankers have cared for our industry as well as they have other industries and they are not to be blamed for resenting the occasional statement that because one or two banks speak disparagingly of the automobile business, all bankers should be put in the same class.

Everyone Planning for a Normal Year.

"On this three weeks' trip we found that the hysteria in the industry has passed and that the manufacturers and dealers are putting their houses in order and are preparing for a conservative, normal year with intensive sales effort as the high keynote.

"In connection with trucks, we found the dealers somewhat discouraged with present conditions. A slowing down in business has materially decreased the demand, while the open weather has permitted the railroads to carry all the freight offered. In fact, the railroads now report 300,000 idle freight cars.

"Bankers and the far-seeing dealers know that the truck business has a fine future which depends somewhat on how soon we have renewed business activity and how soon the programme for our much needed building operations gets under way. The railroads, too, will buy trucks for short haul work, which spells brighter days for motor trucks, of which we have less than a million in use."

In conclusion Mr. Reeves said: "We find the dealers and bankers supporting the manufacturers' plan, which calls for 1921 to be a year of conservatism, with a vigorous sales campaign as the keynote and with the feeling that it will be better at the end of the year for a factory to find its product 10 per cent. oversold rather than 10 per cent. undersold."

RECORD OF BUILDING OPERATIONS FOR FEBRUARY

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Alabama.

Anniston—Automatic Specialty Co.,; 2-story reinforced concrete auto building, 50x150; $200,000.

Birmingham:
- Fowlkes, Johnson & Jones; 1-story garage and repair shop; $20,000.
- Standard Oil Co.; 1-story filling station, 6th Ave. and 7th St.; $6000.

Arkansas.

Pine Bluff—Reed Oil Corp., Tulsa, Okla.; 1-story filling station; $15,000.

California.

Los Angeles—Morgan Adams; 1-story garage and service station, 8th and Alvarado Sts.; $40,000.

Colorado.

Colorado Springs—Antlers Hotel Co.; 1-story garage and repair shop.

District of Columbia.

Washington—A. S. J. Atchison, 3801 McComb St.; 2-story reinforced concrete and brick garage. 81x108.

Illinois.

Alede—Standard Oil Co.; 1-story brick public oil filling station; $9000.

Bushnell—B. P. & E. Co.; 1-story garage. 80x40.

Chicago:
- Jno. H. Albretch, 5329 N. Irving Ave.; 1-story frame garage.
- J. C. Allen, 7530 Calumet Ave.; 1-story frame garage.
- Carl Anderson, 3329 N. Irving Ave.; 1-story frame garage.
- T. Anderson, 8753 Harvard Ave.; 1-story frame garage.
- Apex Motor Fuel Co., 720 S. Wabash Ave.; 1-story frame garage.
- M. J. Bellany, 2118 N. Lawndale Ave.; 1-story frame garage.
- A. M. Billie, 5234 Morgan St.; 1-story frame garage.
- C. F. Blocher, 1822 Leland Ave.; 1-story frame garage.
- C. M. Bosworth, 1525 Glenlake Ave.; 1-story frame garage.
- W. Boyington, 5751 Wilson Ave.; 1-story frame garage.
- T. H. Braunes, 3620 N. Oakley Ave.; 1-story frame garage.
- Thos. Brown, 4643 Prairie Ave.; 1-story frame garage.
- M. Buckholz, 1516 Thorne Ave.; 1-story frame garage.
- H. H. Cady. 4834 Winthrop Ave.; 8-story frame garage.
- V. Clark; 2-story garage and repair shop, 6816-20 N. Clark St.; $16,000.
- Vito Callatti, 4415 S. Sawyer Ave.; 2-story brick and stone garage, 29x35, rear 415 S. Sawyer Ave.
- Chas. A. Cowley, 1028 N. Parkside Ave.; 1-story frame garage.
- Jas. H. Devitt, 2248 N. Lowell Ave.; 1-story brick garage.
- James Doody, 818 W. 34th St.; 1-story garage and repair shop, 3121-27 S. Halsted St.; $30,000.
- L. W. Elwell, 6024 Kimbark Ave.; 1-story frame garage.
- Matilda Emlon, 938 Leland Ave.; 1-story frame garage.
- M. Evanson, 1161 Eddy St.; 1-story frame garage.
- C. Fahlberg, 6325 S. Whipple St.; 1-story frame garage.
- August Fick, 3640 N. Seeley Ave.; 1-story frame garage.
- John Foley, 1450 Highland Ave.; 1-story frame garage.
- E. W. Forst 4407 Dover St.; 1-story frame garage.
- B. F. Fowler, 6740 Bosworth Ave.; 1-story frame garage.
- Emil Frank; 1-story garage, at 5164 S. Wabash Ave.
- H. Freeman, 3943 W. Chicago Ave.; 1-story frame garage.
- H. A. Gebhardt, 3632 N. Tripp Ave.; 1-story frame garage.
- W. F. Greenwald, 4043 N. Parkside Ave.; 1-story frame garage.
- Wm. Hacker, 3915 Crawford Ave.; 1-story frame garage.
- C. Hall, 1928 Summerdale Ave.; 1-story frame garage.
- V. A. Hellstrom, 25 N. Dearborn St.; 1-story frame garage and repair shop; $55,000.
- H. J. Hillegards, 311 W. 110th St.; 1-story frame garage.
- John M. Hoffman, 3709 Ogden Ave.; 1-story frame garage.
- Holtren Seelye & Co.; 1-story brick garage and repair shop, 1128-29 Rosemont Ave.; $30,000.
- J. S. Hundley, 3132 Vernon Ave.; 1-story frame garage.
- Walter Ingstrup, 2755 Armitage Ave.; 1-story brick garage.
- International Harvester Co., 606 S. Michigan Ave.; 1-story garage and service station; $45,000.
- John Jacoby; 1-story garage, 514-26 Devon Ave.; $60,000.
- Mrs. T. Jokes, 5229 S. Turner Ave.: 1-story frame garage.
- M. Johnson, 410 W. 56th St.; 1-story frame garage.
- Dr. W. T. Kalisz, 1309 N. California Ave.; 1-story frame garage.
- J. G. Keidle, 7335 Clyde Ave.; 1-story brick garage.
- W. Kindell, 7346 Clyde Ave.; 1-story frame garage.
- Jos. Kraus, 4316 Archer Ave.; 1-story frame garage.
- Oscar Landis, 1603 S. Ridgeway Ave.; 1-story frame garage.
- T. A. Langan, 57 W. 72nd St.; 1-story frame garage.
- Jos. T. Lanton, 6511 S. Artesian Ave.; 1-story stucco garage.
- Lucco Larocca, 11,600 S. Michigan Ave.: 1-story garage and repair shop; $40,000.
- H. J. Lehmann, 9626 Vanderpool Ave.; 1-story frame garage.
- A. Levany, 5204 Grace St.; 1-story frame garage.
- Frank Liddle, 2-story brick garage, 2-18 E. Garfield Blvd.; $150,000.
- J. McCullough, care Active Realty Agency, 416 S. Western Ave.; 1-story brick public garage and accessory shop, 80x156, 2517-21 W. Van Buren St.; $40,000.
- McKeown Transportation Co.; 1-story garage and repair shop, W. 59th and Bishop Sts.; $125,000.
- F. B. Mackie, 4256 W. 63rd St.; 1-story frame garage.
- Frank Mansolf, 7309 S. Morgan St.; 1-story frame garage.
- John B. Marolowski, 1922 N. Karlow Ave.; 1-story tile garage.
- Chas. Meier, 6231 N. Paulina St.: 1-story frame garage.
- Jacob Mengel, 14 35 S. Kostner Ave.: 1-story frame garage.
- C. H. Miller, 2209 W. 35th St.; 1-story frame garage.
- Wm. Miller, 325 Giddings St.; 1-story brick garage.

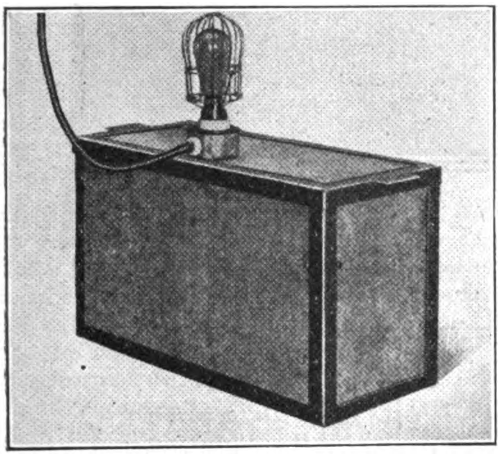
Orange—Gulf Motor Co., Division St., purchased from R. H. Craves by Jesse Gunstream and Gilbert McDonald.

Strawn—Jones & Matthews opened battery station and will also handle accessories.

ACCESSORIES DEPARTMENT

The Hyrate Electric Oven is said to give practical results in saving time and labor, as well as breakage in battery tear down. The manufacturer also claims that it has the distinct advantage that no labor is required while the battery is being heated, and with the Electric Oven the cells are heated not only rapidly, but fairly and evenly, and without burning or charring the tray or rubber parts, and thus danger from explosion of igniting gases in the cells is eliminated. They also claim that the Hyrate Electric Oven will do the work of several steam ovens in actual output, as there is no steam gauge to watch, or work of filling the boiler, as with the Hyrate Electric Oven the external solid parts of the battery are thoroughly heated before the solution rises in temperature, so that the plates are not injured by the heat.



The Hyrate Electric Oven is manufactured in two types, one for from 110 to 125 volts, and the other from 220 to 250 volts. It will operate on either direct or alternating current.

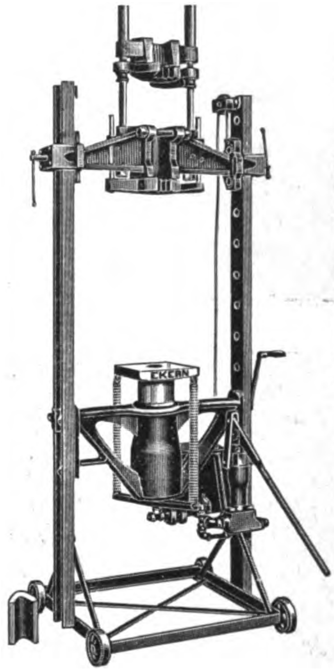
Manufactured by Service Station Supply Co., Detroit, Mich. List price, $38.50.

Ekern's Hydraulic Arbor Press is a new appliance which is especially designed for service in the garage, machine shop and factory. While it may be put to many uses it is stated to be especially adapted to force gears, pulleys, collars or bushings on or off shafting without defacing parts, also for straightening shafting, bars or axles, forming metal parts and many other purposes.

The press is built adjustable so the range of work it will do is practically unlimited. It is mounted on wheels so that it may be rolled to any part of the shop and after service may be put out of the way, thus economizing valuable floor space.

This press has a push up extension instead of down and thus with the extension bolts and the extra cross head, which is used when pressing parts on long shafts, its capacity is claimed to be practically unlimited.

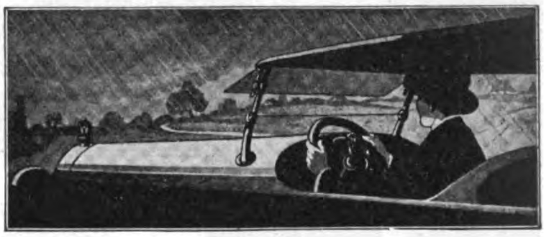
Detailed description: Capacity, 32 tons; distance between standards, 30 inches; floor space, 31x34 inches; base strong; pump strong, simple packed piston with check valves, placed for convenience of operation; cylinder, heavy cast, bolted to two heavy channel steel upright standards; ram, hollow cast, machined to fit cylinder; diameter, six inches, with eight-inch stroke; lower plate, 11x13 inches, cast to ram; upper plates, one circular and one circular with V cut in for letting small rods or shafting by; springs attached to return ram quickly; cross head very heavy with 3½-inch U opening adjustable every five inches up to 48 inches from lower ram plate, being raised and lowered by cable over pulley arrangement and fastened with follower castings with heavy lugs which pass through channel standard into cross head and quickly adjusted and forced into place by heavy screws on each side; weight, 800 pounds without extras.



Manufactured by the Ekern-Turk Manufacturing Co., Pipestone, Minn. Distributed by H. G. Paro Co. 1412 South Michigan avenue, Chicago, Ill. Prices and literature on request.

Pickard's Windshield Protector is especially designed to afford a means of protection against the sun's glare by day and the piercing rays of headlights on approaching cars by night. It is made to fit all models of cars and can be easily adjusted to suit the vision of the individual driver. It is stated that it will not whip with the wind, is substantial and rigid, and is made with a strength that will withstand all jars and bumps.

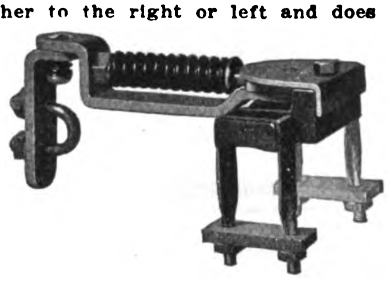
It is constructed of genuine Agasote board, bound on all four sides with U-shaped steel, covered with Never-Leak top fabric and fitted with brackets substantially made. It can be curved to fit any top and will remain in the desired position permanently. The Pickard Windshield Protector is not only recommended for its utility, but it is also said that it will add to the appearance of any car, being built along lines of harmony and refinement as to detail. It is secured to the car by clamps of fine quality bronze which will not rust or corrode, one set being designed for the majority of touring cars, a second for extra large windshield posts, and still another for closed models. In ordering, the name and model of car should be given, so that the proper clamps may be supplied.



Manufactured by the T. W. Pickard Co., Columbus, O. Literature and prices on request.

The Balcrank Stabilizer for Ford Cars is an aid to ease in steering, is attached to the front axle and tie rod, strengthening, it is claimed, the entire steering mechanism.

It is stated that the Balcrank Stabilizer cannot get off center, lock or freeze, and allows the front wheels to be turned either to the right or left and does not interfere with steering. When driving straight ahead the stabilizer aids the wheels to run straight.



The Balcrank Stabilizer is made of high grade material throughout and is easily attached by any repairer in a few minutes time without the use of any tools other than a wrench. Full instructions accompany each set, showing the method of attaching.

Manufactured by the Cincinnati Ball Crank Co., Cincinnati, O. Price, $6.75.

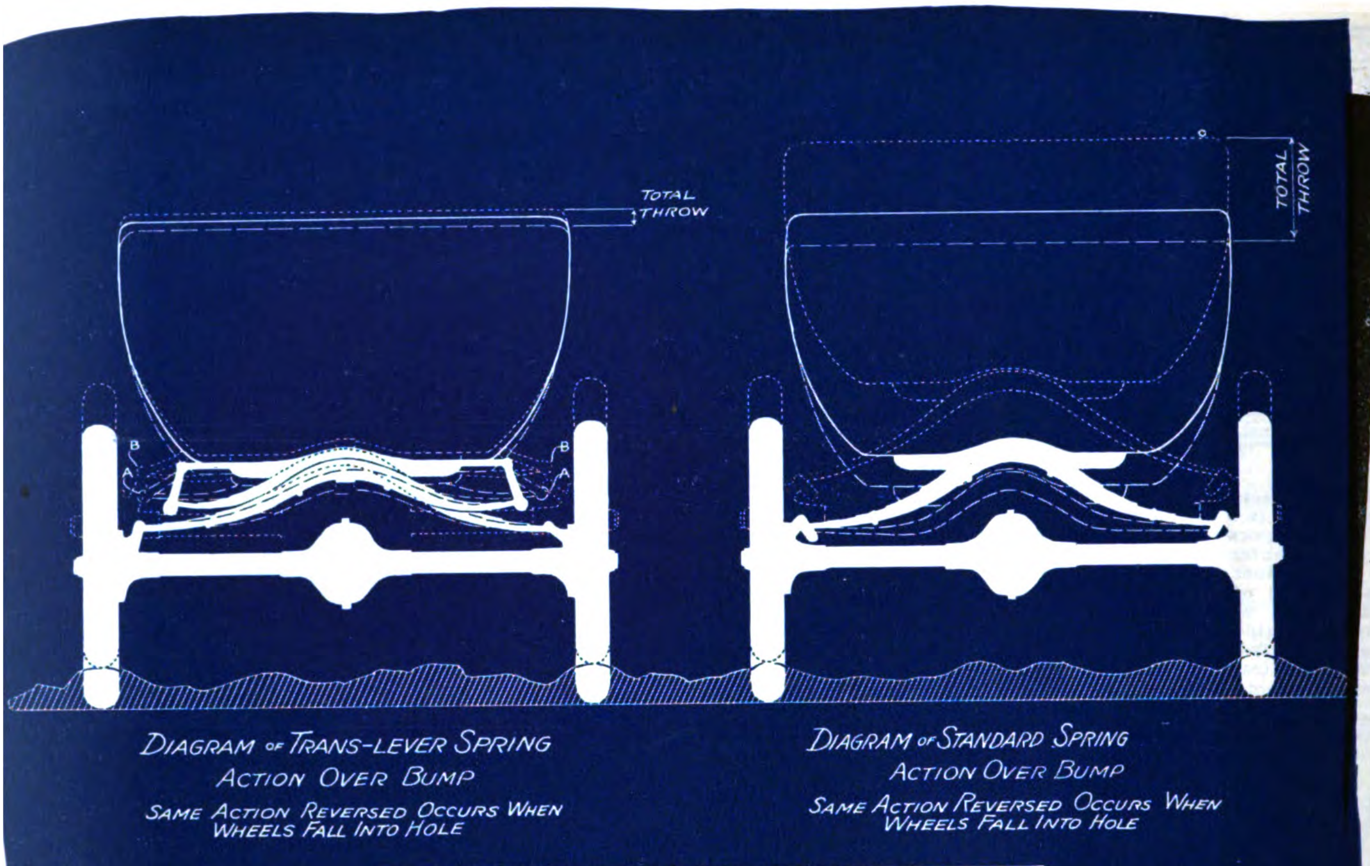


DIAGRAM OF TRANS-LEVER SPRING ACTION OVER BUMP
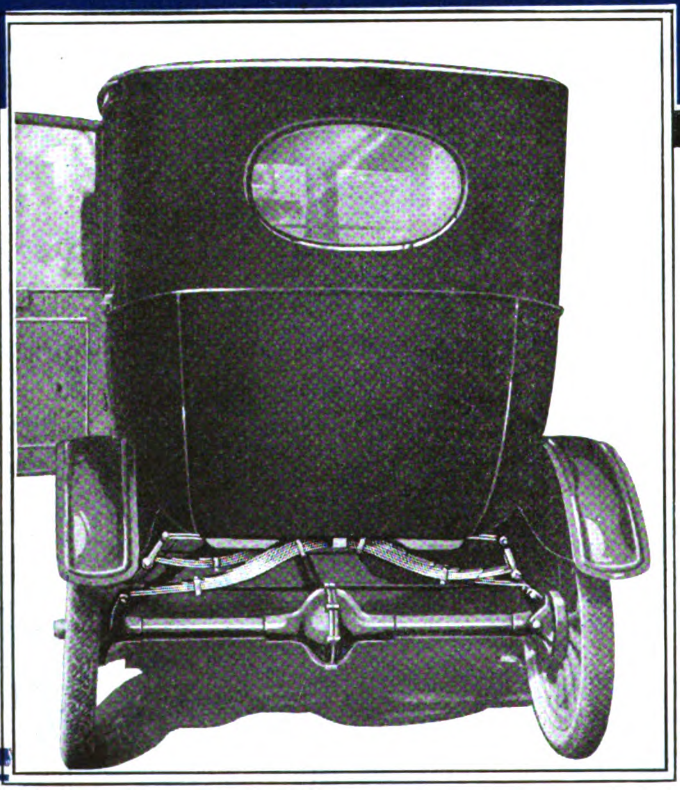
SAME ACTION REVERSED OCCURS WHEN WHEELS FALL INTO HOLE

DIAGRAM OF STANDARD SPRING ACTION OVER BUMP
SAME ACTION REVERSED OCCURS WHEN WHEELS FALL INTO HOLE



Showing Trans-Lever Spring installed on a Ford —no change in appearance.

See Description of Blue-Print on Opposite Page.

These engineers' drawings graphically illustrate the remarkable way in which the Universal Trans-Lever Spring saves the car and the passengers from road shocks.

The movement of the body in going over a bump is but a fraction of that experienced with an ordinary spring suspension.

Compare the total throw of the body shown in the blue print above.

A Remarkable New Spring on Fords

DURING the past four years, well known Detroit engineers in the automotive industry have been at work, developing a new principle in spring suspension.

The new spring is now ready for Ford cars and later will be applied to all makes.

As the blue print on the opposite page shows, this new spring suspension really consists of two springs, crossing each other, and extending practically the full width of the car. Each spring is approximately the same size and weight of the entire Ford rear spring, giving more than twice the amount of efficient spring area.

One end of each spring is fastened to the axle the same as the ordinary Ford spring. The other is shackled to an extension, bolted on to the regular Ford rear frame member. The springs are not clamped to the frame member at the center.

In the center of each spring is a one-inch hardened steel roller bearing which allows the spring free longitudinal and fulcrum movement. This gives 90 inches of free spring as compared with 36 inches in the ordinary Ford spring.

When the wheel of a car equipped with an ordinary spring hits a bump, the body is actually carried higher than the bump itself by the sudden releasing of the pent up energy in the spring due to the impact. And as the wheel drops off the bump, the body drops below its normal position. The entire travel is indicated in the blue print by the dotted and dashed lines. (Opposite page.)

Now compare this with the travel of the body when Trans-Lever Springs are used. The body rises only slightly above normal and drops only slightly below—with but a fraction of the movement which occurs with ordinary springs.

Besides the almost unbelievable smoothness of the body motion accomplished by the Trans-Lever Spring, of equal importance is the fact that it has been made practically unbreakable.

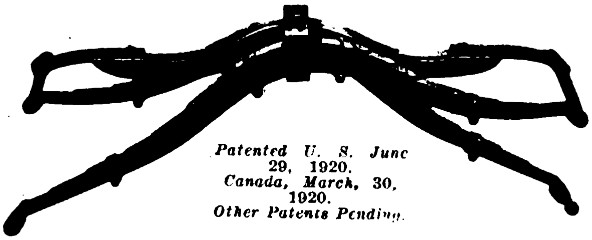
As the entire 90 inches of spring is free, the vibration is spread over the entire length, thus avoiding crystallization.

The spring is easily attached by anyone—requiring no drilling or alteration to body or chassis.

Absolutely Guaranteed

Such an abnormally large factor of safety is provided in Trans-Lever Springs that they are sold with an unconditional guarantee against breakage for the entire life of the car. After ten days use any dissatisfied user may return springs to us at our expense.

Trans-Lever Springs forever solve the vibration problem, giving the car almost unbelievable smooth riding qualities. They save their cost in a short time by reducing tire, gasoline and up-keep expense. And they do away with all necessity for shock absorbers, snubbers, coil springs and other make-shifts.



Patented U. S. June 29, 1920.
Canada, March, 30, 1920.
Other Patents Pending.

PRICES:—

Eight Leaf Spring, Ford Touring, Coupe, Roadster, $35.00. Nine Leaf Spring, Ford Sedan, Delivery Truck, $37.50.

Representatives Wanted

We desire to get in touch with high grade men with sufficient capital to take on the sale of these springs. Opportunities open in practically every territory. Authorized distributors in most large centers—Communicate with factory direct.

UNIVERSAL TRANS-LEVER SPRING COMPANY

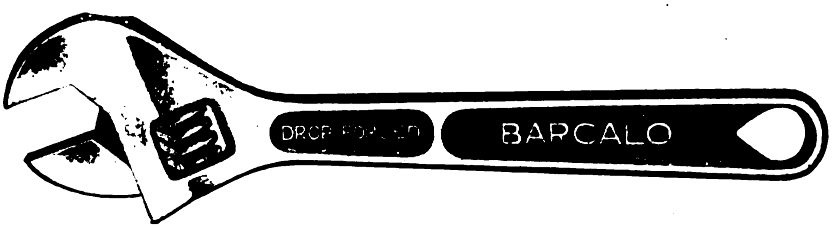
The Barcalo Model N Wrench is stated to be the culmination of 25 years experience in the making of metal products by the Barcalo Manufacturing Co. Three years ago the company began to develop a 22½-degree angle open and adjusted wrench. The engineers had instructions to put a finish on the wrench that would be an index to its quality. The result of all these efforts is the Barcalo Model N wrench. The severest tests have been put on the wrench and it is reported to have stood up admirably under all circumstances.



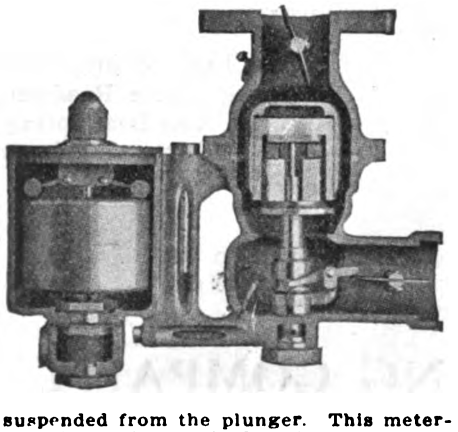
to turn out a design equal to any on the market, and to leave nothing undone in the matter of quality. A special analysis steel gave exceptional hardness and toughness. All working parts were so refined that they would be absoluetly dependable, so that all parts would work smoothly, no matter how difficult the position in which the user might find himself. A study in heat treatment got the exact degree of toughness and hardness in the finished wrench. It was determined

The Model N wrench, as well as other Barcalo wrenches and Barcalo combination pliers are sold to hardware, accessory and kindred jobbers.

Manufactured by the Barcalo Manufacturing Co., Buffalo, N. Y. Represented in the central western territory by the Barney Moore Co., State and Lake building, Chicago; eastern territory by George L. Holmes, 1776 Broadway, New York city, and southeastern territory by G. R. F. Cotten, 1317 Race street, Philadelphia, Pa.

The Aero Carburetor is stated to be scientifically designed to give perfect carburetion on any motor at any speed and under any weather condition. It is of the constant vacuum type, absolutely automatic in action, feeding the correct amount of air and fuel to the motor at any speed.

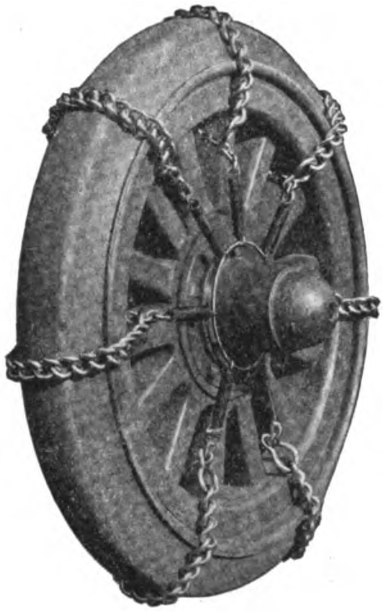
The accompanying illustration shows a cross section of the Aero carburetor. The gasoline is fed from the fuel tank through a filter chamber into the constant level float chamber and the starting well, the same level of gasoline being maintained in both. When the motor is ready to start a rich mixture of fuel is sucked into the motor from the starting well. This enriches the normal mixture, making the starting of the motor extremely easy. When the engine has become warm the dash control is pushed back and the fuel is thereafter supplied through the metering nozzle, into which extends a metering pin which is connected with and suspended from the plunger. This metering pin, as it is raised or lowered, regulates the amount of fuel being fed. It is also connected with the plunger, which regulates the amount of air taken by the carburetor. As the plunger is raised or lowered the proportion of both air and fuel is scientifically regulated, it is claimed, and a consistently uniform mixture of air and gasoline is in this way supplied for all motor speeds.



It is stated by the maker that the Aero carburetor reduces wear and tear on the car, is as fool-proof as a carburetor can be made, having no air valves, springs or adjustments; and reduces gear shifting in crowded traffic.

Manufactured by the Aero Products Co., 112 Hamilton avenue, Cleveland, O. Price on request.

The Trax-Yun Truck Tire Chain is stated by the manufacturer to be one of most convenient and economical devices of this nature on the market. They are sent out ready for use, with no clamps to fit and nothing to attach permanently. The outfit for each wheel consists of a center ring which fits loosely around the hub. Attached to this ring are seven springs. Seven chains are looped around the tire and felloe. The links are broad and flat to avoid cutting the tire and to give maximum traction surface. At one end of each chain is a triangle grab link. On the other end is a series of straight links. This end is slipped through the grab link until the chain is taut, then it is fastened to the end of the spring. The center ring and springs exercise equal tension on all the chains and hold them in place with just enough slack to let them slide along the tire, thus preventing gouging that occurs with too rigid chains when there is a sudden stop or continued use.



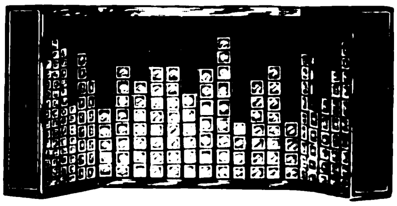
Trax-Yun truck chains can be used in any number of units. If the road and load conditions only require the use of four chains it is not necessary, because of their design, to apply more. The effectiveness of Trax-Yun chains is not lessened unless the condition really requires the use of complete sets. Usually seven (eight on specially large sizes) are furnished for each rear wheel. The length of each chain is adjustable to the size of the felly and tire by a series of straight links at the end of the chain. These links are for locking in the triangle grab link. Then the springs on the center ring are attached to their respective chains. This ring fits over the hub out of the way and combines every separate chain into a complete unit. Cross chains are all oversize, being made of 7/16-inch steel on large sizes, ⅜-inch on medium and 5/16-inch on the small.

They are packed one set in a canvas bag with size marked thereon. Each set contains 14 complete cross chains for all small sizes (except 32x3½ which has 12) and two rings with seven springs on each ring, all assembled and ready to use on the rear wheels. Large dual sizes contain 16 cross chains.

They are also supplied in sizes for pneumatics, both single and dual.

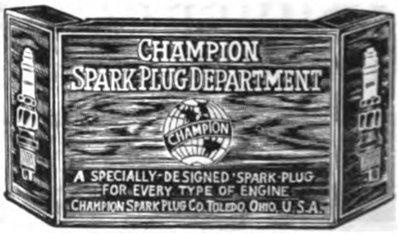
Manufactured by the Cleveland Chain & Manufacturing Co., Cleveland, O. Sizes and prices supplied on request.

The Champion Spark Plug Merchandiser is the result of an attempt on the part of the Champion Spark Plug Co., maker of the well known Champion products, to further its service policy by the developing and perfecting of a merchandising device or silent salesmen for the use of its dealers. This is presented in the form of a cabinet of neat and substantial construction equipped to carry a supply of every type of Champion spark plug made. Individual compartments separate the various types, making it a simple and easy task for the dealer to select the type of plug called for. The accompanying illustrations show the front and rear views.



The merchandisers are modern in every respect with steel covers, on the front of which are carefully worked out index charts giving the special mark or symbol number of every plug carried in the case or made by the Champion Spark Plug Co. With the aid of the index chart the selection of the proper type of plug for a customer is a matter of but a moment, whether it be for passenger, commercial, tractor, motorcycle, motor boat, farm or stationary engine.

The Merchandiser is 31 inches long, 15 inches high and 11 inches deep. It can be placed to advantage on any show case, counter or shelf and because of its neat appearance makes a handsome fixture for any store. One of these Merchandisers will be delivered to any dealer ordering a full assortment of 200 Champion spark plugs and 100 insulators, and as the company allows the dealer to specify any one of five different assortments of plugs, he should have no trouble in selecting a combination that will meet his trade requirements.



CHAMPION

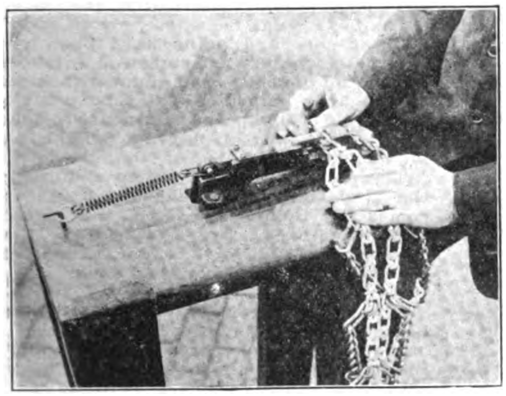
A SPECIALLY-DESIGNED SPARK-PLUG FOR EVERY TYPE OF ENGINE
CHAMPION SPARK PLUG CO. TOLEDO, OHIO, U.S.A.

Distributed by the Champion Spark Plug Co., Toledo, O.

The Spook Skid Chain Machine has been designed for repair shops and service stations which do considerable work on side and cross pieces of non-skid chains for passenger cars, and should prove of interest to the trade. The machine is easily fastened to any work bench and is operated by means of a foot pedal attached to the machine and working underneath the bench.

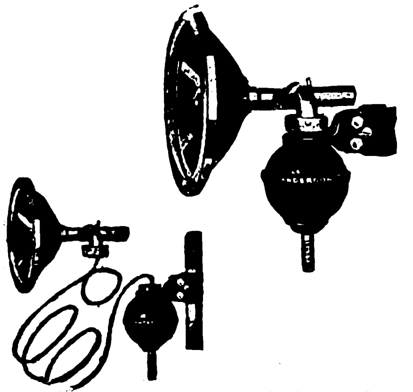


With this machine, it is claimed, cross chains may be easily removed in a fraction of the time usually required and new cross chains fastened in place. It is stated that one man with this machine can easily do as much work in one day as could be done in six by the older method at the same time in a more satisfactory manner.

Sold by the Fairbanks Co., Broome and Lafayette Streets, New York, N. Y. Prices and literature on request.

The Model C Auto Reelite is a new 1921 single-shell model, which has the extension trouble light feature which is stated to have made the Auto Reelite so popular in the trade. The maker asserts that special attention has been given to the design from an engineering standpoint to secure a most rugged and powerful spot light, as well as a beautifully designed model.

It in reality combines three lights in one, spot, trouble and portable. To use as a trouble light simply unscrew the knurled nut at the top of the reel container and withdraw the lamp to any part of the car; just like raising or lowering a window shade.



Following are brief specifications: Made in black and nickel and all nickel finishes; Packard Mazda C lamp bulb; all nickeled parts are absolutely non-rusting. Detachable rear view mirrors supplied, if required, on models C-6 and C-7. Anderson switch conveniently mounted on handle. Universal windshield clamps.

Made by the Anderson Electric & Equipment Co., 154-160 Whiting street, Chicago, Ill. Prices: Standard models, finished in lustrous black enamel, nickel trim, without mirror, C-6, six-inch, 20 candlepower, $9; C-7, seven-inch, 27 candlepower, $10; mirror, $1 extra. Sterling model, searchlight, all nickel finish, with mirror, Model SC-7, seven-inch, 27 candlepower, $15.

The Eclipse Valve Grinder with ballistic movement is claimed to not only do a much better job than by hand methods, but to do it much more quickly and at a fraction of the cost. The grinder is of attractive appearance, light in weight, of ample power, simple in design, has few parts and is of just the right shape to be easily handled.

The motor is under perfect control by means of a trigger switch located handy to the finger of the operator, and operates on either alternating or direct current from 10-volt service sockets. The housing is a tough aluminum alloy, made in two compartments, effectively separating the grease packed mechanism from the motor. The bearings for the motor and mechanism of the grinder are of bronze metal and the gears, pinions and other moving parts of the best steel alloys, heat treated to insure strength, toughness and wearing qualities.

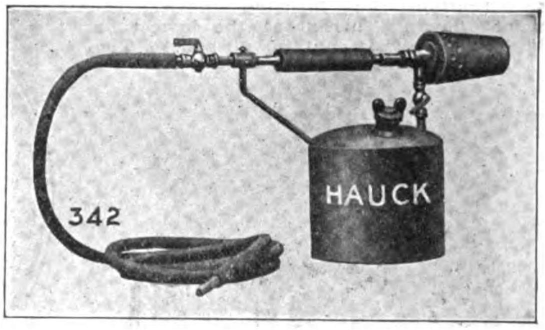
It is stated that it is not necessary to make adjustments to the mechanism and none are provided, but should it become necessary to take the grinder apart the assembly plan is so simple that every part can be taken out and replaced by any shop mechanic, all the parts of the grinder being interchangeable.

Many other features are mentioned which should make this device very desirable for the service station repairer who is called upon to grind valves in the automobile or truck engine.

Manufactured by the Eclipse Valve Grinder Co., 20th street, at Oak, Terminal Railway building, Kansas City, Mo. Prices and literature on application.

The Hauck Compressed Air Torch is considered a practical tool for the service station and garage, as it is designed to burn kerosene, fuel or refuse oil in connection with compressed air. Any service station, equipped with air pump and storage tank for inflating tires, can use this torch to advantage. The manufacturer cites many instances of work done with the torch, showing its economy in operation and wide range of usefulness. By removing the nozzle of the burner it is stated that the torch can also be used as a sprayer to clean engine parts and remove grease.

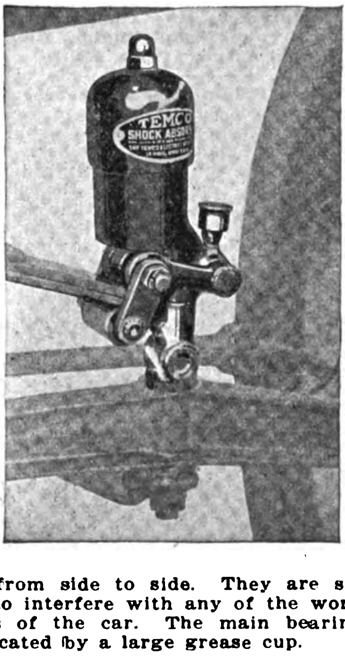
It is claimed that as there is no pressure used in the tank the device is especially safe in operation. The fuel is siphoned to the burner, being controlled by a special adjustment. After the flame of the torch is regulated the control is locked in position. It is stated that the burner lights instantly and does not carbonize. The tank is of steel with all seams and spuds welded and tinned inside and out. It is furnished complete with necessary hose and pilot light. One gallon of kerosene will operate the torch, it is stated, for 45 minutes.



Manufactured by the Hauck Manufacturing Co., 101 11th Street, Brooklyn, N. Y. Prices on request.

Temco Shock Absorbers are designed to gain greater comfort and economy for light cars and are stated to offer the following advantages: The use of telescoping dust caps, longer, stronger springs and radius links to prevent side sway. Each Temco shock absorber consists of two long helical springs, one within the other, both made of genuine crucible vanadium steel. These springs work freely up and down under a telescoping covering that protects them from dust and dirt. There is nothing exposed but a highly finished japanned covering that is easy to keep clean and is stated to add a neater and more complete appearance to the car.

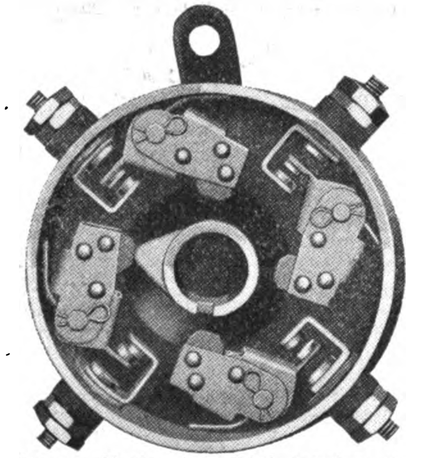
Temco shock absorbers remain absolutely upright all of the time. They are held straight by radius links which also prevent any disagreeable swaying of the car from side to side. They are stated not to interfere with any of the working parts of the car. The main bearing is lubricated by a large grease cup.



The entire set of four can be attached by any person in an hour's time, as they come completely assembled and there are no holes to drill. They will fit all Ford models of all years, including touring, roadster, coupe and sedan. The maker offers to refund purchase price if they are not found satisfactory in every way.

Manufactured by the Temco Electric Motor Co., Leipsic, O. Price, $20 for a complete set of four.

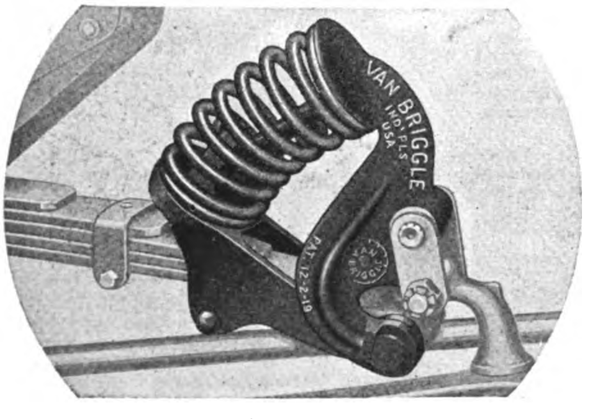
The Gladiator High-Tension Timer System has been available for Ford cars during the past year only, yet it is stated to represent over 30 years' practical experience in gas engine and automotive ignition designing on the part of the maker. Its outstanding features are the sliding, self-cleaning, rocker action contact points and the Liberty motor type cam. This combination is claimed to give perfect ignition, thus insuring an ever efficient flowing current at the lowest or highest speed. It contains no rollers. The sliding, self-cleaning, high-tension, magneto contact points are impervious to corroding, pitting or burning.



The Gladiator high-tension timer system for Ford cars, trucks and Fordson tractors is based on the same principle as that used in the most expensive cars. The Liberty motor type cam forces a positive contact at any speed, at the correct instant. The greater the speed the longer the contact or spark is held in each cylinder because of the lag (the drop of the fiber block to normal position).

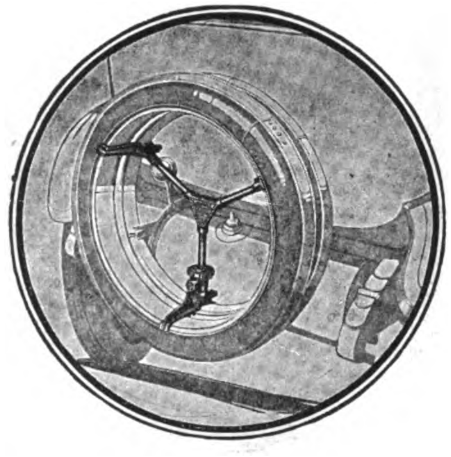
Every Gladiator high-tension timer is guaranteed for 50,000 miles of service and money back if user is not absolutely satisfied. Full directions are included for installing instrument in 10 minutes time. **Manufactured by the Gladiator Co., 204 Monroe avenue, Grand Rapids, Mich.; factory, Auburn, Ind. Price, $5.**

The Van Briggle Shock Absorber Model "C," for Ford cars, is said to represent the work of several years of experiment, and claim is made that excessive vibration and side sway are greatly reduced by its use. The top lever of the absorber acts as a lengthened shackle, thus smoothing the motion of the car spring and giving the effect of a lengthened wheelbase. It is simple in construction, easy to install and of very substantial make. Claim is made that jobbers who have tried the absorber are enthusiastic in their approval, and feel that it will meet with a well deserved welcome by the Ford owning public.



Manufactured by the Van Briggle Motor Device Co., Indianapolis, Ind.

The Twinlock Tire Carrier is designed to embody in the ordinary tire carrying feature the additional one of security from theft of spare tires. It carries one or two tires, as desired, and locks one or both. It may be attached to any car having a circular carrier in a few moments time without the aid of tools. An idea of the construction and application can be gained from the cut.

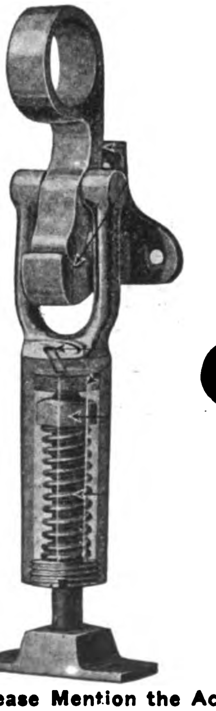


The Twinlock carrier is stated to pass the inspection requirements of the Underwriters' Laboratories, and the company expresses its confidence in the burglar-proof feature incorporated in the device by offering to pay a reward of $100 for the arrest and conviction of anyone stealing a tire from a Twinlock carrier when it is locked.

Manufactured by the Twinlock Co., 15th and Cambridge streets, Philadelphia, Pa. Dealers are invited to write for proposition.

The Ideal Hood Lock is a new device in this line which is stated to be easily operated and to positively prevent rattling of the hood, is adjustable and self-oiling.

The hood lock is of the eccentric type, which permits the lock to be operated with but one finger and which also permits the use of a very much stronger spring than is used in the present type of hood locks. The eccentric locking element is so associated with the hood catch that a two-point bearing (see cut) is secured, which is stated to positively prevent rattling of the hood.



The hood lock is adjusted by rotating the concentric support, or lock body, on the anchor bolt, which lengthens or shortens the lock as desired. The lock body carries an absorbent pad (see cut) which contains sufficient oil for lubricating all moving parts. Each time the lock is released the anchor bolt automatically is forced into engagement with the absorbent pad, which lubricates the moving parts.

Great care and pains have been given to create what is most desired in service, beauty of design and appearance and which also embodies the above unique features. All exposed parts are made of brass and are all highly polished and nickel plated.

The manufacturer is prepared to supply the trade and individual users and welcomes any inquiries.

Manufactured by the Ideal Brass Works, 560-570 North Elder avenue, Indianapolis, Ind. Price, $1.50 each.

A New Standardized Acetylene Gas Head Lamp especially designed for use on heavy duty trucks was recently put on the market, which is stated to be well balanced and extremely rigid so as to withstand the effects of the unusual conditions imposed by service on this type of vehicle.

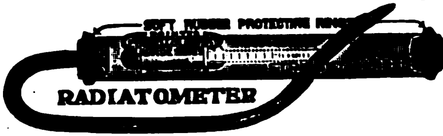
The reflector of this lamp is an extra heavy genuine mangin mirror, held securely in place by two steel clamping rings, four bolts extending clear through a heavy sheet metal body; four lock washers and eight nuts.

The lens is held in place in the same manner and the door is fastened to the body with an extra heavy hinge, riveted together with a large brass pin, thereby preventing rust and making secure construction. The hinge is placed on the top of the door so that should the door be left open it will automatically close itself.

The burner is a De Lux type placed in the proper position to give the maximum efficiency in light.

Manufactured by the Indiana Lamp Co., Connersville, Ind. Prices and literature on request.

The Radiatometer is a newly perfected instrument for testing radiator solutions. As will be noted from the accompanying cut the instrument is simple in construction and it is stated to be accurate as well. It works on exactly the same principle as the Master hydrometer made by the same company. A long flexible rubber tube allows easy access to the radiator solution. A graduated chart on the float tells instantly the strength of solution necessary to withstand varying degrees of temperature. It is then an easy matter to pour in enough alcohol to withstand even the most severe weather.

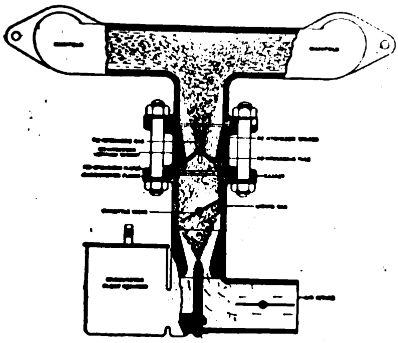


Manufactured by the Beckley-Ralston Co., Chicago, Ill. Dealers' proposition and prices supplied on request.

The Ball & Ball Re-Atomizer, the invention of F. O. Ball, is being made by the carburetor department of the Penberthy Injector Co.

The Re-Atomizer (cut "A") is placed between the carburetor and the manifold. It comprises a spacer into which is pressed a venturi throat carrying four small tubes. The spacer contains a passage way of the same diameter as the intake manifold. Around the lower outside edge of the Re-Atomizer is a groove or annulus which forms a small circular chamber between the inside of the spacer and the outside of the Re-Atomizer.

The ejector effect of air flowing by a tube extending into the air stream in the direction of flow of the air is very well known. This principle is the basic idea of this Re-Atomizer. It will be readily seen that the ejector effect on the four tubes which extend into the throat will draw into the annulus any liquid gasoline which may be passing up the wall of the carburetor and eject it from the tubes in a highly atomized condition so that it floats in the air stream and goes equally to the different cylinders.

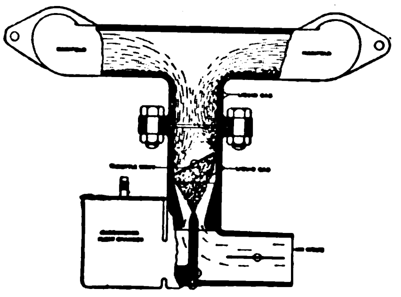


Cut "A"

This complete re-atomization of the gasoline is stated to make it possible to adjust the carburetor for a much leaner mixture, thus giving more miles a gallon and very much smoother running of the car.

It is well known that unless all the gasoline is burned in the cylinders some of it goes down by the piston into the crankcase, thus vitiating the lubricating oil. The Re-Atomizer is designed to eliminate this, thus preserving the quality of the lubricating oil and saving the bearings of the engine.

Cut A shows the Re-Atomizer installed, and it may be noted that the gasoline is completely vaporized and thrown into the center of the air stream, giving a mixture of good quality and an even distribution.

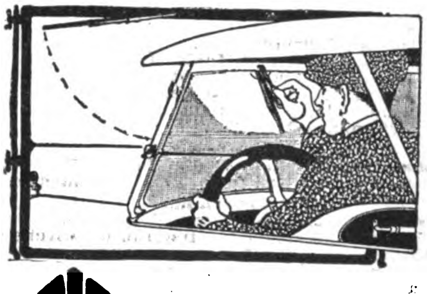


Cut "B"

Cut B shows the ordinary type of carburetor construction without the Re-Atomizer installed, and the globules of fuel are depicted adhering to the walls more on one side than on the other, resulting in uneven distribution and a poor mixture.

Manufactured by the Penberthy Injector Co., Holden avenue and Grand Trunk railway, Detroit, Mich. Information and prices supplied on request.

The Trico Crescent Windshield Cleaner is designed to fit all types of windshields on both open and closed cars. Attachment may be made by clamping over the top of the frame on open cars or by drilling the frame on both open and closed cars. This method of drilling the frame is stated by the manufacturer to be most ideal attachment for a windshield cleaner of the pivoting type. Attachment through the glass is also possible, but is not recommended.



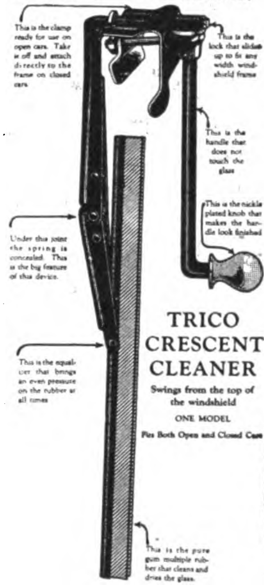
TRICO CRESENT CLEANER

The Trico Cleaner has a real handle that does not touch the glass, but allows the cleaner to fit up snugly to the frame out of sight when not in use. By discarding the clamp and drilling the frame of windshield a splendid fit is possible on open car where top might otherwise be injured by clamp.

The working parts are superior, bringing even pressure to bear on the two rubber strips, which clears and dries the glass at the same time.

The metal parts are treated with army zinc to prevent rusting. The finish is rubber coat black enamel, presenting a rich and durable covering.

The Trico Cleaner is furnished in two styles, black enameled, with flat handle grip, and brass, nickel plated, fitted with nickel plated ball handle.



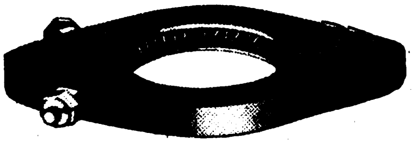
This is the clamp ready for use on open cars. Take it off and attach directly to the frame on closed cars.
This is the lock that slides up to fit any width windshield frame
This is the handle that does not touch the glass
This is the nickle plated knob that makes the handle look finished
Under this joint the spring is concealed. This is the big feature of this device.
This is the equalizer that brings an even pressure on the rubber at all times
TRICO CRESCENT CLEANER
Swings from the top of the windshield
ONE MODEL
Fits Both Open and Closed Cars
This is the pure gum multiple rubber that cleans and dries the glass.

Manufactured by the Trico Products Corporation, 624-628 Ellicott street, Buffalo, N. Y. List price, $2 each in black; $3.50 in nickeled brass. A free counter display is offered to jobbers.

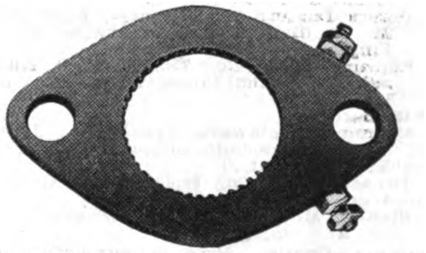
The G & G Electric Manifold Heater is a new manifold heating device, recently put on the market, the invention of John E. Godman and Joseph M. Garr of Lafayette, Ind. The accompanying cuts show top and perspective views of the device.

The heater is placed between the flanges of the carburetor and the flange of the intake manifold and is controlled by a switch conveniently located on the instrument board. The location of the heater makes it possible for it to perform its mission, viz.—to preheat and vaporize the gasoline immediately after it passes the carburetor; and at the same time its design is stated to be such that there is no obstruction placed in the gas passage of the manifold. Another feature of its design is that it is not in any way affected by vibration nor are there any parts that may loosen and fall into the carburetor or to be forced into the combustion chamber of the motor.

The heating element in the G. & G. Electric Heater is brought to a red heat in approximately 15 seconds: in less than a minute's time it will vaporize even low grade gasoline sufficiently for the motor to be started readily with the first engagement of the starter, even in zero weather, it is claimed. However, the heater is not beneficial in cold weather alone, but also is stated to be a decided aid in starting the year around.

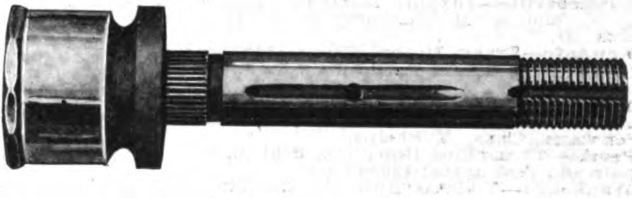


Aside from its ability to facilitate starting it accomplishes other purposes worth considering, viz.: (1) By vaporizing the gasoline before it reaches the motor it prevents any of it from passing into the combustion chamber in liquid form to work its way down the cylinder walls into the lubricating oil. This means that the oil in the crankcase remains pure longer and consequently does not have to be changed as often as it otherwise would. In this connection it may be noted also that the heater tends to prevent the carbon, which is caused by an accumulation of unburned fuel, from forming in the combustion chamber and on the piston heads. (2) It saves the drain on the battery caused by repeated engagement of the starter, when the motor will not fire on account of the fuel being insufficiently vaporized.



Manufactured by the G. & G. Electric Heater Co., 219 North Fourth street, Lafayette, Ind. Price, 7.50 delivered.

Ford-Clark Grease Bolts are stated to be made to precision measurements and to be finished by grinding, especially up to the one-inch size bolt in diameter, to a tolerance which is either plus or minus .005 of an inch. In the welded type of bolts, as shown in the illustration, the stem is made from a special stock 1/64 of an inch oversize, and on this is welded the hex stock cut to the proper length for the head. The head is then machined, threaded and drilled and the bolt knurled under the head, turned and pointed for length to an exact dimension from under the head to the end of the body or shank. The lead and cross holes are then drilled, the "grease flat" milled and the bolt threaded, carbonized, hardened and ground and the cups assembled.



Bolts made in this manner, the manufacturer states, are designed to give unusual wear and long life.

Manufactured by the Ford-Clark Co., 3125 Perkins Avenue, Cleveland, O. Prices on request.

INCREASES IN CAPITAL.

Bridgeport, Conn.—Raybestos Co., maker of auto brake lining, etc.; $2,000,000 to $3,000,000.

Greenwich, Conn.—Palmer Bros., maker of gasoline engines, etc.; $250,000 to $500,000.

Hartford, Conn.—Hartford Automotive Parts Co.; $1,500,000 to $2,000,000.

Chicago, Ill.:
- Reliable Tire & Vulcanizing Co.; $5000 to $10,000.
- Williamson Motor Co., car distributor and service stations; to $100,000.

Ft. Wayne, Ind.—Barrysot Implement Co.; $25,000 to $100,000.

Indianapolis, Ind.:
- Haywood Tire & Equipment Co., maker of machines for rebuilding tires; $20,000 to $400,000.
- National Motor Vehicle Corp.; 80,000 shares to 140,000 shares, no par value.
- Oakes Co., maker of auto fans and parts; $450,000 to $700,000.

La Porte, Ind.—Pony Tractor Co.; $100,000 to $500,000.

Richmond, Ind.—Geo. W. Davis Motor Car Co.; $160,000 to $300,000.

Louisville, Ky.—Louisville Auto Supply Co.; $25,000 to $100,000.

Bronson, Mich.—Douglas-Rudd Mfg. Co., maker of electric battery products, connections, etc.; $30,000 to $236,000.

Detroit, Mich.:
- Detroit Steel Products; to $5,250,000.
- W. Detroit Sales Co.; $25,000 to $100,000.

Lansing, Mich.—Re-Motor Car Co.; $10,000,000 to $15,000,000.

Saginaw, Mich.—Nelson Motor Truck Co., maker of motor trucks and parts; $500,000 to $1,100,000.

Lewistown, Mont.—Pioneer Implement & Auto Co.; $10,000 to $50,000.

Newark, N. J.—Kwick Start Spark Plug Co., 16 Boyden Place; $125,000 to $500,000.

Brooklyn, N. Y.:
- Auto Outfitters; $10,000 to $20,000.
- West End Garage & Auto Co.; $500 to $50,000.

Buffalo, N. Y.:
- Curtiss Aeroplane & Motor Corp., Elmwood Ave.; to $6,978,100.
- Lumen Bearing Co., brass and bronze castings, soldering babbitts and ingot metals; to $500,000.
- Parenti Motors Corp.; $2,500,000 to $10,000,000.
- U. S. Light & Heat Corp.; to $8,50,000; an increase of $1,500,000.

Elmira, N. Y.:
- Bolton Motor Co.; $5000 to $10,000.
- Ward-LaFrance Truck Co., maker of auto trucks, affiliated with American LaFrance Co.; to $10,300,000.

Geneseo, N. .Y—Geneseo Auto Co.; $22,000 to $50,000.

Jamestown, N. Y.—Jamestown Garage Co.; $10,000 to $50,000.

New York City:
- Chatham Garage, Bronx; $20,000 to $75,000.
- Duplex Engine Governor Co., Manhattan; $300,000 to $500,000.
- FosterKetchum Auto Co., Manhattan; $10,000 to $50,000.
- Lloyd's Fire Truck Corp., Manhattan; $100,000 to $150,000.
- Maxwell-Chalmers Co.; addition of $15,000,000.
- Walter Motor Truck Co. ,maker of Walter trucks; to $1,000,000.

Niagara Falls, N. Y.—U. S. Light & Heat Corp.; $7,000,000 to $8,500,000.

Olean, N. Y.—Olean Motors Corp.; $10,000 to $25,000.

Rochester, N. Y.—A. M. Zimrich Motor Co.; $5000 to $25,000.

Utica, N. Y.—Balch Body Corp.; $25,000 to $50,000.

Winston-Salem, N. C.—Motor Co.; $50,000 to $450,000.

Cincinnati, O.—Cincinnati Auto Body; $100,000 to $200,000.

Columbus, O.—Reese Motor Co.; $150,000 to $300,000.

Oklahoma City, Okla.—Parks Motor Co.; $50,000 to $150,000.

Ardmore, Pa.—Auto Car Co., maker of motor trucks; to $4,839,600.

Lancaster, Pa.—Rowe Motor Mfg. Co., maker of worm driven motor trucks, purchased Lancaster Body Co.; capital increased from $500,000 to $2,000,000.

Greenville, S. C.—Greenville Cadillac Co.; $30,000 to $100,000.

Brady, Tex.—Brady Auto Co.; $10,000 to $50,000.

Dallas, Tex.—John H. Dunn Tire Co.; $10,000 to $50,000.

El Paso, Tex.—El Paso Battery & Ignition Co.; $15,000 to $30,000.

Charleston, W. Va.—Charleston Steam Tractor & Truck Mfg. Co.; $1,000,000 to $2,000,000; name changed to Automoto Mfg. Co.

Antigo, Wis.—Antigo Tractor Co.; $500,000 to $1,000,000; name changed to Antigo Tractor Corp.; gen. man., W. L. Carver; asst. man., M. H. Houck; C. R. Parratt.

Green Bay, Wis.—Lanchin Loehr Lubricating Piston Co.; $50,000 to $150,000.

Ladysmith, Wis.—Hein Implement Co.; $25,000 to $75,000.

Milwaukee, Wis.:
- American Auto Co.; $14,000 to $100,000.
- Northwestern Malleable Iron Co.; $500,000 to $1,200,000.
- Overland Wisconsin Co., distributor of Overland and Willys-Knight cars, etc., in Wisconsin; $50,000 to $250,000.
- Pawling & Harnischfeger Co.; $1,000,000 to $3,000,000.
- Sivyer Steel Casting Co.; $200,000 to $400.000.
- Sterling Motor Truck Co., maker of Sterling trucks; $250,000 to $1,000,000; Arthur C. Wollensak chief engineer.

Oshkosh, Wis.:
- Ralph M. Burtis Co., hardware; $12,000 to $25,000; name changed to Stillman Hardware Co.
- Thom Auto Co.; $25,000 to $100,000.

Racine, Wis.—Modine Mfg. Co.; to $450,000.

Superior, Wis.—Twin Ports Steel & Tractor Co., maker of tractors and automotive parts and materials; $10,000 to $100,000.

Two Rivers, Wis.—Kahlenberg Bros. Co., maker of oil engines; $75,000 to $300,000.

CHANGES IN NAME.

San Leandro, Cal.—C. L. Best Gas Traction Co. to C. L. Best Tractor Co.

Santa Rosa, Cal.—Houts-Moulton Cleveland Co. to Houts, Hilliard & Bridgeford Motor Co.

Chicago, Ill.—Findlay Disc Wheel Corp., maker of steel wheels for auto service, to Findlay Steel Wheel Corp.

Arkansas City, Kan.—Woods Bros. Garage to Cannon Ball Garage, 306 N. Summit St.; Roupp & McClosky, owner.

Eskridge, Kan.—Willard's Battery Station to United Electric Service Station; W. C. Rea and Burl E. Muns, mgrs.

Louisville, Ky.—Mahan Bowman Co. to Mahan Motors Co.

Baltimore, Md.—Baltimore Auto Trade Assn. to Baltimore Auto Dealers' ssn.

Dawson, Minn.—Barkeus & Lund Garage to Barkeus & Holton; D. T. Lund, owner.

Brookfield, Mo.—Dickinson Motor Co. to Moore Motor Co..; Vernon C. and Leo E. Moore, owners.

Harrisonville, Mo.—Cable & Lyon, dealer in Chevrolet cars, to G. E. Cable & Co.: Geo. E. Cable, owner.

St. Louis, Mo.:
- Curtis-Robertson Aircraft Corp., maker of airplanes and parts, to Robertson Aircraft Corp.
- Shurnoff Mfg. Co., maker of spark plugs, combination manifolds, grease retainers, running board supports, heaters, etc., absorbed by Inland Machine Works.

Springfield, Mo.—Haskett-Mace Motor Co. to Haskett Motor Co.; Guy R. Haskett, owner.

Pawnee City, Neb.—Overland Garage to Scoville Auto Co.; C. A. Scoville, owner.

New York City:
- Bristol Motors Corp., Manhattan, to Aircraft Repair & Service Co.
- O. J. Childs Co., 1265 Broadway, maker of fire equipment, merged with Utica Fire Apparatus Co., Utica, N. Y.

Oneida, N. Y.—Keller Merrell Motor Co. to Keller Motor Co.

Youngstown, O.—Ohio Garage Co., dealer in Essay, Marmon and Hudson cars, to Wick Ave. Motor Co.

Enid, Okla.—Broadway Garage to O'Connor Motor Co., 206 E. Broadway.

Perry, Okla.—Cooper Motor Co. to Model Garage; Pollard & Mezinge, owner.

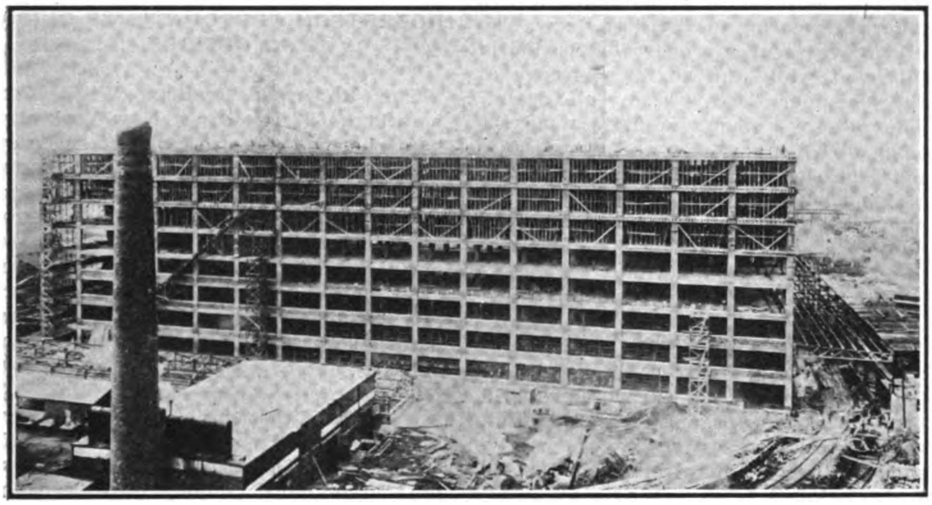
Philadelphia, Pa.:
- Bigelow Willey Motor Co. to Geo. A. Willey Motor Co.
- Lewis & Roth Corp., 15th and Wood Sts., to Electric Power Equipment Co.; trade name of products changed to Elpeco.
- Postal Tire & Rubber Co. to Atlantic City Tire & Rubber Corp.

NOTES OF INDUSTRY AND TRADE

Dodge Brothers Building Big Addition

Substantial evidence of the confidence in the future of the business of Dodge Brothers, the well known Detroit manufacturer of Dodge Brothers cars, is found in its expenditure of between $6,000,000 and $8,000,000 in the expansion of its factory. The present building programme is the largest in the history of the concern, and will bring the total floor space of the plant up to more than 100 acres. In 1914, when the production of Dodge Brothers motor cars began, the total floor space was eight acres.

The principal unit of the construction programme now in progress is the new press steel building, with a floor area of 860,000 square feet. The new construction building, which has just been completed, is eight stories high and has a floor area of 140,366 square feet. Another important unit now being built is the power plant.



Indicating Extensive Expansion Programme of Dodge Brothers Co. at Detroit.

With the gradual expansion of the factory the interplant traffic problem became one of prime importance. The distance between the main building and plant four is nearly a mile and until recently it was necessary to cross 12 railroad tracks to reach it. This problem was solved by the simple, but costly expedient of digging a tunnel. Now half the distance is cut off and traffic passes under the 12 tracks instead of over them. The tunnel is a good example of the efficiency measures always being introduced at the Dodge Brothers factory, which has the reputation among authorities of being one of the most thoroughly equipped and best managed factories in the world.

When the present building operations are completed others will probably begin. There is nearly always something in progress. The maximum production attained so far was an average of about 600 cars a day, but this will be materially increased by the extra facilities.

LOUIS DUSENBURY ENLARGES STAFF.

Louis Dusenbury & Co., Inc., 229-233 Fourth avenue, New York City, importer and manufacturer of upholstering materials for automobiles, carriages, air ships, etc., announces the following increases in its executive staff:

Louis E. Dusenbury has been appointed vice president and Harold W. Schwab secretary, these additions being made necessary by new production plans developed by the company which include the early presentation to the trade of an entirely new line of art motor fabrics. These new Dusenbury motor fabrics will apply the "Period" idea in a unique way to motor car upholstery, being interesting reproductions of the world's greatest decorative themes by the company's expert stylists.

The Dusenbury Co. is represented in Detroit with exhibition and sales rooms at 426 Woodward avenue, the main offices being located in New York city and factories in Bridgeton, L. I., N. Y.

Established in 1849, Louis Dusenbury & Co., Inc., has maintained a continuous business existence of more than 70 years, making it the oldest producer in its line in the country.

KIRKLAND-CRAVENS MOTORS IS HAYNES DISTRIBUTOR.

The Haynes Automobile Co., Kokomo, Ind., has made official announcement that the Kirkland-Cravens Motors, Inc., 1513 McGee trafficway, is to have the distribution of Haynes cars in all of the states of Kansas, Oklahoma and western Missouri and northwest Texas.

The officers of the new company are as follows: President, H. G. Kirkland; vice president and treasurer, Walter Cravens of Salina, Kan.; general manager, H. E. Rose; vice president, F. D. Phillips; manager of wholesale department, Ralph C. Garland; retail sales manager, George R. Hutchings.

Expansion Plans Show Business Revival

The addition to the factory of the Matthews Engineering Co., Sandusky, O., is nearing completion. This is 100 by 140 feet and will be completely equipped with the latest machinery for the manufacture of electric light and power plants which this company produces under the trade name of "Matthews Full Automatic."

The appointment of Thomas H. Bingham as production manager of the enlarged factory is announced. He has been for the past five years general superintendent of the works of the International Harvester Co. at Akron, O. He received his early training in engineering methods in Scotland, having come to this country 14 years ago, since which time he has been engaged in tool making and in superintending factory production.

BADGER CO. PLANS EXPANSION.

Antitcipating a quick return to normal business conditions and desiring to be in a position to serve the trade promptly, the Badger Manufacturing Co., Milwaukee, Wis., has leased a new factory building at Clinton and Oregon streets, that city. It is a three-story structure with a large basement, built of cement and brick, exceptionally well lighted and ventilated—in fact, ideal in every way for the manufacturing of the equipment made by this concern.

With the leasing of this new plant the two factories used up to the present time will be vacated and the entire organization brought together under one roof, which will overcome the inconvenience experienced in operating two plants in different parts of the city.

ALLIS-CHALMERS' BIG BUSINESS.

Unfilled orders of the Allis-Chalmers Manufacturing Co., Milwaukee, Wis., at the end of 1920 aggregated $17,500,000, it is stated, an increase of $2,000,000 compared with the previous year. One order received during the closing weeks of the year called for $1,000,000 worth of gas engines for a prominent steel company. New orders are said to be coming in at the rate of about 75 per cent. of capacity.

CLIMAX ADOPTED BY MUNDIE.

The Climax Model T, 5½ by seven-inch motor, made by the Climax Engineering Co., Clinton, Ia., has been adopted as standard power equipment by the Mundie Manufacturing Co., Peru, Ind., for its No 8, 10 by 10-inch Zin-Ho compressor. This company has used the Climax Model K, five by 6½-inch motor, on its smaller outfits for several years

Stark-Inland Machine Works in Larger Quarters

OPTIMISM and a full-speed-ahead policy for 1921 have been adopted by the officers and employees of the Stark-Inland Machine Works, St. Louis, Mo., manufacturer of the famous Stark-Inland spiral cut one-piece piston ring, which recently celebrated its fifth anniversary by removal to new and larger quarters. While many plants connected with the automotive industry were temporarily closed during the past few months, due to general business depression, it has been a matter of comment that the wheels of the Stark-Inland organization did not stop turning, with the exception of a brief period occasioned by the removal and installation of machinery in the new factory at Jefferson and Lucas avenues.

History has been made by the company ever since it was organized in the early part of 1916. The original force consisted of 20 workmen, who were employed in modest quarters, affording less than 3000 square feet of floor space. Five years have passed and today Stark-Inland one-piece piston rings, to the number of 6,000,000, are used in practically every part of the world; in fact, wherever automobiles, trucks, tractors, motorcycles, locomotives, stationary gas engines, marine engines, air compressors, refrigerating machines, aeroplanes and mining machinery are known. Thus the product comes into service in the air, on the water, under the water, on the ground, under the ground, in every clime and among practically all the peoples of the earth.

In the accomplishment of the phenomenal results obtained for this product, credit is given by the management to publicity as being largely responsible. The aggregate amount expended for advertising, foreign and domestic, by this organization during the past five years exceeded $750,000. Judicious use of printers' ink was employed in various media to tell the world about the band of expanding metal around the piston, which serves to prevent the gas or steam from escaping between the piston and the walls of the cylinder.

The new plant facilities cover more than 70,000 square feet of floor space, and several hundred highly skilled workers are employed to take care of the demand for the product. The management started in business with a capital of $30,000, while the present capitalization is $2,000,000.

Development of Stark Oilless Ring.

Not content with the unusual success of the spiral cut piston ring, the management recently developed the Stark oilless, a popular priced, quick acting piston ring, to enable dealers to supply the demand for a ring of this type. The oilless was placed on the market four months ago and the sales have already totalled several hundred thousand. This ring is made on an entirely new principle—having the turned finish or quick seating feature fully developed. It adapts itself quickly to the contour of the cylinder, by wearing in with less delay. The oil groove assures proper distribution of lubricant while the auxiliary groove at the shoulder "scrapes the oil down." The oilless is manufactured under the same strict supervision as is applied to the Stark-Inland one-piece piston ring.

Coincident with its removal to new quarters the company announced that it had absorbed the Shurnuff Manufacturing Co. of St. Louis, and the stockholders of this latter company are now stockholders in the Stark-Inland Machine Works. With the addition of the Shurnuff line of products, which have been favorably known to the trade since 1916, the Stark-Inland organization now offers to the trader a varied line of motive products. The entire line, which is being marketed under the trade mark brand of Star-K products, is as follows: Star-K-Inland spiral cut piston ring, Star-K oilless quick seating piston ring, Star-K breather spark plug, Star-K-Shurnuff grease retainer, Star-K-Shurnuff combination manifold, Star-K-Shurnuff running board supports, Star-K-Shurnuff windshield ventilator and Star-K-Shurnuff heater.

Will Still Operate Old Factory.

In addition to the new facilities at Jefferson and Lucas avenues, the company will continue to operate the factory at Eighth and Mound streets, where the equipment will be used to manufacture the tools with which the piston rings are made. Dies and jigs will also be made at this plant.

Officers of Company.

The officers of the company are: President, Ottmar G. Stark; vice president, Louis J. Stark; secretary, Fred E. Moore; treasurer, Daniel A. Ruebel.

The officers named, together with John F. Shuford, Edwin H. Wagner and Lawrence C. Kingsland comprise the board of directors.

ROBERTSON CORPORATION'S CHICAGO OFFICES.

The Robertson Resilient Wheel Corporation, 1697 Broadway, New York city, has taken a long-term lease of space on the second floor of the Armour Postal Station building, 3019 Indiana avenue, Chicago, which it will occupy as general offices about Feb. 1. The company reports a brisk demand for the resilient type of wheel, both for passenger cars and commercial vehicles, and contemplates increasing its factory facilities at an early date.

It is stated that the factory of the Lexington Motor Co., Connersville, Ind., is operating at 50 per cent. of its normal production and employing 70 per cent. of its usual working force.

Ford Factories Are Under Production

While an attitude of reticence is still maintained by the officials of the Ford Motor Co. concerning its financial and production affairs, it is known that the main plant at Detroit and quite a number of the assembling plants in various sections of the country are under production to a limited extent, and it is stated that the preference in taking on the thousands of workers again has been given to married men and those having dependents.

There has been no authoritative statement from any Ford official regarding the financial situation of the company, but it is stated on good authority that any negotiations that might have been under consideration with New York banking interests were broken off for the reason that the bankers' demands were considered unreasonable by Henry Ford, and it is also understood that he refused to permit a bankers' committee or representative of the banks to supervise the operation of his plants.

One of the late features in Ford's affairs is the $5,000,000 damage suit filed against Henry Ford by Morris Gest, a theatrical producer, alleging libel in statements published in the Dearborn Independent, a newspaper which is stated to be controlled by Ford. Officials of the company stated that this matter would be ignored.

Henry Ford also recently gave expression in interviews to somewhat unusual theories in regard to the betterment of the condition of rural residents and also advanced plans for the welfare of the great mass of workers in automotive and other manufacturing enterprises.

While official announcement is lacking, it is stated on authority that W. R. Campbell, secretary and assistant general manager of the Ford Motor Co. of Canada, will succeed F. L. Klingensmith as vice president and general manager of the Ford Motor Co. Campbell is reported to be virtually in authority at the big factory at Highland Park.

Mr. Campbell is 39 years old and has been with the Ford company of Canada since it was organized in 1904. Prior to that he was with the Queen City Oil Co.

W. C. Anderson, director of operations in Europe, with headquarters in London and Paris, tendered his resignation last week and this was followed by that of Louis Block, in charge of the Philadelphia branch.

STORM CO. ISSUES INTERESTING PAMPHLET.

The Storm Manufacturing Co., Sixth avenue and Fourth street, Minneapolis, Minn., maker of motor renewing equipment, recently published an interesting pamphlet entitled, "How I Made My Garage Pay in Winter," which is teeming with suggestions which should be of value to garage owners, repair men and service stations in the way of stimulating business during the cold season when there is so often a falling off in the repair business. It is pointed out that now is the logical time for overhauling the motor car when the cars are laid up and the work can be done thoroughly and carefully. The garage or repair shop that is equipped with a few economical, labor saving pieces of repair and replacement equipment is in a position to make a strong bid for this work during the slack season.

The Storm Manufacturing Co. is supplementing the pamphlet mentioned above by a series of suggestions on "Filling the Shop with Profit Possibilities," which will be sent on request to anyone interested.

INFRINGEMENT CLAIMED BY SECURITY CO.

It is stated that the Security Manufacturing Co., Los Angeles, Cal., through its subsidiary, the Miller-Chapman Co., has filed several suits for infringements on its basic patents on automobile theft signals. The patents sued on are the Ells reissue patent 14,956, the Chapman design patent 54,377 and the Chapman mechanical patent 1,343,709. It is stated that these patents cover broadly every device which is adapted to lock on a wheel and to produce a bumping movement if the car is started.

SEWELL CO. APPOINTS DISTRIBUTORS.

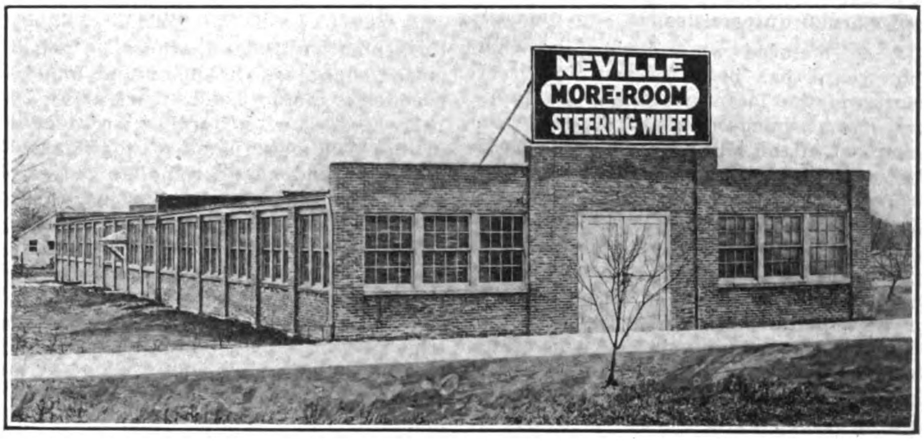
The Sewell Cushion Wheel Co., Detroit, Mich., manufacturer of resilient motor trucks wheels, announces the appointment of the following distributors: Marriott-Howe Tire Co., Mobile, Ala.; Rubber Tire & Supply Co., Springfield, Mo.; F. A. Thompson, Hutchinson, Kan.; M. H. Rykowski, New Orleans, La.; Habbie Motor Co., Montgomery, Ala.; Baldwin Repair Co., Middletown, Conn.; A. F. Greene Co., Norwich, Conn.; Bee Jay Tire Service, Davenport, Ia.; Lampher Motor Co., Joplin, Mo.; Gibbes Machinery Co., Columbia, S. C.; Gibbs & Williams, Salt Lake City, Utah; Peoria Tire and Vulcanizing Co., Peoria, Ill.; O. F. Kress Co., Lawrence, Mass.

Further sales expansion is already under way for 1921.

Neville Mfg. Co. in New Quarters

The accompanying illustration shows the new quarters of the Neville Steering Wheel & Manufacturing Co. at Wayne, Mich. This concern makes the Neville More Room Steering Wheel and this new location will provide much needed space for the expansion of the company's production activities, giving more than three times the floor space as was had at the old plant in Detroit.

The new factory is of brick and cement construction, 50 by 280 feet, with plenty of light and modern facilities.



New Factory of Neville Steering Wheel and Manufacturing Co. at Wayne, Mich.

SPEEDWAY CO. PERFECTS EIGHT VALVE HEAD.

The Speedway Engineering Co., Indianapolis, Ind., manufacturer of Ford speed specialties, which has for a number of years been making the Peugeot type 16-valve camshaft head for Ford cars, especially designed for racing and fast roadster equipment, has been experimenting for a number of months on an eight-valve head for Ford pleasure and commercial cars. It is stated that W. L. Hunt, the designer for the 16-valve head, has now perfected the eight and that it will be placed on the market within the next 30 days. It is claimed that this head will increase the motor efficiency of the Ford power plant from 30 to 35 per cent. The head develops about 30 horsepower, and it is stated that, by its use, the possible speed of Ford cars can be increased to 60 or 65 miles an hour.

The new eight-valve head is claimed to be easily installed, as it fits right on to the Ford block without any change other than the removal of the old head and no special mechanical or technical knowledge is required. It is suggested by the manufacturer that here is a solution for garage men who have been wondering what to do with their accumulation of used Ford cars.

The Packard Motor Car Co., Detroit, announces the re-employment of 1000 additional men, raising its working force to about 4000.

Personal News of Industry and Trade

Jacobs with Hammered Piston Ring Co.

Joseph S. Jacobs has been made manager of the advertising department of the American Hammered Piston Ring Co., Baltimore, Md. He has been associated with the sales and promotion activities of this concern for about a year and a half as assistant to Walter P. Coghlan, general sales manager, and will now assume definite direction of the advertising department, assisted by C. B. Cook. Mr. Jacobs joined the Bartlett-Hayward Co., the parent concern, in 1915, direct from his college activities, and started in a modest position, but rapidly assumed various responsibilities. During the war he was assistant superintendent of the million dollar drop forge plant of the Bartlett-Hayward Co., which was engaged in making high explosive shells. He has attended the Polytechnic Institute in Baltimore, Johns Hopkins and Cornell universities.

J. G. Melbrod who, during the past four years, has been foreman in direct charge of the Titanium Bronze Co. foundry, has assumed charge of the same department of the Hills-McCanna Co., 2025 Elston avenue, Chicago, Ill. Mr. Melbrod's association with the Titanium Bronze Co., and a previous connection with the Lumen Bearing Co., also of Buffalo, N. Y., both of which companies specialized on automobile worm wheels, has given him a wide experience in the handling of aluminum bronze and other metals that, coupled with the Hills-McCanna Co.'s reputation in the construction of bronze worm wheels, and the use of manganese aluminum in gear cases and rear axle housings, makes this new connection of Mr. Melbrod of decided interest to the trade.

Frank J. Flynn has been appointed service manager of the Connecticut Telephone & Electric Co., Meriden, Conn. He has been for several years with the Connecticut company in the field, both among service stations and jobbers. Many of the Connecticut stations were appointed by Mr. Flynn, so that his acquaintance and experience fit him admirably for this new work. I. L. Doolittle, who has been service manager for the past two years, joins the sales division of the company, where his previous training and his qualifications should prove most valuable.

E. A. Taylor has been appointed works manager in charge of production by the Liberty Motor Car Co., Detroit, Mich. He has just severed his connection with the Pierce-Arrow Motor Car Co., Buffalo, N. Y., as production manager and, previous to that, held executive positions in charge of manufacturing departments. He was with the Cadillac Motor Car Co. from 1909 to 1912. In 1912 he became associated with the Maxwell Motor Co. in charge of Detroit plants, and in 1913 was transferred to the Maxwell Motor Co.'s plant at Dayton, where he was in entire charge of the plant and foundry, producing motors and rear axles. In 1917 he became general superintendent of the Chalmers plant of the Maxwell Motor Co. and was in complete charge of negotiations and completion of important war work in addition to the manufacturing of cars. In 1919 he left the Maxwell Motor Co. to join the Pierce-Arrow company.

G. M. Berry, Vice President and General Manager, Stevens Duryea, Inc.

William Elliott Phelps, formerly district sales manager for the Haynes Automobile Co., Kokomo, Ind., has been appointed to the position of general sales manager of the same company, according to an announcement by Vice President and General Manager Alton G. Seiberling. Mr. Phelps, who is a graduate of Princeton unversity, has a long record of successful automobile salesmanship. He was a prominent figure in the sales organization of the Chicago branch of the Winton company, and previous to that was district sales manager of the Haynes Motor Car Co. of Chicago, where he built up one of the most efficient automobile selling organizations in the Middle West. He was also general sales manager of the All-American Truck Co. In addition to his career as a successful automobile salesman, Mr. Phelps holds a high position in automobile circles, having been state automobile investigator for the State of Illinois and today is a leading member of some of the prominent motor clubs in and around Chicago.

John S. Hyatt is the manager of the new Armleder Motor Truck Co. of New York, a branch of the well known Armleder truck manufacturing concern of O. Armleder Co., Cincinnati, O., which has opened headquarters at Third avenue and Butler street, Brooklyn. **A. W. Christopher**, who has heretofore been associated with the sale of Armleder trucks in New York, will be sales manager of the new branch.

General Manager of Stevens Duryea

G. M. Berry, who joined Stevens Duryea, Inc., in July, 1920, as vice president and general manager, though still a young man, has been identified in a large way with the automotive industry for several years. He first came into prominence as an assistant sales manager of the Jeffrey company, later being appointed sales manager and eventually vice president and treasurer of that organization. After leaving the Jeffrey company Mr. Berry became assistant sales manager of the Willys Overland company, eventually being made commercial manager. In all of the several positions filled by him his work has been distinguished by a painstaking regard for every detail that could contribute to the development of a forward looking constructive programme, and he is known throughout the entire industry for the high standards of automobile merchandising which he has always advocated.

C. R. Miller has resigned as general manager of the Allen Motor Co., Columbus, O., after having served in that capacity since the removal of the company from Fostoria, O., to Columbus. Previous to that he was works manager of the Willys-Overland Co. From 1900 to 1918 he was associated with the Miami Cycle & Manufacturing Co., rising from foreman to general manager. Mr. Miller has not announced his plans for the future.

J. A. Palmer has become sales manager for the Neville More Room Steering Wheel Co., Wayne, Mich. He comes from the Burroughs Adding Machine Co., where he has been for 3½ years. Previous to that he was with the Good Health Publishing Co., Battle Creek, Mich. Mr. Palmer will have charge of both sales and advertising in his new connection.

J. H. Desmond who, for the past three years, has been district manager of the Hart-Parr Co. in the Canadian territory, with headquarters at Regina, has been placed in charge of salesmen in the field, with headquarters at the factory in Charles City, Mich.

Dorsey W. Hyde has resigned from the transportation engineering division of the Packard Motor Car Co., Detroit, to become assistant manager of the civic development department of the Chamber of Commerce of the United States.

R. J. Firestone, whose connection with the rubber industry has made him well known throughout the country, was elected a vice president of the United States Motor Truck Co., Cincinnati, O., at its recent annual meeting.

Hubert E. Hartman, assistant secretary and general attorney for the Ford Motor Co., has resigned, effective March 15.

Republic Truck Retaining Executives

E. E. Sieg is to retain the position of assistant general sales manager of the Republic Truck Sales Corporation, Alma, Mich., the sales outlet for Republic trucks, made by the Republic Motor Truck Co. Mr. Sieg joined Republic in 1914 and has been connected with the organization continuously since that time, acting successively as auditor, credit manager, and latterly, as assistant general sales manager, since Jan. 1 of last year. General Manager Frank E. Smith also announces the retainment of **Robert B. King** as eastern division sales manager. Mr. King has been actively connected with the Republic organization for almost three years in various capacities, his service in the sales division having begun over two years ago, as assistant sales manager of the northeastern division. On the rearrangement of the company's sales territories, he was appointed assistant western division sales manager, in which capacity he served until July, 1919, when he was placed in charge of the sales promotion department, serving there until the end of that year. He spent the past year in the eastern sales division, first as assistant manager, and latterly as division sales manager, which position he retains. During his business career, covering the past 10 years, he has had accounting and merchandising training in the hardware, motor and steel product fields, having successfully occupied important positions with the Lion Motor Co., Wilcox Wholesale Hardware Co. and for five years with the Peerless Wire Fence Co., all of Adrian, Mich.

Maurice J. Moore, secretary and treasurer of the LaFayette Motors Co., Mars Hill, Indianapolis, Ind., died at St. Vincent's hospital, Feb. 1, as the result of acute dilation of the heart, following an operation on his knee a week before. He was 35 years old and a wife and four-year-old son survive him. Mr. Moore has held the position of secretary and treasurer of the LaFayette Motors Co. since its inception in 1919; he was also president of the LaFayette Building Co. and was largely responsible for the building of a colony of beautiful homes for LaFayette employees near the LaFayette plant. He was formerly connected with the Northway Motors Manufacturing Co., Detroit, Mich. He was also comptroller of the Chevrolet Motor Co., of Flint, Mich., and auditor and later production manager of the Miami Cycle Co. of Middletown, O. During the war he was disqualified for overseas service by the affected knee, injured in a football game several years ago, but performed an important service as captain in the Motor Transport Corps, in charge of finance, accounting and settlement of claims under the Motor Vehicles division.

R. C. Huddle has been selected by the O. Armleder Co., maker of Armleder trucks, Cincinnati, O., to succeed W. R. Hill as purchasing agent.

A. D. Williams, in Charge of X Laboratory Sales.

Fred Wellman, for two years advertising manager of the National Motor Car & Vehicle Corporation, has resigned his position to join the National Motor Sales Co. of Chicago, distributor of National cars, in the capacity of sales manager. During his connection with the National factory Mr. Wellman engaged in sales promotion work in addition to advertising. Prior to his association with National he was identified with Carl G. Fisher in the latter's Indianapolis Speedway, Lincoln Highway and Miami, Fla., real estate promotions; also he was advertising manager of the Olds Motor Works in 1916. Mr. Wellman broke into the automobile industry via the newspaper route, having been automobile editor of the Indianapolis Times and Indianapolis News in 1911 and 1918 respectively.

L. Grant Hamilton of national prominence in automotive merchandising and advertising circles, has joined the staff of the Akron Advertising Agency, Akron, O. Since his discharge from two years' army service in France, Mr. Hamilton has been in active charge of the advertising of the Federal Motor Truck Co., Detroit, Mich. Prior to the war he was with the Campbell-Ewald agency; he also served as advertising manager of the Regal Motor Car Co., and was a member of the advertising and sales promotion departments of the Studebaker Corporation.

T. B. Blakiston, S. A. Barclay and A. M. Merrifield recently had their efficient services with the American Hammered Piston Ring Co., Baltimore, Md., recognized by promotion. Mr. Blakiston, who has been district sales manager for the southeast territory, has been made general sales manager to succeed J. H. Quackenbush. Mr. Barclay assumes Mr. Blakiston's former duties in the southeast, and Mr. Merrifield is in charge of the Chicago and western sales districts as district sales manager, replacing D. T. Preyer.

Williams Heads Sales X Laboratories

A. D. Williams has assumed charge of sales for the "X" Laboratories, manufacturer of "X" Liquid, and will have his headquarters at the New York office of the company, 25 West 45th street. Mr. Williams was formerly associated with the American Chain Co., Bridgeport, Conn., and the F. Hersh Hardware Co., Allentown, Pa. For the last few years he has been field manager for the Bethlehem Spark Plug Corporation, Bethlehem, Pa.

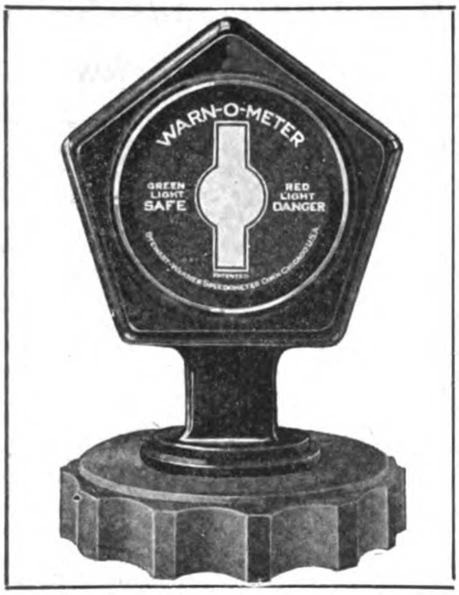
Clifford F. Messinger, general sales manager of the Chain Belt Co., Milwaukee, Wis., has been elected president of the Concrete Mixer Association of the United States. The other officers were: Vice president, W. B. Knickerbocker, Knickerbocker Co., Jackson, Mich.; treasurer, A. T. Scannell, Archer Iron Works, Chicago, Ill.; executive committee, H. E. Smith, president of T. L. Smith Co., Milwaukee, Wis., chairman; P. A. Koehring, secretary of Koehring Machine Co., Milwaukee; Z. W. Carter, sales director of Austin Machinery Corporation, Chicago.

Edward W. Kruspe has been appointed mid-west manager of sales for the Acason Motor Truck Co., Detroit, Mich., resigning from his connection with the Standard Motor Truck Co. to handle the states of Illinois, Indiana, Kentucky, Wisconsin, Iowa and Missouri for Acason. Mr. Kruspe has an enviable reputation in the truck selling field, having handled Four Wheel Drive trucks, as well as Standards, from coast to coast. He is also familiar with the retail end, having been for a time in business in Milwaukee.

George J. Blanton who for the past four years has been connected with the engineering sales department of the Chain Belt Co., Milwaukee, Wis., has been made New York district manager. Before joining the "Rex Family" in 1917, Mr. Blanton was associated with the General Electric Co. for eight years, three of which were spent in Schenectady, N. Y., and the other five in the Milwaukee office. Mr. Blanton is a graduate of the University of Michigan, Department of Mechanical and Electrical Engineering, class of 1909. He will have his headquarters at 50 Church street, New York city.

Dick Jemison, for 11 years sporting editor of the Atlanta, Ga., Constitution, has been appointed advertising and sales promotion manager of the Oldfield Tire Co., Akron, O. For the past year he has been in charge of sales promotion of the Miller Rubber Co. It is reported that an intensive publicity campaign is to be inaugurated under Mr. Jemison's supervision.

"Bob" Crowthers, formerly with the Gary Motor Truck Co., Gary, Ind., has joined Master Trucks, Inc., 3132 Wabash avenue, Chicago, in the capacity of advertising and assistant sales manager.



Front View of Stewart Warn-O-Meter.

STEWART WARN-O-METER FEATURED AT SHOWS.

One of the interesting new accessories being featured at the automobile shows the present season is an addition to the well known line of Stewart-Warner devices. This is the Stewart Warn-O-Meter, which is designed to eliminate, as much as possible, engine troubles which result from overheating.

Fitted to the radiator cap or front fender the Warn-O-Meter is wired back to a thermostatic unit attached to the engine. Concealed in the instrument are two small light bulbs. At normal motor temperature a steady green light shows. Should the cylinders become dangerously hot, due to a broken fan belt, clogged water pipe or other trouble, the thermostat automatically switches on a red light to warn the motorist so that he may remedy the defect in time. The Warn-O-Meter will operate and give true motor conditions regardless of the air or water temperature in the radiator, as it is not dependent on this factor, the operating medium being attached directly to the engine block.

One big point in favor of the Warn-O-Meter is that it will not allow itself to be overlooked. The brilliant red danger signal cannot fail to get the driver's attention when it suddenly flashes on. It can be easily read both day and night.

Another point worth mentioning is the difficulty which accessory thieves would meet with in attempting to purloin the Warn-O-Meter. Although they might obtain the indicating unit, it would be of no use to them without the connecting wires and thermostat and to procure the entire assembly would mean considerable time and trouble.

In the reverse side of the Warn-O-Meter, which faces the oncoming motorist, there is fitted a transparent design of attractive colors which is illuminated by the light within the instrument. This standard trade mark design may be replaced by the name of the car, the owner's monogram or some particular insignia. This adds an attractive touch to the car, especially at night.

The Warn-O-Meter can be easily installed on any car radiator or front fender, or on the hoods of air cooled cars not equipped with a radiator.

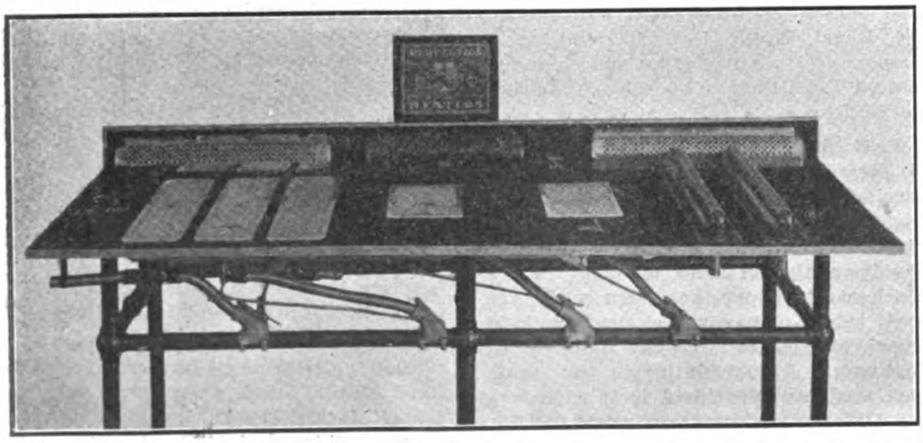
It is manufactured by the Stewart-Warner Speedometer Corporation, Chicago, Ill.

PERFECTION HEATERS AT SHOWS.

The accompanying illustration shows the display of heaters made by the Perfection Heater & Manufacturing Co., Cleveland, O., at the New York and Chicago automobile shows. It is stated that there were not less than nine varieties of this make, the Perfection, seen on 50 of the 88 makes of cars displayed at New York, and the same conditions were in evidence at Chicago.

"It is just as unreasonable—and as unnecessary, too,"—says C. S. Pelton, vice president of the Perfection Heater and Manufacturing Co. of Cleveland, "to ask any one kind of heater, or one particular size of valve, to adapt itself to all makes of cars, as it is to make the same request of any one size of carburetor or muffler. The latter idea would not appeal for a moment to any owner of a machine who cared a cent about the welfare of so valuable a friend; neither does the first—now.

"Structural and other features need not be disregarded. At least one type of Perfection heater will be suitable for installation on any passenger car or truck on which it is possible to use a heater. Perfection heaters have already been adopted as standard equipment on 47 motor trucks."

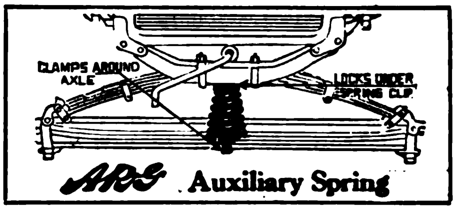


Display of Nine Varieties of Perfection Heaters Exhibited at the New York and the Chicago Shows.

SPRING PROTECTOR FOR FORDS.

The Arg Auxiliary Spring Co. of Birmingham, Ala., pioneer manufacturers of front spring protectors for Ford cars, states that it is now in production on the new Arg auxiliary spring for use on the new model Ford cars.

Until recently the front spring of the Ford car had two spring clips, but the late models have only a single clip. This has necessitated a slight change in the Arg spring, so that the spring can be attached to the new Ford models with the same ease and quickness of installation that has been experienced in the past in installing the Arg on the former models of Ford cars.



The Arg auxiliary spring locks around the front axle and under the spring clip. It is claimed that it not only protects against a broken front spring, but guards against tires being cut by fender irons, a racked, leaking radiator, worn out spring hangers and steering arm locking on radius rod.

While the Arg spring is not sold primarily as a shock absorber, Ford owners who have equipped their cars with these springs state that their cars do ride easier, as the same action of the Arg which protects the front spring from breaking also absorbs the jolts and jars of bad roads.

The Arg may be used on both passenger and commercial models of the Ford, and is sold only through regular trade channels; however, the company will be glad to send descriptive matter to car owners whose dealers have not been supplied with Arg springs by their jobbers.

STANDARDIZING COLOR SIGNALLING.

The use of red, yellow and green, as standardized color signalling, in the control of automobile traffic, is already established in over 200 cities and towns throughout the country, according to the traffic engineers of the Aga company of Elizabeth, N. J., marine lighthouse engineer and builder, which has just completed an investigation of traffic conditions in the United States. The three colors recommended by the standards committee of the American Association of State Highway Officials, are those uniformly used by the railroad systems; red, first degree danger; yellow, second degree danger, and green, traffic danger only.

THE NO-LEAK-O PISTON RING PRINCIPLE.

The No-Leak-O principle which is the distinguishing characteristic of an improved type of piston ring which is being marketed by the No-Leak-O Piston Ring Co., Baltimore, Md., is claimed not to be the result of accident or chance, but is the discovery of John E. Norwood, a mechanical engineer, who has devoted an active life to careful study and mechanical experimenting. He states that he found the underlying weakness of all ordinary piston rings to be the absence of any practical means to create and maintain a constant oil seal or film of oil between the ring and the warped or imperfect cylinder wall, and the lack of equalized ring pressure on the walls of the cylinders. It is claimed that the No-Leak-O ring obviates this weakness by its method of construction. A groove is cut around the ring at a right angle with the face, sloping on an angle of about 45 degrees in combination with the patented step-lap joint. The oil splashed up from the oil pit is picked up quickly by the rings until all the grooves are full. This forms a packing the same as the improved water pump; where a groove full of water makes its own packing against water. No surplus of oil or gas will pass the rings. The oil is retained in the groove between the ring and cylinder wall just where needed for lubrication and forming the oil seal. As the oil is worn out in lubrication, fresh oil is picked up. On the down stroke the square edge forming the groove gathers the surplus oil, pulling it toward the oil pit. On the up stroke it is distributed again from the sloping face of the groove, pulsating as it were, preventing the groove from clogging.

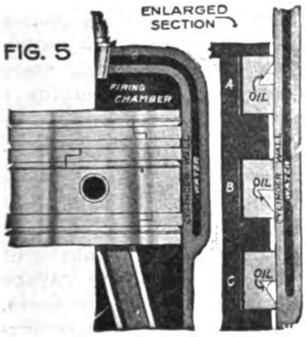


FIG. 5

No-Leak-O rings are made from a special formula of close grained, tough, gray iron, a few points softer than ordinary cylinder metal. They are accurately finished and individually cast, retaining on the inside the skin of the casting, which insures long life and lasting resiliency.

Another feature claimed in favor of No-Leak-O rings is that by reversing the top ring, using it the groove side up, the refuse unconsumed in the grade of fuel now common obtainable, is trapped in the groove and prevented from working past the piston ring down into the oil pit. This is denoted in the illustration. Fig. 5, letter A. On the firing or power stroke this trapped oil is wiped out of the groove on the cylinder wall into the heated firing chamber. It will then be exploded or will go out the exhaust pipe.

In connection with the phenomenal sale reported for No-Leak-O rings, the receipt of an order is announced from the Pennsylvania Rubber & Supply Co. of Cleveland, O., for an entire car load, this being stated to be the largest single order for piston rings ever placed by a single jobber.

The No-Leak-O piston rings retail for as low as 50 cents; the price was not advanced during the war despite the increased cost of manufacture all along the line. A standard policy of fair play towards the jobber, dealer and car owner has always been maintained.

CALDWELL LIGHTNING TIRE REMOVER.

Inasmuch as the Caldwell Lightning Tire Remover is stated to be simple in construction, and more so in use, and that it eliminates all lost motion and the worry of the old methods, it would seem to be a very useful adjunct to the equipment of every up-to-date garage. It is a solid casting weighing 300 pounds and has a machined channel, 37 by five inches, in which a heavy air tube works, pushing a wooden core with equal pressure against the inner circle of the tire at the bead, forcing the tire from the seat. The tire is placed on the device and clamped down well with the spider, which weighs 30 pounds. On wire wheels it should be noted that they are clamped through the hub. Then the tube is inflated with air through the valve stem just under the device. The illustration shows a 35 by five-inch tire pushed nearly off a wire wheel.

In order to handle the smaller sizes, a circular section is cut out of wooden boarding. This lies on the core under the tire and is slipped into the flange of the rim all around and catches the tire just as the wooden core does in the 35 by five-inch size. Two different sized spiders are supplied by which the rims are clamped, one for 24-inch rims and one for 25-inch, which are stated to cover all rims most used at present.

The maker of the Caldwell tire remover states that this equipment was recently installed in the Goodyear Repair School and the repair school of the Miller Rubber Co. at Akron, O.

It is manufactured and distributed by the Caldwell Motor Accessories Co., 408-410 North Central avenue, Knoxville, Tenn., which will supply prices and literature on request.

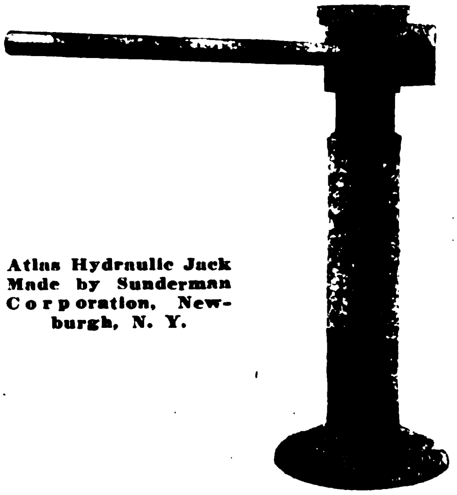
Showing Operation of Caldwell Tire Remover on Wire Wheel.

THE ATLAS HYDRAULIC AUTO JACK.

The Atlas Hydraulic Jack is stated to be the last word in jack building, as it is simple in design, durable in construction and dependable in action. with nothing to get out of order; no gears to slip, no ratchets to stick or catch, but works on the principle of the compression of fluids.

It is built entirely of steel and is claimed to be of the highest quality of material and workmanship. The simple instructions for its operation are as follows: Place the handle on the pump socket with the small notch downward. This notch fits into the slot or slide, and stops the handle on the bottom stroke to prevent tripping, when pumping up the jack. To lower, pull out slightly on the handle and push down the entire distance of the slot, which trips the jack.

For filling the jack with the light oil, which is used as the liquid operating medium, the top or lift cap is taken off, this being held in place by two set screws. A brass plug with a screw driver slot will then be seen, along the side of the pump plunger. This plug is removed and the receptacle filled with the fluid. When filled, carefully replace the plug and cap.



Atlas Hydraulic Jack Made by Sunderman Corporation, Newburgh, N. Y.

The caution is given not to attempt to pull the plunger out of the jack or the packing may be disarranged, which would be apt to cause a leak while lifting. It is also preferable to have a load on the jack when pumping it up in order to expand the packing.

The Atlas Hydraulic Auto Jack is manufactured by the Sunderman Corporation, Newburgh, N. Y. It is made in two sizes, 1½ and 7½-ton, the list price of the former being $7.50 and of the latter, $15.

MUELLER BATTERY HANDLE.

The Mueller Electric Co., 2135-43 Fairmount road, Cleveland, O., announces that it now has a wire type of storage battery handle (No. 7-A) ready for the market. These are lead coated to protect them from acid. The company claims the lead coating offers better protection to the metal because it is not porous as is lead plating.

TRIPLEX ALL-METAL WINDSHIELD VISOR.

C. A. Cathcart Co., Inc., 222 Massachusetts avenue, Boston, Mass., is offering to the trade an attractive and interesting accessory in the new Triplex all-metal windshield visor and rain gutter, for which the following advantages are claimed:

Direct and also reflection protection against sun, street lights and headlights.

Perfect vision in a rain storm (open upper windshield glass); rain gutter feature (integral), collects all rain drops and discharges at both sides of car; these usually form along the lower edge of the upper windshield glass and are blown on to the passengers or form the visor and are blown on to the windshield glass.

The Triplex also perform its functions when the top is down.

No moving parts; the Triplex will outlive the car; made of the highest grade automobile body steel, electrically welded; rigid construction; light weight.

Design tested out for many months on the road.

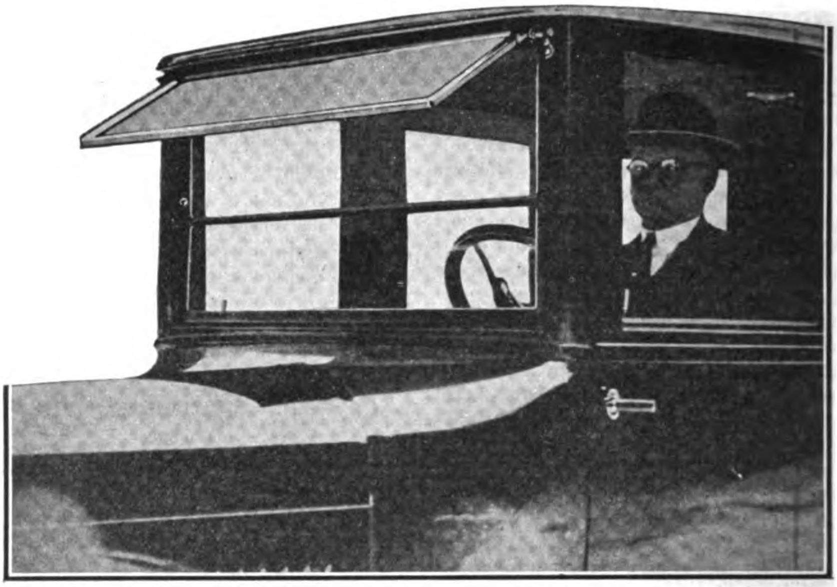
Pleasing appearance; well proportioned and adds to the appearance of any car. Has the look of being built-in as standard equipment.

Finished with three coats of black enamel, baked on; under side has a green non-reflecting finish.

Adjustable instantly to any angle, pull or push with the fingers; no tools required.

Attached in a few minutes, with a common wrench or screw driver, to any open or closed car.

The Triplex is a real "factor of safety." It is stated to perform every function that any other visor performs and has additional features all its own.



Illustrating Utility and Pleasing Appearance of Triplex All-Metal Windshield Visor, Manufactured by the C. A. Cathcart Co., Inc., Boston, Mass.

The weather has no effect on the Triplex because it has no leather, imitation, automobile top material, celluloid or paint in its construction to stretch, sag, develop "water pockets," burn or chip and detract from the general appearance of the car.

The Triplex is stocked in four sizes: 42 inches by 12 inches, 40 inches by 10 inches, 38 inches by 10 inches, 36 inches by 10 inches. Total adjustment 2½ inches on each size. The 38 inches by 10 inches is suitable for most open cars; 40 inches by 10 inches for most closed cars. Any special size furnished in less than one week, 20 per cent. extra, net cash with order. Quotations furnished for special colors and nickel plated brackets.

It is important to note that the overall length of the windshield glass moulding at the top may be between 1½ inches shorter and one inch longer than standard visor lengths. When ordering state whether the brackets are wanted for a closed or open model.

The list price is $12, f. o. b. factory.

GREB NO. 12 REAR AXLE PRESS.

One of the most popular members of the Greb line of automotive and garage equipment is the No. 12 rear axle press, which is especially designed for removing axle and drive shaft gears and pressing on axle gears, and has a capacity for shafts up to 1¼ inches and gears up to 6½ inches, and is thus particularly adapted for Fords, Chevrolets and other small cars. It will remove connecting rod wristpins, timing gears and spindle body bushings.

The method of operation is shown in the accompanying illustration:

No. 1—Pressing gear down by using the cup to remove lock rings. Axle is resting on base plate.

No. 2—Forcing axle through the gear after lock rings have been removed. The axle is now extending through the hole in base plate.

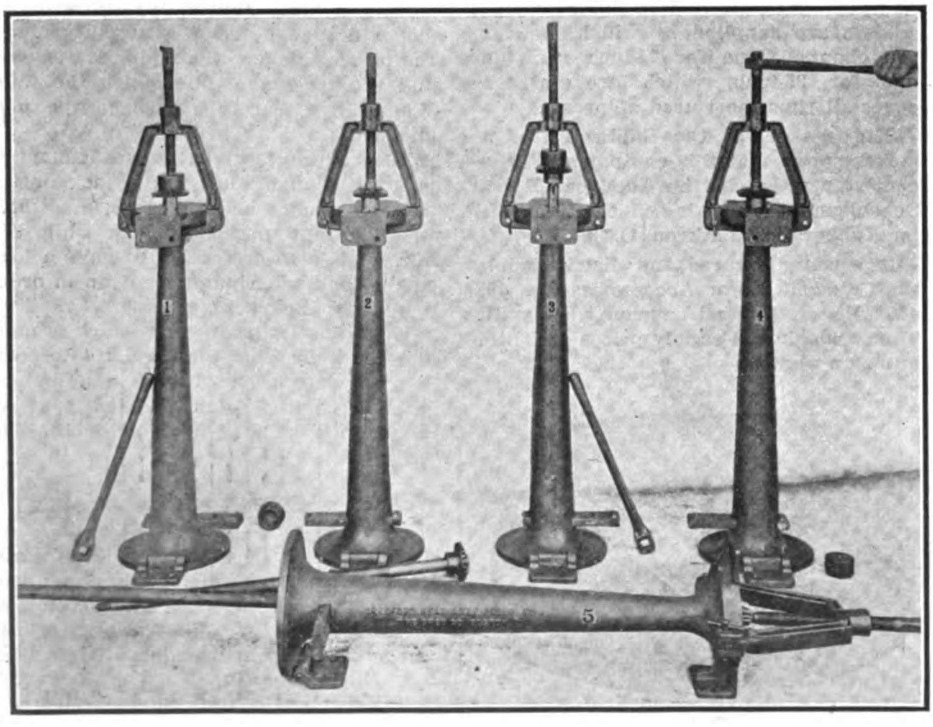
No. 3—Pressing new gear on to axle and below the groove so lock rings may be replaced. The base plate has now been moved back to first position, affording a base for axle to rest on.

No. 4—Forcing gear over lock rings, thereby locking same in proper position.

No. 5—Pressing pinion off drive shaft. This view shows how readily the press may be laid down by means of this base hinge, showing its adaptability for long range work.

The press is constructed throughout of steel and malleable iron. There are two collar supports on the interior of the column to prevent an axle from buckling.

The Greb equipment is manufactured by the Greb Co., Inc., 172-173 State street, Boston, 9, Mass. The list price of the No. 12 rear axle press, is $35.



Greb Rear Axle Press, No. 12, Made by Greb Co., Inc., Boston, Mass., Showing Method of Operation.

REFLEX TRANSMISSION LININGS FOR FORD CARS.

The development and refinement of Reflex Cord Mica Treated Transmission Lining is stated to be an illustration of the truth of the old maxim, "Necessity Is the Mother of Invention." The originators of Reflex cork saw the need of a transmission lining for Ford cars, which would give lasting service and entire satisfaction, and when one considers the attention and materials which enter into the construction and follows the different processes through which it passes, its reported wonderful success on the automobile accessory market is easily understood.

First, the cords of which the fabric is woven into 100 foot lengths, are carefully chosen of the very best grade of cotton and should any defect show in the fabric, on careful inspection after being woven, the length is immediately thrown out.

After being woven the fabric is taken to large vats, where it is dipped in a solution of chemicals, wax and other ingredients. It is in this process that mica, considered the greatest heat lubricant known, is added in powdered form, the fabric becoming thoroughly impregnated with it, thus making it soft and pliable at all times while in use. After the lining has been treated, it is subjected to a drying process and it is this which gives the fabric toughness and unlimited wearing service down to the last thread.

Next, the fabric is cut up into lengths of 24 inches, and in each length is punched 14 holes with a 33/64-inch taper, and into these holes are fitted the corks, also cut on the same taper. The holes in the fabric and the corks forming a perfect fit, there is no possibility of the corks coming out, the more pressure being applied the firmer the corks become imbedded in the fabric. The 14 tapered corks is strictly a Reflex idea, this amount, while being sufficient to take hold easily and smoothly, in no way weakens the fabric, as would be the case were more corks used.

The claim is made that Reflex Cork Mica Treated Transmission Linings never get hard nor slick and never grab nor slip, but take hold easily and smoothly. The corks remain soft and velvety because the cork surface does not become oil soaked, nor does the fabric become slick because, when pressure is applied, the mica works to the surface, in much the same manner as water is squeezed out of a sponge, keeping the fabric soft and pliable at all times. It is also stated that by the use of Reflex cork, perfect control of the car is given at all times, making driving a pleasure and a safeguard is offered on the lives of both pedestrians and drivers.

The Reflex Auto Accessory Co. has also placed on the market a transmission lining without the cork, and the same care and attention is put into the manufacture of this.

The Reflex products are made at Fort Wayne, Ind.

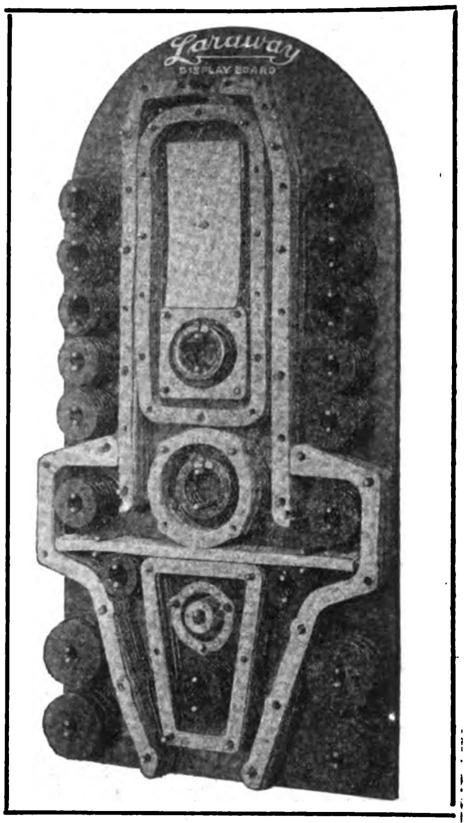
LARAWAY DISPLAY BOARDS FOR GASKETS AND WASHERS.

The Laraway Specialty Co., 546 W. Washington street, Chicago, Ill., is adopting an effective method of distributing cork and felt gaskets and washers for various models of cars. The illustration shows the No. 20 display board, which is characteristic of the line of equipment offered by this concern, this containing an assortment of cork and felt gaskets for Ford cars, together with three Holly and three Kingston carburetor floats, which are included free with this outfit.

These Laraway Patented Display Boards are the original type of equipment designed and manufactured by the Laraway Specialty Co. They are made entirely of hard wood, beautifully finished, with wooden pegs to fit the gasket bolt holes, which assures that the gaskets are properly held in shape, thus avoiding loss by breakage, etc. The principal feature of these display boards is that the goods are always on display and handy for immediate selection and use. The dealer or garage man can see exactly just what stock he has on hand at all times. The Laraway Patented Display Board is thus stated to be a powerful silent salesman, as the gaskets practically sell themselves by this system.

The display equipment is also made with assortments on boards suitable for Dodge, Chevrolet and Buicks, as well as Fords.

Literature, with prices and dealer's discount, will be furnished on request.



Laraway Display Board for Gaskets and Washers.

COPPOCK INTERNALLY HEATED MANIFOLD.

It is stated that poor gasoline holds no terrors for the car equipped with the Coppock Internal Manifold, which is being manufactured bv the Motovic Products Corporation, 441 State street, Detroit, Mich., as it is claimed to obviate poor ignition, carbon sooted spark plugs, thinned out lubricating oil, scored cylinders and burnt out bearings. The Coppock heater is stated by the maker to convert the lowest grade gasoline into uniform, live, dry gas, which gives perfect combustion. It gives heat at low speed and the engine can thus be throttled down to two to four miles an hour in high gear without bucking or jumping. The heat in the manifold regulates itself automatically so that just the amount needed and no more is taken from the exhaust. Gasoline, when vaporized and energized by the Coppock manifold, is claimed to produce a longer, more even and more powerful explosion, giving a smoother running motor, greater flexibility and more speed.

The manufacturer guarantees that the Coppock Internally Heated Manifold will give absolute satisfaction in every respect and that an increase of six to 12 miles a gallon of gasoline can be obtained by its use over that of standard equipment. It is an all-the-year-round proposition, giving the same results both in summer and winter.

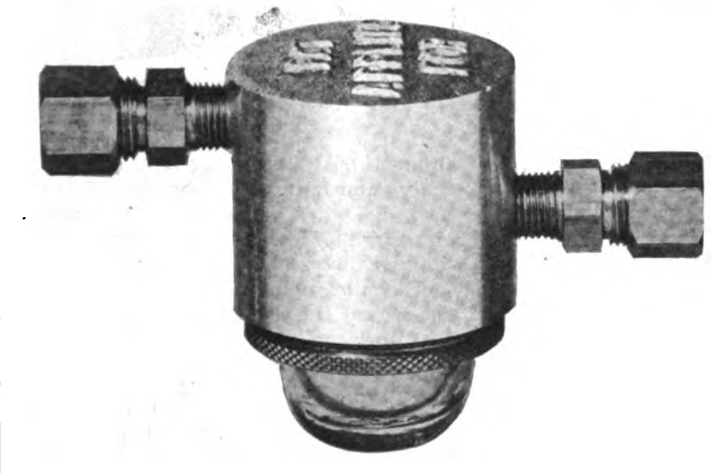
The simple instructions for installing are furnished with each manifold and it is stated that the work can be done in half an hour's time. The prices for the complete installation are as follows: For Fords, $10; all other makes with single intake manifolds, $12.50; all eights and twin sixes, $25.

ADVANCE CO. MOVES.

The Advance Rubber Co. has moved into its new plant in Brooklyn, N. Y., and is preparing for greatly increased production this spring.

WETHERHOLT VISIBLE GASOLINE PURIFIER.

When it is realized how much annoyance and delay are often occasioned by a little piece of dirt, lint or some other foreign substance in some part of the fuel supply system of the internal combustion engine, the utility of some eliminating or purifying device is self-evident. The Wetherholt Visible Gasoline Purifier, which is depicted herewith, is especially designed for this purpose, and is adapted for use on all automobiles, trucks, tractors, marine engines, airplanes, etc. It consists of a compact metal container in which is placed a fine screen through which the gasoline must pass, and on to the lower part of the purifier is screwed a glass cup into which all sediment or impurities that are filtered out by the screen drop. As this cup is always visible when the device is properly attached, it makes a check on the purity of the fuel.



The Wetherholt Visible Gasoline Purifier.

It is stated that the Wetherholt Purifier can be attached at any point in the gasoline line where it would be most convenient to see the glass bowl, and its fitting is a very simple operation. It is only necessary to cut the fuel supply pipe, preferably near the vacuum tank, when the vacuum system is used, and then the compression couplings and small brass fittings are slipped over the cut ends of the pipe with the Purifier between, the brass cup hanging down, and the couplings are tightened up snugly. On pressure or gravity feed systems the Purifier may be placed at any point where it will be easy to see and clean the cup, as stated before. When attaching to pressure or gravity systems it is necessary to shut off the gasoline at the tank or wherever provided, before cutting the pipe. Some pipe lines may be oversize on the outside and it may then be necessary to file a little off the outside of the pipe so that the compression couplings will slip over the cut ends.

To clean the device, simply turn the knurled retainer to the left, empty the impurities and replace.

The former price of the Wetherholt Visible Gasoline Purifier was $5, but this has been recently reduced to $3.50. It is manufactured by the Automotive Manufacturing Corporation, Strauss building, Chicago, Ill.

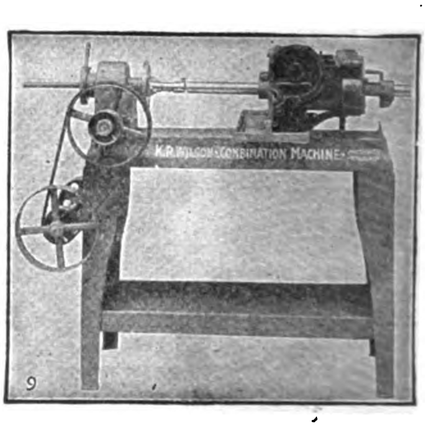
K. R. WILSON COMBINATION MACHINE.

In the K. R. Wilson Combination Machine there is offered a piece of equipment that should appeal to all repairmen that do work on Ford motors in that it combines seven machines and tools in one. These various fixtures and attachments are as follows: 1, rebabbitting fixture; 2, babbitt boring fixture; 3, main bearing reamer; 4. two-position motor work bench; 5, running-in, burning-in, lapping-in machine; 6, cylinder reboring machine; 7, spotting-in bar.

The cut shown herewith depicts the K. R. Wilson Combination Machine with the cylinder boring attachment ready for operation. The boring bar is supported on both ends of the cylinder by very large adjustable bearings, and is directly connected to the power drive and feed head by a universal joint, which absorbs slight misalignments, eliminating any possible chatter. This outfit is guaranteed to bore an absolutely straight, true hole without taper and the time required on slow speed is 9½ minutes a cylinder, regardless of how much metal is bored out. This machine is stated to be so simple that a deaf, dumb and blind man can operate it with 100 per cent. results, and cylinders bored by this machine are unequalled for smoothness by any other device than a cylinder grinder. Extra cutters, ground scientifically correct, will be exchanged for 50 cents each.

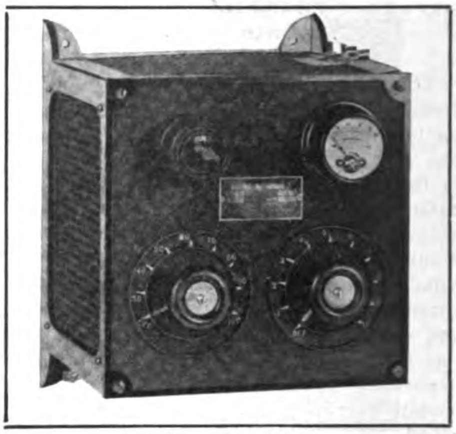
All the other fixtures and attachments are stated to be of equal efficiency to the one illustrated and described. The maker claims that, by owning this one piece of equipment, from $1500 to $4000 in the purchase price of other tools for the same purpose can be saved.

The K. R. Wilson Combination Machine is listed at $365 and is manufactured by K. R. Wilson, 10-16 Lock street, Buffalo, N. Y.



The K. R. Wilson Combination Machine, Showing Cylinder Boring Attachment Ready for Operation.

MAY UNITRON RECTIFIER.



Unitron Rectifier.

Included in the line of electrical equipment for storage battery service being marketed by D. W. May, Inc., 178-182 Central avenue, Newark, N. J., is the Unitron Rectifier, which is especially designed to meet an ever increasing demand for a moderate priced instrument having a capacity of more than 10 six-volt batteries. By the use of the new "Elderkin" transformer it is possible to charge from one to 15 six-volt batteries at from one to six amperes.

The new voltage control units, which are embodied in the Unitron Rectifier, permit perfect ampere regulation and make possible the adjustment of the charging rate in steps of fractional amperes.

The Unitron Rectifier is stated by the manufacturer to be positively the most nearly perfected charging outfit yet made, and it is marketed with a positive guarantee. The list price is $130.

OFFICERS OF DETROIT SALES CO.

The Detroit Consolidated Sales Co., Inc., which was recently formed to distribute the products of the Universal Tool Co. to the wholesale trade in Minnesota, Iowa, Missouri, Arkansas, Louisiana and all states farther east, has elected the following officers:

President, E. H. Harman; vice president, C. H. Hincklev; treasurer, J. F. Nebrick; secretary, C. C. Weisblum.

These officials were nearly all formerly connected with the sales ly all formerly connected with the sales end of the Universal Tool Co. The offices of the new Detroit concern are at 2631 Woodward avenue.

Official Figures of Motor Vehicle Registration

OFFICIAL figures compiled by the American Automobile Association indicate that there were 9,180,316 passenger and commercial motor vehicles registered in the United States during 1920, of which approximately 8,234,490 were for passenger use and about 945,826 were commercially employed. During the same period 271,230 motorcycles were registered. The total receipts from registrations amounted to $99,141,097.

In two states, namely, California and New York, the figures given in the accompanying table cover only the first 11 months of the registration year ending Feb. 28, 1921. The total registrations for the year will, therefore, exceed 9,300,000 cars and receipts will probably reach $100,000,000.

It thus appears that there is now one motor vehicle for about every 11 persons, and that receipts from registrations and licenses amount to more than one-fifth of the total annual expenditure for all roads and bridges in the United States. The gain in registrations over 1919 amounts to 2,114,870, which is the greatest increase ever recorded in a single year. This expansion may be considered remarkable in view of the adverse business conditions during the latter part of the year.

Receipts from registrations and licenses showed a gain of $34,443,842, or 53 per cent. over 1919, the greatest increase ever recorded in a single year. The registrations include in a few cases, notably in Maryland and the District of Columbia, duplicate registrations, but these do not materially affect the grand total of registration.

The race for supremacy between New York and Ohio in the number of motor vehicles is again in New York's favor. The mid-year registrations last summer showed Ohio leading but, during 11 months of the registration year, New York scored 683,919 motor vehicles and Ohio ran second with 620,600 for the entire year. Pennsylvania occupies third place with 570,164 cars; Illinois, fourth, 568,914; California, fifth, 568,892; Iowa sixth, 437,030; Texas, seventh, 427,693; Michigan, eighth, 412,717.

As the California figures are for 11 months the chances are that the total for the year will equal or exceed that for Illinois, and possibly of Pennsylvania.

In receipts from registrations, New York state leads with $8,817,709; Pennsylvania comes second with $8,090,873; Iowa, third, $7,487,830; Ohio, fourth, $6,400,000; Illinois, fifth, $5,780,612; California, sixth, $5,554,265; Michigan, seventh, $5,494,486.

DECREE IN CONNECTICUT PATENT SUIT.

It is announced that a final decree has been announced in favor of the Connecticut Telephone & Electric Co., Meriden, Conn., in the matter of patent infringements, which is of special interest from the fact that it is stated to be the first action brought against a jobbing concern to prevent the distribution of ignition repair parts made in imitation of Connecticut parts. It is stated that several permanent injunctions had previously been granted the plaintiff against manufacturers who produced parts that infringed the Connecticut patents, and that two others have since been issued.

The intention of the Connecticut company to protect its interests and those of automobile manufacturers and owners using Connecticut ignition is clearly evident in the policy it has recently adopted and which it is aggressively following, of seeking court relief from the production and distribution of pirate parts, which it insists are harmful to the interests of all concerned.

WORLD'S FIVE-MILE RECORD BROKEN.

Great interest was aroused in racing circles by the recent performance at Daytona Beach, Fla., of a Ford car equipped with a type BB cylinder head, underslinging parts and other special equipment supplied by the Laurel Motors Corporation, Anderson, Ind., in breaking the world's amateur five-mile record.

The distance was made in three minutes and 46 seconds, or at the rate of 80 miles an hour, and the record is all the more remarkable when it is considered that there are two turns in the five-mile course.

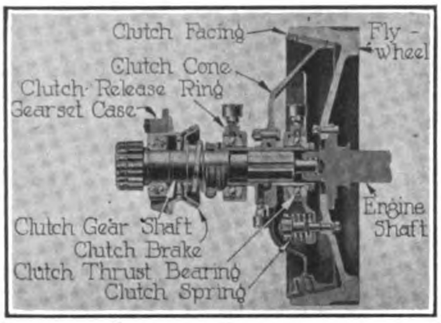
The car is owned by the San Juan Garage Co. of Daytona, Fla., and was driven by "Cassey" Wingate.

COMET CO. HAS RESUMED OPERATIONS.

The Comet Automobile Co., Decatur, Ill., has resumed operations with one-half its working force after a shut down of 15 days for inventory. The business outlook is so encouraging as to indicate that the factory will be under full production within the next 30 days.

The Clutch, Its Components and Their Care

PROBABLY there is no other unit of the car that is subjected to more abuse than the clutch, which is also one of the most important and frequently used, as it is the means of connecting the power of the engine to the other driving units of a car. Slipping the clutch is a common practise with many drivers and little do they realize the damage that it does to the frictioned surfaces.



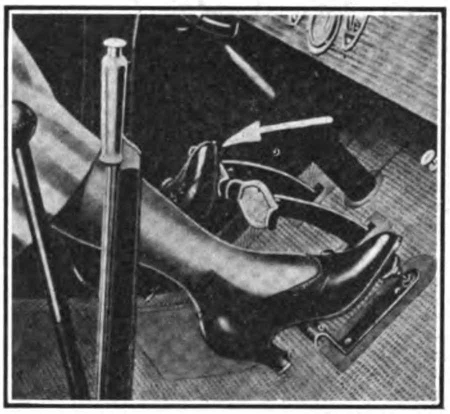
Units of Typical Cone Clutch.

A clutch may be either cone or disc. The cone type is usually covered with a leather facing, but often has a prepared facing of web-like texture which grips the inner cone face of the flywheel. The disc type is made up of alternate discs of plain steel, steel faced on each side, with a frictioned surfaced material, riveted to the discs. The edges of the frictioned discs may be serrated so as to fit corresponding serrations in the clutch housing, while the plain steel discs are strung on three and sometimes four steel rods attached to the clutch shaft. Slipping the clutch has a tendency to wear the frictioned surfaces unnecessarily and will eventually cause the clutch to slip under heavy loads and the consequent racing of the engine.

The components of the cone clutch consist of the flywheel into the inner side of which the leather facing fits; clutch leather facing riveted to the cone; clutch cone through which power from the engine is carried to the clutch shaft; clutch release ring by means of which the clutch is operated from the foot pedal; clutch gear shaft which transmits power from the clutch to the main shaft in the gearset; a clutch brake that is used on many cars to prevent the gears of the gearset from spinning when it is desired to change speeds; a clutch thrust bearing which is usually of the ball type and is used to prevent friction between the points of contact at the forward end of the clutch; clutch springs, usually three in number which supply the proper tension between the flywheel and clutch, and the crankshaft of the engine to which the flywheel is bolted.

The components of the disc clutch consist of the driving discs, fastened to studs screwed into the flywheel, usually three and occasionally four in number; driven discs fastened to the hub of the clutch which transmit the power of the engine through frictioned surfaces; a pressure plate fastened to the hub of the clutch and used to supply an even pressure on the driving and driven discs; a clutch spring which supplies proper tension to keep the clutch plates firmly together; a clutch spider which carries the driven plates; a clutch shaft front bearing, inside the hub of the clutch and fitted with an anti-friction ball bearing; a clutch shaft which transmits power from the driven discs to the gearset; a clutch release; a clutch release fork which connects the clutch pedal to the clutch collar, and the clutch release grease tube through which lubricant is supplied to the clutch release.

It will be seen from the foregoing list of components of the disc type clutch that many parts are used, and as these all work in fixed relation to each other, care should be exercised in its use, even more so than with the cone type clutch, which is composed of less parts. As a majority of the passenger cars are now equipped with a disc clutch, it is of importance that drivers should understand fully its make-up. When operating the car in traffic the clutch should either be kept firmly in place or else held out with the foot. A better method of handling a car in traffic, rather than to try to work through on high, slipping the clutch, is to shift into the next lower speed, leaving the clutch firmly engaged and releasing it only when it is desired to shift back into high.



Position of Left Foot When Riding the Clutch.

Riding the Clutch.

Another practise that is detrimental to the clutch facings is "riding the clutch." Many drivers practise this from habit gained through long experience in driving cars equipped with cone or expanding types of clutches. While this may not seem harmful at first thought, further study will show that it is detrimental to the clutch facings if persisted in. A slight pressure of the foot exerted unconsciously on the clutch pedal causes the discs to separate slightly and, although the car moves at its accustomed speed, slipping at the clutch is taking place. This will soon cause the clutch to slip badly when driving under a load or taking a hill, and the practise is condemned among drivers who wish to keep the component in working condition.

Grabbing Clutch.

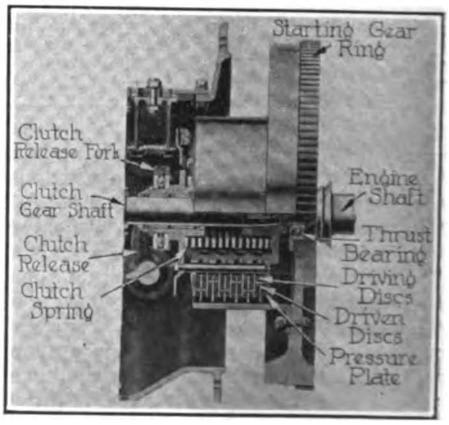
A grabbing clutch is due to too tight an adjustment of the discs in a disc type, or to the facing becoming dry in the cone type. Readjusting the tension supplied by the springs will remedy this defect in the disc type, or washing the facing with gasoline and flowing on a small amount of neatsfoot oil, if the facing is of leather, in the cone type. If the facing of the cone type clutch is of manufactured material and the rivets are causing the "grabbing," the cone requires a new facing. In fitting a new facing the rivets should be countersunk so that the heads will not strike the inner surface of the flywheel. Springs are used in many makes of cone clutches to cause the clutch facing to hold more tightly, and these become weakened and require strengthening. The insertion of small pieces of flat metal under the spring will restore its tension and will prevent further slippage.

Other Defects.

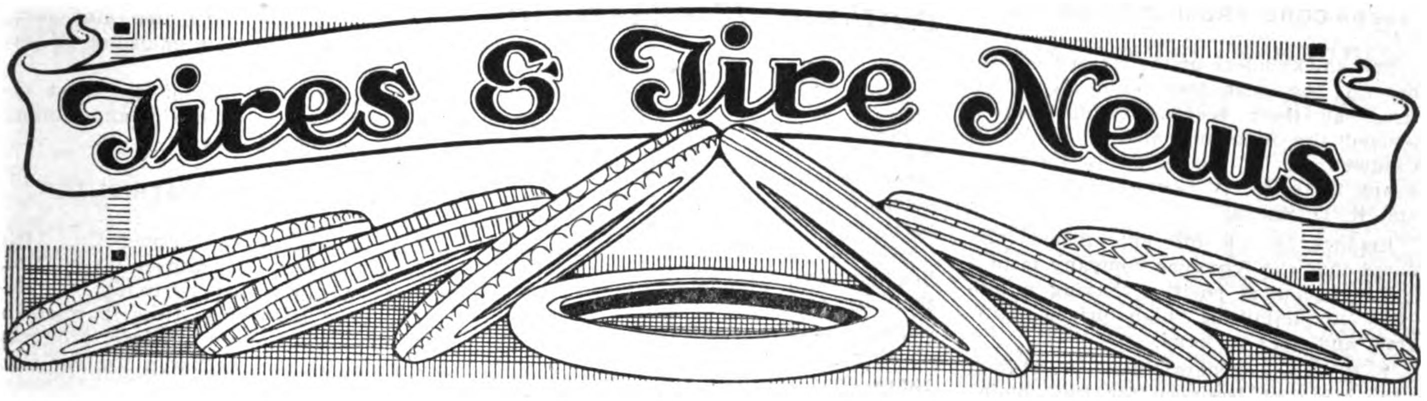
Sometimes the clutch pedal arm or the rocker shaft to which it is attached may become bent or otherwise out of order and prevent the proper operation of the clutch. The clutch lever, which is operated by the foot, actuates a collar which enables the driver to compress the spring, and this releases the clutch. When the pedal is up the spring holds the parts of the clutch firmly together.

This lever may be pivoted just under the floor boards and the lower end act directly on the collar, or it may be attached to a shaft on which is a rocker arm operating the collar; but the result is the same in either case: Pressing the lever releases the clutch and removing the foot allows the spring to hold the parts together. These parts require frequent lubrication, or a dragging clutch may result.

Sticking of the lever, or an inclination to operate sluggishly, indicates that lubrication has been neglected. The leather facings of the cone clutch and the frictioned surfaces of the dry disc type require occasional renewal. Many manufacturers supply new plates with facings already attached, the old plates being turned in for credit.



Multiple Dry Disc Clutch Showing Units of Construction.



Hopeful Outlook for the Industry

John J. Watson, Jr., president of the Lee Tire and Rubber Co., New York City, takes a hopeful view of the outlook for the automobile tire industry. Mr. Watson is credited with stating that the United States will require between 28,000,000 and 30,000,000 automobile tires during the present year. He said, in part:

"It is estimated that production of automobile tires during the spring of 1920 exceeded 150,000 a day. The production during November and December of the same year fell to about 35,000 a day, less than the daily production of the larger tire companies during the spring of that year.

"Some of the best authorities estimate that in 1921 there will be produced about 1,000,000 new cars and trucks. Of those now in use it is probable that from 500,000 to 750,000 will go into the scrap heap this year, so that the increase in 1921 will be probably 500,000. On this basis the country would require about 4,000,000 tires for new cars and with the 8,000,000 old cars in use it would require approximately 24,000,000 tires to supply renewals."

PHILLIPS RESIGNS FROM ESSEX.

R. H. Phillips, sales manager of the automobile accessories and mechanical goods department of the Essex Rubber Co., Trenton, N. J., resigned on Feb. 1. He had been with the Essex over 12 years.

Mr. Phillips' resignation was brought about by his recent election as secretary and treasurer of the National Tire Co., Inc., and the Reliable Tire & Rubber Co., Inc., of Trenton, N. J., succeeding Albert Numbers. These two companies have been in business over five years and their goods are sold extensively in this country and abroad.

BRAHAM HAS BECOME ASSOCIATED WITH DELION CO.

John J. Braham, Jr., of Brooklyn, N. Y., who until recently was connected with the sales department of the Keystone Tire & Rubber Co., New York City, recently joined the selling force of the Delion Tire & Rubber Co. Mr. Braham was elected at the annual meeting of the board of directors of the company a vice president. He will continue to reside in Brooklyn and will make his headquarters in New York at the company's branch, 203 West 72nd street. Mr. Braham and Mr. Seats represented this company at the 21st banquet of the Rubber Association of America, held in New York.

James Newton Gunn, a Prominent Executive of the United States Rubber and United States Tire Companies, Has Been Chosen to Head Lincoln Highway Association.

BROWN ELECTED PRESIDENT OF GRAND RAPIDS TIRE CO.

L. A. Brown, formerly district manager of the United States Rubber Co., has been elected president of the Grand Rapids Tire & Rubber Corporation, Grand Rapids, Mich., a concern of comparatively recent formation, but which has a modern plant erected and completed with the latest facilities for manufacturing high grade cord tires, with a capacity of 1000 tires and 5000 heavy grey tubes per day.

The company's manufacturing policy provides for the production of cord tires exclusively, and it will market the product under the trade name, Corduroy Cord. The company is stated to be adequately financed and will be under production by April 1.

Gunn Elected President Highway Ass'n.

At the recent annual meeting of the directors of the Lincoln Highway Association, James Newton Gunn, president of the United States Tire Co., vice president of the United States Rubber Co. and a director of the Lincoln Highway Association, was unanimously chosen as president to succeed F. A. Seiberling, who was unable to accept the office for another year on account of the pressure of his business and personal affairs. Mr. Gunn has been in close touch with the aims and purposes of the association and the work accomplished, and is deeply interested in its further progress, as indicated by his action, together with that of his business associate, C. B. Sieger, president of the United States Rubber Co., in making possible the financing of the Ideal section of the Lincoln highway. In accepting his new office Mr. Gunn said: "I know that the work of the association should be very much more effective and important now than ever before, and with the opportunities we have under the new conditions in political and industrial life we should be able to accomplish a great good in stimulating the interest and constructive work in highway development throughout the entire country."

Mr. Seiberling continues as a vice president and member of the executive committee of the highway association and W. A. Rutherford of the B. F. Goodrich Rubber Co. becomes a director.

WARNER CHANGES LINE OF BUSINESS.

It is reported that S. L. Warner, who has been vice president and general manager of the National Tire & Rubber Co., East Palestine, O., ever since that concern was organized in 1917, has resigned to become general manager of the Clearfield Sewer Pipe Co., a subsidiary of the Robinson Clay Products Co., Akron, O., operating a large plant and mines at Clearfield, Pa.

Mr. Warner was formerly with the Robinson Clay Products Co. in an executive capacity at the general offices at Akron.

SYRA-CORD PROSPECTS BRIGHT.

The stockholders of the Syracuse Rubber Co., Inc., manufacturer of Syra-Cord tires, at their recent annual meeting elected the following directors: E. R. Caldwell, R. P. Byrne, R. L. Caldwell, Frank Shane, J. B. Losey, F. G. Mauthe and K. D. Smith.

Reports by the different officers indicated that the Syracuse company is in a strong technical position, having practically no liabilities, high priced materials and tires on hand.

J. B. Losey, general manager, states: "Prospects of business for the coming year seem bright. We have a fine lot of spring orders on hand and are lining up many new and promising distributors."

The directors elected the following officers: President, E. R. Caldwell; first vice president, R. P. Byrne; second vice president, Frank Shane; secretary and treasurer, R. L. Caldwell; assistant treasurer, J. B. Losey.

F. H. Ayers, Newly Appointed Director of Sales, Fisk Rubber Co.

Lynskey-Neal-Lynsky, the well known Pittsburgh, Pa., tire dealer, was recently appointed distributor of Syra-Cord tires in that territory. William H. Neal, the manager, reports that the outlook for the tire business in his field is very bright.

GIANT CO. TAKES OVER CUPPLES DISTRIBUTION.

Ernest H. Wood, distributor of Cupples tires at Kansas City, Mo., has sold his business to the Giant Tire & Rubber Co., 1314 McGee street. The latter company is headed by H. P. Lindley.

FLETCHER JOINS FEDERAL.

Richard E. Fletcher, formerly of the Fletcher-Means Co., El Paso, Tex., has sold his interest in that concern and has joined A. J. Engquist of the Federal Tire Co., distributor of Federal tires in the southwestern territory.

National Tire Association Formed

The National Tire Dealers' Association was organized at Chicago during Show Week, following a three days' session of delegates from 10 cities where local associations had already been established. Cleveland was selected for the national headquarters, and Philip O. Deitsch of that city was named secretary.

The purpose of the association, according to the constitution, is "to advance and safeguard the business interests of tire dealers and to promote a cooperative relationship between the manufacturer, tire dealer and buying public." Membership in the association is restricted to local associations, and a tire dealer in business in a town where there is no association must affiliate with an organization in the nearest city in order to avail himself of the advantages of membership in the national body.

A resolution was adopted defining the legitimate tire dealer. "Whereas," it says, "we believe that the policies of a great many manufacturers have been unethical with reference to their interpretation of legitimate tire merchants, therefore, be it resolved that this association consider a tire merchant to be one who sells tires at retail and whose policies are not dictated by any manufacturer. The definition of a tire merchant shall be as of firms having a permanent place of business, making their major profits from the sale of tires, tubes and tire accessories; also repair men and vulcanizers and such owners of garages who carry a stock of tires and tubes for resale."

Another resolution was adopted relating to the mutilation of used tires, to prevent repair and resale.

The following cities were represented at the conference: Milwaukee, Cleveland, Chicago, Minneapolis, Kansas City, Baltimore, Memphis, St. Louis, St. Paul and Cincinnati, together with individual tire dealers, not organized, from Jackson, Tenn.; Melvin, Ill.; Walworth, Wis., and Little Rock, Ark.

Officers were elected as follows: President, Thomas F. Whitehead, Chicago; vice president, R. F. Valentine, Cleveland; treasurer, Henry Stenzel, Milwaukee. The directors in addition to Messrs. Whitehead, Stenzel and Deitsch are Edward P. Farley, Minneapolis, and A. B. Clark, Kansas City, for one year; Joseph Roberts, St. Louis; R. J. Walters, Baltimore, and R. R. Woolley, Cincinnati, for two years.

FISK CO. MAKES NEW APPOINTMENTS.

The Fisk Rubber Co., Chicopee Falls, Mass., recently announced the appointment of F. H. Ayers as director of sales and William Wield as sales manager. Mr. Ayers has been sales manager for the last four years, and has completed 17 years of service with the company. Mr. Wield has been assistant sales manager for the past three years.

C. H. Gage and L. N. South have been chosen assistant sales managers, and K. S. Chamberlain manager of export sales.

This gives Fisk one of the most efficient sales organizations of any similar concern in the industry.

McCLAREN TIRE DISTRIBUTOR.

The Bayha Tire & Rubber Co., 14th and McGee streets, Kansas City, Mo., has been appointed istributor of McClaren cord and fabric tires in western Missouri and Kansas. These products are made by the McClaren Rubber Co., Charlote, N. C.

ANNUAL MEETING OF PENNSYLVANIA RUBBER CO.

At the annual meeting of the stockholders of the Pennsylvania Rubber Co., held Feb. 7, the following directors were elected for the ensuing year: Herbert Du Puy, Charles M. Du Puy, Seneca G. Lewis, George W. Daum, A. H. Price.

William Wield, Recently Appointed Sales Manager of Fisk Rubber Co.

The directors subsequently re-elected the following officers: Chairman, Herbert Du Puy; president, Charles M. Du Puy; vice president and general manager, Seneca G. Lewis; assistant general manager, George W. Daum; treasurer, A. H. Price; general sales director, James Q. Goudie; secretary, George W. Shiveley; assistant treasurer, C. G. Morrill; purchasing agent, H. H. Salmon.

NEW MANAGER FOR HOUSTON LEE BRANCH.

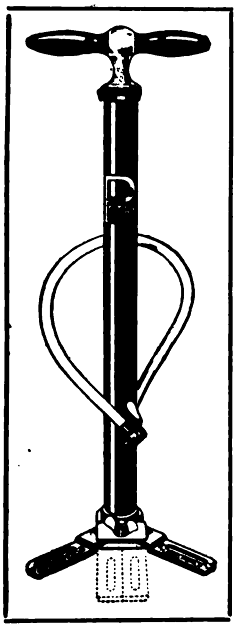
O. F. Peterson of Fort Worth, Tex., has been appointed manager of the Houston branch of the Lee Tire Sales Co. of Texas.

NEW TIRE SHOP AT SAN ANTONIO.

The United States Tire Co. has opened a tire shop at 211 North Flores street, San Antonio, Tex., under the management of H. J. Eisenberg.

The Petry, New Type of Air Pump

The N. A. Petry Co. Inc., Philadelphia, Pa., has just placed on the market a new tire pump which is stated to be radically different from other types of hand pumps, in that it embodies five distinct features that make for easier operation and quicker service. Of these points of difference, the spreading foot base has perhaps aroused the most interest.



This improvement over the ordinary base now in vogue places the pump sufficiently away from the motorist to allow a natural pumping position. A full, long stroke is possible without touching the body.

Equally important is the exclusive Petry valve. It is not merely "commercially" air tight, but is guaranteed to be air tight. This valve is stated to be put to a factory test of an air pressure of 100 pounds under water before being passed for shipment; it has withstood a pressure of 150 pounds per inch.

The handle feels right when the motorist pumps, because many tests were made to develop a shape that would fit the hand. The Petry handle does its part to make pumping easier, giving ample thumb room and a round, firm grip.

A handle lock is the fourth feature. With the lock snapped in place the handle tee and plunger are rigidly held, so that the pump may be readily removed from car. The piston is convex shaped to divert the lubricating oil to the sides of barrel for ease of lubrication and greater pressure on the leather cup washer.

The Lox-On connection at the end of the hose with the time valve deflating pin also lessens pumping effort and can be used only on a pump having an absolutely tight check valve. The deflating pin keeps the tire valve open and saves the pumper the effort necessary to unseat the tire valve with each stroke, usually 20 pounds pressure. The hose is 27 inches long and five-ply highest grade rubber tubing, securely fastened at each end by a specially designed clamp that will hold the hose tight.

The finish is baked black enamel with high lustre. All brass parts are polished and lacquered.

The Petry pump is made complete in the Petry factory at 328-334 North Randolph street, Philadelphia, and carries the usual Petry guarantee to make good. The list price is $5 for 17-inch or 20-inch barrel, with attractive discount to the trade.

SUGGESTIONS TO TIRE MANUFACTURERS.

The well known advertising concern, the Proctor & Collier Co., 528 Walnut street, Cincinnati, O., has issued in pamphlet form, for more general distribution, a reprint from a recent suggestive article in its house organ, "The Day's Work," entitled "What Must a Tire Manufacturer Do to Survive?" The publisher does not claim that this discussion offers a brief for distributor or dealer, as it hits only a few of the high spots, and it is not intended in any way as a criticism of the manufacturer, but is simply offered as an effort to place before manufacturers an analysis of the tire selling situation as the dealer and distributor see it.

The Proctor & Collier Co. will be glad to send copies of the pamphlet to all who are interested in the tire business, and expresses itself as desirous of discussing with any representative tire company the particular plan and method of operation it would suggest as needed to meet the present unusual situation.

BUCYRUS RUBBER PLANT SOLD.

The directors of the Bucyrus Rubber Co., Bucyrus, O., at the recent annual meeting of its stockholders announced the sale of the plant, its equipment and machinery to the C. M. French Rubber Co. of Cleveland. The stockholders approved the sale.

The old board of directors was reelected as follows: Phil Heater, W. J. Schwenck, Jacob Colter, Robert S. Carroll, Daniel Kalb, M. R. Lewis, Phil Browarsky, A. J. Richards, H. A. Paxton, W. A. Blicke.

Following this election the board organized with the choice of the following officers: President, Phil Heater; vice president, Jacob Colter; secretary, W. J. Schwenck; treasurer, W. A. Blicke.

OFFICERS OF INDIA TIRE & RUBBER COMPANY.

At the annual meeting of the India Tire & Rubber Co., Akron, O., J. M. Aldefer was re-elected president. Other directors chosen were J. K. Williams, D. A. Grubb and P. C. Searles.

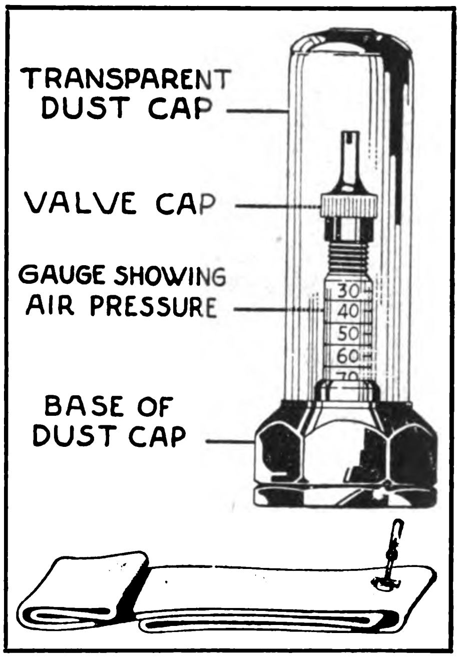
FIRESTONE CO.'S INVENTORIES.

The Firestone Tire and Rubber Co., Akron, O., whose Jan. 1 inventories stood at $37,273,873, against $26,969,535 on Jan. 1, 1920, had materials on hand, in transit and in process valued at $21,168,140, against $11,217,872, finished goods valued at $16,105,733, against $15,751,662.

Service membership in the American Acceptance Council, New York city, has been taken by the Mansfield Tire & Rubber Co., Mansfield, O.; Charles Hoffman, treasurer.

Tirometer Touring Tube and Valve

It is said that 90 per cent. of the premature tire troubles and a loss of one-third of the mileage of tire casings are caused by under-inflation, yet many motorists keep right on neglecting to see that their tire equipment is in proper condition or still adhere to the antiquated perfunctory test of tire inflation by kicking the casing or simply judge from the tire's appearance.



The Currie Brothers Co. of Atlanta, Ga., is placing on the market a type of tube which is designed to obviate such neglect. This is called the Tirometer Heavy Touring Tube, which, instead of having the ordinary tire valve equipment, has a valve which, as may be seen from the accompanying illustration, includes an air pressure gauge that accurately registers at all times the air pressure of the tire. The transparent dust cap is stated to be practically unbreakable and permits the instant reading of the air pressure.

REORGANIZATION OF FORT WAYNE COMPANY.

The Fort Wayne Tire & Rubber Co., Fort Wayne, Ind., has reorganized with L. R. Welker as its new president and C. M. Billings, secretary and treasurer.

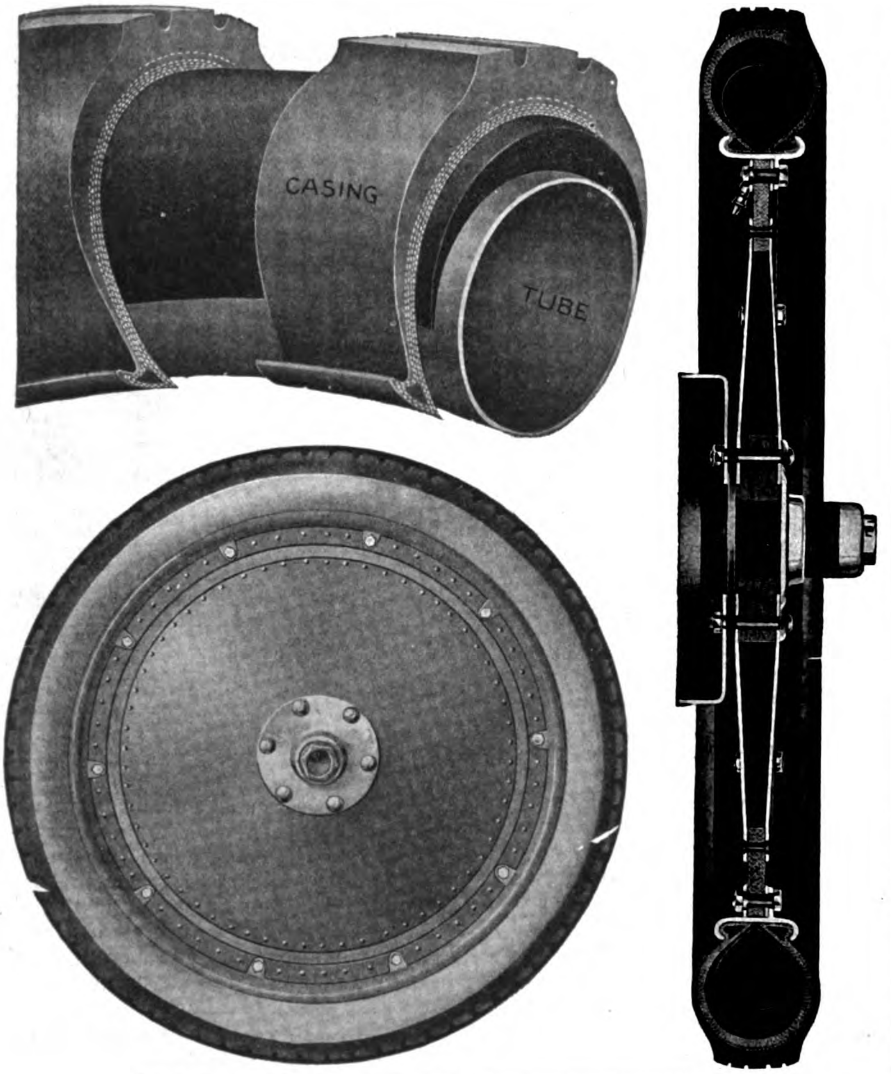
The new board of directors includes Albert E. Thomas, P. F. Hunt, Bluffton; Dr. G. L. Shumaker, North Manchester; August Chenoweth, Warsaw; J. P. Gerhardt, Garrett; Albert Feigert, Wren, O.; E. D. Engler, Decatur.

At a meeting of the directors, A. B. Jones, formerly vice president of the B. F. Goodrich Co., was elected president, succeeding F. A. Seaman, who was temporarily acting as president. Mr. Seaman was elected vice president.

Two Interesting Products of Hall Co.

Two products of the Hall Syndicate, Inc., 1310 Commonwealth Trust building, Philadelphia, Pa., which are attracting considerable interest in the trade at the present time, are shown in the accompanying illustrations.

The Hall Flexible Wheel has a demountable rim, either straight or clincher, and can be applied to any car without changing the hub or the use of extra parts; the bolts of the old hub are used.



Two Products of Hall Syndicate, Philadelphia, Which Are Attracting Attention: Top, at Left, Tire Cut Away to Show Hall Felt Liner; Below, at Left, Hall Flexible Wheel; Right, Cross Section of Hall Flexible Wheel.

The wheel is made up of two steel discs and a ⅝-inch thickness of thoroughly vulcanized fabric held, between the steel rings on the outer edge and the steel discs, by rivets placed about 1¼ inch apart all around the circumference. The outer rings have threaded bushings inserted into which are the bolts which hold the demountable rim in place without the use of lugs. This is accomplished by the use of specially constructed rims which have a vertical member with holes to bolt it against the steel rings riveted to the fabric. The axle is held in suspension.

The fabric disc is claimed to prevent shock and vibration from reaching beyond the rim of the wheel, thus making riding very easy. When the wheel hits a rut the shock is absorbed or insulated by the fabric disc and does not reach the axle or chassis units of the car. By test it has been found to entirely withstand side strain such as is caused by running against a curb, etc. The fabric disc is made of a good grade of cotton fabric of many plies vulcanized in steam jacketed molds, with a thin layer of rubber on each side to protect it. One inch of this fabric in single ply is stated to have the tensile strength of 300 pounds, and this fabric disc thus has the strength of a great many tons. The fabric is not affected by weather conditions or moisture.

The wheel is very attractive and gives the car a high-grade appearance, besides being easily kept clean. The wheels are made in three sizes, 30 inches, 32 inches and 34 inches, and in any desired color.

Hall Felt Liner.

The Hall Felt Liner is made of pure wool felt, which is a perfect insulator of heat, thereby preventing the tires from heating up when driving over hot roads at high speed. The felt liner separates the inner tube from the heated tire and keeps the air from getting hot and expanding—the cause of many blowouts. The volume of air necessary in the inner tube is claimed to be reduced, which in turn reduces the strain on the fabric and prevents blow-outs along the side walls. By supporting the inner walls of the tire against stone bruises, which cause the fabric to break or crack, the inner tube is prevented from pinching and causing tires to go flat. The felt liner is thick and very hard to penetrate. The weight is but 2½ pounds for the 30-inch tire. The use of this liner is stated to eliminate tire trouble and to lengthen the life of tires by many thousand miles.

The Hall Syndicate, Inc., is now under production at its plant, 1730 Glenwood avenue, Philadelphia, Pa., with a capacity of 200 wheels a day.

Financial Notes of the Tire Industry

The preliminary report of the United States Rubber Co. for the past year shows a striking gain in earnings compared with 1919. The net profit, after all charges and allowances for federal, British and Canadian taxes, was $21,275,524, or the equivalent, after preferred dividends, of $19.82 a share on the $81,000,000 common stock. In the previous year the net profit was $17,730,237, equivalent after preferred dividends to $17.59 a share on the $72,000,000 common stock then outstanding.

Total sales last year were $255,744,635, the largest in the history of the company. In 1919 the sales amounted to $225,589,465, and in 1918 to $215,398,425. The balance sheet shows current assets of $195,505,243 and current liabilities of $153,452,426. The report states that inventories were written down $11,020,605, but actual supplies on hand were much larger at the close of 1920 than at the end of 1919. The current report places inventories at $122,873,231, whereas inventory in the previous report was put at $87,633,699.

B. F. GOODRICH EARNINGS.

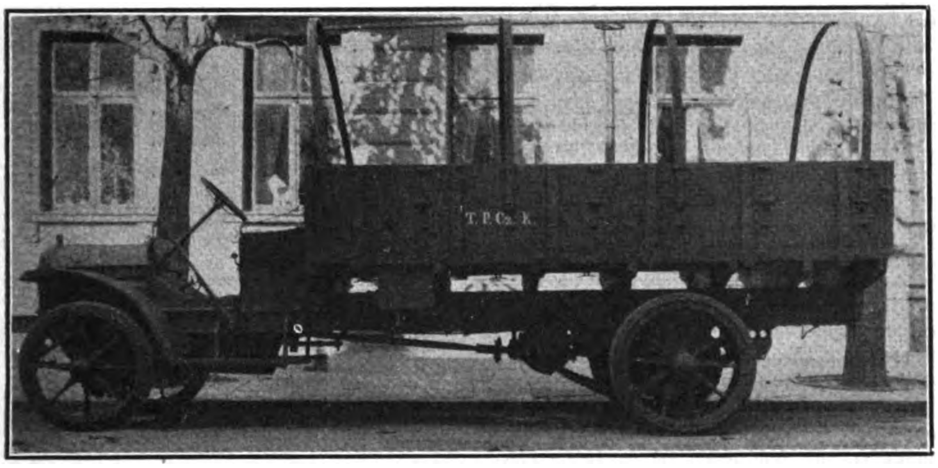
The net sales for the year of the B. F. Goodrich Rubber Co., Akron, O., are reported to amount to approximately $150,000,000.

At the recent meeting of the directors a dividend of 3½ per cent. was declared on the preferred stock, 1¾ per cent. payable on April 1, 1921, to stock of record March 22, and 1¾ per cent. payable July 1 to stock of record June 21. The directors voted, subject to the approval of the stockholders at the annual meeting in April, to retire 11,880 shares of preferred prior to July 1, 1921, in accordance with requirements of the charter, to set up out of surplus a reserve of $10,000,000 to provide for all possible contingent losses on raw material commitments for future delivery, and to take action with regard to the May dividend on the common stock at meeting of directors to be held in April.

EXPORT DEPARTMENT
W.

Auto Exports for 1920 Beat Record

Exports of passenger automobiles from the United States for last year far surpass all records, according to the National Bank of Commerce. In a statement the bank says that in the first 10 months 112,376 were sent abroad as compared with 67,145 in 1919, the highest previous year, and 28,306 in the fiscal year ending June 30, 1914, the highest pre-war year.



White Three-Ton Truck, the Gift of the American Red Cross to Polish Red Cross.

"Shipments to all parts of the world showed remarkable gains, the numbers sent to the United Kingdom and British India being especially noteworthy," it is pointed out. "These sales have not only benefited American industry, but the widespread use of these cars will also facilitate the development of further trade in American automobiles, accessories and parts."

The largest exports were to these countries, the bank's figures show: United Kingdom, 18,114 cars; British India, 10,848; Canada, 7369; British South Africa, 5510; Cuba, 5286; New Zealand, 5099; Brazil, 4968; Sweden, 4887; Dutch East Indies, 3439; Argentina, 3372; Uruguay, 3287; Norway, 3000.

AMERICAN CARS POPULAR IN URUGUAY.

In a recent report on the Uruguayan automobile market, made by a British official, it was stated that the automobile trade in Uruguay is American, and that the British manufacturers cannot hope to compete in the cheaper or medium priced cars. The report also states that out of a total of approximately 13,000 automobiles in Uruguay 60 per cent. are of American make, 15 per cent. British and 25 per cent. from the rest of Europe. In the city of Montevideo private cars number 5500, taxis 1580 and commercial cars 260. The official gives the reasons for the preference for American cars as economy of gasoline and oil, speed, flexibility, lighting, self-starting and appearance of body. He emphasizes the fact that the American car has the proper width of wheel track, whereas the British car is four inches too narrow. In summing up the Uruguayan market, he states that the sales of motor cars will show a steady increase both for city and country use.

IMPROVED TRANS-ANDEAN AUTOMOBILE ROAD.

The National Bureau of Roads and Bridges for the Argentine Republic, South America, has assigned a sum of 100,000 pesos ($42,000) to be spent on the construction of a better trans-Andean highway from Mendoza, Argentina, to Chile. The Province of Mendoza is to take over part of the new work and has already begun repairs on the existing road.

Polish Red Cross to Have White Truck

A three-ton White truck has just been donated to the Polish Red Cross by the American Red Cross for use in its warehouse in the Warsaw district.

This gift is a veritable God-send to the Poles because it is the finest piece of rolling stock in that society's relief work. Complete efficiency records are being kept on the operation of this automobile under Polish management, and these records will be compared with similar ones made on trucks operated by American relief organizations in Warsaw. There is a great deal of friendly rivalry between the auto experts—each side wanting to show the best results.

AUTOMOBILE MARKET IN ERITREA.

On the shore of the Red sea, in the Italian colony of Eritrea, there promises to be a market for motor vehicles. Highways are being built, or planned, which will offer a field for the sale and use of motor vehicles on the inland plateau between Asmara, Keren, Agordat and other trade centers. It is apparent that the Italians are going ahead with the opening up of this colony in a way which will demand the construction of both highways and railways. There are, as yet, very few motor vehicles in use in Eritrea. There are more than 300 miles of completed motor roads.

FOREIGN TRADE WITH NEW BRUNSWICK.

The total imports at St. John, New Brunswick, during the fiscal year ending March 31, 1920, amounted to $26,990,916, over $10,000,000 in excess of 1918, which was the heaviest importing year in the history of the city. Of these imports, $113,298 were for passenger automobiles, $44,449 for freight cars and $8882 for other vehicles.

India rubber and gutta-percha products were valued at $18,847, gasoline at $28,473, lubricating oils at $18,263 and coal oil at $8428.

The Fifth Rubber Trade Fair will be held in the Royal Agricultural hall, London, June 3-17.

Vehicles and Tires in New Zealand

The importation of motor vehicles, tires, covers and tubes into New Zealand has been a very important item in the increase noted in that dominion's foreign trade, and the first nine months of 1920 were no exception—in fact showed a greater increase than for any like period in the history of New Zealand.

The total imports of motor vehicles and chassis during the period mentioned were 8469, of which the United States supplied more than one-half, 4872, and Canada 3215.

Motor vehicles entering New Zealand pay a duty of 10 per cent. ad valorem from the United Kingdom and possessions, with 10 per cent. additional from all other countries, and a one per cent. war tax that is collected on all imports.

In rubber tires, covers and tubes for motor vehicles American manufactures lead, but not to the same extent as in motor vehicles, imports from the United States amounting in the first nine months of 1920 to $2,330,723, from Australia $1,130,809, from Canada $902,624, from the United Kingdom $580,417, France $710,957, Italy $495,833, Japan $4205, and from Belgium $7168.

It is estimated that if the good roads campaign succeeds in giving New Zealand up-to-date public highways, it will save the motor car owners about $3,750,000 a year on tires. Motor tires, tubes and covers enter New Zealand duty free from all countries, with the exception of the one per cent. war tax that is collected on all imports.

LUBRICATING OILS IN JAPAN.

Japanese industries, which are steadily developing, require large amounts of lubricating oils and greases, and as the production in Japan is limited, the greater part must be imported from abroad. In 1919 lubricating oils to the value of $1,585,648 and greases to the value of $135,683 were imported, principally from the United States.

AUTO IMPORTS TO BRAZIL.

Complete statistics covering the importation of automobiles into Brazil since January, 1907, show that the total number received in that country between that time and July 1, 1920, to have been 24,475, representing a value of $24,723,430. Of these 15,109 came from the United States, 2018 from France, 2277 from Germany, 1282 from Italy and 586 from England.

MOTO-METERS TO BE MADE ABROAD.

George H. Townsend, president, and E. V. Hennecke, sales manager of the Moto-Meter Co., Inc., Long Island City, N. Y., have returned from their recent trip to England and France. They were successful in establishing a branch factory in each of these countries to meet the steadily increasing demand for Boyce Moto-Meters in the foreign field.

The Benjamin Electric, Ltd., of Tottenham, London, will have charge of Moto-Meter manufacture in England. The French factory at 50 Avenue de la Grande Armee, Paris, will be conducted by F. Repusseau et Cie.

Both factories are already in operation.

AUSTRIAN ARMS FACTORY MAKING AUTOMOBILES.

It is reported by William Ford Upson, representative of the United States Department of Commerce at Vienna, Austria, that the Austrian Arms Manufacturing Co., with factories in the city of Stepyr, Upper Austria, is now manufacturing high-grade six-cylinder passenger cars and trucks. The end of the war found this concern with an equipment capable of producing 1,000,000 rifles and other small arms a year. Now it is making a few sporting rifles of the Mannlicher model, and shot guns, and has recently turned its efforts to the production of motor vehicles. Thus far the company has produced about 400 automobiles, but expects to turn out 4000 in 1921, and to increase this to 10,000 in 1922, and after that to 20,000 machines a year. About 6000 men are now employed, while during the war it kept 15,000 at work.

It is understood that these cars are sold principally in England, France, the Netherlands, Germany, Poland and Rumania.

NON-STOP RUN IN JAPAN UNDER ARMY OBSERVATION.

It is stated that an Overland touring car recently had the distinction of being selected for the first non-stop motor car test run ever held in Japan.

This car, furnished by the Shima Automobile Co., Ltd., recently left Shimonoseki at the western end of the main island of Japan, and was driven to Aomori, at the northeastern end, a total distance of 1378 miles. The run was made in 136 hours and 40 minutes. This time included 32 hours and 45 minutes in stop-overs for entertainments along the route so that the actual driving time was 103 hours and 55 minutes. No attempts were made for speed. It was intended to demonstrate the durability and reliability of the motor vehicle.

The run was held under the auspices of two Japanese newspapers, the Osaka Mainichi Shinbun and the Tokyo Nichi-Nichi Shinbun. The most significant feature of this run was the deep interest on the part of officers of Japan's army motor corps, who accompanied the car throughout the journey. Major Mizutani of the corps highly recommended the reliability and easy riding qualities of the car, which had the Triplex spring suspension.

Although this was heralded as a "non-stop" run, the interest and hospitality of the people along the way was too overwhelming to be ignored.

Trade Opportunities in the Foreign Field

Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce and its district and co-operative offices upon written request by opportunity number.

34,367—A commercial agent in Egypt is planning to open show rooms for the exhibition and sale of tractors, trucks, oil engines, agricultural machinery, motor cars, tires, etc., and desires to secure the representation of firms with a view to advertising and selling American goods.

34,405—A commercial agent in Spain desires to secure an agency for the insurance of automobiles. References.

34,411—A machinery importing firm in Spain desires to secure an agency from manufacturers and exporters for the sale of iron and steel sheets, ingots and castings, steam engines, turbines and locomotives, automobiles and motor trucks, electrical supplies, mineral oils, petroleum, etc. Quotations should be given c. i. f. Spanish ports. Correspondence should be in Spanish or French. References.

34,413—A commercial agent in Italy desires to secure an agency for the sale of electrical fixture articles, electrical apparatus, coal, metals, paper, provisions, shoes, chemical products, oils and greases, leather belting, leather articles, automobile parts and accessories, kitchen utensils and hardware. Quotations should be given c. i. f. Genoa. To arrange for opening of credit with American banks. References.

34,438—A commercial agent in Siam proposes to carry on business in that country as importer and distributor and desires to secure an agency for the sale of motor boat engines, motor trucks, automobiles and automobile supplies. No reference offered.

34,459—A commercial agent from the Canary Islands is in the United States for a short time and desires to secure an agency for the sale of fertilizers, sulphate of ammonia of 25 per cent.; nitrate of potash, corn, wheat, construction material, dry goods, automobiles, paper and leather. References.

34,468—A manufacturing company in Belgium desires to secure an agency for the sale of medium priced automobiles. Quotations should be given c. i. f. Belgian port. Reference.

AUTO OWNERS COMBINE IN ARGENTINA.

Private motor car owners have formed a limited liability corporation in Buenos Aires, Argentina, with a capital of 1,000,000 pesos ($964,800) in order to secure independence of the profiteering elements. The organization is to arrange to furnish its members with garage service, oil, gasoline and supplies at cost prices.

Calendar of Coming Events

Feb. 16-19—Trenton, N. J., Annual Automobile Show, Trenton Automobile Trade Association, Armory.

Feb. 16-19—Evansville, Ind., Annual Automobile Show, Dealers' Automobile Club.

Feb. 16-19—Madison, Wis., Ninth Annual Show, Passenger Cars, Trucks, Tractors and Accessories. Stermle Ordnance Building. Don E. Mowry, Secretary, Cantwell Building.

Feb. 18-28—San Bernardino, Cal., Show, Passenger Cars, Trucks, Tractors and Accessories. Fred M. Renfro, Manager, Chamber of Commerce Building.

Feb. 19-26—Newark, N. J., Passenger Car. Truck and Accessory Show, Newark Auto Trade Association, First Regiment Armory. Claude E. Holgate, Manager.

Feb. 19-26—Albany, N. Y., Annual Automobile Show, Albany Automobile Dealers' Association, Armory. J. B. Wood, Manager.

Feb. 19-26—San Francisco Cal. Fifth Annual Show, Passenger Cars, Trucks, Tractors and Accessories, Exposition Auditorium. G. A. Wahlgren, Manager, 215 Humboldt Bank Building.

Feb. 20-26—Pittsfield, Mass., Automobile Show, Benefit Company F, State Armory. James J. Callahan, Manager.

Feb. 21-26—Salt Lake City, Utah, Automobile Show, Intermountain Automotive Trade Association. W. D. Rishel, Manager.

Feb. 21-26—Grand Rapids, Mich., Passenger Car, Truck and Tractor Show, Automobile Business Association, Furniture Exhibition Building. M. D. Elgin Manager.

Feb. 21-26—Louisville, Ky., Passenger Car Show, Louisville Auto Dealers' Association, Armory.

Feb. 21-26—Manchester, N. H., Annual Automobile Show, New Hampshire Automobile Dealers' Association, Armory. C. E. Norris, Manager.

Feb. 21-26—Deadwood, S. D., Eighth Annual Automobile Show, Auditorium, Passenger Cars, Trucks, Tractors and Accessories.

Feb. 21-26—Bethlehem, Pa., Seventh Annual Show, Passenger Cars and Accessories, Coliseum, Broadway and Montclair streets. J. L. Elliott, Manager, 1038 Norway Place.

Feb. 21-26—Elmira, N. Y., 11th Annual Passenger Car Show, Elmira Auto Club, State Armory. H. S. Bryan, Manager, 210 East Water Street.

Feb. 22-24—Amarillo, Tex., Automobile Show, Amarillo-Panhandle Automotive Association.

Feb. 22-24—Galesburg, Ill., Automobile Show Galesburg Automotive Dealers' Association, Armory.

Feb. 22-25—Sioux Falls, S. D., Convention, South Dakota Retail Hardware Association, H. O. Roberts, Secretary, Metropolitan Life Building, Minneapolis, Minn.

Feb 22-25—Des Moines, Ia., Convention and Exhibition, Iowa Retail Hardware Association. A. R. Sales, Secretary-Treasurer, Mason City, Ia.

Feb. 22-25—Saginaw, Mich., Automobile Show, Automobile Dealers' Association.

Feb. 22-26—Binghamton, N. Y., Annual Automobile Show, Binghamton Dealers' Association, Armory. R. Moffit, Manager.

Feb. 23—Ann Arbor, Mich., Mid-Western Conference on Highway and Highway Transport Education, University of Michigan.

Feb. 23-26—Clinton, Ia., Passenger Car Show, Auto Dealers' Association, Coliseum. Harry G. Fitch, Manager.

Feb. 23-26—Newton, Kan., Annual Automobile Show, Harvey County Motor Trade Association, Auditorium. Henry Marks, Manager.

Feb. 23-26—Malone, N. Y., Annual Automobile Show.

Feb. 24-25—Salt Lake City, Utah, Annual Meeting, Intermountain Automotive Trades Association.

Feb. 26-March 5—Buffalo, N. Y., Annual Automobile Show, Buffalo Automobile Dealers' Association, 74th Regiment Armory. C. C. Proctor, Manager.

Feb. 28-March 5—Duluth, Minn., Annual Automobile Show, Duluth Automobile Trade Association, Armory.

Feb. 28-March 5—Portland, Me., Automobile Show, Portland Auto Dealers' Association, Exposition Building. Howard B. Chandler, Manager.

Feb. 28-March 5—Bethlehem, Pa., Truck and Tractor Show, Coliseum, Broadway and Montclair Streets, J. L. Elliott, Manager, 1038 Norway Place.

March 1-5—Quincy, Ill., Third Annual Auto Show, Passenger Cars, Trucks and Accessories. J. W. Hart, Secretary, Whig Journal.

March 1-5—Wichita, Kan., Automobile Show, Wichita Motor Trade Association. Wichita Exposition Building. Henry B. Marks, Manager.

March 1-5—Wilmington, Del., Automobile Show.

March 2-10—Des Moines, Ia., Passenger Car Show, Des Moines Automobile Dealers' Association, Coliseum. C. G. Van Vliet and D. Schooler, Managers.

March 3—New York City, Regular Monthly Meeting, Automotive Service Association of New York.

March 5-12—Atlantic City, N. J., Annual Automobile Show, Automobile Trades Association of Atlantic City, Million Dollar Pier; A. H. Generosky, Manager.

March 5-12—New Haven, Conn., Annual Automobile Show, New Haven Automobile Dealers' Association, Arena.

March 5-12—Atlanta, Ga., Annual Automobile Show, Atlanta Automobile Association, Auditorium; Virgil Shepard, Manager.

March 5-12—Pittsburgh, Pa., Annual Automobile Show, Automotive Association, Inc., Motor Square Garden; J. J. Bell, Manager.

March 5-12—Brooklyn, N. Y., Automobile Show, Brooklyn Motor Vehicle Dealers' Association, 23rd Regiment Armory. George C. Lewis, Chairman.

March 7-12—Nashville, Tenn., Annual Automobile Show, Nashville Automobile Trade Association, Page Building.

March 7-12—St. Joseph, Mo., Passenger Car, Truck and Tractor Show, St. Joseph Automobile Dealers' Association, Auditorium.

March 7-12—Syracuse, N. Y., Passenger Car Show, Syracuse Automobile Dealers' Association, Armory. Howard H. Smith, Manager.

March 7-12—Indianapolis, Ind., Automobile Show, Indianapolis Auto Trade Association. Indiana State Fair Grounds. John B. Orman, Manager.

March 7-12—Springfield, Mass., Annual Automobile Show, Springfield Automotive Association, Auditorium. Harry W. Stacy, Manager.

March 7-12—Indianapolis, Ind., 22nd Semi-Annual Show, Passenger Cars, Trucks, Accessories and Farm Lighting Outfits. John B. Orman, Manager, 338 North Delaware Avenue.

March 7-12—Paterson, N. J., Fifth Annual Show, Passenger Cars, Trucks, Tractors and Accessories, Fifth Regiment Armory. H. MacGinley, Manager.

March 7-12—Scranton, Pa., 11th Annual Show, Passenger Cars, Trucks, Tractors and Accessories. Hugh B. Anderson, Manager, Board of Trade Building.

March 10-11—Wheeling, W. Va., Annual Automobile Show, Wheeling Automobile Dealers' Association, Auditorium; G. M. Ford, Manager.

March 10-12—Pendleton, Ore., Annual Automobile Show, Pendleton Automobile Association; Happy Carmon, J. B. Knight, Managers.

March 12-18—Richmond, Va., Show, Richmond Automotive Trade Association, Gray's Armory. J. A. Kline, Manager.

March 12-19—Boston, Mass., 18th Annual Automobile Show, Boston Automobile Dealers' Association, Mechanics' Building. Chester I. Campbell, Manager, 5 Park Square.

March 12-19—Newark, N. J., Annual Automobile Show, New Jersey Automobile Exhibition Co., First Regiment Armory.

March 14-19—Trenton, N. J., Sixth Annual Passenger Car and Truck Show, Trenton Automobile Trade Association, Second Regiment Armory. Frederick Perry, Jr., Manager, West, State and Willow Streets.

March 14-19—Omaha, Neb., Passenger Car and Truck Show. Omaha Automobile Trade Association, Inc.

March 14-19—Washington, D. C., Annual Automobile Show, Washington Automotive Trade Association, Convention Hall; Rudolph Jose, Chairman.

March 15—Fort Worth, Tex., 24th Annual Southwestern Exposition and Fat Stock Show. Passenger Cars, Trucks and Tractors. M. Sasson, Jr., Secretary.

March 16-19—Greenville, S. C., Annual Automobile Show, Greenville Dealers' Association, Textile Hall.

March 19-26—Detroit, Mich., Annual Automobile Show, Detroit Automobile Dealers' Association, Morgan-Wright Building.

March 20-26—Torrington, Conn., Show, Company M, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

March 21-26—Cedar Rapids, Ia., Annual Automobile Show, Linn County Motor Trades Bureau, Auditorium; E. L. McKibben Manager.

March 23-26—Ottumwa, Ia., Annual Automobile Show, Wapello County Motor Trades Bureau, Davis Building; Frank T. Lynch, Manager.

March 25—York, Pa., Passenger Car, Truck and Tractor Show, York Auto Dealers' Association.

March 28-April 2—Annual Automobile Show, Columbia Automobile Trade Association, State Fair Building; J. M. Green, Manager.

April 2-9—Bridgeton, N. J., Annual Automobile Show, Bridgeton Automotive Association.

April 3-9—Denver, Col., Annual Automobile Show, Auditorium.

April 3-9—Gloversville, N. Y., Annual Gloversville-Johnstown Automobile Show, State Armory. J. J. Callahan, Manager.

April 4-9—Seattle, Wash., Annual Automobile Show, Seattle Auto Dealers' Association, Arena-Hippodrome. W. J. Coyle, Manager.

April 11-16—Buffalo, N. Y., First Annual Motors and Sportsmen's Show.

April 27-29—Atlantic City, N. J., Ninth Annual Meeting, Chamber of Commerce of the United States.

May 9-10—Amarillo, Tex., Convention, Panhandle Hardware & Implement Association. Troy Thompson, Secretary-Treasurer, Delhart, Tex.

May 30—Indianapolis, Ind., 500-Mile Race, Speedway.

June—London, England, International Rubber Exhibition.

July-October—Lima, Peru, Peruvian Centennial.

July 4-9—Mackinac Island, Mich., Summer Meeting, Automotive Equipment Association.

July 4-15—London, England, London Fair and Market, Royal Agricultural Hall. International Trade Exhibitions, Ltd., Broad Street House, New Broad Street, London, E. C., England.

July 23—Strasbourg, France, French Grand Prix.

Aug. 13—Belgium Grand Prix.

September—Bandoeng, Java, Dutch East India, Second Industrial Fair, Automobiles and Trucks, Netherlands-India Industrial Fair Association.

Sept. 4—Italian Grand Prix.

Oct. 5-16—Paris, France, Automobile Show, Grand Palais.

Oct. 12-14—Chicago, Ill., Annual Convention National Implement and Vehicle Association. H. J. Sameit, Secretary, 72 West Adams Street.

Nov. 14-19—Chicago, Ill., Annual Convention and Business Exhibit, Automotive Equipment Association, Coliseum.

Shaler Summarizes Anti-Glare Law

The C. A. Shaler Co., Waupun, Wis., well known maker of automobile lamp and lens equipment, recently issued a booklet giving, in convenient form, a concise summary of the standard head lamp which is now in effect in a number of states and is under consideration in many others, as well as in the Canadian provinces and European countries, and has been approved by the American Automobile association, the National Traffic Officers' association, the Society of Illuminating Engineers, the Society of Automotive Engineers, etc. The summary is as follows:

1. **Two Head Lamps Required**—All passenger cars and trucks must use two head lamps of approximately equal candle power.

2. **Size of Electric Bulbs**—Each state usually specifies the maximum candle power of the bulb which is permissible under any conditions and then, by laboratory tests, determines the maximum sized bulbs which can be used with each make of lens without exceeding the limits of glare specified under No. 4.

3. **Minimum Permissible Road Illumination**—A, at 100 feet ahead of the car and between 1½ feet above the road and the level of head lamps, the illumination must be 4800 candle power or more; B, at 100 feet ahead of the car and seven feet to the right and somewhere below the level of the head lamps, the illumination must be 1200 candle power or more.

4. **Elimination of Glare**—A, at 100 feet ahead of the car and at points five feet higher above the road, the illumination must be less than 2400 candle power; B, seven feet to the left of the above points the illumination must be less than 800 candle power.

It will be noted that this law insists not only upon a glareless light, but there must be, at the same time, sufficient light on the road ahead for the safety of the driver. With this idea in view the Shaler experts have designed the Shaler Roadlighter, which is stated to be distinguished from other anti-glare lenses by the fact that instead of merely complying with all head lamp laws by stopping glare, which could easily be done without any lens at all, it distributes all of the light from the head lamps over a carefully chosen area of the road.

Shaler Roadlighter Lens, Which Has Been Officialy Tested for Anti-Glare.

It throws a light on the road that looks as if it came from a pair of regular head lamps plus a pair of spot lights. The distance light is as strong or stronger than with plain glass, and there is an especially brilliant illumination of the edges of the road that enables the user of this lens to see plainly, even while passing other cars whose head lamps glare. This remarkable efficiency is due to the fact that instead of simply bending the light down and fanning it out sideways as is done with other anti-glare devices, the Shaler Roadlighter divides the light into three overlapping beams, which are thrown toward the road at different angles so as to give a broad, smooth light for the first 100 feet and a narrower, intense light far in the distance.

The efficiency of the Shaler as a glare-stopping device would seem to be proved by its having received the highest candle power rating allowed by law in every official state test.

Although the big demand for the Shaler anti-glare product in a few of the states which recently adopted the standard head lamp law is stated to have consumed the entire output of the Waupun factory up to the present time, and prevented its more general introduction, ample production is now assured and prompt deliveries are being made.

The retail price of the Shaler Roadlighter, Ford size and smaller, is $2.75 and $3.50 for all larger sizes.

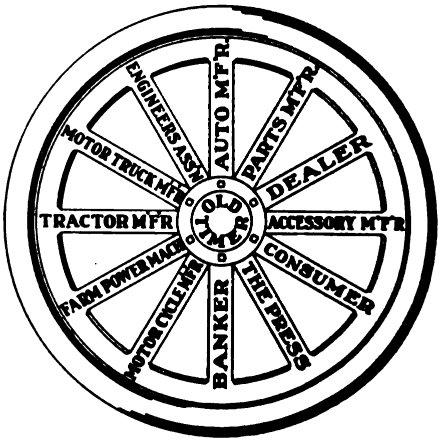
MECHANICAL CONVENTION AT PIERCE-ARROW FACTORY.

Pierce-Arrow distributors' service men from all over the country recently attended a mechanical convention which was held at the factory of the Pierce-Arrow Motor Car Co., Buffalo, N. Y., under the auspices of the service department. The object of this meeting was to qualify the distributors, through their mechanical service men, to become thoroughly acquainted with the design and construction of the latest Pierce-Arrow models of passenger cars and trucks and thus put them in a position to give effective service in keeping the vehicles in satisfactory operation for their owners. And these conventions proved so valuable from the first that they have now become annual features, at which service men, distributors and fleet owners are given a thorough course of instructions, They become better acquainted with the factory, its methods and its organization and so become one with it in method, ideals and spirit.

The programme this year was varied and full of action and interest, being divided between lectures, shop demonstrations and road tests.

Old Timer's Emblem Suggested by Alvin

One of the most pleasing social features of Chicago Show Week was the first annual banquet of the Old Timers' club, held in the Gold room of the Congress hotel. This organization was formed at the 1920 shows and grew during the year to a body of 6000 members without officers and with no set policy. At this 1921 banquet every available seat, 625 in all, was occupied. Congressman Clifford Ireland of Illinois was the toastmaster and the speakers included Elwood Haynes, who was made Honorary Member No. One; David Beecroft, Albert Champion, the newly elected president; Forrest J. Alvin of Cincinnati and Samuel E. Hibbin of Chicago.



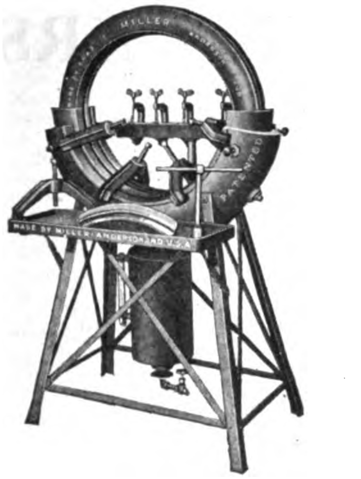
Officers for the ensuing year were elected as follows: President, Albert Champion, Flint, Mich.; secretary, F. Ed. Spooner; vice presidents, Howard Marmon, Indianapolis; Martin L. Pulcher, Detroit; John Younger, Cleveland; Gregory Flynn, New York City; W. L. Hughson, San Francisco; Thomas J. Hay, Chicago; C. G. Sinsabaugh, New York City; Richard Kennerdell, Franklin, Pa.; Alfred Reeves, New York city; Lloyd R. Maxwell, Chicago.

Headquarters have been opened at 420 Book building, Detroit, occupying a portion of the offices of F. Ed. Spooner, who is secretary and general manager of the organization.

Old Timer Emblem Suggested.

Forrest J. Alvin, general manager of the United States Motor Truck Co., Cincinnati, O., is the originator of a clever device which has been sent to the ofcials of the club as a suggestion for an emblem.

The design, as will be noted from the accompanying reproduction, is in the form of a wheel with "Old Timer" as the hub. The 12 spokes are represented as 12 important factors in the automotive industry, as follows: Engineers' association, Motor Truck Manufacturer, Farm Power Machinery, Motorcycle Manufacture, Banker, The Press, Consumer, Accessory Manufacturer, Dealer, Parts Manufacturer, Automobile Manufacturer and Tractor Manufacturer.



Advance 1921 Model of Miller All-in-One Vulcanizer.

MILLER'S ALL-IN-ONE VULCANIZER.

The Miller All-In-One Vulcanizer, sectional and retreader, being marketed by Charles E. Miller-Anderson Rubber Works, Anderson, Ind., is stated to represent the result of 26 years of untiring efforts in the designing, perfecting and manufacturing of vulcanizers and other products for tire factories and rubber repair shops. The accompanying illustration is the advance 1921 model.

This vulcanizer is a full one-half circle with extra deep cavity and steam space extending up the side walls to heat the entire surfaces so that bead molds can be used. All kinds of work, such as rim cuts, blow outs, bead curing, retreading or rebuilding can be done to perfection with sand bags or air bags.

The inside surface of the vulcanizer is accurately machined as well as all other parts, assuring a fine shaped tread and a true and smooth surface for the bead molds to rest on. The company can furnish cast iron or aluminum bead molds as preferred by the purchaser. The cavity clamps are very strong with extra large screws. They are quick to operate, having a hinged joint which permits instant placing on or removal from mold to any number desired. The greater number of screws the easier it is to get correct, well distributed pressure with sand bags which work perfectly. The clamps are arranged so that as many as may be desired may be used, five being furnished as regular equipment.

A convenient and substantial tool shelf is built on the side of vulcanizer where clamps, wrench, pads, bead molds and other necessary tools can be conveniently placed.

There is an extra long air cooled flange at either end of cavity to prevent marking the tire. All kinds of fancy treads can be duplicated by using a special matrix compound that is furnished at a small extra cost.

These outfits can be had in any style to suit the purchaser, for steam line with or without boiler, stand or any attachments. They are regularly furnished with ribbed tread design. Five pressure clamps, pressure plate, clincher and straight side bead molds are furnished as regular equipment.

The Charles E. Miller-Anderson Rubber Works, Meridian, 14th and Main streets, Anderson, Ind., will send a 108-page catalogue free for the asking, listing outfits for tire factories and rubber repair shops.

COMPTON MADE ASSISTANT SALES MANAGER.

Wayne Compton has been promoted from the position of manager of sales of corporations to assistant sales manager of the Spreckels Savage Tire Co., San Diego, Cal. Mr. Compton has been with the Spreckels company for several years, coming up from a salesman to the position he now holds.

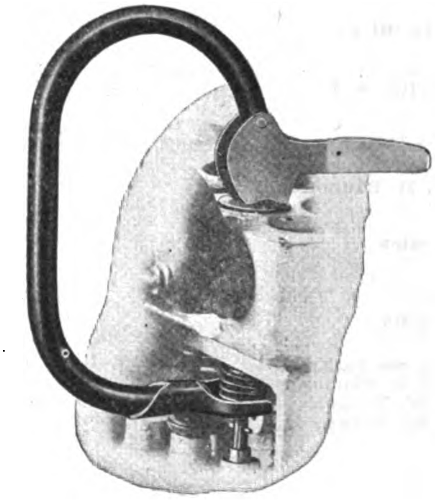
Other promotions recently announced by the Spreckels Savage Tire Co. are George W. Greene from assistant superintendent to superintendent, and Ralph E. Brown from chemist to assistant superintendent.

LOOMIS BEARDSLEY ADDING TO LINE OF VALVE-LIFTING TOOLS.

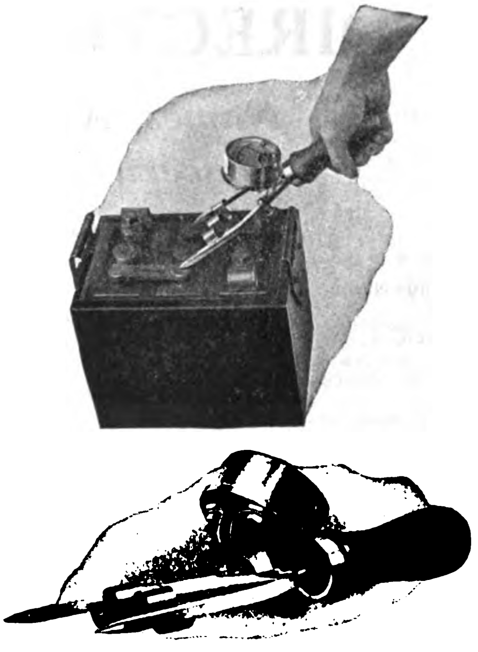
The Loomis-Beardsley Manufacturing Co., 1112 Mt. Vernon avenue, Columbus, O., announces that it has had such success in the sale of its Ford and Dodge valve lifting tools, it has decided to make these lifters for other makes of cars, using the same principle which has proved so efficient heretofore. The company states that it is now ready for production on equipment for the following cars: Hudson Super-Six, Hupmobile, Chalmers, Maxwell, Overland Four, Oldsmobile Eight, Marmon, Packard Twin Six, Studebaker, Continental Motors (two types, 9N and 7 R), Kissel, Allen and a new model Dodge.

These all sell at $1.50 each, the Ford at $1.25 and the adjustable model, which is suitable for use on nearly all cars, at $2.50.

The accompanying illustration shows the Ford model Never Slip valve lifter in position on the motor and this denotes the principle which is employed in the other models.



Ford Model Never Slip Valve Lifter, Made by Loomis-Beadsley Manufacturing Co., Columbus, O.



Weston Model 453 Heavy Discharge Battery Tester and Prod.

WESTON HEAVY DISCHARGE BATTERY TESTER.

The Model 453 Heavy Discharge Battery ester, which is manufactured by the Weston Electrical Instrument Co., Newark, N. J., is intended for testing the voltage of each cell of the battery while a relatively heavy current is flowing. It consists of a well designed substantial prod upon which is mounted a direct current voltmeter having a range of 3-0-3 volts.

The prod has two prongs securely fastened in a wooden handle, which are spaced so that they can be pressed into the cell terminals of the standard automotive batteries. Connected between the prongs is a special alloy conducting strip of approximately 0.01 ohm resistance, through which approximately 200 amperes will flow when two volts are applied across the prod.

The voltmeter is a Weston Model 301 with a legible and easily read scale. The instrument and prod are furnished in nickel finish only.

The list price of the tester complete is $18; for the prod only, $8.50.

MOTOR CARS IN JAMAICA.

The following summary compiled from the records of registration of motor vehicles in the island of Jamaica, British West Indies, is interesting for purposes of comparison:

Number registered since first records: 1917-18, 1994; 1918-19, 2102; 1919-20, 2601. Number discharged from register as exported or destroyed: 1917-18, 406; 1918-19, 456; 1919-20, 467. Number shown by registers as apparently liable to taxation: 1917-18, 1578; 1918-19, 1640; 1919-20, 2134.

During the year 1919-20 taxes were paid on 1285 motor cars and vans and 11 traction engines.

Spirit of Optimism Very Much Alive at Boston Show

Business Transacted and Prospects in Sight Beyond Sanguine Expectations--Enthusiastic Expressions from Representative Dealers.

“THE great doors of Mechanics' building are closed—the show of shows is over—the $2,000,000 exhibit is a thing of the past—but the spirit of optimism which was aroused in not dead but, on the contrary, very much alive.”

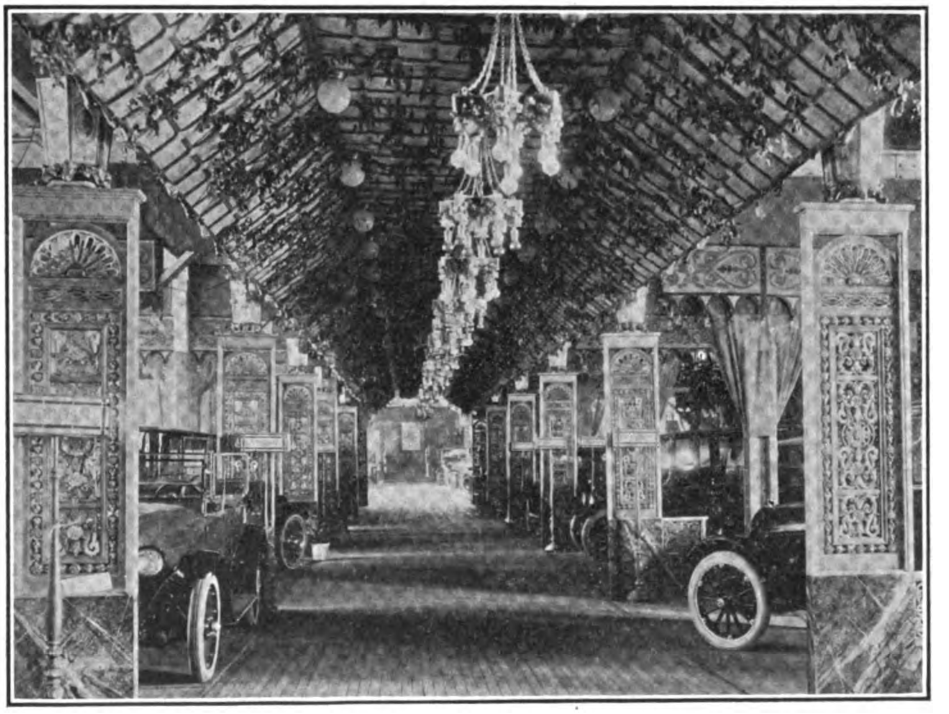
Manager Chester A. Campbell of the Boston Automobile Show thus epigrammatically expresses the passing of New England's great event of the season and he goes on to summarize its effect on the industry in the following words:

“For months past the public have been wavering. They wanted cars and had the wherewithall to buy them, but the ever present pessimist, which often works his way even into the automobile business, had whispered, 'Wait—Prices unsettled—Few orders—Wait I say.' And so the buyer waited. All he needed was the grasp of the hand to enable him to step from indecision to decision—but the darned old pessimist halted him in his tracks and that hesitation blocked the way to the buyer's decision.

“But the show—it did the job. It just threw all the conservatism and pessimism of old New England to the winds—it fairly shrieked its words of optimism and the enthusiasm and interest which resulted will go on for time indefinite. Over 2200 agents registered during the week; over 3000 salesmen were on their toes, chuck full of pep; over 200 headliners from the great factories were there to catch the fever of so-called 'staid old New England' and carry that contagion back to their own organizations, where cooperation and encouragement has been so lacking between the factory and dealer.

“The show broke the buyers' strike and, the sales made, the prospects for new business were most encouraging. It was a great show—even if I do say so.”

That this estimate is not exaggerated may be gathered from a glance at the enthusiastic personal statements from many of the representative New England distributors and dealers which appear in the following pages. Almost without exception the tone is optimistic and encouraging in the extreme not only as regards actual business transacted during show week, but also as to the prospects for future business. The peak of the business depression has evidently been passed and the industry can now safely descend the slope and pass on to the



View of Boston Show Along the Main Entrance to Mechanics' Building, Showing Details of Luxurious Decorative Setting.

level of normal production and returning good times.

A number of these expressions of opinion call attention to the fact that the demand for new cars already exceeds the amount on hand and in truth in one case, at least, it is stated that a number of orders were not booked because immediate delivery could not be assured. This savors in this respect of the conditions noted throughout the country a year or two ago. But the manufacturers are now, for the most part, ready and eager to speed up to the limit and will undoubtedly be in a position to supply any normal demand at a few weeks' notice.

Spirit of Business in Evidence.

Returning to the more specific details of this marvellous 19th annual Boston show, the atmosphere of business was clearly in evidence at all times; it could not be overshadowed even by this, the richest decorative setting in the country's shows annals, or by the sweet strains from band and orchestra and the expressions of admiration and lively chatter of the gayly gowned habitues of society. Rather, these all combined to make up what might be characterized as an exhibition ideal in all respects and one that was fully satisfying to exhibitor and spectator alike.

In regard to the exhibits themselves:

It has been some years since radical departures in design and finish have been made in the automobile field. The standardized car with respect to model and materials seems to have been reached. This year there were exceptions to this proposition in the case of two or three makes of motors. But in general the models bore the same general appearance of their recent predecessors, and the 1921 series were notable mainly in refinement and additional equipment.

As usual, the booths contained a large number of stripped chassis. Some had the sectional views of the engine with an entire half cut away, showing the pistons, connecting rods and shaft turning slowly by electric power.

A striking feature of the event was the large number of special jobs that were unusually colorful in body finish and upholstery. Many of these exhibits were finished in highly polished nickel, which flashed the reflection from the electric illumination and added to the brilliancy of the scene.

As last year, the exhibited types of cars show a majority of the closed models. The permanent top appears to be regular equipment in many makes, though the body of open design with the one-man top is holding its own in popularity. The open sport car was also much in evidence and the increase in the two and three-passenger cars was noticeable.

Of the great number of closed types shown the sedan predominated, with the limousine a close second. A number of luxuriously equipped town cars and landaulets attracted much attention, and aided by the assiduous attention of versatile and voluble demonstrators these exhibits afforded an interesting study for visitors who wished to make an extended inspection of the models.

General View of Exhibits of Passenger Cars in Grand Hall, Mechanics' Building.

The disc wheel, that came into popular favor a few years ago, continues to appeal to a large number of motorists, if the number of cars so equipped indicates the buyer's wish. In addition to giving an appearance of strength to the car, booth attendants pointed out, this equipment serves to an advantage in keeping the spokes free from dirt and makes cleaning of the car less arduous.

Visitors to the Boston show have come to expect a display set off to the best advantage through the use of artistic drapings and effecive backgrounds, nor were they disappointed this year as they walked down the main aisle of Exhibition hall. The richest colors in royal purples, dull golds and green lacquers were artistically combined, while distant views through windows painted in the French style were shown on the side walls. The center aisle of Grand hall was spanned with delicate arches, the stage at the extreme end having a facade in glass and marble brilliantly illuminated.

Arrangement of Exhibits.

The principal arrangement of the exhibits was in the main the same as in former years, the veteran attendant finding the standard makes of cars in their familiar places.

The passenger car exhibit completely filled the entire main floor of the building with a large number of models shown in Paul Revere hall on the second floor and in the halls behind the galleries.

Trucks Were of Particular Interest.

Of particular interest to the business man, the contractor and to city and town officials was the exhibition of the trucks, trailers and tractors that filled the huge basement of the Mechanics' building. The department contained a great array of practically every type of commercial, farm and fire motor vehicles that is manufactured.

The models ranged from the 1000-pound delivery to the giant six and eight-ton trucks. Several pieces of automobile fire apparatus suitable for city or suburban service were among the exhibits. Ambulances, hearses and trolley "trouble" vehicles were also displayed.

It is evident also that the truck manufacturer is increasing the number of his models with the idea of providing a size to suit any demand of business delivery. It should be said, however, that the light delivery type has increased in greater proportion than the heavy duty vehicle.

Tractors Were in Evidence.

Mention likewise should be made of the tractor exhibits which, while naturally few in comparison with the other displays, nevertheless created considerable comment. The Automotive Corporation showed its automatic tractors and the Sowers Tractor and Implement Co. was kept busy explaining the mechanical features of the Beeman Garden tractor, the Cletrac, the J-T tractor and other farm implements. The New Britain Machine Co. also showed a New Britain tractor with plow and other tools.

Accessories Outshow All Previous Displays.

The accessory department this season outshone to a great degree all previous accessory displays. The galleries of the Mechanics' building were crowded with car equipment of almost every type now on the markets. The booths lined both sides of the narrow aisle that circled the halls. Many of the booths contained equipment demonstrated by mechanical devices that proved to be unusually attractive to hundreds of visitors, who included the department in their passing around the show.

Four Days Devoted to the Salon.

The Salon in the Copley-Plaza grand ball room was open for four days of show week. Here were displayed, with the handsome decorations of the hall as a fitting background, the finest products in the way of high class standard and custom body work that the automobile designers of the entire world can offer. Here a parallel could be drawn between the cream of all countries in motor vehicle ideas and construction and it is safe to say no American had cause to feel shame by the comparison.

Representative Dealers Boost Boston Show

Sales Were Encouraging.

We were very much pleased and encouraged by actual sales made, prospects created and all-around interest shown by dealers and prospective purchasers at the recent automobile show.

Not only were actual sales made, but the number of prospects received were far beyond our expectations. It is the writer's opinion that the business as a whole, both passenger cars and trucks, will have a healthy, steadily increasing volume from now on.—WM. HOLLINGSWORTH, AJAX MOTORS SALES CO.

Business Better Than Since Last July.

Our business in actual sales was better during the show week than any week since last July. Prospects are much better; in fact, it seems that we should actually get more business this coming month than for the corresponding period last year.—H. E. WHITTEN, BOSTON FEDERAL TRUCK CO.

Much Pleased with Conditions.

We were very much pleased with conditions as we found them at the Boston Automobile Show. The orders placed with us during the week ran ahead of last year in both retail and wholesale sales. The feeling among our dealer organization was especially optimistic.

Part of the results obtained were undoubtedly caused by the Olds Motor Works introducing at this time two new models—a four and an eight-cylinder motor, both of which are proving decidedly popular with the buying public. Local conditions have materially improved in the last few weeks, and everything points to a good season's business.—HARRY C. DUNN, General Manager, BOSTON OLDSMOBILE CO.

Attendance Larger Than Ever.

I believe the attendance at the Boston Automobile Show was as great as at any show we have had. At any rate it appeared to me so. We had tremendous crowds every day of the week, and I am under the impression that most of the dealers at the show did business. I do not think that the average business done was as great as last year, but nobody expected it. On the whole, I would say that the show had been a huge success.

I believe that it is a good thing to have a show, I believe that it is a good thing to stimulate trade, and I don't know of any other business that you can sell tickets for admission to people to buy merchandise.—W. J. CONNELL, President, CONNELL & McKONE CO.

Results Were Most Gratifying.

The results of the Boston Automobile Show were most gratifying to us. Not only was there a lot of real interest shown by visitors from metropolitan Boston, but the enthusiasm was apparent in the crowds which came from every part of our New England territory.

The retail business of our organization amounted to $137,500 for the week, or slightly in excess of last year.

The attitude of our dealers was decidedly encouraging, so that everything considered we believe that the outcome of all this optimism will be a very satisfactory sale of automobiles from now on. —B. C. HAMILTON, Sales Promotion and Publicity, CHANDLER MOTORS OF NEW ENGLAND, INC.

Show One of the Busiest.

The writer has exhibited cars for the past 10 years and think we are safe in stating that the show just past was the busiest one our exhibition ever had. This may be due to the fact that our car was reduced in price Jan. 3, which had a great deal to do with the interest taken in it.

The exact number of sales during the week was twice as many as last year, as we could promise immediate delivery, and we also closed a number of good agencies. On the whole we were very well satisfied with the results and while there was a number of people just looking, who probably have used cars for exchange, they are in the market for new automobiles and left their names with us as well as probably other cars in our class price.—F. A. DUTTON, Treasurer and Director of Sales, F. A. DUTTON MOTOR CO.

Showing Typical Accessories Exhibits in Departments F and G.

Show Highly Successful.

From the Ford Motor Co.'s standpoint the Boston show was highly successful, more actual orders having been written this year than at any previous one.

The crowds at the show were tremendous and indications from all sources would tend to signify that business will be entirely satisfactory, particularly on low priced cars.—R. R. JONES, Manager, Cambridge Branch, FORD MOTOR CO.

Sold More Cars.

We sold two more cars at retail at the show this year than we did last year. The wholesale business from our dealers, however, was not as great.

We found the buying public more discriminating and holding more to standard make of cars than to new makes that they are not familiar with—the public realizing that this business is coming to a "survival of the fittest," has undoubtedly brought about such a condition.

We are now securing as many orders daily as we did last year, and our March sales to date surpass our March sales in 1920. We have 178 orders on our books for April and the first of May delivery, against 87 cars in stock, or 91 cars shy for delivery. The factory is not able to speed up production over night to take care of such a condition and the result is an imminent shortage. We are now taking orders on most of our models for three and four weeks delivery.—F. A. ORDWAY, Vice President, HENLEY-KIMBALL CO.

Number of Purchasers Remarkable.

We were more than pleased with the results obtained at the Boston Automobile Show. We not only closed up considerable business during the week, but we also obtained the names of enough prospective purchasers to keep us busy for many weeks.

With the existing business conditions, it seems remarkable that there are so many purchasers of automobiles. This is probably the cumulative effect of restriction in buying during the past five months; but, whatever the reason, we predict there will be an actual shortage of cars before the end of April.—F. A. HINCHCLIFFE, HINCHCLIFFE MOTOR CO.

Great Interest in Trucks.

Never before have we seen public interest centered to such an extent in trucks as during the Boston show. Aside from closing several spot cash sales during the week for heavy duty trucks, we obtained a wonderful list of prospects, with the result that our salesmen are now cashing in and each day are closing sales with prospects obtained at the show.

The new ¾-ton worm drive Clydesdale Clipper created no end of attention and much favorable comment from all sources. Never before have we received so many direct inquiries from prospects in outlying territory and from Maine, New Hampshire and Vermont as during the past week.

We are fully satisfied that the corner has been turned and that truck sales will show a substantial and marked increase from now on. We can safely round it up in one small package by saying that public interest and attendance at the Boston show exceeded our fondest expectation by 100 per cent.—RALPH G. CALEF, Manager, HOLLAND SYSTEM TRADING CORPORATION, CLYDESDALE TRUCK DEPARTMENT.

Sold a Number of Trucks.

The Boston show, from a point of attendance, was one of the greatest the writer has ever attended. The business was not as great at this show as at some of the previous shows, yet we were able to sell a number of trucks and at the same time get quite a number of good prospects who will purchase trucks later in the year. We would liken this show to the one in 1915, from a point of business. We also believe that the worst is over, and that business in all lines, including the truck, will go forward at a good healthy growth in the future.—P. S. AULTMAN, Manager, KELLY-SPRINGFIELD MOTOR TRUCK CO.

Accessories Business Increased 33 Per Cent.

The business produced at the Boston Automobile Dealers' Show was fully as good as we had anticipated, and our business in the store on accessories and Ford parts is at least 33 per cent. more than it was last year during the same period.

We are looking forward to an excellent business and we find that people are buying high grade articles which are not absolute necessities. This to my mind speaks well for the future.—GEO. W. MACBRIDE, Treasurer, GEO. W. MACBRIDE &‹CO., INC.

Satisfactory in Tractor Prospects.

The Boston show was a very satisfactory one for us in many ways. We made several direct sales and got in touch with several hundred live prospective users who are in the market for a tractor of this sort and are waiting for spring work to open up and for a demonstration to be given them on their places.

The interest at this time confirms our belief that land is bound to be worked, crops raised and farms of various sizes and classes are looking for machinery to do their work efficiently.—E. T. GLASS, NEW BRITAIN MACHINE CO.

Sold Twice as Many Cars.

Our Boston show business was a complete success and more than twice as many cars were sold than in any previous years, and 10 times as many prospects interested.

The future outlook is very encouraging to us. Our new family of cars has appealed to the buying public. They are assured of the style and the quality is already established, and we are offering real value to an owner.

We have more orders booked at the present time than the factory can furnish us cars for in the next four months.

The entire future outlook is very encouraging.—W. H. GLEASON, Vice President, UTTERBACK-GLEASON CO., INC.

Great Opportunity to Meet Trade.

We are very much satisfied with our efforts to get from the exhibit which we made at the show the most satisfactory results.

Reviewing the situation now that the show is over, we feel very much satisfied with what we have accomplished. Even though we did but very little actual business, we found an opportunity there to talk with a great many of our very best prospects and getting an idea of their views on the situation as far as the possibility of purchases in the near future are concerned. Most of them talked very encouragingly.

Some new prospects were developed, but naturally few, as we are covering the territory very carefully and feel that we are very well posted on most of the possibilities there are in this section, as our salesmen are working with all the energy at their command.

Naturally the commercial vehicle people have not the opportunity at the Boston Automobile Show of closing business in any such way as the passenger car dealers have, and the show has never been a place where any great amount of business was done.

The most it amounts to with us is advertising and, as we have said before, it gives us an opportunity of meeting our trade and to meet them on rather different ground and talk from a slightly different angle than when you call on a man during business hours while he is very busy with his own affairs and usually has but little time to give to salesmen representing motor truck interests.—G. H. HUDSON, Branch Manager, WALKER VEHICLE CO.

Wholesale Business Extremely Promising.

Although there was no great rush in retail buying, we were indeed fortunate in securing quite a number of orders from persons we had never seen before; in fact, new sales entirely. Wholesale business, much to our surprise, was extremely promising.

Taking the show as a whole we were more than satisfied with the outcome, as there was displayed a distinctly strong interest in air cooling, and we obtained a larger number of bona fide names and addresses than ever done before at any show.—JAMES C. TATE, Treasurer, HOLMES MOTORS, INC.

Sales Exceeded 1920.

We are glad to be able to state that our sales record for the automobile show —and pre-show—weeks of 1921 exceeded our sales for the similar period of 1920 by such a margin that we can confidently predict a record breaking March for this year.

In connection with the automobile show this year we ran a special advertising campaign which, combined with the show, has netted us several thousand more live prospects than we have ever had before. We are expecting big things from the future.

From every indication the Commercial Motor Vehicle show was a success. As to the exact number of sales I am not in a position to state, but I have reason to believe that they were gratifying to all of the executives. Without doubt they had one of the best exhibits that the commercial dealers have ever had in New England and the attendance was all that could be asked for. Indications point to a very successful and profitable coming year's business. I can only quote "1921 will reward the fighters."—L. B. SANDERS, DUNBAR, SANDERS, INC.

Most Successful from Business Standpoint.

This year the Boston show was the most successful from a business standpoint, in our experience. We sold during the week of the show 74 cars and trucks, a total business of $363,997.

The outlook for the next few months, at least, would seem to us extremely bright in the automobile industry, and we are hoping that the improvement in condition will continue throughout the year.

Our sales at the show included 24 bona fide orders with deposits for Packard Twin Sixes, and our sales of the new Single Six car, which is meeting with tremendous public approval because of its low price and economy of operation, would certainly have been three times the 27 we did sell, had we been able to promise earlier delivery. Our sales at the present time are far in excess of the supply.—ROBERT B. PARKER, Vice President and General Manager, PACKARD MOTOR CAR CO. OF BOSTON.

Enjoyed Mighty Good Business.

We certainly enjoyed a mighty good business at the show, fully up to previous years results and much better than we expected this year in view of the depression in automobile business through the past few months.

Not only did we secure both wholesale and retail orders for immediate delivery, but we also found a greater number of deeply interested prospects than ever applied to us for information at our exhibits.

Our retail salesmen are enthusiastic over the show results and all agree from present indications that 1921 business will be well up to the standard of previous years.

It is true that in a few sections of our New England territory depression still exists, especially in northern Maine: their results from potato crops have been unsatisfactory. Encouraging reports come from there, however, and we believe by the middle of summer nearly normal conditions will prevail throughout New England.—A. H. SOWERS, Treasurer and General Manager, LEXINGTON AUTOMOBILE CO.

Buyers' Strike Is Over.

The Boston Auto Show proved conclusively to us that the buyers' strike is over, although actual sales did not reach the mark observed during the last few years. The buyers that did appear at the show appeared to have a keener sense of value, and were more inclined to carefully consider the comparative values of cars than previous years, when the big question with them was the delivery date.

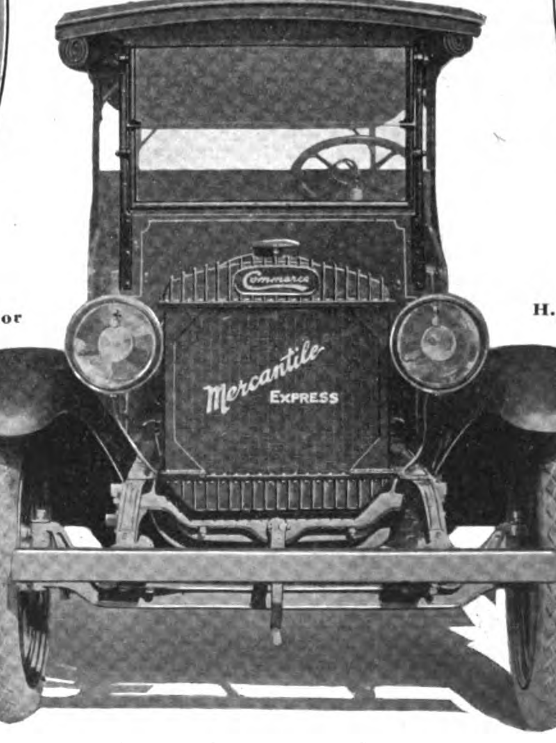
(Continued on Page 86.)

Merchandising Motor Trucks in New England Exemplified by Commerce Motor Co.

THE recently formed Commerce Motor Co. of New England, Inc., located at 20 Brighton avenue, Boston, in the heart of the automobile district, affords a representative instance of the manner in which the merchandising of motor cars is handled in New England, admittedly one of the nation's most fertile fields for this class of business. This concern handles, through its branch agencies, Commerce trucks, which are made by the Commerce Motor Car Co., Detroit, Mich. It is housed in a fireproof building, containing 7500 feet of floor space and the structure is ideal in design and arrangement of floor space for a modern show room and service station. The particular type of vehicle to be specialized on is the new Commerce Mercantile Express, which is a light express model with a capacity of three-quarters of a ton, but other Commerce products will be handled by the Boston concern. That a big business in the smaller car will be done is shown by orders already received. Perhaps a record sale to date was made by the Worcester, Mass., dealer, who sold the first truck sent him in less than an hour after receiving it, and other sales of a similar nature are also recorded, all of which speaks well for the future.

W. E. Kelton, President, Commerce Motor Co. of New England, Inc.

Not only does the new distributing concern get a flying start in its merchandising campaign through the orders booked from individuals, but it has also closed several fleet installations, noticeable among which are several orders from the United States Postoffice Department for use in the New England states. Many of the trucks ordered for this work are already in service, and others are slated for early delivery.



The Commerce Mercantile Express, a Speedy, Light Delivery Truck Designed Especially for City, Suburban and Farm Service.

W. E. Kelton is president of the new organization and H. F. Talbert is the treasurer. That these two men, both of whom are thoroughly versed in the merhandising of motor trucks, should have chosen to enter a joint business, guarantees the success of the organization with which they have affiliated. Mr. Kelton has for more than 16 years been identified in a selling way with very large automobile interests, and Mr. Talbert, long known in the agency and garage business, brings a wealth of financial knowledge and a thorough training in the economic side of the business to the organization. The combination augurs well for the going power of the corporation.

Both of the officials fully realize the value of service to the customer as a strong factor in the success of any business, and one of the specific conditions insisted on in appointing agents is that ample service be given to the buyer of a Commerce truck. Regardless of whether the purchaser buys the one vehicle, or a fleet, it is the same to the distributor, who insists that adequate service shall be given to all.

H. F. Talbert, Treasurer, Commerce Motor Co. of New England, Inc.

The dealer is expected to stock parts for the trucks in varying amounts, depending wholly on his territory, and the Boston office will be prepared at all times to give extra service in the way of sending out parts by special delivery, or by personal messenger if the occasion is drastic enough to warrant. A minimum charge will be made for all service not covered by the manufacturer's guarantee, and this will be based, so far as possible, on the assumption that even though the guarantee may have expired, the manufacturer is willing to adjust the matter by meeting the customer more than half way.

With full understanding of the hectic conditions of the last few years, the new organization realizes that the morale of the truck business should be constantly seeking a higher plane on which to function, and intends, in the words of President Kelton, "To treat the customer at all times as though he were a prospective buyer, rather than one who has already purchased."

Keeping Customers Sold.

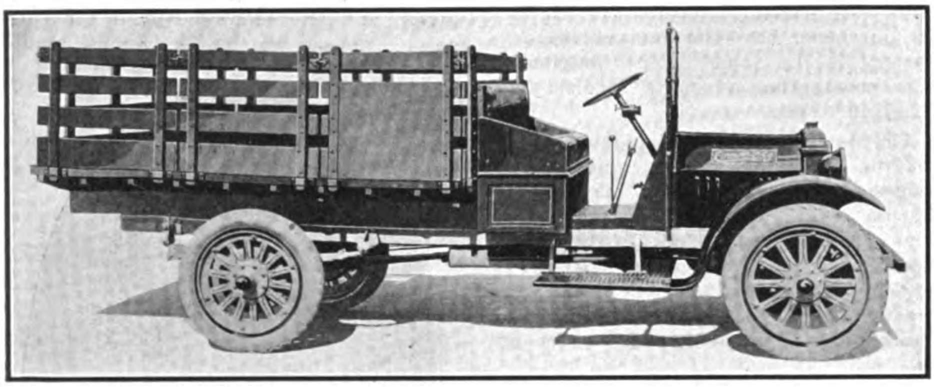
This company practically guarantees to the dealer who follows its rules, that the man who once purchases a Commerce truck will always be a buyer of that particular vehicle, by reason of the exceptionally fair treatment which he will be given, and the plans outlined for this service appear worthy of the best traditions of general business life.

Mr. Kelton has some unique views on the subject of service and strikes a modern chord when he says, "The time has come for the automotive industry to realize that real service in the true sense of the word must be thrown in as good measure to the purchaser of a car or truck. The automotive industry, the second largest in the world, will reach new high levels only by attention to the important detail of service.

"To my way of thinking the time is coming soon when this service will be given in much the same way that typewriters, adding machines, cash registers and dictaphones are cared for. In a measure that is just what we are planning to have our agents do, and all that have lined up with us have expressed a willingness to so cooperate. The old platitude that 'service is service only as it serves,' is an apt expression of the kind of service that we intend to give, and the customer who buys our product will be convinced of the truth of the assertion."

Incidentally, while on the subject of service, the company will also take care of its dealers in a way that should make for complete cooperation. Traveling sales engineers will be employed who will call on each dealer and sub-agent at certain stipulated periods and will not only be prepared to handle any cases of readjustment that may come up, but will also go out with the agents' salesmen and call on prospects with a view to selling them a truck.

In addition to this, the traveling representative will carefully go through the stock of parts carried by the dealer and will see that he is carrying at all times the proper amount. This representative will aid the dealer in every way that can be desired and will be able at all times to answer any question relative to the business.



The Combination Stake and Platform Body Makes Splendid Chassis Equipment for General Farm Haulage.

Mercantile Express Made up of Standard Units.

The Commerce Mercantile Express was designed to be the fastest, finest and lowest priced car in its class. It is sold to the customer with complete equipment and the cab top and body are optional. The speed truck has been solely designed and manufactured to be used with pneumatic tires, and the manufacturer disclaims all responsibility if solid tires are used. Fully appreciating the good features of the solid tire, it is pointed out that the high speed at which the vehicle will be operated does not admit of using the less resilient type of wheel equipment, and this fact is impressed on the purchaser.

The officials of the Commerce Truck Co. of New England, Inc., after a careful survey of the merchandising field, are optimistic regarding truck sales during the current year. They see a potential market, that with proper development, will assume proportions of great magnitude, and orders already booked for immediate delivery tend to show that they have the right viewpoint. With unbounded faith in the trucks they represent, a responsive territory for their exploitation and distribution, and a selling season of unlimited scope, the newly formed organization gets away on high speed at a pace which should do much to place it in the front rank of distributors.

Motor Omnibuses Here to Stay

(By T. J. FAY, President, Fay Motor Bus Co., Rockord, Ill.)

PERHAPS the most discussed and unsettled problem of the day is transportation, not only in suburban territory, but also in cities; people are moving away from the congested districts and want home and yard room, but present street car service is inadequate to allow the building up of the outlying city districts. The factories are taking advantage of cheaper ground, allowing them space to build daylight and sanitary buildings; then again comes the question of transportation.

There are 13,300 city and interurban railroad companies operating in the United States, 5500 of which are in the hands of receivers, and very few of the remaining 7800 paying interest on their bonds, and of this number few ever did make a dollar out of their actual operating profits. Of course we know that some billions were cleaned up on watered stock, but somebody has got to pay, and "to be sure" that somebody is the public. Street cars will have to be put on a firm paying basis if they are going to exist. Fares will have to be increased even more than they are at present.

In the meantime the inevitable progress of improved invention has crept in, until the time will soon come when the motor car will supersede the electric car. The streets will be cleared of ugly rails, switches, poles and wires and no longer will we hear the continual rumble of steel wheels and have traffic blocked by long street car stops. It is a fact that today 60 per cent. of the people of the United States travel by motor. This statement can be verified by a glimpse at any busy street in any city in our country. Only a few years ago the electric street car was the best means of transportation, but today motor car, with big pneumatic cord tires, can carry a several ton load evenly and smoothly over the ordinary city streets, very often covering a distance of from 7000 to 20,000 miles without a single change of tire.

For the past two years I have been operating bus lines and during that time have carried almost 2,000,000 people, and have never had a serious injury, which disproves the theory so often advanced concerning the danger of motor conveyances with so many motor cars on the streets.

In the city of Rockford, Ill., where we operate a larger fleet, we carry people to and from work in less than one-half the time they can be carried on the street cars. From the city limits my scheduled operation to the factory district is 25 minutes, while it takes one hour and 25 minutes on the street car. We charge a fare of 10 cents. The street cars charge seven cents. Therefore, for three cents a man can stay home 50 minutes longer. From Rockford to the end of the street car line at Camp Grant, "my largest operation," my operating time is 20 minutes, while the street car requires 45 minutes.

For the past few days we have had a terribly cold wave, the thermometer registering 21 degrees below zero, with heavy snow drifts. We have gone through without an accident; neither have we missed a single trip, while the street cars have not been able to run on their schedule. Most of the interurban lines in this section have been unable to carry out their schedule, yet my buses are operating regularly between Rockford and Rochelle, a distance of 35 miles, in two hours and 15 minutes, making stops at five towns between these points.

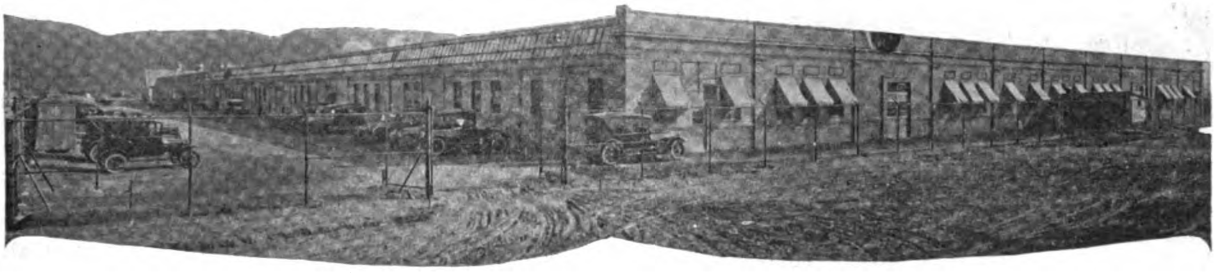
I realize that practically every bus line started in the country has failed, but at first every movie theater and almost every other new enterprise failed, although the very failures have brought experience and organization until it is possible and practical to build bus lines and give adequate service for almost every phase of transportation.

Care and experience must be used in the selection of the type and size of the chassis and body. One must have a large enough organization to handle the checking, dispatching, proper garage facilities, repair shop, incentives for the drivers to care for the buses. It is a big business and must, if successful, be handled by a large organization, but the possibilities are greater, I believe, than any other business in the United States.

For the first several months of my operation I paid dearly. There was a long time when my best friends begged me to drop the bus business, since I was financially embarrassed to such an extent, but I knew my losses were mostly my mistakes, those of inexperience, but I realized what they were and that they could be remedied, which I have done, without one cent of additional capital.

Stevens Duryea Continues Policy of Manufacturing to a Principle

(By S. G. SWIFT.)



General View of New Stevens Duryea Plant at Chicopee, Mass.

THE well-known New England car manufacturing concern of Stevens Duryea has always dignified the automotive industry as being the epitome of all mechanical art, rather than as the successful attempt of merchandising a product made to sell to a general market. When, therefore, the war clouds hovering over the country made it increasingly hard to obtain first grade materials, those responsible for the perfection attained refused to lower the barrier of ideals sufficiently to admit of using inferior stock, and discontinued manufacture, rather than sacrifice in any measure the high standard that has ever characterized the Stevens Duryea car.

Following the signing of the armistice the company once more turned its thoughts to resumption of car manufacture and it was decided to get under production again as soon as the state of the materials market and other conditions should warrant, and as plans matured it was evident that a new factory was necessry. The old one had been good enough for the times, but efficient manufacture demanded larger and better quarters, and eventually a 32-acre plot of land, midway between Springfield and Holyoke, in the city of Chicopee, was purchased, and a one-story brick and steel building erected. This structure contains all that is modern in the way of machines and equipment. It is 600 feet long by 310 wide and has a roof of saw-tooth construction which admits of ample light.

It is heated with a vertical tube boiler that works in conjunction with a Carrier air conducting system, which washes and purifies the hot air as it leaves a battery of radiators. This air is distributed through long radiator pipes to the different departments. The system is also adaptable for summer weather, and will insure a supply of artificially cooled and washed air through the warm months.

The main office occupies the entire end of the building and offers an interesting perspective as one glances the length of it, appearing to come together at the far end. This office, while well appointed is not elaborate, as the company considers that all unemployed assets should be built into the product, and one cannot but agree with the idea.

All of the machines are located in the main building with the exception of those used for nickeling and case hardening, which with the blacksmith shop and dynamometer room, are housed in a smaller building at the rear of the plant. The location, which is about two miles from the former factory, was decided on as being central to Springfield and Holyoke, the population of both cities contributing its quota of machinists, upholsterers and decorators to the personnel of the plant.

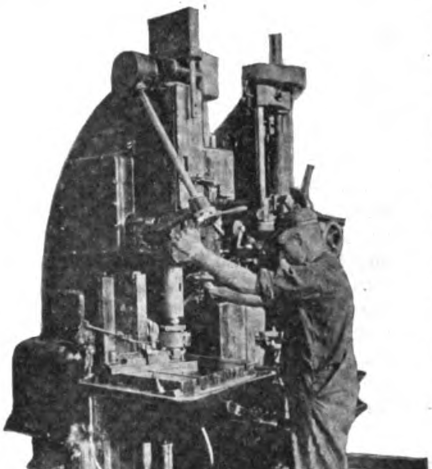
All Bodies Custom Built.

The body department naturally plays an important part in turning out the yearly production of 1000 vehicles. This department builds and finishes each body in an individual style and manner. Divided for the purpose of this article into classes, the types manufactured are the touring car, vestibule limousine and the touring sedan. An open sport model has also been developed which has all of the comfort noted in the others combined with the snappy, sporting features for which there is a certain current demand.

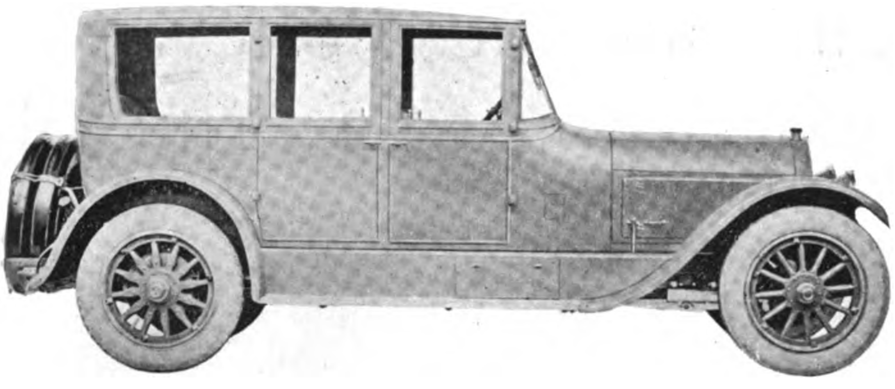
Where the upholstery is of leather, only the best of carefully selected and treated hides are used, and there is no such article as split leather in the whole department. Nothing but the finest quality of curled horse hair is used in the upholstering, and the spring suspension of the seats is of the finest coil steel, especially manufactured for use on exclusive designs.

New Cars Built with Aluminum Bodies.

The frames of the different types manufactured are all of carefully selected materials, and the body metal is aluminum. Metal trimmings for doors and windows, and door locks and hinges are



A Type of Milling Machine Employed in Stevens Duryea Construction—Testers About to Start on Usual 500-Mile Road Test.



Rich in Its Simplicity This Luxurious Limousine Is Especially Roomy.

all cut from the raw material and made by hand. There isn't a piece of sheet metal in the body of the car, with the exception of the aluminum, all other parts being cut from heavy gauge stock, which is somewhat unusual when one looks at the trim and finish on the ordinary car in comparison.

Tops Hand Tailored to Each Automobile.

The top making department is situated next to the space allotted to the body builders, as the two work in conjunction. Every top seen on a Stevens Duryea car was tailored to that particular job. Strictly speaking it was tailored onto the body, and is as much a part of it as though the two had been built as a unit. This department, equipped with 15 power driven Singer sewing machines, is staffed with men, many of them elderly, who have made a life work of the art, for art it is, of building tops, and they know their business.

Bodies Painted with 14 Coats.

Painting is the next step in the construction of the finished body. This work is in charge of a man who for 20 years has specialized in the painting of Stevens Duryea cars. There is only one satisfactory way to paint a body that shall measure up to the standards set by the company, according to this workman. The first operation calls for a thorough cleaning of the surface with steel wool and a solution in which gasoline is a base. This is followed by a metal primer coat. Coach body filler is next applied. The body is then treated to a coat of liquid putty, and when this dries, five coats of rough finish are laid on.

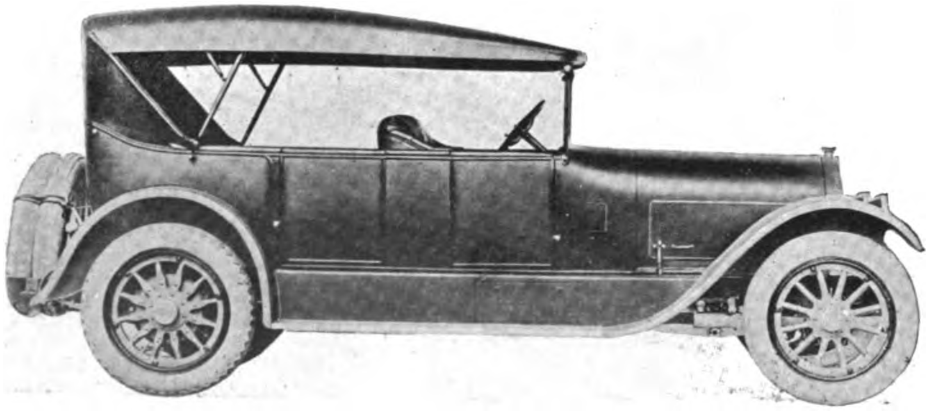
After this comes a coat of chrome yellow, which is scoured off when dry with pumice stone. This last treatment is the forerunner of two more color coats, which in turn are followed by three coats of color varnish, which is dried by natural heat in a specially constructed room kept at the exact degree of temperature necessary to dry the varnish smoothly. Another finish coat of varnish is given the machine after chassis and body have been hung up. And the result—a satin finish that defies the exploring finger to find a high spot in the entire surface of the car.

Chassis Design.

The chassis of the new car follows closely the lines of previous models, and such changes as have been made insure greater power and economy, together with improved riding qualities. The rear springs have undergone a change, being 3½ inches longer than formerly, and three-quarters elliptic instead of half, thus giving extra action and doing away with small vibrations.

The throw is controlled by four Gabriel snubbers, and the result of these innovations is seen in the manner in which the car rides, as the body seems to hang at a dead level, the axles moving up and down with the action of the springs.

An inspection of the current model will at once disclose familiar Stevens Duryea characteristics. Although low and strictly modern in its lines, the body still retains many features noted in former models, such as for example, the high seat backs, straighter than many others, the molding, back of the rear doors, and the leather covered trimmings. The radiator, the five-spoke steering wheel, the left hand gear shift and brake lever, leaving the center of the front compartment unobstructed, the six-cylinder motor, the unit power plant supported at three points, the multiple dry disc clutch—all are essentially Stevens Duryea.



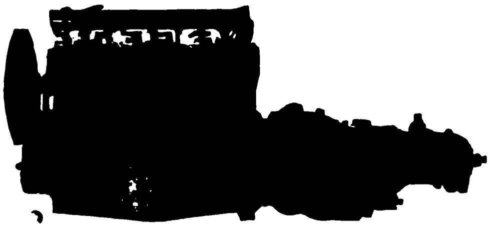
The Touring Car Commands Attention.

Engine Shows Several Refinements.

In 1904, the unit power plant supported at three points, first adopted in 1897, had been developed to the point of completely enclosing the engine, clutch and transmission in a rigid unit housing. This is today a basic principle of Stevens Duryea design, and the rigid aluminum housing that encloses crank shaft, clutch and transmission, insures the perfect alignment of their bearings at all times and under any road conditions.

The entire unit is flexible with respect to the frame and practically independent of it. The engine always delivers the maximum percentage of its power to the rear wheels because sources of loss, such as flexible joints between engine clutch and transmission, bearings out of alignment, twisting caused by unevenness of the road and squeezing of the lubricant from between the cramped surface bearings are avoided.

The multiple dry disc has been a Stevens Duryea advantage since 1904.



Left Hand View of Power Plant.

This clutch is compact, indestructible and requires little or no adjusting. It releases instantly, allowing perfect shifting of the gears. It takes hold positively but gently, reducing the strain on every part of the driving mechanism, lessening tire wear and adding immeasurably to the comfort of the passengers.

Stevens Duryea is said to have brought out the first American six in 1905. It was a complete success from its inception, and demonstrated again the far sighted wisdom of building around a principle.

That the six-cylinder principle holds as good today as ever, is witnessed by the fact that it has successfully withstood the recent tendency to increase the number of cylinders. With the admitted advantages of fewer parts, lighter weight, perfect balance and greater accessibility, continued six-cylinder supremacy, as exemplified by Stevens Duryea is not surprising.

The model E power plant is fundamentally the same as the model D, which has proved itself all the most exacting owner could wish, with its smooth, quiet power, instant responsiveness to the driver's every whim, delightful flexibility and quick acceleration. Numerous refinements, however, have made the model E power plant even more powerful and flexible, and there is a marked economy in gasoline consumption.

The ignition is a two-spark magneto system. Two hot sparks simultaneously ignite the mixture in each cylinder in two places at once. The complete charge is burned and its full expansive force utilized. None is wasted by sluggish or incomplete combustion. Quicker acceleration, smoother running at low speeds and greater efficiency results.

The highly perfected type of carburetor is especially adapted to present day fuels. This is coupled up with a short intake manifold, heated both by water jacketing and hot exhaust gas, the latter being controlled by the amount of throttle opening.

The exhaust manifold carries the hot gasses down at the front of the engine and thence underneath the car and away from the floor boards instead of back immediately under them, as is the usual practise in many types of motor vehicles.

The cooling water is thermostatically controlled, keeping the engine constantly at an efficient temperature. A motometer on the instrument board registers the temperature of the water leaving the water jackets.

Starting and lighting are provided for by a two-unit system. The starting unit of ample power, insuring rapid spinning of the motor, is operated by a convenient button on the control panel.

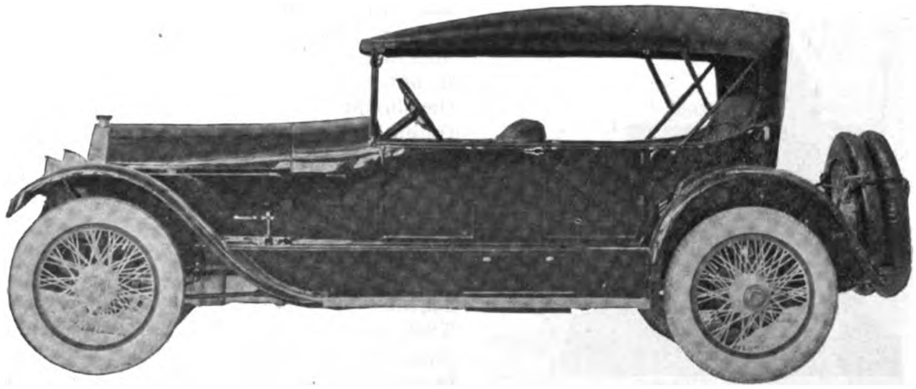
Right Hand View of Power Plant.

A most important advantage of Stevens Duryea construction is the square and taper square connections in the drive line, which eliminates keying together the different units through which the rear wheels are driven and avoids wear or twisting or shearing of these important parts, and this principle is largely responsible for the long life of Stevens Duryea motor cars. The component parts fit so perfectly and are so absolutely united by this form of construction, that, in effect, the crank shaft turns the rear wheels directly.

The same sturdy and reliable steering gear is employed. It is so smooth and easy acting that the car may be swung quickly aside with one hand.

All Steel Forgings Tested for Tensile Strength.

The raw materials that go into Stevens Duryea cars are the best that money can buy. The essential advantages of the steels used is that practically all such steels are of special alloy and heat treated, a sample of each piece being subjected to the most searching physical and chemical tests. The use of such steel gives greater strength for a given weight than can otherwise be obtained. In the use of all other materials no compromise is permitted at any point—only the best will suffice.



The Well Balanced Four-Passenger Close Coupled Sport Touring Type.

Multiple Machine Operations Not the Rule with Stevens Duryea.

The machine shop is one of the distinctive features of the plant. The system, followed in many factories, of completing a part by multiple operations doesn't obtain. The company believes that the only way by which parts can be machined to exact measurement is by the single operation, and all machines are designed with this feature in mind with the single exception of the Bausch multiple drill, which bores all the bolt ways in the aluminum crank case at one operation.

One out of every three parts, large or small, that go to make up the mechanical unit of Stevens Duryea cars is inspected, and never was test more rigid, nor closer limits set. Delicate instruments scaled to measure one-ten thousandth of an inch, quickly detect the slightest variation from standard requirements, and the system of passing small parts that show a measurement just under or over the limits set is not allowed. Every part must be exact, and this is one of the basic principles that make the assembled engine need very little adjusting, the different moving parts functioning perfectly.

Cylinders Ground to Closeness of .0002 of An Inch.

In looking at the different operations the writer was especially interested in the process of cylinder grinding. This work is done on a Heald style 65 cylinder grinder. and the work produced is undoubtedly the equal of any commercial cylinder grinding job done anywhere. A workman who has specialized for 20 years in the work has charge of the delicate operation, which attains a closeness of .0002 of an inch for diameter. The method of measuring for accuracy is by means of a dial indicator, which is kept when not in use in a master cylinder, which allows the operator to keep the instrument set at an exact figure. The finish obtained is far superior to that seen in many operations of similar nature, and is as near perfect as it is humanly possible for it to be.

Another operation that is of unusual interest is that of fly wheel balancing. The wheel balanced on knife edges, is bored and rebored on the back side until it exactly balances, and when exactly true will not turn so much as a quarter inch from any position.

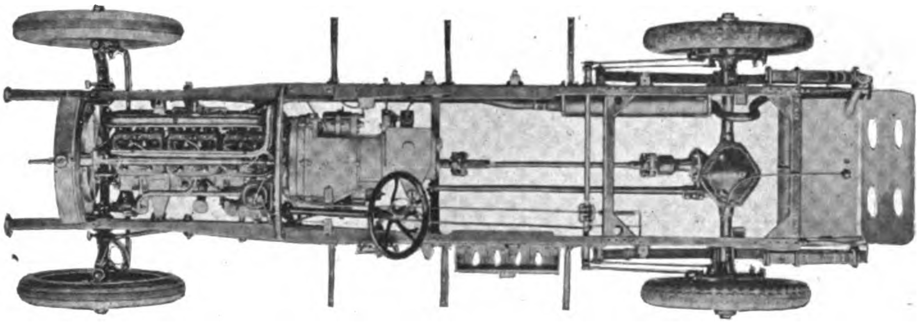
Production of Each Department Centrally Controlled.

The production of the factory is controlled by a centrally located department, which lays out the work in such manner that no one department produces a greater proportion of work than another. This department knows at all times just what each department is doing, and while of recent inception, has already worked to a decided advantage for all concerned.

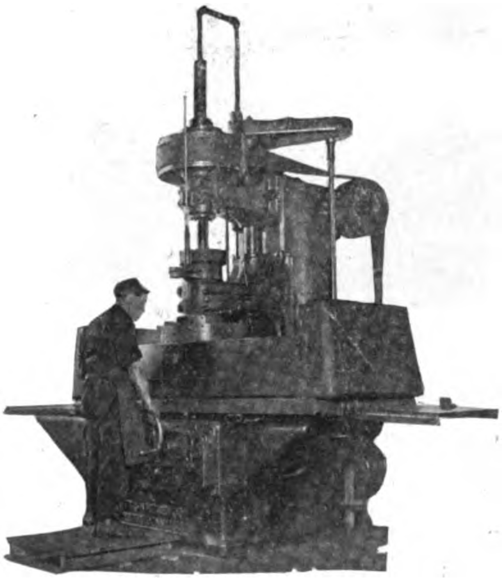
Multiple Tests Assure Satisfactory Performance.

The layout of the machine department is ideal in that all parts work through the different operations in a straight line to the engine and chassis assembly departments, which work in conjunction with each other.

The engine assembly is one of the most carefully conducted operations in a factory where extreme attention to de-



The Accessible Assembled Chassis Ready for Attaching the Body.



Cylinders Finished to .0002 of An Inch.

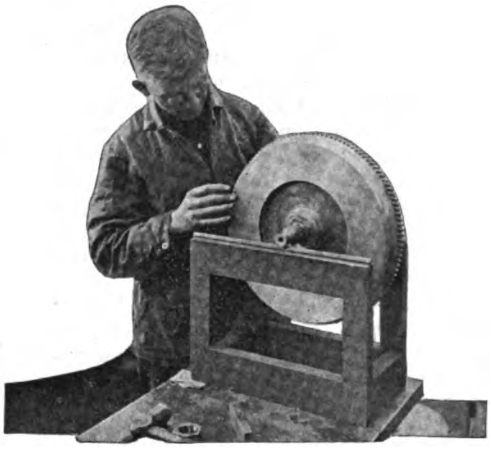
tail is paramount. Only men of long experience, with general all-round knowledge of the business are allowed to work in this department, which is fitted with many special features which make for precision. The various parts, after assembly, are placed under a belt and are "lapped in" by running in a bath of oil. When the parts have become properly seated the engine is mounted on cement blocks, as shown in the illustration, and coupled to an electric dynamometer is run under its own power for 24 hours.

Following this test the bearings are tightened, and any minor adjustments necessary are made. The chassis is then mounted on test tires and a test body is placed on the car, which is then ready for a 500-mile road test.

Tester Is Aristocrat of Automobile Mechanics.

The tester is the aristocrat of all automobile mechanics. He knows all there is to know about handling new cars, and must necessarily be familiar with every part of the machine. He has a seeming sixth sense which has been developed by years of close attention to the business, and is a veritable wizard at detecting any slight irregularity in the performance of his machine. He knows the meaning of the slightest vibration which is not as it should be, and can tell to the instant just how near perfect the timing is.

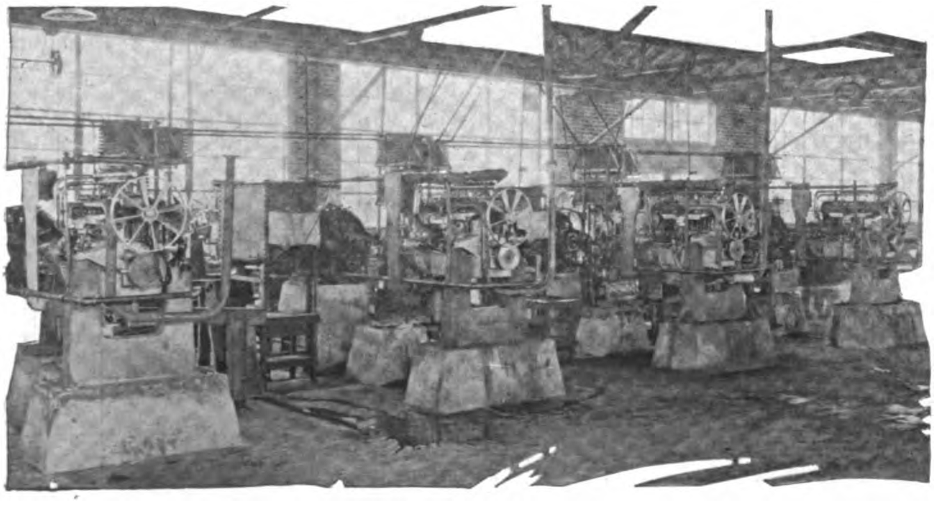
These men, with their odd looking machines, the body of which, as seen in the picture, closely resembles a racing car, think nothing of weather or road conditions, and drive the full 500 miles over country that at times would try the courage of men of lesser experience. They make practically all adjustments en route, and when they drive into the factory yard at night, mud splashed and tired from a strenuous day, there is nothing much to be done to the machine in the way of adjustments. A few bearings to be tightened the least bit, perhaps, or some slight spring corrections, but otherwise the engine is mechanically perfect, for these testers know their business. They work hard to deserve the faith which is reposed in them, and deserve all the credit they get.



Inspecting Flywheel for Balance.

After returning from its 500-mile trial trip the test body is removed and the chassis cleaned. It then gets its color varnish, after which it goes to the "hang-up" department, where it is attached to the body. Here, at its best is seen the result of the production control, for so closely has each operation on both body and chassis been figured that the finished body and the finished chassis come to the hang-up department simultaneously, both having been completed at the same time. The work of hanging the two units is accomplished very handily by means of a padded hoist, and the car is then road tested for a final time. The finished job is then ready for its final coat of varnish and the final inspection as a finished product. Tire racks, floor coverings, lamps and other accessories are attached at this time, and the machine is ready to be sent to the dealer, though, as a matter of fact, most of the cars produced thus far have been driven from the factory by their owners.

All Main Bearings Are Lined Up by Special Machine.



Department Where Engines Are Tested by Dynamometer in Groups of Ten.

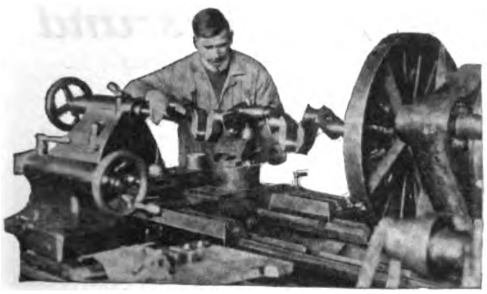
Extreme Care Exercised in Appointing Dealers.

A Stevens Duryea dealer's franchise is recognized as a distinct asset by the better class dealer, who considers himself fortunate in being associated with an enterprise which has established and conformed to the high standard set by this company. The company in turn, believes emphatically that a high grade car must be distributed and sold by a high grade dealer, and that success, to be permanent, depends largely on proper and dignified representation.

Regardless even of unusual sales ability, dealers appointed must be men of the highest standing. With the unusual demand for territory it has been a question of selecting the proper dealer, as a dealer once accepted must become a permanant part of Stevens Duryea.

All territories allotted are for the territory adjacent to the city in which the agency is quartered, and each agent is expected to work his field exhaustively, with the understanding that he can secure additional territory just as soon as result of his intensive sales campaign in the original field justifies. The franchise issued by the company is unique in that it has no cancellation clause incorporated. It differs from some also in the handling of small dealers, each of whom gets a contract direct from the factory, instead of from the distributor in whose territory he may be located, and thus practically does away with the sub-dealer.

The paramount idea of all sales programmes adopted by the Stevens Duryea company is to assure closer cooperation between the factory and the owner, and to develop the personal note, sounded in all that the company says and does, to the highest degree of harmony.



How the Crank Shaft Is Machined.

Success in the automotive field is gained by hard work, study and experience, linked with good and careful judgment. It is the result of constant striving, year after year, for progress along well defined lines of endeavor. The present status of Stevens Duryea is the cumulative result of almost a quarter century of the same striving that has been responsible for every great success, and is representative of the attainment of the highest ideals. The same honest purpose to achieve and maintain a reputation for leadership which has thorough going excellence as its foundation, and lasting worth as its true aim has produced a car that is representative of the ideals of Stevens Duryea—a product that is substantial and unpretentious, a true aristocrat of the motor car world.

The personal note predominates, to the exclusion of all that is stilted and ceremonious throughout the entire organization the officers of which are all young men. There are no private offices in the new plant, and the president, other officials, clerks and stenographers, all occupy one unusually large, well appointed office, which isn't partitioned off by so much as a fancy railing.

Every one of the several executives is a business man, first, last and always, and it is pleasant to be able to say that the entire personnel appears to have been hand-picked for the work to be done. They measure up to the standard that is Stevens Duryea in a manner that would have pleased the founders of the business.

The officers are: President, R. S. Deering; vice president and general manager, G. M. Berry; treasurer, M. R. Leathers; the department heads—sales and advertising departments, P. W. Hine; service and parts departments, R. T. Jenks; chief engineer, T. L. Cowles; factory manager, George Braithwaite; purchasing department, H. S. Beebe.

SPECIFICATIONS IN BRIEF.

Engine—Horsepower: 47.4 (N. A. C. C.). Cooling: Six, cast in pairs; L head type. Bore and stroke: 4 7/16 inches by 5¼ inches. Lubrication: Pressure and splash; oil circulated by gear pump in lower crank case, pressure gauge on dash.

Cooling System—Centrifugal water pump and belt driven fan; cellular radiator and large water jackets; thermostatically controlled circulation with dash motometer to indicate engine temperature.

Ignition—Magneto and battery; two spark magneto and storage battery for starting.

Carburetor—Latest type with dash control for easy starting and atmospheric adjustment.

Fuel Supply—Vacuum feed; 25-gallon tank on rear, including 3-gallon emergency reserve.

Controls—Spark and throttle levers on sector above steering wheel; foot throttle; clutch and brake pedals adjustable; hand brake and gear shift levers on left side.

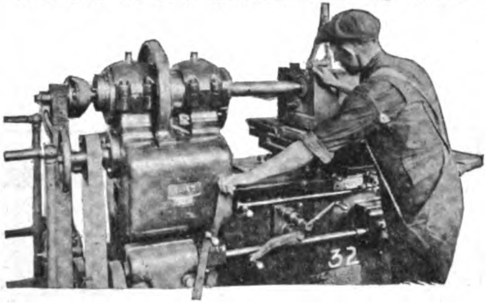
Clutch—Stevens Duryea multiple dry disc.

Transmission—Three speeds forward and reverse; ball bearing; Stevens Duryea patented self-finding quadrant (impossible to mesh wrong gears in shifting).

Drive—Shaft; two universal joints; spiral bevel drive gears; torque tube takes driving torque.

Electrical System—Two-unit 6 volts; starting motor pinion magnetically shifted to engage teeth on flywheel; starting switch on dash. Powerful motor spins engine 130 revolutions per minute. Generator constant voltage type with current regulator.

Battery—120 ampere-hour carried on left side in case between running board and frame.



Special Labor Saving Grinding Machines.

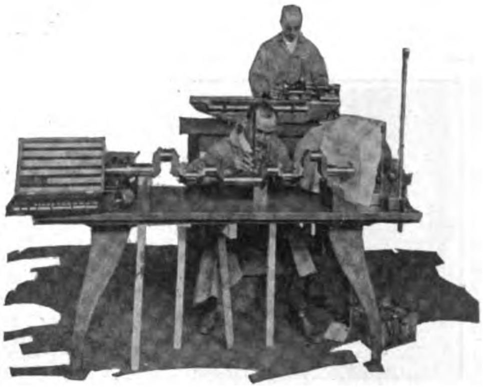
Front Axle—Drop forged, I beam section; special heat treated steel, ball bearing steering spindles.

Rear Axle—Full floating; ball bearing; nickel steel axle tubes and driving members; drop forged differential housing.

Brakes—Service: Contracting on rear wheels; asbestos fabric lined. Hand: Expanding on rear wheels; bronze shoes on wheel drums.

Steering Gear—Semi-irreversible, hardened and ground steel worm and sector; ball bearing; eccentric adjusting bushing.

Springs—Front: Semi-elliptic, 40 inches long. Rear: Three-quarter elliptic, 57½ inches long, underslung on rear axle.



Final Inspection of Finished Crank Shaft.

Lubrication—Alemite system throughout chassis.

Wheels—Artillery type, wood. Wire wheels optional at extra cost.

Rims—Quick detachable; demountable.

Tires—35 inches by five inches straight side cord; rib front, non-skid rear.

Tire Pump—Power driven from transmission.

Tire Carrier—Rear of car for two tires or wheels; Yale locked.

Wheelbase—138 inches.

Tread—56 inches.

Standard Trimmings—Open car: Nickel; upholstered with the finest quality black hand-buffed, hand boarded leather; hand-buffed leather binding, tonneau carpet of finest imported English horse hair.

Closed cars: Brushed silver finish; upholstered in heavy broadcloth of our own exclusive patterns. Silk curtains, cords and laces and superior wool carpets in harmonizing colors.

Color Specifications—Open car body, chassis, guards, bonnet, splash pans and radiator of the same color; wheels and striping in harmonizing colors. Closed car lower body panels, bonnet, fenders, running board shields, radiator and chassis of the same color; upper body panels, belts, striping and wheels of harmonizing colors.

Options: Brewster green light, sage brush deep, green gray deep, Beige brown, coach blue light, coach blue medium, deep wine.

Prices—Model E chassis, $7000; standard body styles; touring, $8000; vestibule limousine, $9500; close coupled sport (four-passenger), $8000; touring sedan (four-passenger), $9500. Custom body styles: Roadster, $8500; town brougham, $10,750; limousine, $10,750.

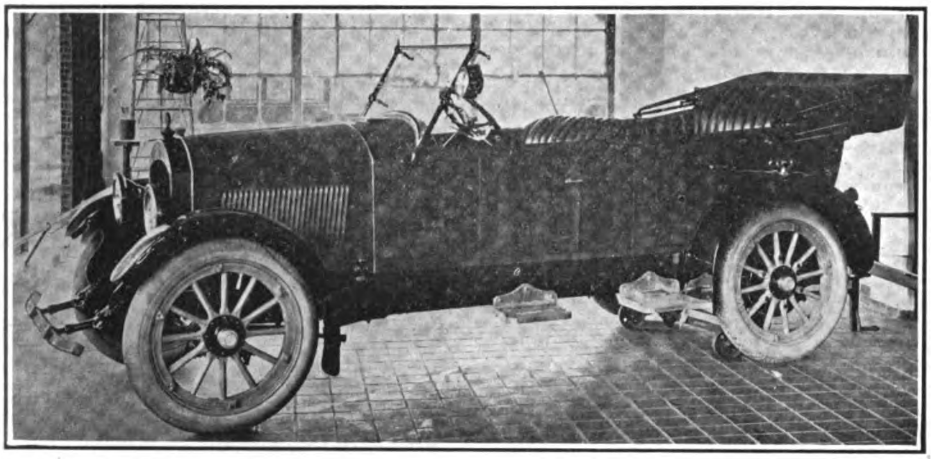
New Models of 1921 Cars, Trucks and



New Premocar Magic Six Model Manufactured by the Preston Motors Corporation, Birmingham, Ala.

PREMO CAR MODEL 6-40 A.

Engine—Falls, Six-Cylinder, Overhead Valve Enclosed, 3⅛ by 4¼, 23.5 Horsepower, S. A. E. Rating.

Lubrication—Force Feed and Splash.

Cooling—Thermo-Syphon or Natural, Service Fan.

Carburetor—Zenith, Especially Designed.

Fuel Supply—Stewart Vacuum, 15-Gallon Tank in Rear.

Ignition—Connecticut.

Starting and Lighting—Dyneto Double-Unit Starter and Generator; Dyneto Lighting.

Transmission and Clutch—Muncie Unit Set, Three Speeds Forward and One Reverse; Borg & Beck Clutch, 10-Inch Multiple Disc.

Wheels—Artillery. Wire or Disc, $75 Extra. **Tires**—Firestone, 32 by 3½. **Rims**—Firestone Type E.

Wheelbase—117 Inches.

Finish—Fabrikoid; Option of Colors.

Equipment—Klaxon Horn, Stewart Speedometer, Large Double-Bulb Head Lights.

Price—$1295 f. o. b. Factory, Birmingham, Ala.

ACE MODEL G.

Engine—Guy Disc Valve, Six-Cylinder, 3¼ by 5, En Bloc.

Lubrication—Own Oil Gauge.

Cooling—Pump.

Carburetor—Special.

Ignition—Atwater Kent.

Starting and Lighting—Auto-Lite.

Transmission and Clutch—Gear Set, Unit Forward with Motor; Disc Clutch.

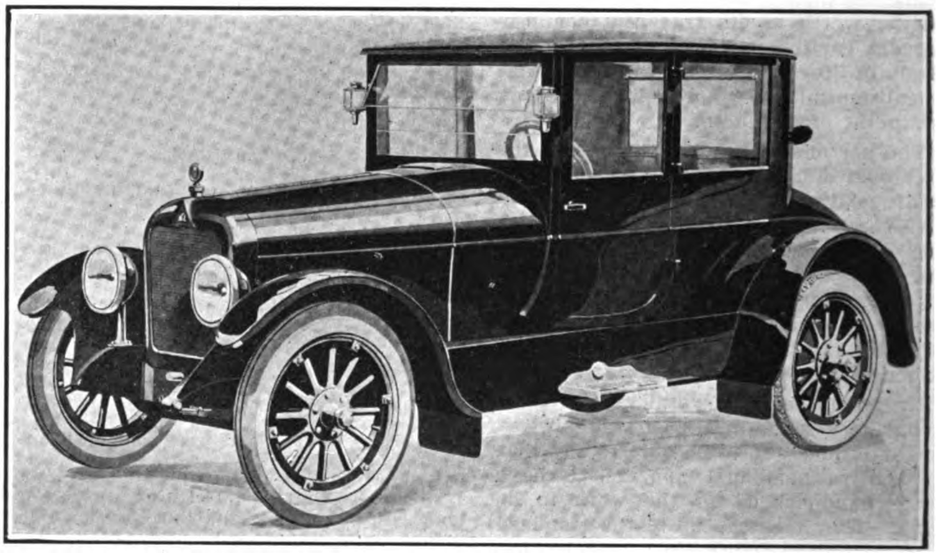
Wheels—Artillery. **Tires**—Firestone, 32 by 4. **Rims**—Firestone.

Wheelbase—123 Inches.

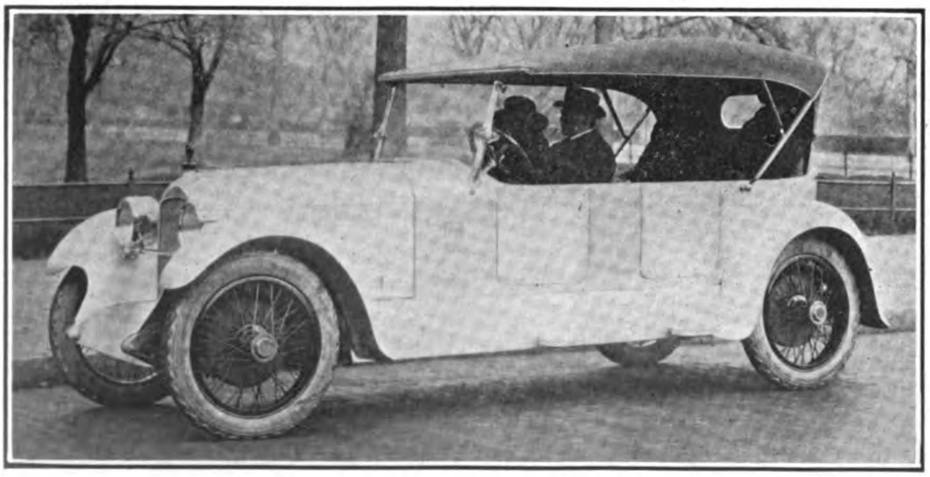
Bodies—Touring, Roadster, Brougham and Sedan.

Finish—Colors Optional.

Equipment—Complete; Individual Side Steps.



Ace Four-Passenger Brougham, Made by the Apex Motor Corp., Ypsilanti, Mich.



Duesenberg Straight Eight Touring Car Made by Duesenberg Automobile & Motors Co., Indianapolis, Ind.

DUESENBERG STRAIGHT EIGHT.

Engine—Duesenberg Single Block, Eight-Cylinder, 2⅞ by 5, 26.74 Horsepower, S. A. E. Rating.

Lubrication—Pressure.

Fuel—Vacuum, tank at rear.

Ignition—Delco.

Transmission and Clutch—Three Speeds Forward and Reverse; Multiple-Disc Clutch.

Brakes—Service, Hydraulic on All Four Wheels by Pedal; Emergency on Propellor Shaft, Hand Lever.

Wheels—Rudge-Whitworth wire. **Tires**—33 by 4⅛, Oversize.

Wheelbase—134 Inches; Clearance, 9⅜ Inches.

Bodies—Aluminum, Straight Line, Stream Line with Well Rounded Fenders and Doors of Ample Width; Individual Steps.

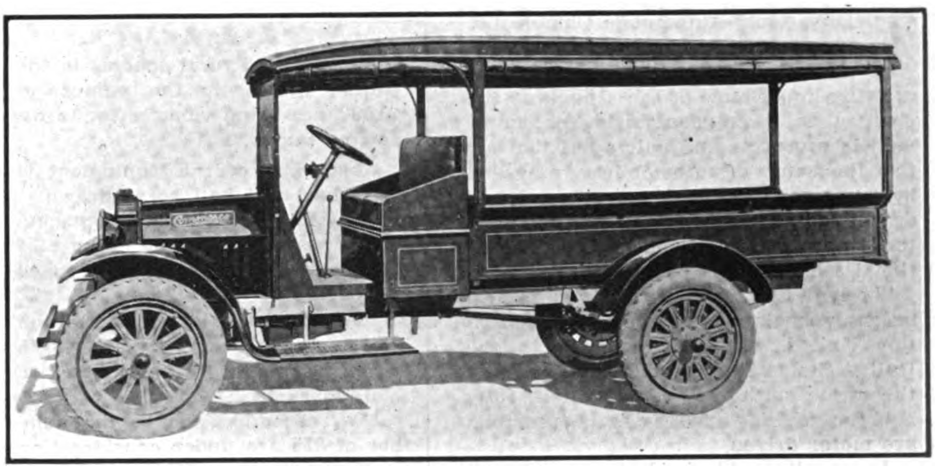
Equipment—Complete, Instruments All on Cowl Board.

Price—Approximately $6000.

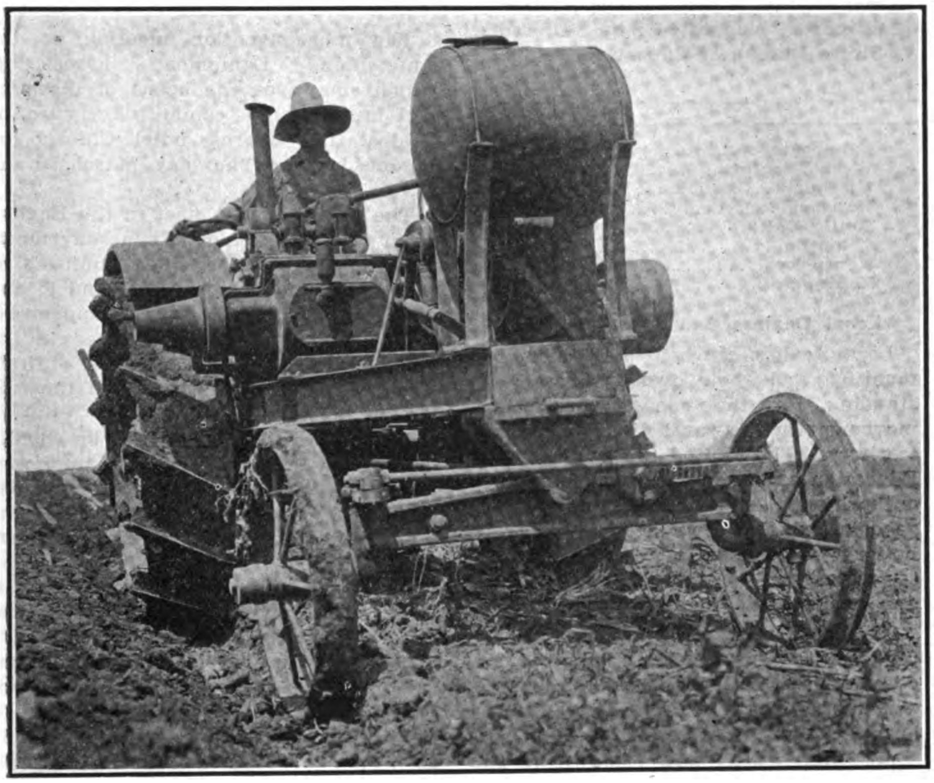
Tractors Now Being Offered to Trade

COMMERCE ¾-TON TRUCK.

Engine—Continental (Red Seal).
Cylinders—Four, En Bloc.
Bore—3¾ Inches.
Stroke—Five Inches.
Ignition—Eisemann G-4 High Tension.
Horsepower—22.5, S. A. E. Rating.
Cooling—Thermo-Syphon System.
Carburetor—Zenith, Stewart Vacuum.
Starting and Lighting System—Bijur Motor and Generator, Willard Battery.
Steering Gear—Jacox Truck Type.
Clutch—Cone Type, 14 Inches Diameter.
Transmission—Detroit Gear, Truck Type, Three Speeds Forward, One Reverse.
Rear Axle—Salisbury ¾-Floating Type.
Gear Ratio—Five to One.
Wheelbase—127 Inches.
Tires—Goodyear Non-Skid Cord Truck Type, 34 by 4½-Inch, Front and Rear.
Tread—56 Inch.
Price—Chassis, Equipped $1350 f. o. b. Detroit, Mich.



New Commerce Model T, Made by Commerce Motor Car Co., Detroit.



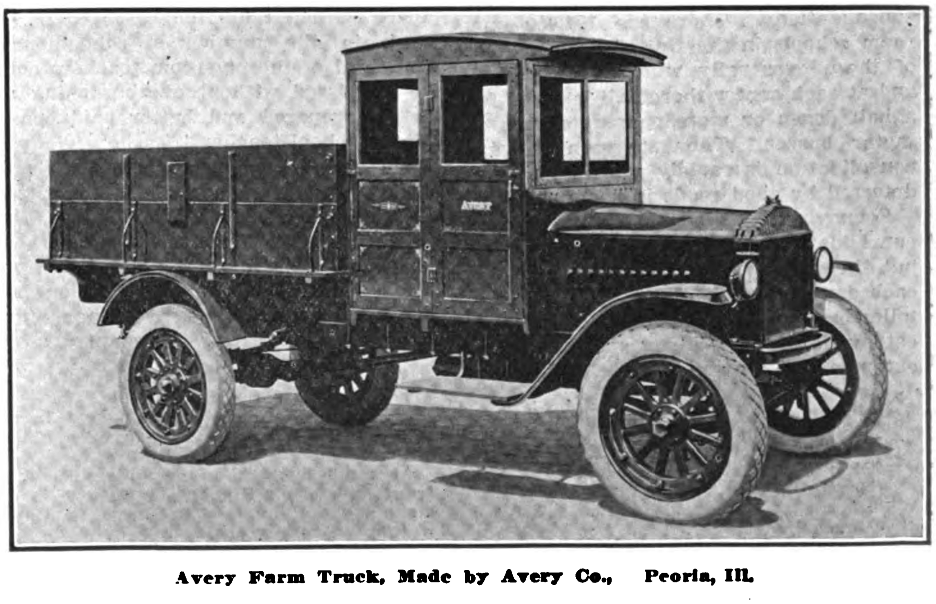
Waterloo Boy, Model N, Made by Deere & Co., Moline, Ill.

WATERLOO BOY MODEL "N" TRACTOR.

Engine—Horizontal I-Head Type.
Cylinders—Two, En Bloc.
Bore—6½-Inch.
Stroke—Seven-Inch.
Speed—750 Revolutions a Minute.
Horsepower—12 Draw Bar, 25 Belt Pulley.
Lubrication—Mechanical Oiler and Splash.
Cooling—Pump Circulation.
Carburetor—½-Inch Schebler.
Ignition—Magneto.
Clutch—Deere Band Type.
Transmission—Enclosed, Two Speeds Forward, One Reverse; Plowing Speed, 2 1/3 Miles an Hour; Road Speed, Three Miles an Hour.
Final Drive—Wheel Type, 53 Inches High, 12 Inches Wide, Fitted with Angle Lugs.
Rear Axle—Operates on Hyatt Roller Bearings.
Length Over All—147 Inches.
Width Over All—77 Inches.
Weight—Less Fuel, Oil and Water, 5850 Pounds.

AVERY ONE-TON FARM TRUCK.

Engine—Special Avery Six-Cylinder.
Cylinders—En Bloc, L-Head.
Bore—Three Inches.
Stroke—Four Inches.
Horsepower—21.6, N. A. C. C.
Cooling—Thermo-Syphon.
Carburetor—⅞-Inch Stromberg.
Starting and Lighting System—Westinghouse Regular Equipment.
Steering Gear—Ross Truck Type.
Clutch—Multiple Disc.
Transmission—Selective Sliding Amidship, Three Forward, One Reverse.
Rear Axle—Avery Torbensen.
Wheelbase—129 Inches.
Tread—56 Inches.
Tires—Goodyear Cords, 34x5-Inch, Front and Rear.



Avery Farm Truck, Made by Avery Co., Peoria, Ill.

Schools as Field for Motor Vehicle Prospects

THE National Automobile Chamber of Commerce, in a recent educational bulletin, calls attention to the growing importance of the schools of the country as a pregnant field for motor vehicle prospects and points out the fact that thousands of automobiles are needed by rural schools today to replace horse drawn equipment, to renew worn out motor transport units and to serve additional school routes.

Twelve thousand consolidated (rural union) schools are now in operation in the United States, according to the United States Bureau of Education; and the same authority reports that fully half the vehicles used for carrying pupils are motor driven.

A consolidated school is one which combines several districts. This means that some of the children must be brought from a considerable distance.

In Massachusetts half of the children for whom transportation is furnished are carried on electric and steam roads, the remainder by motor vehicle or horse drawn conveyances. If the Massachusetts percentage holds true for the country as a whole there are approximately 18,000 automobiles and as many wagons or carriages used in school transportation. This assumes that the 12,000 consolidated schools have a conservative average of 150 to 180 pupils carried per school.

Most of the 18,000 or more horse drawn carriers can be profitably replaced by motor vehicles, except in certain sections where bad roads are a barrier to automobile use.

Massachusetts Recommends Motor Vehicles.

"The motor bus is fast replacing the horse drawn vehicles because of its superiority in regularity, speed and general comfort," says Bulletin No. 115, Massachusetts Department of Education.

"On the whole—transportation by motor bus is found to be somewhat less expensive than by horse drawn vehicles," says the same authority, giving figures.

Much more of the business of supplying motor transportation to schools, however, will be available in the case of new consolidations. There are 194,000 one-room schools in the United States. Most of these eventually will be centralized, and at each center there will be need for a half dozen or more passenger cars or motor busses. The movement toward consolidation is rapidly growing, though deterred by good roads in some sections.

Pennsylvania is considering 275 new consolidations at the present time. Iowa put in a new consolidated school for each day of the school year in 1920. The following partial list, compiled from latest available data, gives an idea of the extent of the movement:

State	No. of Consol. Schools
Indiana	1002
Ohio	913
North Dakota	526
Iowa	360
Massachusetts	333
Minnesota	302
West Virginia	171
Missouri	150
Kansas	140
South Dakota	140
Colorado	114
Kentucky	80
Nebraska	61

Consolidated rural schools in the United States, to the number of 12,000, are using vehicles for transporting pupils.

About half of this equipment is motorized and half horse drawn.

The motor bus is fast replacing the horse drawn vehicle because of its superiority in regularity, speed and general comfort.

One-room schools, not yet consolidated, to the number of 194,000, promise a great future motor vehicle market.

New consolidations to the number of 275 are under consideration in Pennsylvania alone.

Automobile bus body improvements for school transportation purposes suggested by United States Bureau of Education.

Local Dealers Can Aid Movement.

Local dealers can help both their communities and their own businesses by standing for the consolidated school movement in the rural districts of their territory. The United States Bureau of Education and other leading educational authorities recommend consolidated schools, which mean better buildings, better paid teachers and consequent better instruction for the children than the one-room schools can afford.

The relation of good roads and the automobile to education is briefly and forcibly stated by United States Commissioner of Education P. P. Claxton as follows:

"If there were more good roads and more auto busses in our rural counties, the consolidation of schools could go on apace with a reduction of 50 to 80 per cent. in the number of schoolhouses. One-third of the one-room teachers could be dismissed without overburdening the better prepared and better paid consolidated school teacher."

Official Suggestions on School Bus Needs.

J. C. Muerman of the United States Bureau of Education, Washington, has prepared the following suggestions on body styles and service instructions. These suggestions are based on hundreds of inquiries and recommendations from schools all over the country:

Bodies.

Top ventilators are desirable.

Preferable to have driver's seat in the same compartment as passengers, so that he can keep control of children.

As much weight as possible needed on front wheels. Present tendency is for large school busses to have too much weight on rear wheels.

Two exits important, in case of fire, capsizing or stalling in drifts.

Where four rows of seats, running lengthwise of bus, are provided, ample aisle space should be allowed, using maximum possible width of body.

Upholstery—if not too expensive, removable khaki upholstery over leather or leatherette would be preferable to plain leather currently used, as the khaki could be removed and washed.

Service Suggestions.

Seller should provide adequate service instructions.

Minimum garage equipment for minor repairs should be stated.

Definite arrangements should be made for service station work.

Statement needed of how long paint should stand up, and what grade of paint is needed for repainting.

A. E. A. MIDCONVENTION MEETING MARCH 30.

The mid-convention meeting of the Automobile Equipment association, which comprises the board of directors and membership committee, is to be held at the Congress hotel, Chicago, on Wednesday and Thursday, March 30 and 31.

The directors will meet in the English room at 10 o'clock on Wednesday morning and the membership committee at the same time in parlor A-6 and 8, and any applicant who desires to appear before the membership committee in the interests of his application is entirely welcome to do so, as has been the custom in the past.

At this meeting, which will be equally divided between jobbers and manufacturers, there will be a short and separate session of the manufacturers and of the jobbers where they can counsel and confer on matters of interest to them and later both bodies will meet in joint session and if any member of the association has anything they would like to have brought up of a helpful or constructive nature, if sent to Commissioner Webster, it will be properly presented to the body before whom it should really go. This is being done in the thought that at this time some matters may come up of interest to either branch of the industry that may be taken up and started in a preliminary way, to be further discussed at the June convention at Mackinac Island if not properly disposed of at the mid-convention meetings.

The meetings will be in session throughout Wednesday and Thursday, when it is expected final adjournment will be had.

NEW MAXWELL DEALERS.

Lou H. Rose of San Francisco, Cal., and the Conduitt Auto Co. of Indianapolis, Ind. have taken over the distribution of Maxwell cars in addition to the Chalmers.

The Wallace Buggy Co. of Chattanooga, Tenn., and the Omaha Motor Sales Co. of Omaha, Neb., are now handling both Maxwell and Chalmers lines.

NOTES OF INDUSTRY AND TRADE

Is to Manufacture New Pleasure Cars

A new company, known as the Gray Motor Corporation, has been formed at Detroit for the manufacture of a new automobile in four models. The prime movers in the enterprise are Frank L. Klingensmith, who recently resigned as vice president and treasurer of the Ford Motor Co., and Frank F. Beall, for many years vice president in charge of manufacturing of the Packard Motor Car Co.

The company will occupy the factory and equipment of the former Gray Motor Co., Mack avenue and the Terminal railroad.

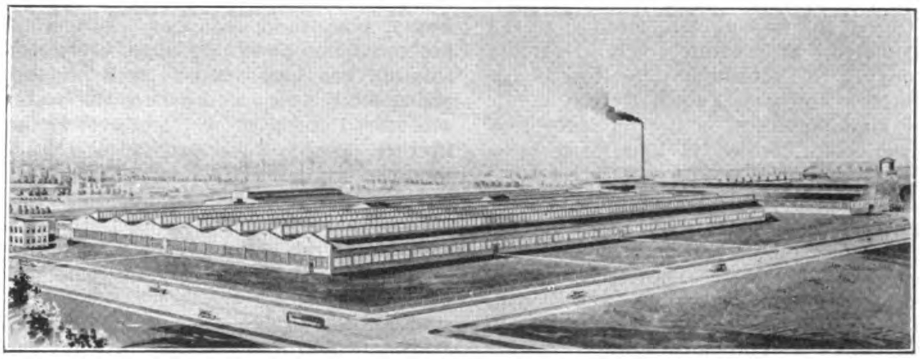
A four-cylinder motor designed by Mr. Beall will go into the new machine. It has a long stroke, small bore and overhead valves, for which simplicity and economy are promised. The wheelbase will be 112 inches and the four-cylinder overhead motor 3½ by 5.

The car will be marketed through about 10 distributing centers, these having assembly plants. The cars will be shipped from Detroit unassembled, thereby reducing expenses from the Detroit office. It automatically will lower freight charges to the purchaser.

Before coming to Detroit Mr. Beall was in the bicycle manufacturing business and spent 12 years with Browne & Sharpe in Providence, R. I. He was one of that company's chief executives when he resigned to join the Packard staff.

William A. Blackburn, for 12 years with the Cadillac Motor Car Co., will be factory manager of the new corporation.

The officers are as follows: President, Frank L. Klingensmith; vice president and general manager, Frank F. Beall; treasurer, George H. Krichner, president of the First State bank of Detroit; secretary and assistant treasurer, J. B. Moran.



The New Columbus Plant of the Timken Roller Bearing Co. at Columbus, O., with the Main Bearing Factory in the Foreground. The Heat Treating Plant is in the Rear to the Right and Offices and Warehouses to the Left.

NAMES OF BIG AUTO OFFICE BUILDINGS CHANGED.

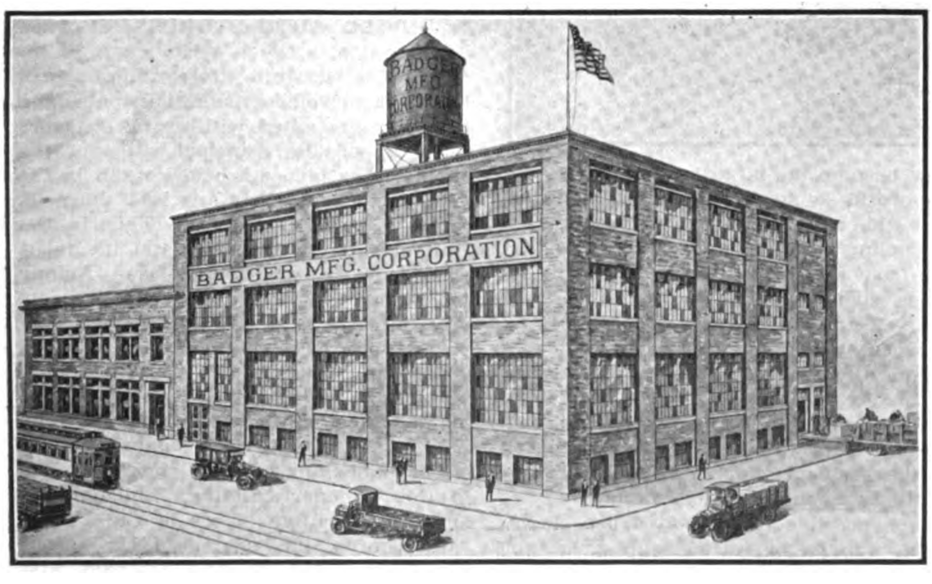
A certificate has been filed with the secretary of State of Michigan amending the articles of association of the Durant Building Corporation so as to change the name of the company to "General Motors Building Corporation."

The company's new office building at Cass avenue and West Grand boulevard, Detroit, will be known as the General Motors Building.

The office building at the corner of 57th street and Broadway, New York city, will be known as the "General Motors Building," instead of the Chevrolet Building, as heretofore.

SHERIDAN CARS EQUIPPED WITH PERFECTION HEATERS.

Announcement has just been made by the Perfection Heater and Manufacturing Co., Cleveland, O., that a contract has been closed with the Sheridan Motors Co., Muncie, Ind., whereby Perfection heaters will be a standard equipment on all Sheridan closed cars. This comfort feature is in keeping with the Sheridan slogan, "The Complete Car."



New Factory Building of Badger Manufacturing Co. in Milwaukee, Wis., Is of Cement and Brick Construction and Exceptionally Well Lighted and Ventilated.

CONNECTICUT CO. AWARDED ANOTHER INJUNCTION.

It is stated that Judge Frank Cooper of the United States District Court of northern New York has made a decision by which a permanent injunction is made in behalf of the Connecticut Telephone & Electric Co., Meriden, Conn., restraining the Denlinger Lamp & Ignition Co., Rochester, N. Y., from the sale of ignition parts which it is claimed were made in imitation of and violating the patents of the plaintiff company.

The Connecticut company is endeavoring by means of court action, as well as by the education of the trade, to eliminate from the market the imitation parts which it claims are of inferior quality, unfailingly give poor service and cause dissatisfaction to users of the Connecticut system.

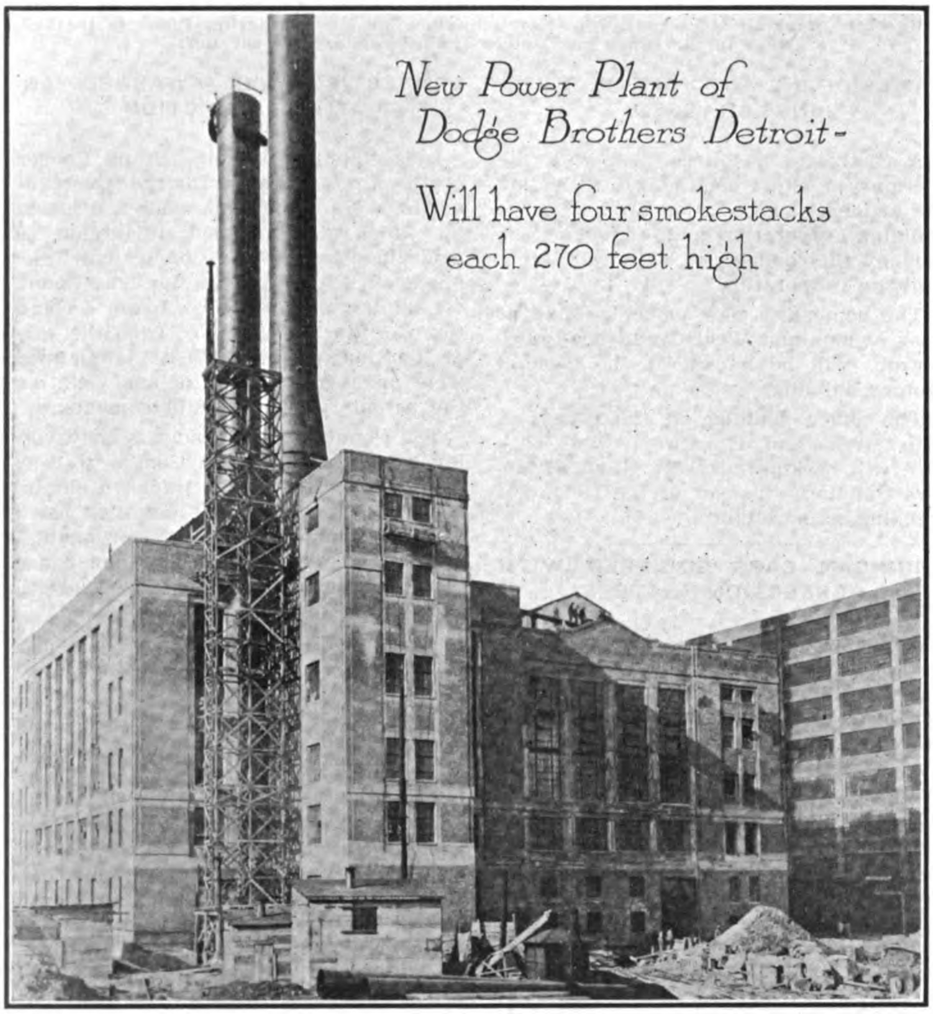
RECORD FRANKLIN SALES.

Business for the month of February as reported by the Franklin Automobile Co. of Syracuse shows that sales are keeping up to a high level. By Feb. 15 the entire month's production had been sold and to meet the overdemand the factory was called upon for 100 more cars than planned for. Shipments for the month totaled 952 cars, or within 35 cars of the best February in the company's history—this occurring last year. A new record would have been hung up this year but for the fact that February, 1921, had one less day than February, 1920.

Even with the Franklin factory working on a 40-car-per-day programme, which is the present rate of production, it found itself unable to keep up with orders. During February the total number of orders received aggregated 1107, and even the 952-car output fell short of filling orders for February shipment by 155 cars. The manufacturing schedule for March calls for the production of 1031 cars.

The Simms Magneto Co. of East Orange, N. J., reports for 1920 a net income of $71,661. This compares with $94,998 earned in 1919 and $74,414 in 1918.

Mammoth Power Plant and Cooling Tower for Dodge Brothers Plant



One of the predominant features of the expansion programme being rapidly brought to consummation by Dodge Brothers, the well known Detroit motor car manufacturers, is the immense new power plant, which is illustrated herewith.

Tons and tons of coal will be consumed there beneath eight huge boilers, but not one shovel will be in sight. It is to be a "shovel-less" plant from beginning to end. No coal will be shoveled in and no ashes will be shoveled out. Everything is to be automatic. A car dumps its fuel cargo into a hopper and passes on. Soon another car comes and receives a load of ashes—and no human hand will have touched the coal in the entire process of transformation.

The power plant is designed for an installed capacity of 40,000 kilowatts and it requires approximately 25,000 gallons of water a minute for each 10,000 kilowatt unit. There is no natural water supply within miles of the factory. To take water from the city mains and then waste it after passing once through the condenser, would be out of the question. Not only would the cost be prohibitive—it would be about 70 cents a thousand cubic feet, or $560 an hour—but the drain of the city's supply would be far too heavy. In other instances where similar problems presented themselves the solution has been found in a cooling pond, a large reservoir where the water was stored and used over and over again. In this case, however, so large a tract was not available. Not only are property prices extremely high, but there was danger that the spray rising from such a pond would damage newly manufactured cars and parts. So this plan also was abandoned.

From this problem or conglomeration of problems grew the plans for what has now become the largest cooling tower in the world—a structure 146 feet long, 32 feet wide and 104 feet high. It is capable of cooling 18,000 gallons of water a minute from a temperature of 105 to 85 degrees when the outside temperature is 72 degrees and the relative humidity is 69 per cent. With other atmospheric conditions the water will be cooled to within 25 degrees of the existing dew point with a minimum temperature of 45 degrees. This tower effectively disposes of the problem which confronted Dodge Brothers construction engineers. It makes possible the repeated use of the same supply of water, with a loss of only five per cent. due to evaporation. The tower is of the most substantial type, capable of withstanding a wind pressure of 90 miles an hour.

Four immense stacks, each 270 feet high and 13 feet in diameter, are being erected. They will be among the largest in the country. Although the power house was not started until May 18, 1920, it is now practically ready for operation. The first fire was started Feb. 1. Many of the factory executives were present to observe the ceremonies. Built at a cost of $3,500,000, the power plant is without question one of the engineering triumphs of modern industry. It is significant, in this connection, to observe that the entire plant was built by Dodge Brothers construction department. With this plant in operation the factory is safeguarded against any future emergencies such as the breakdown of the central power plant, on which many of Detroit's largest industries are dependent.

The new power house is only one of a number of large expansion projects now in progress at Dodge Brothers, the total cost of which will be approximately $8,000,000.

TIMELY NEW LITERATURE OF INTEREST TO THE TRADE.

The Barrett Co., maker of the well known Tarvia products, has just issued from the press a set of booklets showing the application of Tarvia on roads and for other purposes.

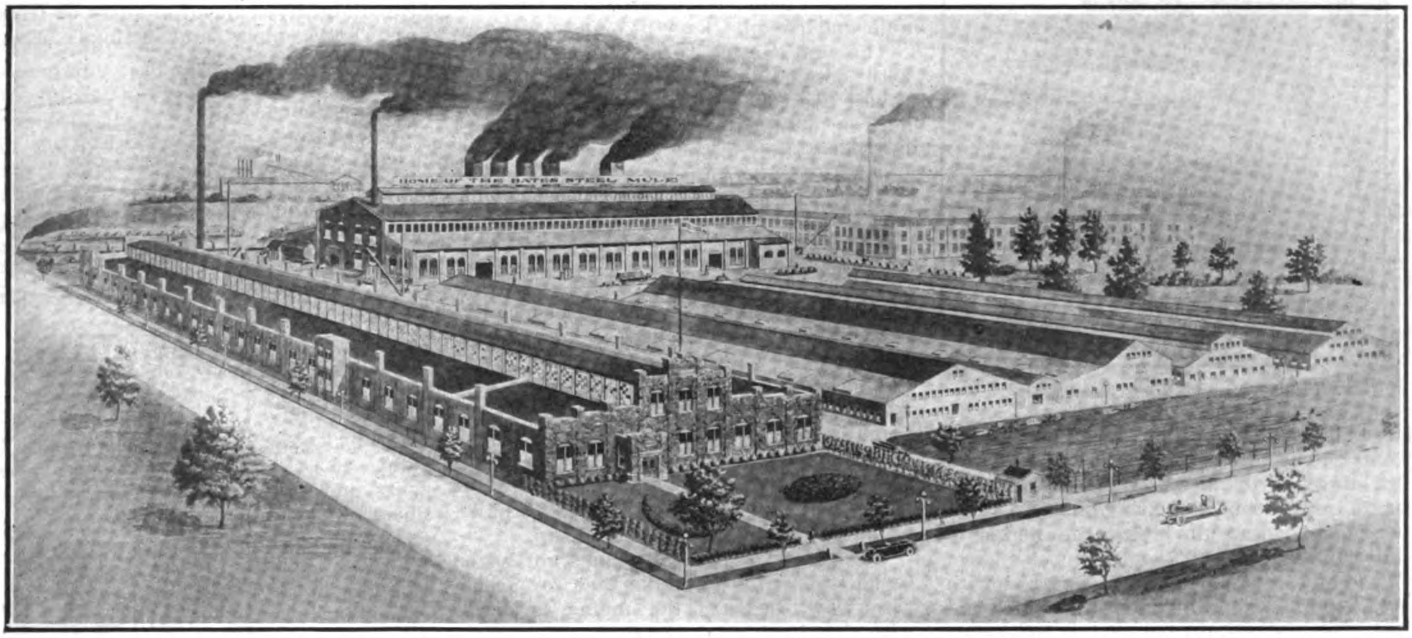
These brochures are entitled, respectively, "Tarvia Pavements—A Booklet Showing Step by Step in Actual Photographs the Construction of a Tarvia Pavement;" "How a Tarvia Macadam Roadway Is Constructed" and "Tarvia Preserves Roads. Prevents Dust." These are all illustrated in the superb manner characteristic of Tarvia publicity, and the text is replete with interesting and valuable information concerning road construction and maintenance and similar matters.

The Barrett Co. maintains distribution headquarters in all of the principal cities of America and Canada.

UNITED AUTO STORES NEWS.

The United Auto Stores, Inc., which has its home offices in Philadelphia, and is now represented with stores in more than 35 of the principal cities of the country, has placed a house organ in the field to keep properly apprised those interested in its activities. This is the United Auto Stores News and its debut was made with the March issue. Among the features in its contents of more general interest is a comprehensive symposium on the idea of real service on which the readers of the "News" are invited to express an opinion as to the highest ideal of the term and its practical application to every day business.

The publishing office of the "News" is in the Widener building, Philadelphia. and the executive offices of the United Auto Stores, Inc., are at 1411 Walnut street, Philadelphia, and 18 East 41st street, New York City.



HOME OF THE BATES STEEL MULE

Magnificent Plant of the Bates Machine & Tractor Co., Joliet, Ill., Where the Bates Steel Mule Is Produced to Supply an Increasing Demand.

Ford Outlines Plans for Expansion

In what is claimed to be the first authoritative statement' in regard to his plans for the expansion, present and future, of the mammoth Ford enterprises, Henry Ford gave out the following information based on conditions the last week in February:

That plans for the new power project and factory at Green Island, near Troy, N. Y., are being moulded into shape following the recent permit of the United States government to go ahead with the work.

That the Ford factories are turning out at present about 3000 automobiles and 200 tractors each day, which is pretty nearly the pre-war schedule, even with the smaller number of men employed. He expects the demand to increase just as regularly as it did before 1917.

Estimates from a reliable source place the number of men at work in the Highland Park Ford plant at about 24,000 and at the Rouge plant about 6000.

That there were 95,000 cars in the hands of dealers and 30,000 in process of construction at the branches when the Highland Park plant closed Dec. 24.

That 57,000 cars were sold during January, liquidating the 30,000 completed in the branches and 27,000 of the dealer stocks.

That retail sales for the first half of February were 42,000.

That total production for February was 35,000.

That sales through February approximated 85,000, assuring the liquidation of 50,000 more of the dealer stock.

That dealer requirements for March are 70,000, necessitating a production schedule of 3100 daily, within 1100 of the record for daily production.

That working forces and production will be increased steadily until normal production is reached.

That continued operation and increasing production is contingent on steel prices and that if the company is forced to again shut down it will be due solely to prohibitive steel prices.

That there will be no reduction in the wages on specific jobs and no reduction in the minimum scale.

That the Ford Motor Co.'s reply to reports of financial stress is the announcement of steadily increasing working forces and output scheduled to reach close to normal by the end of March.

That the executives now in charge at Highland Park and River Rouge will constitute the permanent official personnel with official titles in most cases eliminated.

STROMBERG PASSES DIVIDEND.

Directors of the Stromberg Carburetor Co. have passed the quarterly dividend on common stock. The company paid a dividend of 50 cents in the December quarter. The directors said the action was taken because of general business conditions. Dividends were first paid by the company in 1917 at 75 cents a share for the quarter. In August, 1918, the rate was increased to $1 quarterly, but last December it was reduced to 50 cents.

Net profits for 1920 operations, after payment of all expenses and charges and after making allowances for Federal taxes, were estimated at approximately $410,000, or $5.45 a share on the 75,000 shares of capital stock outstanding. In 1919 the profits were $401,328, or $5.35 a share.

Paul M. Hutchins, agent for Hudson and Essex cars at Grand Rapids, Mich., has added the Lafayette car to his line, which he will distribute in western Michigan.

Earnings of Car and Accessory Makers

Pierce-Arrow Motor Car Co.'s report for the last year shows net profits after charges and Federal taxes amounting to $1,769,914. This was equal, after preferred dividends, to $3.88 a share earned on the 250,000 shares of common stock of no par value. The net profit the preceding year was $2,491,070, or $6.75 a share.

Continental Motors Corporation's report for the fiscal year shows net profits after Federal taxes of $3,567,504, compared with $3,425,725 in the preceding year. After dividends had been paid last year there was a surplus of $2,517,611. The balance sheet shows inventories of $11,164,999, an increase of more than $5,000,000 over the same item in 1919.

The Mullins Body Corporation for the year ended Dec. 31 reports net sales of $3,711,420 and net profits after Federal taxes of $701,290. After preferred and common dividends there was a surplus for the year of $211,290.

The Peerless Truck and Motor Co. for 1920 reports a net income after charges and Federal taxes of $1,063,306, equal to $5.21 a share on 200,000 shares ($50 par) outstanding against $872,154, or $4.36 in 1919.

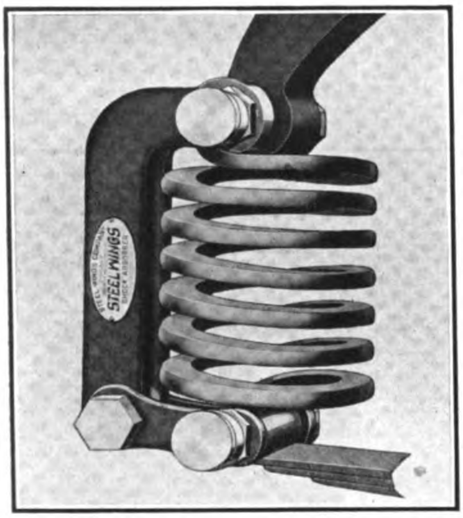
The Studebaker Corporation's report for 1920 shows net profits of $9,822,854 after deductions of Federal taxes, depreciation and other fixed charges. This was equivalent to $15.18 a share on the $60,000,000 of common stock, compared to earnings of $20.69 a share on the $45,000,000 of common stock outstanding at the close of 1919. In December, 1919, however, the capital stock was increased from $30,000,000 to $45,000,000, so that if the $30,000,000 had prevailed until the close of the year the 1919 earnings would have been $28.54 a share.

STEEL WINGS SHOCK ABSORBER.

Steel Wings Triple Purpose Springs for Ford fronts are designed to eliminate the necessity for shock absorbers on these cars. The spring contains two more leaves than the Ford front spring and is 10 inches longer. It is made of alloy steel, oil tempered.

This spring may be installed on a Ford without changing the construction—that is, without drilling any holes. It is the work of a few moments only.

The Steel Wings spring gives additional strength through its boltless center feature, which eliminates liability of breakage at the center bolt. The Steel Wings spring is locked together with a patented corrugated center lock. The hangers are extra heavy drop forgings.



Steel Wings Shock Absorber.

Additional stability is obtained by the extra long spring which carries the load of the car to the extreme end of the axle, preventing side sway, making steering easier and obviating the necessity for stabilizers.

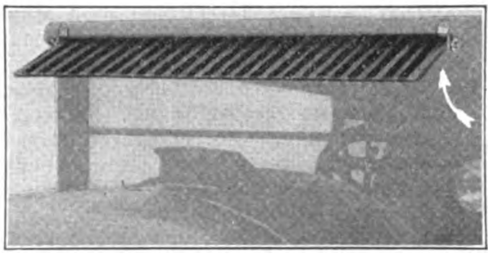
Steel Wings springs are equipped with the Stanley self oiling feature, which not only makes the upkeep easier, but keeps the spring constantly lubricated, thus insuring its perfect resiliency at all times.

Steel Wings Triple Purpose Springs for Ford fronts are guaranteed for the life of a car.

Manufactured and sold by the Steel Wings Co., 417 South Dearborn street, Chicago, Ill.

LAFAYETTE AUTO VISOR FOR ALL CARS.

The old established firm of J. Horat Co., has recently brought out a very practical and cheap visor. The insistent demand of automobile owners for a device which will protect the windshield from rain, snow, sun and glaring headlights has been thoroughly analyzed by this company with the result that it has perfected a visor very simple in construction and with several exclusive patented features.



Lafayette Auto Visor.

The universal bracket by which the visor is attached permits it to be applied to any open or closed car. The cover is ingeniously designed so that it may be removed and replaced without disturbing the frame of the visor. In order to meet the demand of different localities, covers of several different patterns of striped material are furnished, as well as solid black. Simple adjustment to any angle is provided for and these adjustments may be made from the seat.

The desire of the manufacturer was to furnish a visor which would not only be adaptable to every make of car, but one that would at the same time be durable and cheap.

The LaFayette Auto Visor complete with one cover is sold for $5. Extra covers are $3 each. Further information may be obtained from the J. Horat Co., Lafayette, Ind.

THE ONE HAND-Y VALVE GRINDER.

The Knight Engineering and Sales Co., Los Angeles, Cal., recently placed on the market a new valve grinder especially designed for the facing of automobile valves.

This new tool can face a set of 12 valves in less than 20 minutes so efficiently that it only requires one application of grinder compound to seat.

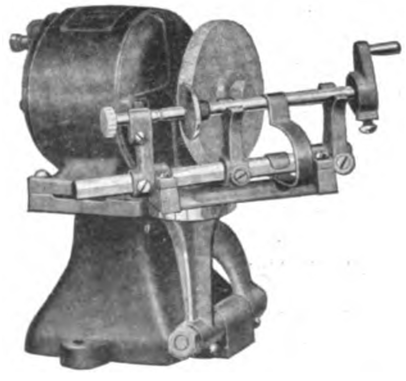
Valves of any size and of any angle can be faced with the One Hand-Y Grinder without any special set up.

The center of the valve does not have to be true with the valve face for accurate work because the facing is done with the shank as the center.

The grinder is equipped with a 1/12 horsepower Westinghouse motor.

Do it with the

ONE-HAND-Y
VALVE GRINDER



BLUE RIBBON GRAPHITE SPRING OIL.

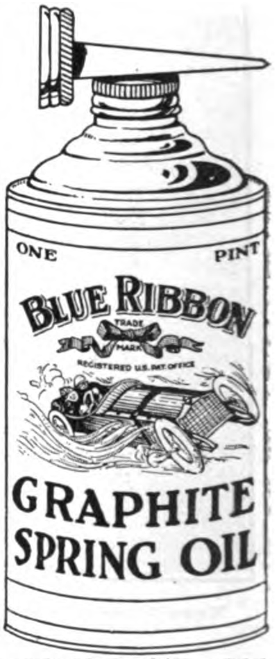
As is well known, squeaky springs or squeaks anywhere else usually mean poor or improper lubrication. It is a hard, strenuous job to lubricate springs or other parts with ordinary oil or grease where it requires the use of spreaders or wedges or the removal of springs or parts to clean off rust.

It is stated that Blue Ribbon Graphite Oil is a favorite with garage men and automobile owners because it makes short work of a mighty unpleasant job, and not only gives perfect and permanent lubrication. but eliminates and prevents rust and produces a smooth sliding contact free from friction, which insures comfortable and easy riding without the nerve racking squeaks and unpleasant noises which take the joy out of motoring.

Frozen or Rusty Connections.

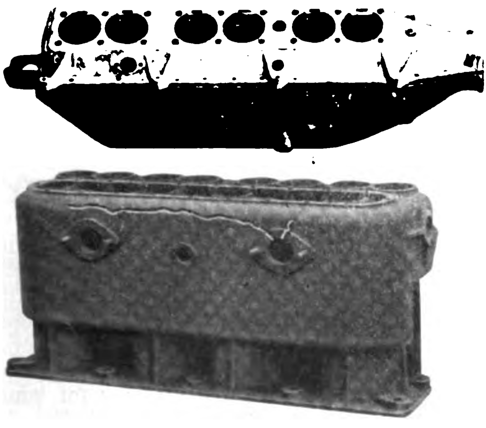
Nothing is more aggravating to the garage man, machinist, plumber or steam fitter than the removal of rusty or frozen nuts, bolts, pipes and fittings. Every mechanic has gone through this experience—fumed, fussed, cussed and tussled with aching muscles and skinned hands.

A shot of special quick penetrating graphite oil from the Blue Ribbon Handy Oiler goes right to the spot and relieves the resistance or friction whether it is caused by rust, corrosion or lack of proper lubrication, leaving a thin deposit of graphite, which retains just enough of the lubricant to prevent rust, dirt or grit from forming, due to the smooth, close graphite contact. It likewise is stated to prevent about 90 per cent. of spring breakage, to increase tire mileage and preserve the life of the car all around, as nothing will rack and add to its normal wear and tear quicker than springs and other working parts which lack proper resiliency and freedom of action.



Blue Ribbon Graphite Spring Oil is put up in half-pint and one-pint handy oil cans, and is manufactured by the International Metal Polish Co., Inc., Indianapolis, Ind., which will supply prices of this and its other products on request.

Illinois collected $5,915,646.17 in motor vehicle fees during 1920. There were 503,761 pleasure cars registered and 64,997 motor trucks, a total of 568,758.



Showing Castings After Being Repaired with F. A. A. Aluminum and Cast Iron Mends.

SUBSTITUTE FOR ACETYLENE WELDING.

A product which is claimed to make a permanent repair on automobile motors. as well as aluminum and cast iron castings, is now on the market. The F. A. A. Aluminum and Cast Iron Mends are spoken of as substitutes for acetylene welding. F. A. Albertus, the originator of the F. A. A. products, has had many years experience in practical shop work and his products are the result of many trying and difficult experiments.

In repairing iron or steel a filling material of the proper chemical composition must be used to bind the metal together. The importance of this composition cannot be over-estimated, since the strength and structure of the finished repair depends almost entirely upon the filling material.

The Cast Iron Mend is stated to meet the above requirements and to be used successfully in repairing all classes of gray iron, malleable iron and steel. It is especially valuable in the repairing of scored cylinders and cracked water jackets. No machining is required, nor is heat applied to the casting, thus avoiding warping and cracking. Cast Iron Mend is applied with an ordinary copper soldering iron, and muriatic acid cut with zinc.

In the case of the Aluminum Mend, the process is somewhat different. First the parts to be repaired are filed clean, then heated with a blow torch. After applying a small amount of the mend and rubbing it in well with a wire brush, the parts are ready to be placed together and all cracks and crevices filled with the mend. After cooling the repair is filed off and polished, leaving a finished job, the same color as aluminum.

Aluminum Mend is compounded especially for the purpose of retarding oxidation of the aluminum. When oxide is present it is rapidly dissolved by the mend, producing a repair similar in structure, composition and color and equal in strength to the original metal.

All of the F. A. A. products are subject to rigid tests and thorough inspection, thus assuring a perfect product to the trade.

The sales policy will be to dispose of the products through distributors and jobbers.

In territory not covered by distributors and jobbers, products will be supplied direct to the consumer.

The accompanying illustrations show repair work after being mended by the F. A. A. Cast Iron and Aluminum Mends.

These goods are made by F. A. Albertus & Co., 206 Ninth street, Milwaukee.

SAFETY ROBE RAIL BALKS SNEAK THIEVES.

One of the most celebrated thief catchers in the country, who is an inspector in the New York metropolitan police department has said:

"Automobile owners throughout the United States, in the smaller communities as well as in the larger cities, have undoubtedly sustained a greater net loss through the theft of lap robes, coats and similar portable possessions left in their cars than through all other forms of automobile thievery combined."

The Safety Robe Rail, which is being marketed by the Safety Robe Rail Corporation, 1776-1778 Broadway, New York city, is designed to obviate just this annoyance and loss. It is attached to the car in the same place and manner as the old style robe rail and occupies no more space.

As will be noted from the cut the rollers are eccentric and tighten if an attempt is made to remove a robe or other object from them.

When they are not in use, lap robes, wraps, coats, etc., are held so securely by the Safety Robe Rail that physical force cannot remove them. The sneak thief's technic, of course, does not permit the use of attention attracting tools. However, even were he to use a "jimmy," he could not separate the Safety Robe Rail from its charge.

Notwithstanding the relentless, potential power of the Safety's grip, it holds gently whatever is entrusted to its care. Whether holding one article or several, the Safety's grip automatically adjusts itself to just the proper pressure.

The Safety Robe Rail is unreservedly guaranteed by the maker. The price is $20. In ordering the make and model of car should be given.

HIGH LUSTER FINISH FOR AUTOMOBILE USE.

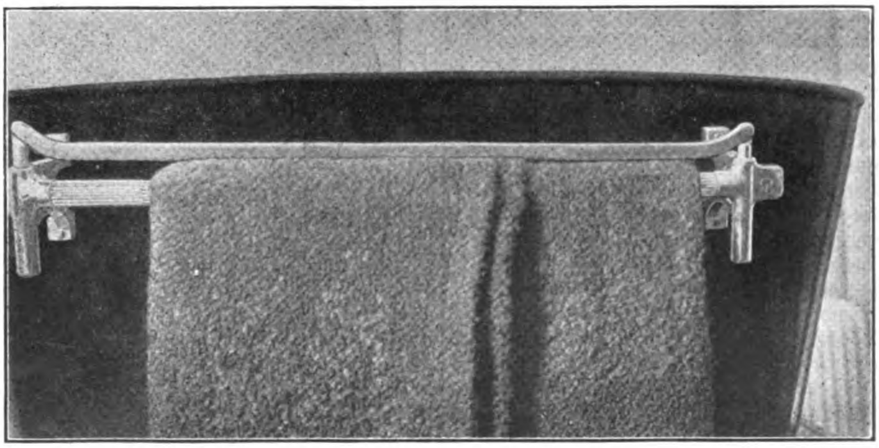
That substitutes seldom satisfactorily take the place of originals is true even if trite, and this may be illustrated by experience in trying to refinish any highly enamelled or varnished surface, such as a new automobile body. To the H. L. Feasel's Laboratory, 9 Debrosses street, New York city, may be attributed the distinction of making and placing on the market a liquid the properties of which are said to be such that the original finish is protected and preserved by its use. Not in any sense of the word is it a polish — in every sense of the word it will preserve and protect. It is sold under the name of High Lustre Finish, and is guaranteed by the H. L. Feasel's Laboratory to preserve and protect, not renew, any varnished or enamelled finish.

H-L-F
High Lustre Finish
A Product of the
H. L. FEASEL'S LABORATORY

High Lustre Finish cleans, rubs dry, lasts. An old soft cotton cloth is all that is needed. Applied in this manner, not lavishly, but as reasonable necessity demands, the lustre and beauty of the original finish will be indefinitely retained. The more you rub the better, because H. L. F. removes all foreign matter when so applied. Its component parts contain no injurious ingredients, such as turpentine, alcohol, acetic acid, etc., which tend to destroy and literally dissolve the original finish; thus the purchaser of High Lustre Finish is assured that its use on any enamelled or varnished surface will not harm or destroy the original finish.

High Lustre Finish is packed one dozen bottles to the case and an attractive counter display, with signs, descriptive folders, etc., are supplied to dealers.

The price list is as follows: One-half pints, $6 a dozen; pints, $12 a dozen; quarts, $18 a dozen.



The Safety Robe Rail in Position on Back of Seat.

Personal News of Industry and Trade

New Representatives of Stutz Co.

Fred P. Steele, for many years associated with the automobile industry and favorably known to distributors from coast to coast, has joined the Stutz Motor Car Co. of America, Inc., and will represent the factory in the Atlantic coast district. **Homer R. Horsfall**, formerly identified with the automobile business in St. Louis, and for the past five years with the Overland, is now connected with the Stutz Motor Car Co. of America, Inc., with sales supervision over the western and Pacific coast territories. **Fred Wilson**, one of the pioneers of the industry, is now with the Stutz Motor Car Co. of America, Inc., in the capacity of assistant sales manager.

W. H. D. Totten, who was a director of the United States Motor Truck Co., Cincinnati, O., and secretary of the Stewart Iron Works Co. of the same city, recently died at his home in Cincinnati. Mr. Totten had many friends in the automotive and iron industries with which he was so long associated.

W. A. Beardsley has been appointed, by the Winther Motor Truck Co., Kenosha, Wis., as district sales manager for the states of Washington, Oregon and Idaho. He had previously been associated with several large distributing companies on the Pacific coast. **A. J. Landrum**, Laredo, Tex., has been appointed Winther distributor for southern Texas and the states of northern Mexico. and the Harper-Libby Co., Inc., 801 Beacon street, Boston, Mass., will represent the company in eastern Massachusetts.

H. Y. Grassl is to be retained by the reorganized Republic Motor Truck Co. as director of service of the Republic Truck Sales Corporation. Mr. Grassl has been connected with the service department of the Republic institution for over four years, during the early portion of which time he visited the entire Republic distributor organization in the United States and Canada, and supervised the installation of standard service records, maintenance of stock inventories and the company's general service system. Practically all of his business career has been devoted to the mechanical and engineering field. Among the larger concerns with whom he was connected may be mentioned the Allis-Chalmers Clyde Machine Works of Racine, Wis., the Metropolitan Power Co. of Chicago and the Goldman Co., engineer and machinery manufacturer of Chicago. For two years immediately prior to joining the Republic organization Mr. Grassl was connected with the Master Truck Co. of Chicago, and during that concern's early manufacturing experience, supervised the engineering and production of its first truck model.

Hoomer Hilton, Managing Director, National Association of Motor Truck Sales Managers.

T. B. Blackiston, formerly district sales manager in the southwest territory for the American Hammered Piston Ring Co., Baltimore, Md., has been promoted to the position of assistant general sales manager, replacing J. H. Quackenbush. S. A. Barclay will be district sales manager in charge of the territory formerly supervised by Mr. Blackiston. **A. M. Merrifield** has been placed in charge of the western and Chicago sales districts as district sales manager, replacing D. T. Preyer.

Glenn B. Hiller, formerly general sales manager of the Nelson Motor Truck Co., Saginaw, Mich., has been elected general manager and director of sales and advertising of the Triangle Motor Truck Co., St. Johns, Mich.

W. C. Durant has resigned as president and director of the Durant Building Corporation and has been succeeded by **A. P. Sloan, Jr.**

Daniel G. Throne, National Sales Representative for Republic Motor Trucks.

Hilton Has Joined the Winther Co.

Homer Hilton has been elected vice president and general sales manager of the Winther Motor Truck Co., Kenosha, Wis. Mr. Hilton is a well known figure in the motor truck industry, just relinquishing the duties of managing director of the National Association of Motor Truck Sales Managers, of which organization he has been a director for some time past. Previous to his direct management of the association affairs he was sales manager of the Oshkosh Motor Truck Manufacturing Co., of which company he was one of the organizers three years ago. He has also been connected with various other organizations in the automotive field.

W. J. Corr has been elected secretary and treasurer of the Maibohm Motors Co., Sandusky, O., succeeding I. O. Bormann, resigned. Mr. Corr has been director of purchases for the Maibohm Motors Co. for the past year and is widely known in the automotive industry. He was with the General Motors Co. for the first two years following its organization. doing purchasing, cost and systematizing work at the Northway, Cadillac and Oakland plants. For the following two years he was director of purchases of the Apperson Brothers Automobile Co., Kokomo, Ind.; then for two years director of purchases of the Falls Motors Corporation, Sheboygan Falls, Wis. For nearly three years prior to joining the Maibohm organization he was purchasing agent for the Detroit plant of the Aluminum Castings Co.

Don F. Whittaker has been elected executive sceretary of the National Association of Motor Truck Sales Managers and has assumed charge of affairs at the headquarters of the association, 1157 Book building, Detroit. Mr. Whittaker has been connected with well known truck manufacturing concerns, such as the Federal and Acason Motor Truck companies. The next meeting of the directors of the association will be held March 25, at which plans will be made for the carrying on of the work under Mr. Whittaker's supervision.

Harry Eisner of the Eisner-Lenk Co. and the Auto Glare Remover Co., 711 Boylston stneet, Boston, has returned from a tour of three months and a half abroad with Mrs. Eisner. Mr. Eisner states that he was successful in placing foreign selling rights for the Glare Remover in England, France, Italy, Germany and Switzerland.

Roland Rohlfs, the well known aviator, who holds the world's altitude record of 34,610 feet, has become a member of the sales force of the Ostendorf Motor Car Corporation, Buffalo, N. Y., which distributes the Franklin car. Mr. Rohlfs is the son of Anna Katherine Greene, the noted novelist.

Strout Is Apperson's Eastern Manager

George H. Strout, who has been connected with the Apperson Brothers Automobile Co. for a number of years, has been made manager of the eastern department and, in addition to his new duties, which include general charge of the New England, eastern New York and northern New Jersey territory, he will continue to direct the export business of the company.

W. R. Melcher, formerly eastern representative of the Gemco Manufacturing Co., has returned to the C. A. Shaler Co., Waupun, Wis., in the capacity of special jobbers' service representative on Shaler vulcanizers and Shaler Roadlighters. Mr. Melcher was associated with the Shaler company in 1918-19.

Mitchell Mackie, who has been sales manager of the Waukesha Motor Co., Waukesha, Wis., since 1915, resigned March 1.

George H. Strout, Who Has Become Eastern Manager for the Apperson Brothers Automobile Co.

H. L. Dipple, formerly president of the H. L. Dipple Co., Indianapolis, Ind., was recently made general manager of the Central Auto Top & Leather Co., Inc., 421 North Capitol avenue, Indianapolis, Ind., maker of automotive accessories, transmission belting, etc. Mr. Dipple brings to his new position a valuable experience gained in important connections in the automotive field.

Harry E. Marshall has been appointed Pacific coast representative of the Mueller Electric Co., Cleveland, O., manufacturer of Universal batteries and test clips. He will be in charge of the company's offices and warehouses at 332 Leavenworth street, San Francisco, Cal.

C. A. Grainger, formerly factory representative of the American Hammered Piston Ring Co., Baltimore, Md., for the southeastern district, has been promoted to be district sales manager of the territory comprising Texas, Missouri, Kansas, Arkansas and Oklahoma.

W. G. Rath, Newly Appointed Secretary-Treasurer of the Napoleon Motors Co., Traverse City, Mich.

T. B. Funk, who has been Utilitor engineer for the Midwest Engine Co., has also been placed in charge of sales to succeed Fred E. Wilson. Mr. Funk went to the Midwest organization last year and prior to that was associated with the Moline Plow Co. as chief engineer and factory manager.

Seymour R. Cochrane was recently made director of the sales division of the Allison-Rood Co., Lincoln car distributor in the Chicago territory. He was formerly director of the exchange car division of the company.

Harry J. DeBear has sufficiently recovered from his recent operation as to be able soon to assume his duties again as president of the Maxwell Motor Sales Corporation of New York city.

Ralph Leavenworth has resigned his position as advertising manager of the Standards Parts Co., Cleveland, O., to accept the post of director of personnel for S. L. Weedon & Co. of the same city.

C. D. Peet, General Manager, Napoleon Motors Co., Traverse City, Mich.

Hudson to Head New Truck Company

William F. Hudson, president of the Hudson Motor Specialties Co., Philadelphia, and inventor of Hudford and Flexo products, is forming a company to build a three-ton truck which will embody in its construction many of Mr. Hudson's patented features. The name of the company will be the Hudson Motor Truck Co. and the product will be known as the Hudson truck. Mr. Hudson will be president of the new company and J. H. Malone, vice president of the Hudson Motor Specialties Co., will be vice president of the truck company also.

H. J. Behr, formerly manager of mechanical sales for the B. F. Goodrich Rubber Co. in the Philadelphia district, has been appointed general manager of the Goodall Rubber Co.

F. R. Wilhelmy, who recently resigned from the Standard Parts Co., Cleveland, O., has joined the Cleveland Tanning Co.

T. B. Funk, Utilitor Chief Engineer, Is Now Also Sales Director.

J. S. Inslip, formerly of the sales department of the metropolitan branch of the Locomobile company, has been appointed New York manager of Rolls-Royce of America, Inc., to succeed R. W. Schuette, resigned. **J. Roy Hiltz** has also left the Locomobile company to take up special sales work with Rolls-Royce, making his headquarters at the company's American works, Springfield, Mass.

George E. Smith has resigned as sales manager of the Simon Sales Co., Detroit, Mich., which position he assumed about a year ago. He is well known for his work in various sections of the country for Willys-Overland, Inc., in connection with sales promotion and efficiency systems.

Saville Baar, who was attached to the Americanization Bureau of the Detroit Chamber of Commerce during the war period, and was also a former representative of the Simon Sales Co., has joined the Studebaker Corporation in Detroit.

JAFFE REPLACEMENT RADIATOR.

One of salient features of the method adopted by the Jaffe Radiator Co., 14 East Jackson boulevard, Chicago, Ill., in the manufacture and distribution of its Jaffe radiator product is the guarantee against damage from freezing or through defective materials or workmanship. The company states the reasons for the supremacy of its product as follows:

1. Correct construction of the scientifically correct honeycomb cellular type; where elasticity and resiliency are of prime importance in distribution of shock, the honeycomb is acknowledged the ideal type.

2. Water tubes are rolled to avoid weakening of the metal—not die stamped.

3. Tubes are corrugated; therefore, being stronger and containing more metal than straight sides, the flow of the water is slightly interrupted, giving the brass more time to absorb and disperse the heat.

4. The absence of sharp angles and corners, which are present in some other types of zig-zag water channels, prevents the clogging which so impairs radiator efficiency; nor is there any internal soldering to clog with sediment.

3. Composed of over 2000 air cells, two-thirds of each of which come in direct contact with the water in the channels; air fin in each cell not only augments radiating surface of core, but breaks up the air as it enters the cells and imparts to it a whirling motion, insuring maximum cooling value.

6. The basically sound hexagonal cellular construction and the naturally resilient rolled brass provide enormous strength with great flexibility. For this reason the most violent shocks and incessant vibration can be withstood, because a flexible and not a rigid, unyielding resistance is offered to strains and blows.

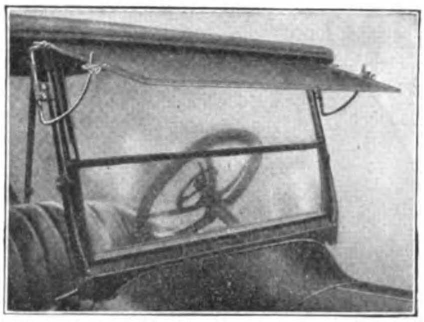
7. By this wonderful flexibility all danger from cracking and bursting, if the water freezes, is eliminated. The Jaffe will not burst, crack, leak or become distorted from freezing.

Jaffe Replacement Radiator.

8. Brass is used wherever the water comes in contact with the metal and this includes the tanks. Freedom from rust and corrosion is thus insured, coupled with great strength and security from frequent repairs.

9. Large cells make repairs from accidental damage easy; the symmetry of the core construction gives notable beauty of appearance; the black enamelled shell is of pressed steel; all joints and angles subject to severest strain or damage are reinforced; from outlet to neck and cap, strength and durability are paramount.

PRESTON STORM AND GLARE VISOR.



Preston Storm and Glare Visor, Open Model.

The Preston Storm and Glare Visor, shown in the accompanying illustration, designed to shield the eyes of motorists from the glare of the sun, street lamps and head lights, is one of the latest devices added to the wide line of articles manufactured by the Metal Special Manufacturing Co., 338-356 North Kedzie avenue, Chicago. It has been placed on distribution and already a heavy popular demand has been created for it, it is stated.

The visor consists of a patented nickel plated, adjustable bracket and has a thumb screw attachment which permits its adjustment to any range or angle of vision without the driver leaving the car. When used on an ordinary touring car the supporting brackets are held in position by two steel clamps which fasten to the windshield posts. Each bracket is provided with screw holes so when applied to closed cars the clamps are not used and the bracket is screwed securely to the frame of the windshield. A special bracket is made for Ford touring cars and roadsters.

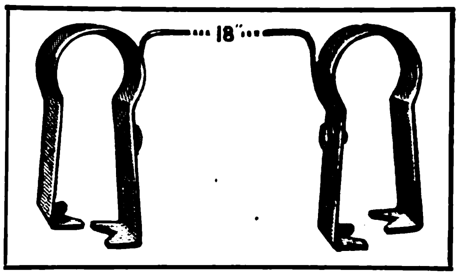
The frame, the joints of which are electrically welded, is covered with black water proof automobile top material, firmly stitched, and presents a neat and finished appearance. A wide piece of material is left at the back of the visor in order to completely seal the space between the automobile top and the visor, thus excluding rain or snow. A round piece of bar steel extends across the top the entire width of windshield, projecting 2¼ inches on each side. The adjustable brackets slide on this bar so that each visor is adjustable in width to suit any car within a variation of four inches.

The Preston Visor is being made in two sizes, the larger being four inches wider than the smaller and with the adjustable feature will fit all cars from 36 to 44 inches in windshield width measuring from center to center of the windshield posts.

It is claimed for the device that it adds greatly to the comfort and safety of motoring, relieving the constant eye strain and preventing accidents due to clouded windshields and glaring light.

THE ATTACHO BATTERY JUMPER.

The Attacho Battery Jumper is especially designed to meet the need for a simple, practical, convenient and inexpensive tool for use in connecting storage batteries for charging. It consists of two lead coated clamps connected by 18 inches of lead coated copper wire. It is intended primarily for use on batteries fitted with the standard tapered terminals. On these terminals the hair-lip jaws take a close hold and the clamp stands firmly upright, with no tendency to lop over.



These jumpers are not recommended for use on old style battery terminals.

The clamp is a one-hand affair. It is not necessary to take two hands to pull the jaws apart. The proper method is to grasp the shorter leg between the thumb and two fingers, hook the longer leg over the top of the terminal and spread the clamp by pulling toward the operator.

The Attacho Battery Jumper is manufactured by the Mueller Electric Co., 2135 Fairmount road, Cleveland, O. The net prices are as follows: In lots of less than 10, 20 cents per jumper set; in lots of 10, 14 cents a set; lots of 100, 12 cents a set, and lots of 1000, 10 cents a set.

TO MARK TOOLS WITH NAME.

Protect the tool with a thin layer of wax or hard tallow by coating the heated steel with wax and allowing it to cool. When the wax is hard the name is written in it with a pointed instrument, so that each stroke penetrates to the steel.

Then pour some nitric acid over the waxed surface, let it stand for a short time and after washing off the acid with water heat the metal until the wax melts, and wipe it dry. The name will appear engraved in the steel.

RECORD OF BUILDING OPERATIONS FOR MARCH

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Arkansas.

Marianna—Mann & Gatling, Scimitar Bldg.; Memphis, Tenn.; 1-story brick commercial garage, 50x100; $15,000.

Connecticut.

Stamford—Stamford Motor Sales Co.; 1-story frame or terra cotta salesroom, 40x40; $25,000.

District of Columbia.

Washington:

G. H. Bright, 4917 13th St.; 1-story garage; $50,000.

R. J. O'Neill, 1147 Connecticut Ave.; 1-story brick and reinforced concrete garage; $150,000.

Florida.

Jacksonville—R. B. Parrimore; 2-story frame garage; $12,000.

Illinois.

Cairo—Leo McDaniel, 804 Commercial Ave.; 1-story garage and repair shop; $40,000.

Chicago:

C. C. Adams, 1344 Madison St.; 1-story frame garage.

C. E. Adcock, 1520 Elston Ave.; 1-story frame garage.

D. V. Atlas, 2148 N. Sawyer Ave.; 1 story brick garage.

B. J. Balch, 5811 Calumet Ave.; 1-story brick garage.

A. W. Blanz, 2032 Fletcher St.; 1-story frame garage.

Jos. Bower, 6448 S. Robey St.; 1-story frame garage.

E. E. Bristol, 4826 N. Monticello Ave.; 1-story frame garage.

Chas. T. Broeker, 10045 S. State St.; 1-story frame garage.

William Brown, 3008 W. Harrison St.; 1-story frame garage.

Emma Buest, 4448 N. Maplewood Ave.; 1-story frame garage.

L. W. Calwell, 4140 N. Springfield Ave.; 1-story frame garage.

Anthony Charvat, 2621 S. Millard Ave.; 1-story public garage, 25x125; $10,000.

C. W. Christiansen, 845 Ainslie St.; 1-story brick public garage; at California and Chicago Aves.; $50,000.

M. Clancy, 4135 Wallace St.; 1-story brick garage.

E. Collis, 4853 N. Western Ave.; 1-story frame garage.

J. J. Courts, 3800 W. 63rd St.; 1-story concrete garage.

R. J. Cronin, 1043 E. 65tr St.; 1-story frame garage.

Fred Coppersmith, 4915 Lexington St.; 1-story frame garage.

E. W. Cowell, 3522 W. Adams St.; 1-story frame garage.

Archie Damm, 33 S. Parkside Ave.; 1-story frame garage.

L. F. Dearing, 4114 N. Lincoln St.; 1-story frame garage.

A. D. Denmarke, 2625 S. Millard Ave.; 1-story brick garage.

Dr. H. Deru, 6845 Chappell Ave.; 1-story concrete garage.

John Drisch, 3942 Wrightwood Ave.; 1-story frame garage.

Jas. Dunn, 2849 Warren Ave.; 1-story frame garage.

Chas. Eifler, 6043 N. Hermitage Ave.; 1-story frame garage.

John Fisher, 2549 S. Ridgeway Ave.; 1-story frame garage.

E. F. Flavin, 7640 Emerald Ave.; 1-story brick garage.

Thos. F. Freeman, 11522 Victoria St.; 1-story frame garage.

Leo Fremuth, 2733 Byron St.; 1-story frame garage.

M. Handler, 1231 S. Avers Ave.; 1-story frame garage.

Jas. Harrington, 3164 N. Halsted St.; 1-story brick garage.

L. Hayner, 2211 N. La Porte Ave.; 1-story frame garage.

A. Hendricks, 4555 Montana St.; 1-story brick garage.

L. Hoos, 52'2 Kenmore Ave.; 1-story frame garage.

Fred M. Hull, 735 N. Lockwood Ave.; 1-story frame garage.

Jas. B. Hurless, 6420 Dorchester Ave.; 1-story brick garage.

Irving A. and Raymond Jenski, 2633 Milwaukee Ave.; 1-story garage, storage battery and service station, at 2621 Milwaukee Ave.; $20,000.

Oscar Johnson, 7723 Paxton St.; 1-story brick public garage, 72x165; $30,000.

J. Kane, 1121 George St.; 1-story frame garage.

W. E. J. Keller, 5746 S. Mozart St.; 1-story brick garage.

C. F. Krebs, 2749 N. Sacramento Ave.; 1-story frame garage.

M. Kufer, 3317 Crystal St.; 1-story frame garage.

W. L. Lainsch, 10818 N. Harding Ave.; 1-story frame garage.

C. Larson, 4220 Henderson Ave.; 1-story frame garage.

E. M. Looby, 7142 Peoria St.; 1-story brick garage.

W. E. Lowry, 4649 N. Springfield Ave.; 1-story frame garage.

Frank McGowan, 3444 S. Wood St.; 1-story frame garage.

M. Matthes, 419 Oakwood Blvd.; 1-story frame garage.

R. T. Miller, 4048 W. 63rd St.; 1-story frame garage.

J. E. Mockel, 5859 Prairie Ave.; 1-story frame garage.

Carl Mohr, 4318 N. Springfield Ave.; 1-story frame garage.

E. H. Morey, 650 N. Long Ave.; 1-story frame garage.

John Mullen, 6458 S. Sengamon St.; 1-story brick garage.

Benj. Myers, 3137 Muskegon Ave.; 1-story frame garage.

Thos. Nelson, 214 N. Lockwood Ave.; 1-story frame garage.

C. Nielsen, 720 N. Long Ave.; 1-story brick garage.

CAPITAL INCREASES.

Connecticut.

Hartford—Hartford Automotive Parts Co.; $1,500,000 to $2,000,000.

Delaware.

Wilmington:

Piqua Automotive Financing Corp.; $550,000 to $1,050,000.

PLATE XLI.

GREAT DEMAND FOR FILLING STATIONS

Accompanying Design Shows Superstructure of Brick Trimmed with Concrete Stone or Terra Cotta—Effect is Attractive.

FILLING stations have sprung up along lanes of traffic throughout the country, and there is a constant demand for new ones. At these one should be able to obtain oils, greases, gasoline and sundries of a nature that may be needed in emergencies, such as tubes, patches, cement, etc.

As the filling stations depend to a large extent on transient trade, it is advisable to make them as attractive as possible. As individual tastes in this respect may go into extremes, endeavor has been made in the accompanying design to simply illustrate a type.

Many persons think that a mere building with a "gas" pump at the curb makes a filling station complete, but the fact is that the real heart of a filling station is buried beneath the ground.

Units of Station.

In connection with a station, large storage tanks are required for the gasoline and usually there is need for several of them. The prospective dealer is advised to secure tanks of ample capacities, as it may happen that the demand from his customers is greater than the oil companies will be able to supply him on quick orders.

In this respect suggestion is made that a 1000-gallon tank be the average, and that nothing of a capacity of less than 500 gallons be considered.

As all stations must keep adequate supplies of lubricating oils and greases on hand at all times, this stock must be given proper consideration. In the building shown herewith provision has been made for oil storage in vertical tanks, placed in separate compartments as shown, the pumps being located directly over them, as will be seen from a glance at the plan.

Grease, lubricants, etc., may be kept stored below, with some for current use on the shelves of the store or salesroom.

Construction Details.

The foundation would be of concrete, with the main or outside wall at least 12 inches thick, while the interior or dividing wall would be eight inches in thickness. A study of the section at the right will explain fully just what the nature of the construction would be, and of its components.

The mixture for the mass concrete will be found satisfactory, if a 1-3-5 is used, which is a first class quality for foundation work. A footing has been placed underneath the walls to insure equal distribution of all loads and to prevent sinking or sagging caused by excessive weights upon concentrated areas of soil, the bearing pressure of which cannot resist the loads placed thereupon. The foundation has been allowed to extend above grade, forming the base course to receive the superstructure.

The superstructure is of brick, trimmed wih concrete stone or terra cotta, these trimmings comprising cornice and coping, or, if one so desires, the entire building may be constructed of any one of these materials, with an attractive effect being attained.

If brick is used a rough textured one is suggested, with large white joint ¾-inch thick, rough struck or raked out, either of these giving pleasing effects.

Reinforced Concrete Floor.

The floor is of reinforced concrete as shown, using a wire mesh for reinforcing, or small twist bars, the latter being placed six inches on centers, the short span, with rods running at right angles, spaced at about 16 inches on centers. Concrete for all slab work of this nature should be of a 1-2-4 mixture, good and rich.

The roof may be framed up as shown, on rafters if the building laws permit that type of construction in the district where the station is located, and, if not, a concrete slab may be erected. In either case they may be treated with a coating of tar, applying gravel according to the best tar and gravel finishes.

The interior finish may be of plaster, or the walls finished in white, unplastered. The warmth derived from plaster during the cold, damp weather, will well repay for its installation.

Cost of Building.

Heating may be obtained from a small heater placed in the basement, a hot air furnace being ample to take care of the same. A toilet and a wash stand are also situated in the basement, access being gained from the upper floor by a flight of stairs as shown.

All plumbing and piping may be of standard make, insuring satisfaction at all times. Lighting by electricity, with the outlets placed to owner's advantage, these being governed by the equipment of the station.

The cost of a building of this type and size, exclusive of fittings, would come in the neighborhood of $1500 to $1800. For further information address the Architectural Department of this publication.

ACTIVITIES IN GARAGE AND REPAIR SHOP FIELD

Happenings of the Month Briefly Noted and Classified by States and Towns—New Places of Business Opened, Sales and Transfers.

Alabama.

Atmore—Clark Bros. will probably rebuild burned garage.

Florence—Miller-Buick Co. will rebuild garage and install equipment.

Arkansas.

Bald Knob—W. C. Grenshaw has sold his garage and repair shop to Roy T. Edwards.

Evening Shade—E. E. Carroll & Sons have enlarged their garage.

Pine Bluff—J. M. Reidinger and William Wolf have opened repair shop at 1030 State St.

California.

Berkeley—Thomas Eisenhuth and L. L. Kitchener have purchased interest of Frank Griffiths in Service Auto Repair Shop at 2062 Center St.

Ferndale—D. A. Branstetter has opened garage and display room in Matteri Bldg. on Main St.

Marysville—Arthur Schiveley and Edgar Taber have dissolved partnership.

Oakland—L. H. Rose Co. has opened garage and salesroom at 2345 Broadway.

Connecticut.

New Britain—Geo. Bloogood and Frank Berthieume have purchased Whitney St. Garage.

Florida.

Pensacola—City commissioners will install 500-gallon oil tank in their filling station.

Georgia.

Atlanta—Broadnax Motor Co., 253 Peachtree St.; probably rebuild burned garage.

Brunswick—Brunswick Automobile Co. will probably rebuild burned garage.

Columbus—G. S. Smith has taken over repair department of Chattahoochee Automotive Co.

Dublin—A. H. and Henry Grier have taken over Prest-O-Lite Battery Service Station on Jackson St.

Illinois.

Anna—H. W. Stokes has purchased Norris Garage on E. Vienna St.

Austin—J. D. Edwards, 5317 Washington Blvd., has purchased business of Paramount Garage at 5819 Lake St.

Barry—Geo. H. Wike has sold his garage and repair shop to W. E. Patterson and L. E. Elder.

Bluffs—J. M. Pine has purchased Priest Garage and Repair Shop.

Butler—Owen Garrett and Floyd A. Robertson have opened garage and repair shop.

Canton—Blew & Kepple have moved their battery station to 118 S. First Ave.

Chesterfield—Myron Gaher and Raymond Bowman will open garage and repair shop.

Chicago:

William J. Greig has purchased garage and repair shop at 79th and Sangamon Sts.

William A. Grunau, Jr., has sold his garage at Irving Park Blvd. and Ward St. to Geo. A. Matson.

Geo. Huber has purchased Green Front Garage at 5043 Broadway.

Dahinda—Russell Farquer has sold his garage and accessory business to Lorance Dawson.

Dixon—H. S. Lynch will open garage and repair shop.

Elizabeth—Bray & Goldworthy have sold their vulcanizing and battery shop to Ben Baumgartner.

Freeport—Starks Auto Supply House, formerly at 74 Adams Ave., is now located at 22 E. Galena St.

Galesburg:

C. W. Brown has sold stock and equipment of Main Garage to John Famulener.

F. P. Oseborne has purchased an interest in B. & O. Garage.

Georgetown—J. W. Hall has opened tire repair shop on E. West St.

Gibson City—J. B. Hayes has opened battery station in Enterprise Bldg.

Greenville—Central Garage Co. has enlarged its building with 2-story addition.

Havana—Daniels Taxi Service will open garage and repair shop on Grange St.

Henry—Willis Harris and F. Flensberg have taken over garage and repair shop.

Jerseyville—Phil Taylor and Lou Schnider have opened garage and repair shop in T. J. Butler Bldg. on S. State St.

Kankakee—John Rogers has sold his accessory business at Schuyler and Station Sts. to Asa Beeve.

Latham—John Harding has purchased interest of his partner, George Skelton, in garage and repair shop.

Lincoln—H. McMillan has purchased interest of his partner, Ray Wilson, in Wilson and McMillan Automobile Co.

Litchfield—Litchfield Tire Shop and Litchfield battery Service Station are now located in J. C. White Bldg. on W. Union Ave.

Loda—Ludwig Seaburg has purchased Iroquois Garage and Service Station.

McComb:

J. A. Atherton has moved his supply station from Park Garage to Scatt Bldg.

Gordon Sympson has purchased interest of his partner, V. Brewer, in garage and repair shop at 208 S. Lafayette St.

Macon—W. C. Chynoweth & Son have purchased C. O. Hebo Garage and Repair Shop.

Maroa—S. R. Nowlin has sold his garage business to Chas. Creekmur.

Monmouth—J. W. Gray has opened garage and salesroom.

Oakford—Benj. Boeker has opened garage and accessory shop.

Ottawa—Mundell Motor Co. has leased its repair shop to R. E. Wise.

Paris—R. W. Haynes will open repair shop.

Peoria—Everett Barlow has sold his battery service station to Harold A. Telburg and Chas. Trace.

Pinckneyville—Theo. Weihn has sold his garage and service station to John Reith.

Saybrook—John Sutton and R. Crawford will open garage on Harrison St.

Staunton—Henry and Walter Beinke have purchased business of Central Garage.

Strasburg—Clyde Lane has sold East End Garage to Ulmer Bros.

Topeka—A. H. Dissman has sold his garage and service station to William Koch.

Tuscola—Thos. Wright has sold his garage business to Earl Jones.

Waterman—Cecil W. Smith has purchased Waterman Garage.

Wateska—Leon J. Hargreaves has sold Wateska Battery Service to Warren Hoober.

Windsor—C. A. Curry has purchased the interest of his partner, A. V. Wallace, in Wallace & Curry Repair and Accessory Shop.

Worden—William Sogrecker will open garage and repair shop.

Indiana.

Advance—Harold Bennett has purchased interest of Otto Rodgers in Rodgers & Swindler Garage.

Anderson:

Fred Dixon has purchased Palace Garage at Meroidian and 14th Sts

C. J. Richardson has purchased Simmonds and Moneyhun Garage and Repair Shop on E. 9th St.

Chas. Weeks has sold Madison Battery Station on Main St. to Clifford Rhodins.

Angola—William Slick has purchased Helm Garage.

Bloomington—Millenberger & Sampson have purchased Hayes and Chestnut Garage at 4th and College Sts.

Bluffton—Main St. Garage has moved to Main and Elm Sts.

Clayton—C. A. Edmondsen has opened Ford sales and service station.

Cloverdale—King. Morrison & Foster have opened garage and service station on Market St.

Connersville—G. C. Decamp has opened garage and service station at 116-20 E. 5th St.

Covington—Leonard Bantz has sold his interest in Trott and Bantz Garage to Charles Lang.

Crown Point—William F. Carroll, Chicago, has leased Neunfeldt Garage on S. Court St. and will conduct it as garage and service station.

Delphi—William Harrison has sold his garage and repair shop to Foster & Dillinger.

East Chicago:

C. L. Cochran has opened garage and repair shop on Railroad Ave.

Paul R. Skinner and L. D. Williams have purchased Chicago Avenue Garage.

Elkhart—Geo. W. Polk has purchased Central Garage.

Greensburg—John Robbins and Frank Huntington have opened garage and repair shop on W. Main St.

Hamlet—Walter Jorgensen has purchased Hamlet Garage.

Hammond—William Herrington has taken over interests of Sid Kauffman in Herrington & Kauffman Auto Sales.

Howe—A. S. Atwater and W. D. Hudson have purchased Scherahorn Garage.

Laporte—G. S. Hillabald has sold his garage business to Geo. E. Wakeman and G. A. Croup.

Lebanon—Bert Miller & Son have sold their garage and service station on S. Lebanon St. to C. W. Patterson.

Liberty—Cecil Irwin has sold his interest in auto business to his partner, Albert Mitchell.

Marion—H. M. Miller has sold his business to Fisk Motor Sales Co.

Michigan City—Guy R. Stoddard has sold his interest in Auto Sales & Service Garage at 716 Franklin St. to his partner, Louis M. Gast.

Monticello:

E. C. Cullers have purchased Main Garage.

Ray Ward has sold his garage and accessory shop to O. Wells.

Monroeville—Arthur Stairheim has sold Peerless Garage to Grant Ginther.

Newport—W. Bert Conley has opened garage and accessory shop in Coffa Bldg.

Niles—H. F. Powell has purchased an interest in Price Garage.

North Manchester—Howard R. Roger has purchased interest of partner Samuel Leffel, in Roger & Leffell Garage.

Pleasant Lake—Kimber Weldin has purchased garage and repair shop.

Portland—Jacob Schmidt will open garage and repair shop on E North St.

Red Key—William Williams has sold his garage to Chas. A. Dull.

Richmond—S. J. Brower will open service garage and repair shop on N. Barron St.

Sullivan—C. T. Akin and E. G. Wilson have opened garage and repair shop on Section St.

Terre Haute—Steinhart Co. has removed its general auto business to 7th and Poplar Sts.

Union Mills—C. S. Hillabold has sold his garage business to Geo. B. Wakemann and C. A. Croup.

Valparaiso—Harry Pagin, who recently took over Motor Service Shop, is conducting it in connection with his garage.

Vincennes—W. H. McGinnis has purchased business of T. G. Rankin Motor Co., 11 S. First St.

Orange City—F. H. McDonald has sold his tire repair business to Henry Noordhoff.

Oskaloosa:

- Homer Darland has purchased Harper Garage.
- Floyd E. Lock has sold half interest in East End Garage at 311 S. 7th St. to Walter Bruerer.

Russell—Clifford Campbell has purchased Freight Garage.

Udell—Gus Gordon has purchased Fox Garage.

Villisca—C. J. Burnham has sold his garage and repair shop to Walter Books.

West Branch—Edward Kleineck has purchased interest of Chas. Pennock in Pennock Bros.' Garage.

Kansas.

Denmark—S. C. Page has sold his garage to Denmark Mercantile Co.

Emporie—Root Motor Co. has opened garage at 710 Commercial St.

Hutchinson—T. M. Hall has sold Bushton Garage and Repair Shop to M. W. Peterson.

Junction City—Fred C. Shane has opened battery station on W. 6th St.

Lawrence—J. K. Meinertz has taken over business of Palmer Tire Co., 11 and 13 W. 9th St.

McLouth—Silas Clark and William White have opened garage and repair shop.

Ness City—Buick Garage has moved from Hopper Bldg. on Sycamore St. to Osborn Bldg. on Pennsylvania Ave.

Parson—M L. Taylor and E. R. Berah have purchased Owl Garage at 1712-18 Washington Ave.

Scott City—C. W. Motor Co. has sold its garage and repair shop on W. 5th St. to W. A. Wright.

Wichita—Watkins Motor Co. has moved from 211-13 W. Douglas Ave. to 226 S. Lawrence Ave.

Kentucky.

Boston—R. H. Walters has opened garage and accessory shop.

Burgin—H. H. Clark has purchased an interest in garage of Bert Van Arsdall.

Danville—Willis Williams Co. has converted livery stable into garage and repair shop.

Georgetown—Frank M. Thompson has purchased a half interest in Howe and Morgan Garage and Repair Shop.

Lagrange—Ralph Raylor has sold Lagrange Garage to F. S. Taylor and C. B. Taylor.

Lexington—Easley & Son have sold their garage and service station at 109 W. High St. to Kittrell and Callaway.

Marcellus—J. M. Edwards will open garage and repair shop.

Paris—Verna Owens has purchased Citizens Garage and Service Station.

Parksville—Thomas Morgan will open garage and repair shop.

Sanders—Smith Bros. have taken over Sanders Garage.

Stanford—Stanford-Buick Co. has opened garage and repair shop on Main St.

Winchester—Baldwin & Flynn have purchased business of H. W. Davis Motor Co. on Lexington Ave.

Michigan.

Bay City—John W. Lawler has purchased Martin Garage.

Bellevue—F. W. Nicholson has sold his garage and repair shop to Lew & Holder.

Belding—North Side Garage is now operated by Frank Van Gleisen.

Charlevoix—O. D. Hammond has purchased an interest in Lakeway Garage, at State and Antrim Sts.

Charlotte:

- Grant Kiplinger has purchaser interest of Nelson E. Gibbard in vulcanizing shop of Gibbard and Simpson.
- Garn & Larke have sold their vulcanizing and accessory business to Percy Young.

Detroit—Sutton Sales Co., 821 Genessee Ave., will open garage and sales room.

Dowagiac—Claude Upson has purchased garage business from H. A. Welcher.

Gaylord—Floyd H. Sisson has purchased interest of partner, A. H. Van Doran, in Otsego Garage.

Grand Rapids—John Feitz and Carl Zumwalt have opened garage and service station at 14 Wealth St.

Holt—Walter Reece and Carol Fiedler will open garage and repair shop.

Iron Mountain:

- Victor Bellagamba will open service station at S. Stephenson Ave. and E. F. St.
- Max Sells has sold Wismer Garage on Quinnesec St. to Irving Riddler.

Jackson—Mutual Oil Co. will open filling station.

Monroe—Gus Litzen has opened auto painting shop and garage at 322 E. Elm St.

Muir—Decker & McClow have purchased Kenney Garage and Accessory Shop.

Sault Ste. Marie—Austin J. Lipsett and Jacob Bambridge have purchased Dixie Garage.

South Lyon—Chas. Conely has purchased interest of partner, C. E. Dewey, in Dewey & Conely Garage and Accessory Shop.

Tecumseh—Louis and Karl Schneider have purchased Garlinghouse Garage and Repair Shop on S. Evans St.

Three Rivers—Howard Plummer and L. C. Bent have purchased business of Battery & Electric Co.

Minnesota.

Chisholm—Earl Thomas and Warren Brown have opened garage and accessory shop at 313 W. Lake St.

Dawson—C. O. Holtan has purchased interest of D. T. Lund in Barkens & Lund Garage.

Mapleton—Business of Mapleton Motor Co. has been purchased by Joe McQuiggan and Burnham Greely.

Marshall—Jas. S. Scott and W. O. Jefferson, who conducted Marshall Radiator & Repair Shop, have dissolved partnership.

Melrose—Syvrud & Meyers have purchased garage and repair shop from A. M. Stuntebeck.

Middle Rivers—John Lund has purchased Peterson Garage and Service Station.

Minneapolis—Arthur Larson has purchased Patrick Lynch Garage at 1416 E. Lake St.

Motley—C. W. Akin has sold his garage and repair shop to W. A. Sears.

Nashwauk—P. G. Drong Browerville has taken over Motor Inn Garage.

North Branch—Dave Therrieu has sold North Branch Garage to Anderson Auto Co.

Red Wing—M. J. Seufort and E. W. Olson have opened garage and repair shop in Miller Bldg. on 4th St.

Rochester—Arthur Domke has taken over repair department of Motor Inn Garage on N. Broadway.

Rothsay—Oscar Mobraatin has sold his interest in Mobraatin & Lindberg Garage and Repair Shop to his partner, John Lindberg.

Taunton—Rudolph Amundson and Victor Gits have leased Ross Garage.

Waconia—Herbert Kemski has sold Waconia Tire Shop to L. W. Schwalbe.

Missouri.

Hannibal—Hinton Bros. have sold their garage and service station at 4th and Church Sts. to John T. White.

Jefferson City:

- Keisinger Bros. have sold their garage and repair shop on Main St. to Billman Bros.
- W. H. Remmert has purchased interest of J. H. Altheff in Main Garage and Repair Shop.

Kirksville—M. E. Cook has purchased an interest in Cannon Ball Garage.

Marshall—Celsus Durrett and A. L. James have purchased Tucker-Page Garage.

New London—H. A. Bartell has leased Hulse Garage.

Princeton—O. C. Davis and Darcy Higgins have purchased garage and repair shop in Goodman Bldg.

Rock Port—Rock Port Auto Co. has sold its garage and repair shop business to Benj. Travis.

St. Louis—Strauss Motor Car Co. will open service station.

Shelbyville—Nicholas Motor Co. has sold its accessory business to J. A. Claggett and C. S. Gatchel.

West Plains—Earl Woodree has sold his interest in Woodree Garage on E. Main St. to G. W. Hazell.

Montana.

Missoula—Sontesley Bros. have purchased Lake City Garage.

Nebraska.

Gering—Graham & Burch have purchased Gering Garage.

Kearney—Manhattan Oil Co. has opened garage, salesroom and service station at Lincoln Way and Ave. A.

Omaha:

- National Auto Accessory Co. has purchased store and garage of W. S. Auto Supply Co., 2012 Farnam St.
- Union Outfitting Co. will open garage and repair shop.

New Jersey.

Morristown—Fred McGoldrick will open garage and repair shop on Elm St.

New Mexico.

Lordsburg—Jas. Edgar has sold his garage and accessory shop to Highway Garage & Trucking Co.

New York.

Lockport—T. J. Sullivan has sold Central Garage and Repair Shop to Daniel Kill & Son.

Greensboro—Coble & Starr will probably rebuild burned garage.

North Carolina.

Reidsville—Harry T. De Lancy has opened garage and repair shop on W. Market St.

North Dakota.

Fort Rice—Herman Schoonever has opened garage and repair shop.

Ohio.

Ashtabula—Interlocking Cord Tire Co. of Akron has purchased business of Pearce Tire & Rubber Co.

Bowling Green—P. D. Hite and B. R. Ballinger have purchased Dixie Garage at 250 S. Main St.

Cambridge—Chas. Miller has purchased Cambridge Auto Service & Supply Co., 209 Dewey Ave.

Centerburg—D. D. Larimore has sold his garage and repair shop business to E. E. McGuire and French Walker.

Chillicothe—Ralph Flesher has sold his garage and repair shop on E. Springfield St. to Jas. A. Abernathy.

Du Pont—Motor Sales Co. will open sales and service station at 7002 Euclid Ave.

Marion—B. E. Baumgartner has sold his interest in Marion-Overland Garage to other stockholders.

Middletown—Standard Oil Co. has opened service station at 3rd and Leibee Sts.

Newark:

- Clyde Bowman has sold his tire and accessory shop at 47 S. 2nd to H. B. Winn.
- W. P. Winn has purchased business of Reinbald Tire Co.

N. Canton—Motor Service & Supply Co. has enlarged its service and supply shop.

Richmond—Paul Thompson has opened garage and repair shop.

Springfield—Springfield Storage Battery Co. has leased entire first floor of new Kennedy building on S. Jefferson St.

Oklahoma.

Enid—H. E. McBride has sold his garage and accessory shop to John Bennett.

Portland—Gerald Goodsell has sold his interest in Palace Garage Co. to his partner, C. W. Pilcharld.

Pennsylvania.

Titusville—O. W. Jones will open garage on W. Mechanic St.

South Carolina.

Anderson—Petroleum Oil Co., S. Main and River Sts.; rebuild filling station.

Greenville—Jackson Motor Sales Co. has purchased plant of Akron Tire & Battery Co.

Greer—C. P. Mills and W. M. Thompson have opened garage and accessory shop.

South Dakota.

Armour—Ira Smith has purchased Armour Garage.

Sioux Falls—Henry A. Homan has opened his garage and repair shop on 9th St.

Spearfish—Roy Cook has taken over C. B. Craig's garage and repair shop.

Tripp—Daniels & Moon have purchased A. B. Banker's repair shop.

Tennessee.

Dunlap—Dunlap Auto Co. has opened garage and service station.

Lafolette—J. M. Agle and Emmett Moore have opened garage and repair shop on Tennessee Ave.

Oneida—Jas. Bell Nashville will open garage and repair shop.

Texas.

Austin—Parke Houston and Richard Yett have leased Miller's Garage and Filling Station.

Dallas—Lamberttl Motor Co., Mann and Washington Sts., will rebuild garage.

El Campo—Magnolia Oil Co. will open filling station.

Galveston—Jasper Automobile Garage will probably rebuild burned building.

Hereford—Albert Murphy has purchased Hereford Garage, including filling and storage station.

Hondo—Yantis Motor Co. will probably rebuild garage.

Houston—Alamo Tire Co. has moved to 1401 Main St.

Miami—Cooperative Oil Co. will open filling station and storage tank.

Seymour—F. L. Knight will remodel garage.

Waco:

- E. M. Brown Motor Co., 929 Austin Ave., will enlarge its building.
- Hall & Fisher Tire Co. have moved to 421-23 Franklin Ave.

Vermont.

Jeffersonville—Ralph Bourne has sold his garage and repair shop.

Swartz Gasser Converts Gasoline into True Gas

THE Swartz Electric Co. of Indianapolis, Ind., whose factory is located at the Speedway, announces the development of a new device called the Swartz Gasser, and which is intended to be placed on the market in a short time. The Swartz Gasser is an automatic mechanical device for converting gasoline into a true gas, instead of a mixture of air and finely subdivided particles of the fluid held in suspension, such as is commonly used as the fuel supply of ordinary internal combustion engines, and it is stated that some exceedingly broad and fundamental claims have been filed in the United States patent office covering the process.

Attention is drawn to the fact that carburetors, of which there are scores of types in everyday use, are all made on practically the same principle, the aim being to secure as perfect a "mixture" of gasoline and air as is possible. Differences in details of constructions are devoted to improved methods of insuring such a mixture and also to the control of the proper proportions of gasoline and air supply. The Swartz Gasser is claimed to be an entire departure from the carburetor principle. Instead of the cylinder of the engine being fed with a more or less rich mixture through the carburetor, the Gasser supplies it with real gas which, when combined with the proper proportions of air forms an explosive compound which tests show develops about 100 per cent. more power a gallon of gasoline consumed than is obtainable by the best of the present methods. It is well known that gasoline under normal conditions is very volatile and gives off an inflammable explosive gas. But because of the fact that only a portion of the gasoline could be volatilized, the remainder, being too heavy, accumulated and as a constant supply of fresh gasoline was added it causes such an accumulation of this residuum that it has to be drained off or otherwise disposed of at frequent intervals.

Construction and Operation of Swartz Gasser.

The Swartz Gasser is claimed to be the first successful attempt to utilize both the volatile and heavier constituents concurrently. It is a metal gasoline reservoir connected with the main gasoline tank by an ordinary feed pipe with a float control of the usual construction. The top of the reservoir forms a gas dome which opens into the intake manifold with an improved automatic auxiliary air intake.

As the piston falls on the intake stroke it draws this gas from the dome into the cylinder. At the same time it draws through a needle valve from the bottom of the reservoir a small amount of the heavier and less volatile fluid, which goes over with the gas and is exploded with it in the cylinder. By a simple adjustment the proportion of volatile and non-volatile materials is adjusted so that the varying grades of gasoline can be used without the possibility of the accumulation of residuum. As the gas is drawn from the dome by the action of the piston head there is a vacuum created above the surface of the gasoline and this vacuum is replaced with hot air from an exhaust manifold air heater, which surges into and through the gasoline reservoir from beneath and, by means of heat and violent agitation, accelerates the formation of the gas in the dome.

Ira T. Swartz, President of Swartz Electric Co., Indianapolis, Ind.

Three Fundamental Principles.

There are three fundamental principles involved in the operation of the Swartz Gasser that are distinctive and unique.

First—Putting the gasoline under a vacuum instead of atmospheric pressure accelerates the evolution of the gas.

Second—Relieving of this vacuum by means of a current of hot air passing through the gasoline not only heats, but violently agitates the gasoline and this in turn increases the evolution of the gas.

Third—The residue which would, under ordinary conditions, rapidly accumulate is carried away as rapidly as it collects by means of the needle valve. In fact, there is no residuum at any time, because it is used concurrently with the gas evolved from the surface of the gasoline.

The final perfection of the Swartz Gasser is stated to be the result of years of work in the experimental laboratory of the Swartz Electric Co. under the personal direction of Ira T. Swartz, the president of the company, and A. E. Weaver, experimental engineer. Its future possibilities can only be surmised, inasmuch as it is applicable not only to automobile engines, but also to all styles of stationary internal combustion engines, to submarine and aeroplane use, and to the production of an economical source of gas for domestic heating, lighting and cooking. Many exhaustive tests in actual use on automobiles and stationary engines have shown an average of double the economy from a given amount of fuel consumed. An automobile which would make 10 miles on a gallon of gasoline under the ordinary method will, it is claimed, average 20 with the Swartz Gasser.

One of the Chief Difficulties.

One of the chief difficulties said to have been encountered in the perfection of the device was that the gas was so powerful and explosive that it was difficult to obtain proper control of it. One enthusiast remarked that there was as much difference between the explosive power of Swartz gas and that of the ordinary gasoline mixture as between exploding dynamite and burning wood. Swartz gas explodes, while a gasoline mixture simply burns rapidly.

CONDITIONS NEAR NORMAL SAYS HASSLER HEAD.

That business conditions are now on a solid and practically a normal basis again, with a good healthy volume of sales already in sight, is the statement made recently by Robert H. Hassler, president of Robert H. Hassler, Inc., Indianapolis, manufacturer of the Hassler shock absorber.

"We see every reason for optimism in the immediate future," said Mr. Hassler. "There is no danger of a further business apathy, because we have got back to the point where every dollar the buyer invests calls for reasonable value in merchandise based on a normal labor and material cost.

"Orders for Hassler shock absorbers are coming in splendidly, in a volume that compares quite favorably with the best seasons we have had. In fact, we confidently expect our business of this year to surpass by a large margin that of any previous season. This is expected, notwithstanding the fact that during the early months of this year we felt keenly the buying apathy, receiving practically no orders for a couple of months, just as did most other manufacturing concerns.

"I should like to say in this connection that I don't believe this nation ever saw such a wonderful change back to normal conditions, a change which entailed so little business distress, and which left all industries capable of continuing their normal courses with practically no interruption."

GASOLINE PRICE CUT.

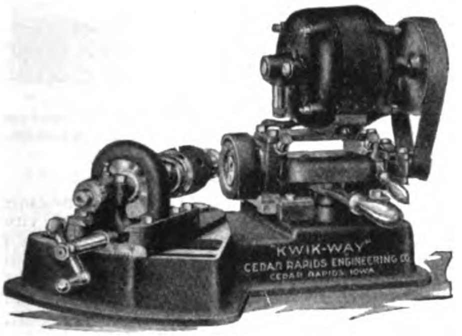
The Standard Oil Co. of New York announced on March 9 a reduction in the selling price of kerosene and motor gasoline of one cent per gallon, effective throughout New England.

"The reduction," said an official of the company, "will become operative in Maine, New Hampshire, Massachusetts, Vermont, Connecticut and Rhode Island. Outside of that territory I have no authority to make any announcement, as the matter will be handled by other headquarters."

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Kwick-Way Valve Facing Machine has recently been perfected and is now being built for the purpose of refacing motor valves preparatory to grinding. The valve is held by an especially designed chuck and rotated while the face is being trued up with a high speed grinding wheel. The chuck shaft, grinding wheel and motor are mounted on a symmetrical cast iron base. Electric current may be obtained from any lighting circuit.

The base is a one-piece casting, heavily ribbed and reinforced, insuring rigidity and freedom from vibration, features positively essential to obtain accuracy. The grinding wheel shaft or spindle is hardened and ground to an accuracy of one-half thousandth of an inch. It runs on high grade ball bearings, made dust proof and packed in grease.



The grinding wheel is of special shape, with a special grit, produced expressly for this machine by the Norton company. These wheels are regularly stocked by the manufacturer as well as ourselves.

The engineering force has designed a chuck that will properly center a worn valve for refacing. It is really two universal three-jaw chucks in one, working independent of each other. This especially designed and patented chuck centers the valve stem at two points 2¼ inches apart on that section of the valve stem that works in the valve guide. This insures extreme accuracy in centering a used valve for refacing. The chuck and chuck shaft are one unit. All parts are hardened and ground, being held to the closest possible limits for accuracy. The chuck shaft runs in reamed bearings, adjustable for wear, and is driven at a speed of 200 revolutions per minute by a set of worm gears from the grinding wheel shaft, which has a speed of 6000 revolutions per minute. Both grinding wheel shaft and chuck shaft are mounted on sliding carriages, the ways of which are gibbed to compensate for wear. The grinding wheel is moved across the face of the valve by means of a hand lever on front of carriage. The adjustment of the valve relative to the face of the grinding wheel is accomplished by turning the small crank at the left end of the chuck carriage.

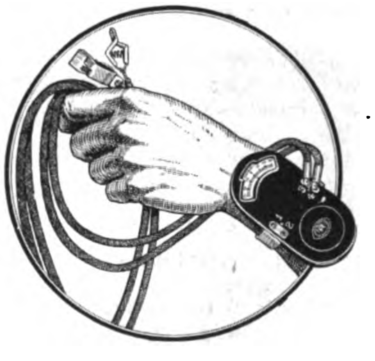
This machine will take any size valve up to and including three-inch head and one-half inch stem. It will true up the face of a valve at the rate of one a minute. By means of the graduated dial the machine can be set to grind any angle from 25 to 65 degrees. The machine has a direct motor drive through a friction cluch pulley on the grinding wheel shaft.

The same care and accuracy are stated to be incorporated in its manufacture as that employed in making the highest grade of machine tools.

Manufactured by the Cedar Rapids Engineering Co., Cedar Rapids, Ia. Literature and prices on request.

The Onan Wrist Meter is a compact little device that should appeal to every mechanic, garage and repair shop man in that it affords a practical testing instrument of the various electrical components of the car. It is worn on the wrist like a watch and is always at hand the instant it is wanted.

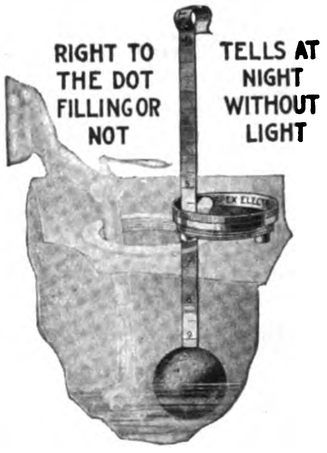
As will be noted from the cut, it is a combination instrument, comprising an ammeter automatically protected against burn-out, a circuit signal which will indicate a circuit or the absence of the same, an automatic breaker with condenser for testing all kinds of ignition systems, spark plugs, secondary parts or even for starting a high-tension magneto with the use of battery current, as well as a storage battery drop tester. In short, it is stated to be to the mechanic what a thermometer is to a doctor, and is just as well made as a watch. Each device is accompanied by an instruction book full of shop kinks gained from experience in this class of repair work.



Manufactured by David W. Onan, 43 Royalston avenue, Minneapolis, Minn. List price, including test cables and instructions, $15.

The Apex Gasoline Gauge for Ford and Chevrolet cars is claimed to be designed in such a manner as to insure accuracy at all times and under all conditions, at the same time with the least possible number of operating parts. Among its many features of decided importance attention is called by the maker to its extreme simplicity, the ability of the driver to ascertain the contents of the gasoline tank in the dark, as well as by day light, and convenience of reading the gauge while filling the tank. It is not necessary to remove the gauge while filling.

The best grade of material is guaranteed to be used in the construction of the Apex Gasoline Gauge. The indicator is of imported clock tempered spring steel and the indicating figures, are etched thereby assuring a permanent and accurate graduation.

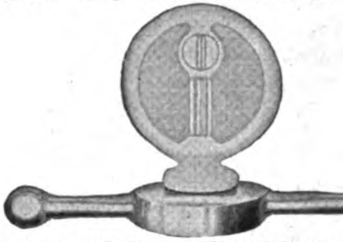


RIGHT TO THE DOT FILLING OR NOT
TELLS AT NIGHT WITHOUT LIGHT

No tools are necessary for the installation of the Apex gauge; the old radiator is simply replaced by the device.

Manufactured by the Apex Electric Manufacturing Co., 1410 West 59th street, Chicago, Ill. List price, $1.

The Illinois Racing Type Radiator Cap for all makes of cars, which is shown in the illustration, is one of a number of types made by the Illinois Brass Manufacturing Co. and combines the features of practicality, classy appearance and durability. The Illinois Radiator Caps are made of special Illinois nickel silver alloy; the long arms make them easy to unscrew and they will not burn the fingers when the radiator is hot; there is no nickel plate to wear off and no rubber to crack or melt.



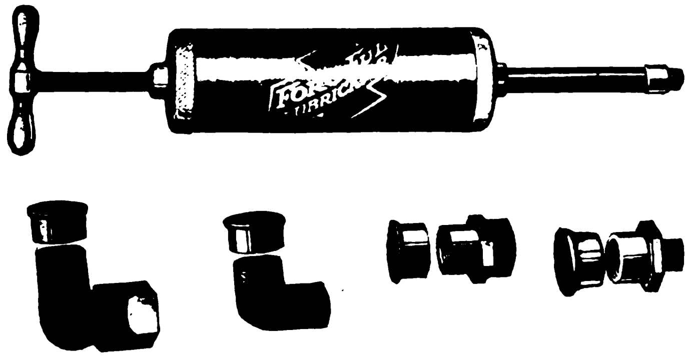
The company also markets the Durable Hub Cap and the Stutz Spare Wheel Lock Arm.

Manufactured by the Illinois Brass Manufacturing Co., 224 North Ada Street, Chicago, Ill. Prices on request.

The Forc-Ful Lubricator is especially designed for the convenient and economical lubrication of the wheels of the Ford car. The usual method of lubricating these members is to fill the hub caps with hard grease and then to screw them on to the end of the hub, thus forcing the grease into the bearing. With the Forc-Ful device the end cap of the lubricator is removed and the lubricator filled with grease, is screwed on the hub in place of the cap, and after being thoroughly seated on all the threads the plunger is screwed down and the entire contents of the lubricator may be, if desired, forced into the hub, pushing the old grease out ahead of it through the opening around the inner wheel bearing.

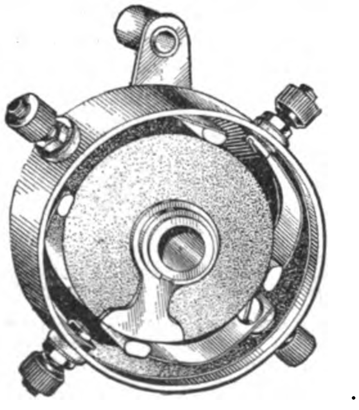
By this means every bearing of a Ford car designed for hard grease lubrication may be thoroughly cleaned and filled with fresh grease in no more time than is often spent in trying to force grease into a single bearing by the grease cup method.

The Forc-Ful lubricator equipment includes a powerful screw plunger grease gun with automatically closed nozzle, and fittings for all parts of the Ford car designed for hard grease lubrication, as follows: Four straight line connections for rear transmission bearing, universal joint and two rear wheel bearings; one special straight connection for the differential housing; two elbow conections, one each for the fan and steering post bearings; four special elbow connections for the steering pins, or king bolts, and tie rod bolts.



Manufactured by the I. C. Manufacturing Co., Chicago, Ill. Sales Department, the Ziske Co., 1323 Michigan avenue, Chicago. Jobbers' proposition on request.

The U. & J. Timer is built on a principle that is new in timers, it is claimed, but that has been proven practical for years in electrical dynamos and generators—namely, the rotor principle. The rotor is the only moving part of the dynamo—similarly the rotor is the only moving part in the U. & J. Timer, there being no rollers. The rotor of the U. & J. Timer is made of specially prepared insulating material so hard, dense and tough that it canont gather moisture, it is stated.



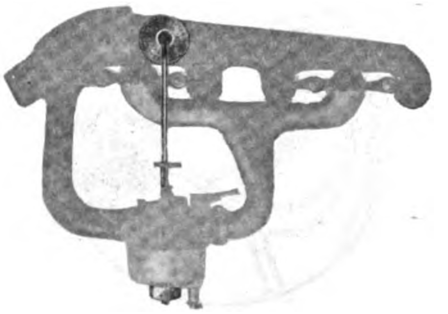
It, therefore, gives a clean wipe contact, insuring a hot spark to each plug, because the pressure exerted by the contact, determined in the design of the timer, remains uniform at all speeds. The result, the manufacturer states, is long life and perfect operation. With the U. & J. the roller is absolutely abandoned. The contact blocks are set on steel springs that exert a constant pressure. They cover the whole face of the rotor, making groove wear impossible. The springs are high tension and heat treated. They never lose their "spring" and "snap," it is claimed, even under excessive heat. Since the rotor is the only movable part revolving inside the contact blocks, all sediment falls into the base of the timer—centrifugal forge throws all dirt or grease off the rotor, so that the timer cannot become clogged. The shell of the timer back of the contact blocks is lined with insulating material, making, it is claimed, short circuits impossible. The edges of the contact blocks are rounded, both front and back, so that a reversal of the motor cannot cause damage from back fire.

The timer is strong and heavily made throughout. The terminals are strong and tight and cannot loosen.

Manufactured and sold by the U. & J. Carburetor Co., 505 West Jackson Boulevard, Chicago, Ill. Installed on a 15-day trial and guaranteed to give perfect satisfaction. Retail price, $2.50.

The Duro Fuel Converter is a new attachment for the carburetors of Ford cars which, by heating the gasoline immediately before it is sprayed into the air stream, is able to effect economies in fuel consumption that should attract widespread attention in view of the present cost and low grade of motor gasoline.

Many inventions have been offered to the motorist for the saving of fuel, ranging from new carburetors of high price and complex construction, to simple attachments to the intake manifold whose sole function is to admit additional air to the mixture without passing it through the carburetor.

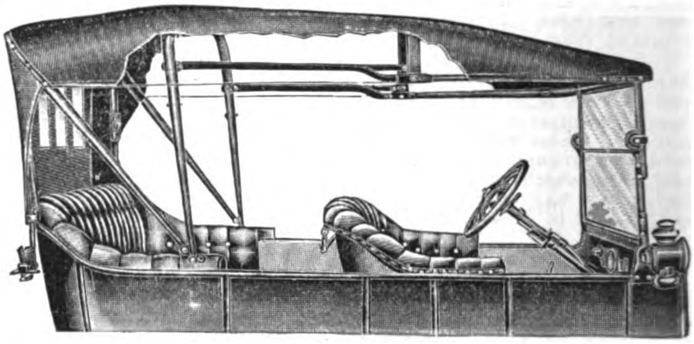


The Duro Fuel Converter is based on the principle that liquids become more fluid by heating them and on the assumption that low grade gasoline is less fluid than high grade. Its function is to reduce the viscosity of motor fuel in order that the pulverizing effect of the air stream through the carburetor shall result in a spray of the finest possible division. It is intended that the fuel in this condition: i. e., liquid, shall be carried to the cylinder in order that the highest possible volumetric efficiency shall be obtained, while at the same time having so great a fluid surface exposed to the air in which the fuel is entrained that the resultant heat due to compression and explosion shall vaporize completely and thus render available all the energy contained in the fuel at the proper time. It is obvious, therefore, that the heating of the fuel is merely intended to accomplish a fine division of spray and not intended to force vaporization, which would result in reduced volumetric efficiency.

At present the Duro Fuel Converter is being produced for attachment to Ford motors only, but the maker is preparing to equip many other standard makes of cars on which successful trials have been made.

Manufactured by the Duro Co., 96 North 15th street, East Orange, N. J. Information as to prices, etc., on request.

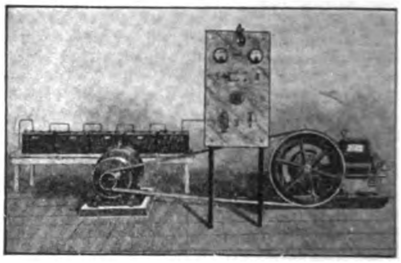
The Top Converter for Ford Cars has been developed by the manufacturer to supply Ford owners with a type of converter which quickly changes the old style top into a one-man type by simply removing the two front bows and substituting the bows and irons of the converter. With this device the top is fastened to the top of the windshield as in the one-man top, while provision is made for raising and lowering the top equipped with the converter when desired.



Manufactured by the Fulton-Houston Co., 1146-1150 South Michigan Avenue, Chicago, Ill. Price on request.

The Main MCF Lighting and Charging Set is a new outfit recently added to the well known Main line, especially designed for lighting the suburban garage and also to supply equipment for the charging of automobile batteries. It consists of the Main MCF plant using a 600-watt, 40-volt, direct current generator, a 1½-horsepower gasoline belted engine and a 16-cell sealed glass jar type battery for the lighting of the garage and an extra panel on the switchboard for charging from one to 10 six or 12-volt batteries to automobiles at a time.

This equipment is of the same high quality of construction as is characteristic of the entire line of the Main Co.

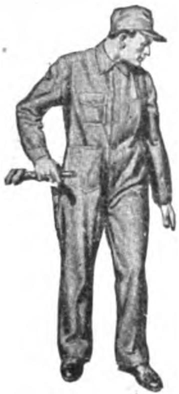


By the use of the MCF plant any garage or repair man is absolutely independent of any outside source of current and is in a position to earn big returns on the investment, by the charging of storage batteries alone, the maker states, to say nothing of the convenience of having such an outfit available at all times.

Manufactured by the Main Electric Co., Cleveland, O. List price for complete plant, $290.

The No. 028 Medium Weight Khaki Outerall, shown herewith, is one of the popular forms of Outerall Economy garments for motorists and repair men. It is especially suited to the needs of the regular garage mechanic and repair man, and its detailed description is as follows:

Jacket collar and patch pockets, four in front and two in back; combination watch and pencil pocket; convenient rule pocket; two-button cuff; special side opening for giving easy access to pants pockets; all pockets double stitched and reinforced; all seams double stitched and felled, giving double strength and no raw edges; upper sleeve extra large, permitting easy movement of shoulders; no binding when stooping or in other working positions. Fast color; best grade khaki cloth. All buttons protected throughout to prevent scratching of smooth surfaces. Sizes, 34, 36, 38, 40, 42 and 44. Extra sizes furnished upon request at additional charge.



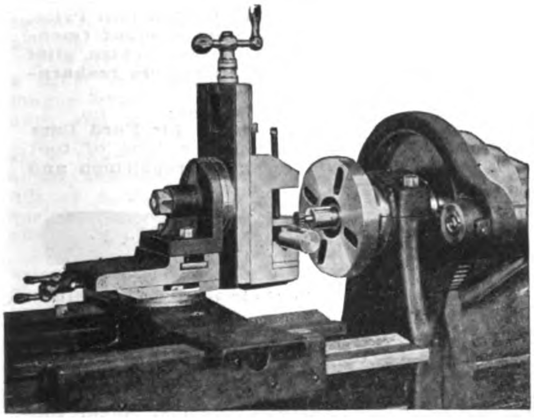
This thorough construction is typical of the entire Outerall line, which includes a nobby tourist motor coat, and there is a special garment for every trade.

Manufactured by the Michigan Motor Garment Co., Greenville, Mich. Description and prices of full line on request.

The Barnes Milling Attachment fits any of this make of sliding extension gap lathes which are now in use; i. e., 12-22 inch, 13-22 inch and 14-24 inch, and can also be fitted to other makes of lathes, 12 inch to 18 inch, equipped with compound rests.

The milling attachment is stated to be a very handy vise for a wide variety of work, including the cutting of seats for Woodruff keys, splining and squaring shafts, sawing, splitting bushings and drilling and boring small parts.

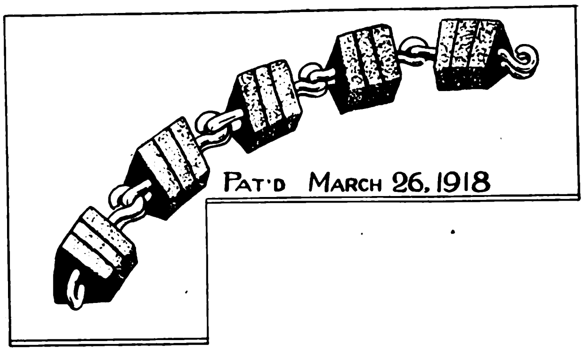
The illustration shows the style of mounting used at present. The vise swivels and is graduated 180 degrees in the vertical planes, while the collar on the vertical screw is graduated in one-thousandths of an inch.



The equipment consists of the milling attachment, complete, as shown, with steel V block steel plate, gib and bolts for attaching and ball crank handle. Cutters and arbors are not included. Specifications: Vertical feed, six inches; cross feed, 12 inches; vice will hold 4½ inches; depth of jaws, 1¾ inches; width of jaws, five inches.

Manufactured by the Barnes Drill Co., 814-830 Chestnut Street, Rockford, Ill. Prices and literature on request.

Master Link 10.000 V Belting for Fans is made from selected sole leather and steel wire links. The steel links are embodied into the leather V shaped blocks in such a way as to prevent the steel from touching the pulley at all, the leather blocks doing all the gripping and at the same time not being subjected to any bending or strain whatever, as the bending is all done at the link joints and the strain is all on the steel links. This makes it very powerful in tensile strength and the caterpillar link principle gives it a superior fan pulling ability.

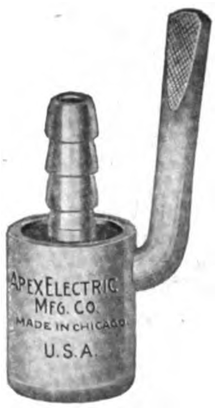


Every link is a new pull and it is claimed to be impossible for this belt to slip on the pulley. The leather V shaped blocks wedge into the pulley, grabbing and gripping it with the tenacity of a bull dog—the pulley has simply got to travel if the belt travels. And the belt does not necessarily have to be fitted tightly on the pulley. In fact the maker recommends only a moderately tight adjustment.

Master Link V-Belting is furnished on spools containing 25 feet. It can be easily disconnected with screw driver or similar tool and easily reconnected, making any length of belt desired. No special tools are required. It is guaranteed to run 10,000 miles.

Manufactured by the Master Link Belt Co., Oklahoma City, Okla. Prices, per foot: ⅝ inch, retail, 60 cents; wholesale, 40 cents; ¾ inch, retail, 75 cents; wholesale, 50 cents.

The Apex Pump Connection can be instantly attached to the tire valve by a half turn of the lever which compresses the rubber bushing, fastening the connection securely to the tire valve, thereby permitting it to become positively locked, so that it will not leak nor blow off. An upward turn of the lever releases the connection. There are no threads to become burred.

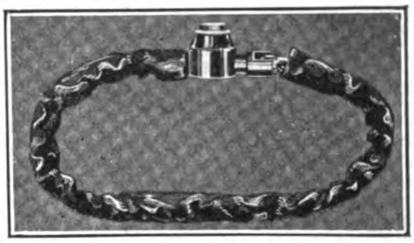


The Apex connection will fit on any tire valve and is claimed will positively hold tight under any pressure. Owing to its construction it can be conveniently used on wire wheels as well as disc.

The best grade of material is used and the device is guaranteed against any imperfections.

Manufactured by the Apex Electric Manufacturing Co., 1410 West 59th street, Chicago, Ill. Price, 35 cents each.

The Able Chain Tire Lock, as will be seen from the illustration, is a chain loop of sufficient size to attach a spare tire in its case or rack to an adjoining substantial part of the car frame, and is, furthermore, equipped with a special combination theft proof bar lock. The following extract from the report of the Underwriters' Laboratories on this device will show its efficiency under the strenuous tests of this organization:



"1. The steel chain forming the loop resisted all attempts to cut it with bolt cutters.

"2. It was impossible to even start the hack saw blade in the material or to mark it with a file.

"3. No success was had in the attempts to break the lock or loop with a two-pound machinist's hammer.

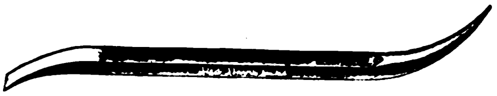
"Practicability: The installation tests show that the ordinary automobile owner can install this device in a few minutes' time without the use of any tools. The locking of the tire by this device does not require the use of a key, thereby eliminating the possibility of the automobile owner forgetting or losing the key.

"Durability: This device is capable of withstanding the deteriorating effects of wear and tear for a reasonable period of time. The device is made of a good grade of material. It is therefore believed that this device will be sufficiently durable to last for the life of the automobile on which it is used.

"Summary: From the conclusions drawn it will be noted that this device is practical to install and use; that it is durable and that it is uniformly manufactured."

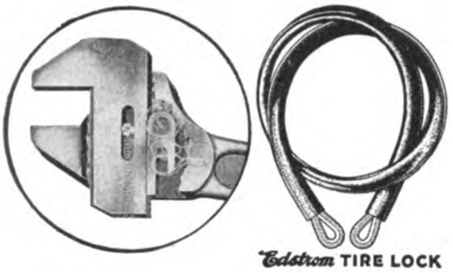
Manufactured by the Able Manufacturing Co., Inc., 731 Folsom street, San Francisco. Ill. Prices on request.

The Red Devil Cotter Pin Extractor is designed to fill an essential place in the tool kit of every motorist. When it is realized that in an average car at least 80 cotter pins are used and that they frequently become rusted or lost in the process of repairs, thus making frequent replacements necessary, it will be readily seen that some such device as the Red Devil Cotter Pin Extractor is as worthy a place in the motor car equipment as a jack or tire pump. The Red Devil is strongly made from octagon tool steel, 90-point carbon Swedish analysis.



Manufactured by the Smith & Hemenway Co., Inc., Irvington, N. J. Price on request.

Edstrom Tire Locks are stated to be made from the same high tensile strength aeroplane strand of wire cable as the Kantkick Towline, with the ends machine wire wound to prevent fraying and the lock is covered with a high grade of chrome tanned leather, which harmonizes with the car finish.

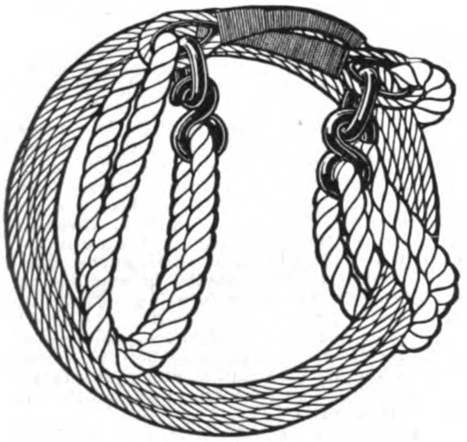


Edstrom TIRE LOCK

Another article manufactured by this company which has superior merit is the pipe wrench, which is fitted with special jaws for pipe and round stock. It is stated that the wrench is instantly adjustable and locked by the action of the thumb lever. The improved jaws are made of tool steel, easily replaced when worn at small cost.

Manufactured by Jessop & Thompson, 1421 South Michigan Ave., Chicago, Ill. Prices of the tire lock, 36 inch length, $1.75 each; 42 inch length, $2.10 each. Price of wrench on application.

The Kantkink Towline is claimed by the manufacturer to be the big-little towline that is guaranteed not to kink, snag or snarl. It is big in service and small in bulk, which is made possible by the special Roebling aeroplane strand of high tensile strength, from which the towine is made.



Edstrom KANTKINK TOWLINE

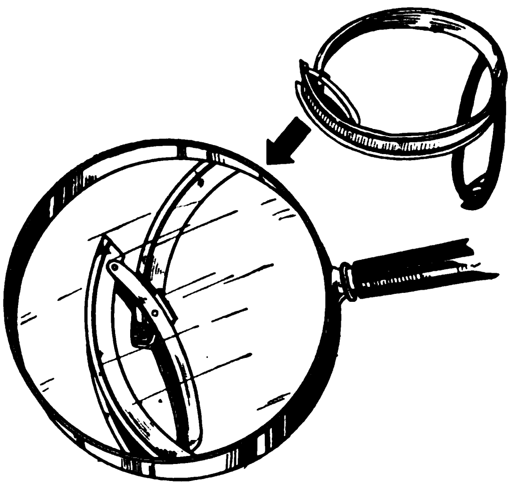
A feature of the towline that recommends it to motorists is that the towline will uncoil straight and when folded stows in a small space in the car. The ends are machine wrapped to prevent the ends from fraying and are fitted with manilla rope slings and special hooks for quick hitching to the car axle.

Made in three sizes for the Ford, touring car and heavy trucks.

Manufactured by Jessop & Thompson, 1421 South Michigan Ave., Chicago, Ill. Prices according to size, $5, $6.50 and $9.50.

Raymond Demountable Rims operate on an improved principle which renders them distinct from others of the split type in that a U shaped lever is provided which affords an exceedingly easy method of reducing the circumference of the rim, allowing an easy slip-off or slip-on of the tire. This patent lever device, when the tire is on the rim, acts as a lock to hold the rim ends in alignment.

It will be noticed that the lever operating the rim extends out from the flange of the rim. To mount on the felloe band already on the wheel, place the Raymond rim on the felloe band, allowing the drive member to seat (this driving member may be either a depression or a stud drive) properly in the felloe band, carefully mark the position the extending end of the lever strikes the felloe band. By taking an ordinary monkey wrench or a hammer the edge of the flange of the felloe band can be bent so as to allow the rim to seat on the felloe band perfectly.



The three points of superiority claimed for the Raymond are, first, that it is possible to change a clincher tire without the aid of a tire tool in a moment's time; second, that the materials entering into its construction, together with the thorough workmanship required, insure a surplus of strength far in excess of actual requirements; third, that, as reducing the circumference of a rim is the simplest method known to modern engineering in making a tire change, by designing this patent rim to perform this duty of a circumference reducer as well as a rim lock, an idea has been evolved which makes the device so simple a child can operate it.

The Raymond demountable rims are designed to accommodate all sizes of clincher rims.

Manufactured by the Raymond Rim & Wheel Co., Jackson, Mich. Prices and literature on request.

The Lincoln Tire Gauge is a scientifically designed precision instrument intended to make tire inflation an easier and more satisfactory operation. This is accomplished by eliminating alternate inflating and testing. In service it is only necessary to set it for the pressure desired, fasten it to the tire valve by the simple movement of a lever and turn on the air, which enters through the check valve at the top. A whistle notifies the operator when the tire is inflated.

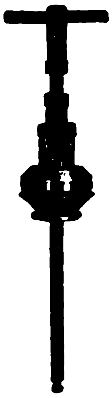
LINCOLN
PATENTS PENDING

To set the knurled head is turned to right or left, micrometer fashion, for the exact pressure desired. The body of the gauge is hard brass, finely polished and nickel plated, while compression springs are made from crucible steel wire.

Manufactured by the Lincoln Products Co., 161 Massachusetts Avenue, Boston, Mass. Price and literature on request.

The Halburn Adjustable Reamer is an improved valve seat reamer with an expansion of wide range, it is asserted by the manufacturer. Other claims made for it are that this one tool will do more work than four sets of solid reamers, thus effecting a saving of 80 per cent.; and it is quickly adjusted to dimension by the turning of two nuts, after which the cutters are locked in position by turning one of these nuts—a simple, quick operation.

The Halburn adjustable reamer is designed for strength; the cutters are properly hardened and ground tool steel that slide in a slot having a 45-degree base. This brings the pressure against the solid body of the tool, making it impossible for the cutters to flip out, it is stated, and giving the same effect as a perfectly solid tool. Owing to the cutters seating in a 45-degree slot, the pressure drives them toward the center, preventing them from getting out of alignment. The center stem is solid throughout, giving, it is claimed, absolute accuracy to the guiding of the cutters. The pilot stems are made interchangeable by slipping them over the solid stem. A cross bar wrench is supplied so that the pressure will be directly over the center of the tool. The tool can be lowered through a small port hole and expanded after it is inside the port.

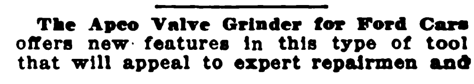


The 45-degree cutters are specially designed to cut all regular 45-degree valve seats. The base is only 1 1/16 inches, small enough to be used in the Northway engine. Interchangeable cutters for 30 and 60 degrees and concave cutters for the Fordson tractor can be supplied at a slight additional cost. The cutters can be quickly sharpened.

The Halburn Adjustable Reamer is packed in a substantial box and is accompanied by full instructions. Two sets of 45-degree cutters, 5/16, ⅜ and 7/16-inch pilot stems, and wrench are included.

Manufactured by the Halburn Co., 317 West Pico Street, Los Angeles, Cal. Price, $12; extra cutters, $2 a set of eight (mention whether large or small); extra pilot stems, any size, $1 each; cutters resharpened, 25 cents a set.

The Apco Valve Grinder for Ford Cars offers new features in this type of tool that will appeal to expert repairmen and motorists who do their own valve grinding.



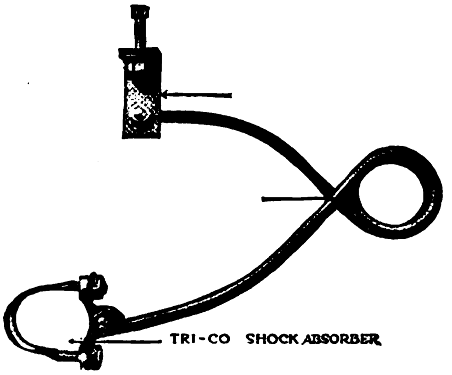
When in operation the Apco grinder holds the valve firmly so that it may be raised from its seat. A universal joint makes possible the grinding of the last valve, while the revolving disc under the handle prevents the hand from slipping down, when turning the handle between the palms of the hands. The grinder is well finished, weighs one pound and measures 12 inches over all.

Manufactured by the Apco Manufacturing Co., Providence, R. I. Price, 50 cents each.

The Tri-Co Shock Absorber is stated to be especially designed for the purpose of stabilizing, snubbing and softening road shocks—all in one. The attachment of this shock absorber is made directly from the running gear to the body, independent entirely of the springs, with the idea of eliminating any spring interference. The regular springs on the Ford car, in this manufacturer's estimation, are ample for all purposes for which a spring is intended and modification of their action brings about a very undesirable result.

The Tri-Co shock absorbers are effective in snubbing the up throw of the car on bad roadways. They also act as a cushion on the down throw when bad roadways with extraordinarily bad holes are encountered. The stabilizing effect is gained principally through the front end of the car where the upper end of the snubber is attached to the lamp post bracket and the lower end of the device to the front axle. When the shock absorbers are placed in position on the car down pull is exerted to provide constant tension on the body and lessen the up throw and swaying action.

The front attachment is made by removing the nut on the lamp post bracket of the front light to which the bracket of the shock absorber is attached and the nut replaced. The lower end encircles the front axle where two steel fillers are placed to strengthen the clamp attachment of the front absorber. The bar of the shock absorber is ½ inch in diameter and is treated by one of the best known processes for bringing out a fine coiled spring, which is said to be sufficiently heavy to be very effective in adding to the riding quality of the car.



The rear absorber is attached by removing the ordinary body bolt found on all Ford cars; a longer bolt is replaced in the same opening. The lower end of the shock absorber is carried direct to the car housing.

When the down pull is exerted in all four springs the settle of the car is stated to be equivalent to a weight of about 40) pounds.

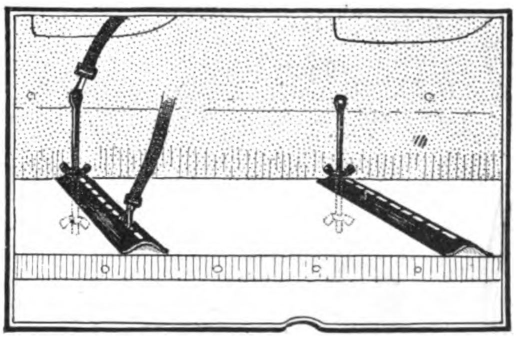
The attachment, when in position, gives a short wheelbase car the quality of a longer wheelbase car in effecting the balance and stabilizing the driving quality.

Exhaustive tests made with the springs show them to be serviceable not only as shock absorbers, snubbers and stabilizers, but as a sure method of prevention of spring leaf breakage, as they are very effective in the cushioning of severe jolts.

Manufactured by Trico Products Corporation, 624-628 Ellicott street, Buffalo, N. Y. Price, complete set, front and rear, ready to attach, $15, in U. S. A.

The Loxtite Carrier can be fitted to any automobile in less than a minute; two narrow metal strips and two small metal uprights are fastened to the running board. These two uprights slip through perforations in the running board, being held securely in place by wing nuts and serve to lock the metal strips in place The wing nuts when tightened enable the uprights to bear most of the strain. Four straps which snap into metal strips and uprights and buckle at any point, lock tightly in position luggage of any size or shape. The luggage held in place by these uprights cannot rub against the body of the car to scratch or mar it. Unscrewing the lower wing nuts allows the complete equipment to be removed in less than a minute.

The flat metal strips are rounded on top and therefore offer no obstruction to the use of the running board. If desired they may be swung back to lie against the car body and are almost invisible.



The uprights are so small as to be hardly noticeable when not in use.

The metal parts are black enamelled; the straps similar to the Webb military equipment are black also. When the carrier is in use nothing but the luggage and the two straps is visible.

When detached the entire Loxtite Carrier weighs one pound, is contained in a cover and can easily be carried in the door pocket of any car or a coat pocket.

Apart from its simplicity and the fact that it can be attached or detached so quickly, one of the chief advantages claimed for the Loxtite Carrier is its great adaptability. The Loxtite will hold securely in place any material which can be put on the running board of a car, from a large trunk or case, or sacks, to a small flat package, or package of irregular or round shape. The materials used in its construction are stated to be the best obtainable. The tensile strength of the steel parts is sufficient to hold 1000 pounds and, of the straps, sufficient to hold 400 pounds.

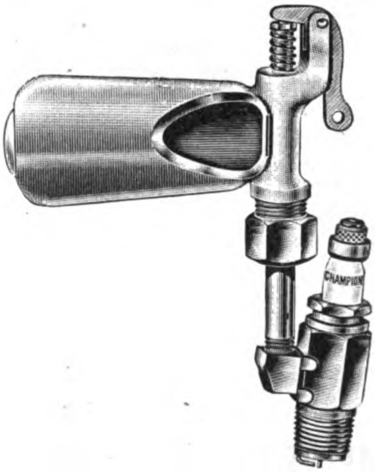
The Loxtite is made in two sizes: The standard is for any luggage extending not more than four inches beyond the running board. This carrier has metal strips 8¾ inches long and uprights five inches high. The larger size is for any luggage extending more than four inches beyond the running board and the metal strips are 11½ inches long and the uprights seven inches high giving additional support and added protection.

Manufactured by the Loxtite Carrier Co., 1776 Broadway, New York City. List prices: Standard size, $3.50; large, $4.25.

The Illinois Nopowerloss Explosion Whistle is especially adapted for use on automobiles, motor trucks, motor boats and motorcycles. Its installation is stated to be very simple and its operating cost is nothing. It is stated to embody the following principal features: When the whistle is in operation no loss of power is noticeable; the engine will not knock; there is no strain on the engine bearings; the car will run smoothly with the whistle in operation; it will not crack the porcelains when attached to a spark plug; the aluminum whistle will not melt from heat; air cannot be drawn into the cylinder through the whistle and poor combustion and loss of power from this source are eliminated; it is absolutely fool proof.

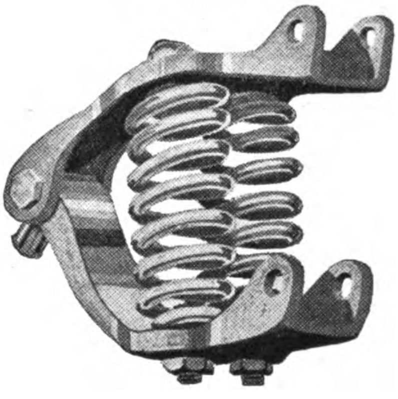
The Illinois Nopowerloss Explosion Whistle for priming cup is made of pure cast aluminum, highly polished. The fittings are of cold rolled steel, nickel plated. A special cord is attached for its operation.

The cut shows the Nopowerloss whistle with spark plug attachment. Its construction is otherwise similar to the priming cup type. The elbow and four-prong lock washer by which it is attached are made of cold rolled steel. The elbow is screwed against the washer to the spark plug and the prongs of the washer are bent downward against the spark plug. The other two prongs are bent upward against the elbow, making a positive lock.



Manufactured by the Illinois Brass Manufacturing Co., 224 North Ada street, Chicago, Ill. Price, for priming cup, $3.50 each; with spark plug attachment, $4.75 each. Illinois elbows, separately, 20 cents each; lock washers separately, five cents each. Order by number, as follows: No. 1 for priming cup; No. 2 for ½-inch spark plug; No. 3 for ⅞-inch spark plug.

Hayes Shock Absorbers have been proven, it is stated, after three years' satisfactory service, to afford in the highest degree, riding comfort, car protection, more mileage to the gallon and decreased tire wear. They have the effect of lengthening the springs to more than double their normal length, allowing the wheels to pass over all road obstructions, reducing the force of the shock to the body of the car, its mechanism and passengers and are stated to make a car ride as easily with one passenger as when fully loaded.



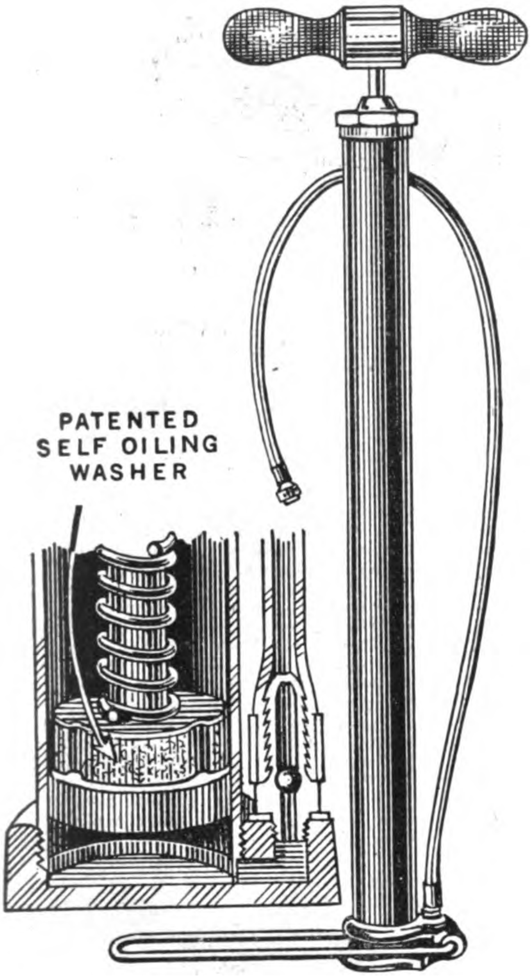
A single spring model is especially adapted for the front end of cars fitting between the rear end of the front spring and the car frame. A double type is designed for attachment at the rear, which fits at the end of the spring. A special underslung type is also made for Dodge rear attachment, or for any car equipped with three-quarter elliptic spring, which is easily installed with the original grease bolts on the spring.

The Hayes shock absorber fits practically every model of car except the Ford, and can be installed on front or rear springs. Full particulars for equipping any car will be furnished on request.

Manufactured by the Hayes Shock Absorber Co., Minneapolis, Minn. List prices: Single spring, front, per pair, $17.50; double spring, rear, per pair, $20; set of four, $37.50.

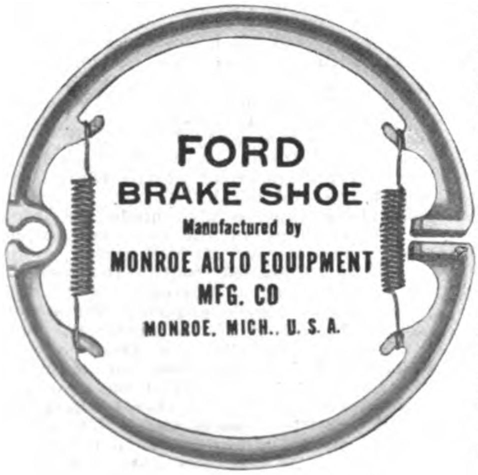
The Monroe Self-Oiling Tire Pump is offered as standard equipment on high grade cars in that through its patented self-oiling washer feature, shown in the cut, it is always in serviceable condition at an instant's notice.

A complaint is born the moment a tire pump cannot respond to a call for its service. Lying in a tool box, the leather washer is apt to get dry, and it is useless; it disappoints when it should serve and the dealer is blamed for selling an article that is "no good."

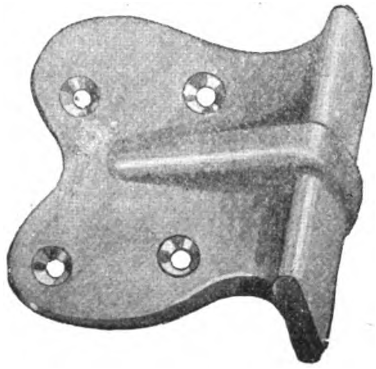


Monroe self-oiling pumps always respond. The leather is always soft and pliable. The oiled felt washer feeds a little oil to the leather on every up-stroke of the pump through the spring action (see illustration) and a full barrel of air goes into the casing—no exertion, no slipping and no loss of time.

Monroe pumps are made in two models: The No. 10 is 21⅞ inches in height, the cylinder is 1½ inches in diameter, and it is finished in black enamel with nickel ferrule and cap. The No. 5 is the same as the No. 10 except that the cylinder is 1½ inches in diameter, and there are minor differences in shape of handle and foot standard.

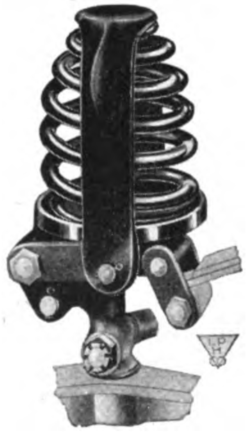


The same concern also specializes on the Ford brake shoe, which is cast to fit any Ford, and sedan and closed car spot light brackets. These latter are curved or flat to fit either style of post, are machined of heavy cast iron and are finished in black enamel, baked on. These brackets will fit the following cars: Dodge Brothers, Ford, Buick, Overland, Oakland, Hudson, Chalmers, Packard and many others.



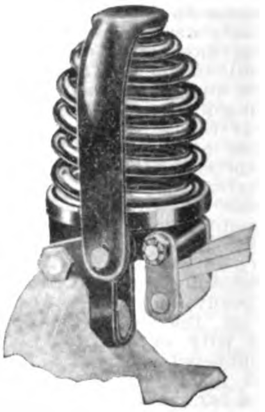
Manufactured by the Monroes Auto Equipment Manufacturing Co., Monroe, Mich.; sales representative, the Fulton Co., Milwaukee, Wis. Prices: Monroe Self-Oiling Tire Pump, No. 10, $2.75; No. 15, $3. Sedan and closed car brackets, 75 cents each. Ford Brake Shoe, 70 cents a pair.

The Halladay Direct Suspension Shock Absorber is stated to be especially designed for and effective in service on the Ford car in that it works on the principle of preventing the rebound by eliminating the cause. A leaf spring, violently and excessively forced out of the normal curvative will recoil nearly as far in the opposite direction. The only way to avoid such recoil is to prevent the original deflection. The accompanying sketches show the front and rear attachments.



The maker of the Halladay Direct Suspension Shock Absorber has been designing and manufacturing shock absorbers for years and this latest product is stated to be the result of all this beneficial experience and to be the last word in shock absorber efficiency. As will be noted, it is of the well known "bee-hive" form and has all the late improvements, such as bushed bearings and extra heavy yokes, eliminating liability of breakage and excessive wear. There are no frictional bearings to interfere with the spring action and no light breakable parts to be lost. It is stated to place no additional load on the leaf spring or strain of any sort to cause bending or breaking.

Halladay Direct Suspension Shock Absorbers are built in touring or coupe, sedan or light commercial truck, and roadster models and are packed in a durable carton with complete directions as to attachment. In ordering, the make of car on which the absorbers are to be used should be specified.

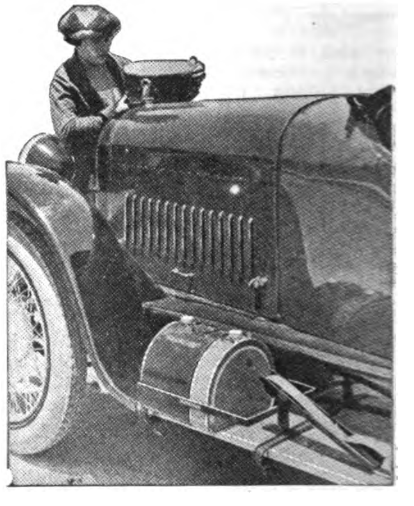


Manufactured by L. P. Halladay Co., Streator, Ill. Price, per set of four, $18.50.

Boyco Service Units are combinations, in compact, handy form of Boyco Autocans for gasoline, oil and water. They are made in various sizes and combinations to accommodate the particular needs of every user.

The Boyco Service Unit is now becoming recognized as a practical necessity. It does away with odd sized, separate cans. It is easily carried, well built, sturdy and of actual value wherever gasoline motive is used.

As will be noted from the illustration the Service Unit is securely and snugly fastened to the running board and cannot work loose. The Autocans are combined in a neat, substantial frame, equipped with two clamps for fastening to the running board or like object and a top channel bar through which a heavy web strap passes and buckles at the side. With this construction they are securely and snugly held, having four places of contact.



The top channel bar holds the handles in place and eliminates all rattles. The strap running through it protects the caps and acts as a stopper in case they are mislaid.

Its substantial build, sensible pattern and actual usefulness appeal in every locality at all times of the year.

The Boyle Manufacturing Co. also markets an extensive line of canteens and carriers, camp grates and other touring equipment, as well as articles to make life better worth living for car owners who make their own repairs, such as the Boyco Allcar Creeper.

Manufactured by the Boyle Manufacturing Co., Santa Fe avenue and 51st street, Los Angeles, Cal. Descriptions and prices on request.

The Able Combination Auto Lock is a compact device made of high grade bronze; the working parts cannot rust or corrode. It becomes a permanent part of the car and will last the life of any car upon which it is installed.

It is as easy to lock or unlock the Able combination as it is to turn on the batteries—but it is absolutely impossible to unlock it without knowing the combination. The combination device on the Able lock is non-pickable and positively theft proof.

Few people will bother to use an auto lock that requires the least inconvenience in locking or unlocking. One failure to lock may be fatal. The Able Combination Auto Lock gives security without inconvenience. It is easily and quickly operated from the seat and there is no mud, dust or grease to soil hands, gloves or clothes.

LOCKS
ABLE
0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17

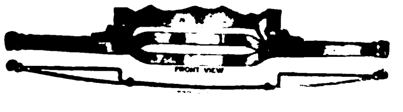
The Able lock is placed in such a position on the steering post that it is practically impossible to use a cold chisel, hack saw or Stillson wrench on it in an effort to break it from the steering post and thus unlock the car.

The driving tests showed that a thief would be unable to steer the car in such a manner that he could drive for any considerable distance down the street, nor could he turn a corner in order to get the automobile to a point where he could work on it at his leisure.

Manufactured by the Able Manufacturing Co., Inc., 731 Folsom street, San Francisco, Cal. Prices and literature on request.

The Halladay Twin-Bar All-Steel Truss Spring Bumper is designed to appeal to anyone desiring a bumper of massive appearance and exceptional strength, without unnecessary weight. The truss spring bumper feature is still retained, as it is considered by the maker to be positively the best type of construction to stand the severe concussions to which a bumper is subjected. The flexibility of a double, full length spring steel bar of highest grade insures the greatest possible protection.

The fittings of this bumper are also made of spring steel, thus presenting an all-steel construction, eliminating breakage. It is handsomely finished in either black japan with nickel end caps and name plate bolts, or buffed nickel plate over a heavy coat of buffed copper, preventing rust.



The Halladay Twin-Bar Bumper is supplied complete, as shown in cut, or the manufacturer will furnish it with any other of the regular Halladay fittings, either front or rear. It is packed in a standard carton, four by six by 60⅓ inches, and is shipped in cases containing 10 cartons each unless otherwise specified. The weight of the bumper bar is only 26 pounds.

Manufactured by L. P. Halladay Co., Streator, Ill. Price, with any style fittings: Twin-bar, two by 5/16 inch, Japan finish, $16; nickel plate finish, $18.

The Allen Combination Gas-Air Blow Torch, Soldering and Branding Tool, for either gas or gasoline, is stated to be a new device equally well adapted for precision, medium or broad surface work. Heat is projected into an opening inside the shank of the tip of the tool, keeping the outside surface of the tip clean and at an even heat and free from carbon Its use obviates the frequent going back and forth to the fire, whether the tool is required as a portable or stationary equipment. The temperature range is 1300 to 1900 degrees Fahrenheit.

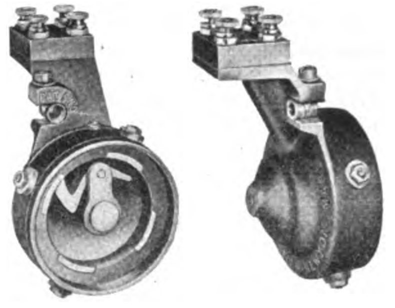
The flow and proportioning of air and gas are under positive control and intense heat is concentrated at a point. Rapidity of operation and fuel economy are claimed for the Allen tool. All parts are interchangeable and flexible steel tubing may be supplied in any length for air and gas.

It may also be supplied with a holding post which holds the torch, leaving both hands free for the manipulation of the work. The tool may be raised or lowered, on the post, tilted up or down or swung in a circle. Cups are also attached to this post convenient for holding flux.

Soldering tips of pure copper, cast or wrought, are supplied, standard or special, as extras, either straight or elbow. The Allen gas soldering tool, blow torch and branding tool is also supplied for gas only, with a temperature range of 1290 to 1700 degrees Fahrenheit.

Made by the L. B. Allen Co., Inc., 4521 North Lincoln Street, Chicago, Ill. Literature and prices at request.

The Newton Timer for Ford Cars, front and rear views of which are shown herewith, presents, among other features, a bone fiber terminal block mounted on a hollow arm projecting from the main part of the case, which is made of cast iron, and in the terminal block are four numbered terminal screws, each connected by an internal wire to its corresponding contact segment of the contact race. This race is of the usual construction, consisting of a bone fiber ring and steel contact segments set into the ring. With this design the lead wires are removed from contact with oil and dirt in the drip pan and kept from chafing against the adjacent parts of the engine. The rotor or contact assembly consists of a brass composition brush holder and a special bronze alloy brush; the latter is actuated and pressed into contact by a steel wire spring coiled about the pivotal pin of the brush, the ends extending outwardly, one end bearing against the barrel of the brush holder and the other end against the arm of the brush. The design of the brush is stated to be such as to allow a generous amount of wearing material and, as the brush wears, continually presents a forwardly projecting cleaning edge, which keeps the contact race bright. By the bronze brush making contact with the steel and also by reason of the peculiar shape of the brush, an excellent electrical contact is said to be made and the wear of the contact race is very slight and uniform in character.



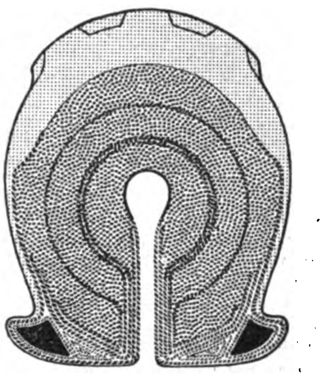
The principle amount of wear occurs on the brush, which is guaranteed by the maker to be good for 10,000 to 15,000 miles of service, and as the case will outlive several brushes, it is evident the device is economical as well as efficient. A steel bearing for the operating rod is provided and held in place in a slot in the arm by a conical pointed clamping screw, the point of which engages with a groove in the bearing piece. The oiler is placed at the top of the case at the rear of the projecting arm.

Manufactured by the Newton Timer Co., 42 Parsons Street, W. Newton, 65, Mass. Retail price of timer, complete, consisting of case and contact assembly, $3.50; extra contacts, 75 cents.

The Liberty Airless Tire is a tubeless cushion tire of high resiliency, composed wholly of rubber and fabric, and with a small central cavity to further increase easy riding.

Tested side by side with a properly inflated pneumatic it is said to be fully as resilient.

The tread and outer walls are composed of extremely tough and wear-resisting rubber, and the interior consists of highly resilient red rubber, reinforced by layers of fabric.

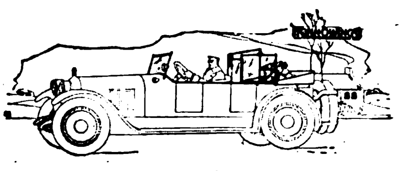


The tire looks exactly like a pneumatic on the wheel, and is interchangeable with any pneumatic on the same rim.

Being airless, it cannot puncture, or blow out, it is stated, and its makers report an average mileage in service between 25,000 and 30,000 miles with no trouble, care or repair.

This tire is manufactured by the Liberty Airless Tire Corporation of Carey, O., who has just completed and put into operation a modern three-story plant.

Gemco Tonn-O-Wings. A device recently placed on the market, is stated to be meeting with success from dealers and jobbers handling it. Tonn-O-Wings are attached in a few minutes time to the top rest at each side of the tonneau. They are so designed that a 12-inch wing of plate glass can be adjusted to any position desired by the occupants. In this way complete protection from the discomforts usually found in driving is afforded, but a conversation can be easily carried on between the occupants of the front and those of the rear seat.



A big feature of this device is that the wings can be quickly and easily attached without changing or damaging the car. This gives it the added advantage of being inexpensively and easily installed.

Tonn-O-Wings are made in four sizes, ranging in price from $51 to $60, and the manufacturer will be pleased to make recommendations to car owners if furnished the make and year of the car for which the wings are desired.

Manufactured by the Gemco Manufacturing Co., Milwaukee, Wis. Circulars on request.

S. A. E. Announces 1921 Standard Divisions

THE organization of the 1921 Standards Committee of the Society of Automotive Engineers has been completed. It contains 25 divisions, with a total personnel of over 200. B. B. Bachman of the Autocar company is to continue as chairman.

The 1920 miscellaneous division has been divided into the screw thread and the parts and fitting divisions. The latter division will consider such subjects as ball studs, horn mountings and serrated shaft fittings.

A passenger car body division also has been appointed and will consider subjects the standardization of which will be advantageous to both body users and manufacturers.

The complete list of the 1921 divisions and the more important subjects assigned to them follows:

Aeronautic—Engine nomenclature, elastic cord for shock absorbers, engine name plates, fabric tests, hose and hose clamps, performance and static tests, synchronizer attachments and wheels.

Ball and Roller Bearings—Roller bearings, thrust ball bearings and clutch release bearings.

Battery—Industrial truck and tractor batteries.

Chain—Rollerless bushing chains and roller chain sprockets tooth forms.

Electric Vehicle—Lamp voltage and vehicle motor ratings.

Electrical Equipment—Automobile wiring, generators and starting motor mountings, insulated cable and flexible disc magneto couplings.

Engine—Fan hubs and V belts.

Frames—Passenger car frames.

Iron and Steel—Molybdenum steels, physical characteristics of S. A. E. steels, sheet steel and steel tubing.

Isolated Electric Lighting Plant—Storage battery rating and knife switches.

Lighting—Bases, sockets and connectors, head lamp brackets and nomenclature.

Lubricants—Lubricants.

Motor Boat—Engine brackets and exhaust manifold connections.

Motorcycle—Priming cups.

Non-Ferrous Metals—Die casting alloys, physical characteristics of non-ferrous alloys and wrought non-ferrous alloys.

Parts and Fittings—Ball studs, brake lining specifications, exhaust pipes, pipe fittings, horn mountings, serrated shaft fittings and universal joint companion flanges.

Passenger Car Body—Body standardization.

Radiator—Radiator standardization.

Screw Thread—Carriage bolts, pressure gage connections and drain cocks.

Springs—Test for parallelism.

Stationary Engine—Flywheel pulley lugs, oval pipe flanges and stationary engine pulleys.

Tractor—Anti-freezing solutions, belt speeds, plowing speeds and testing forms.

Transmission—Clutch facings, transmission drive for speedometers and tire pump mountings.

Truck—Body installation dimensions, power take-off, three-joint propeller shaft front shaft rear ends.

A questionnaire was recently sent out to several hundred automotive manufacturers requesting suggestions as to parts and materials standardization of which would be advantageous to the industry. Any such suggestions received by the society will receive prompt consideration by the council and assigned to the proper division of the standards committee.

S. A. E. Issues New Hand Book.

The Society of Automotive Engineers has recently sent copies of the revised edition of volume one of the S. A. E. hand book to all of its members. Although the data contained in the revised edition are in general the same as those in the old edition, some new matter has been added as, for instance, the report of the nomenclature division on automobile nomenclature and the report of the research division on passenger car performance tests.

The standards have been grouped into 10 sections, the pages of each having a different prefix letter, as follows: A, Power Plant B, Electrical Equipment; C, Parts and Fittings; D, Materials; E, Transmission; F, Axle and Wheel; G, Tire and Rim; H, Frame and Spring; J, Controls; K, General. Thus all "G" pages refer to tire and rim standards.

The S. A. E. hand book is published by the Society of Automotive Engineers, Inc., 29 West 39th street, New York city. Copies are sent gratis to all members of the society, but non-members may obtain copies at $10 each, and may subscribe to the additional sheets as they are issued. Leather binders with one inch rings, the S. A. E. hand book being of loose leaf form, may be obtained from the society at $4 each. Separate data sheets may be obtained at six cents each if desired.

S. A. E. HOLDS STANDARDS MEETINGS.

Several meetings of the S. A. E. Standards Committee divisions were held during March. Among these were the frames division meeting on March 10 in Cleveland, the Die-Casting Alloys subdivision and the Passenger Car Body division meetings on March 11 in New York, the Screw Thread division meeting on March 12 in Detroit, the joint meeting of the Transmission division and the subdivision on Thrust Ball Bearings on March 14 in Detroit, and the Truck division meeting on March 15.

Reports on ball studs, clutch release type thrust ball bearings, motor truck body installation dimensions and three-joint propeller shafts, were discussed at length.

The society has undertaken the standardization of three-joint propeller shaft ends, a sub-division of the truck division having been appointed to obtain information on present practise and draw up a tentative specification. J. R. Coleman of the Selden Truck Corporation is chairman of the subdivision, the other members being H. B. Knap of the Packard Motor Car Co. and J. W. B. Pearce of the Spicer Manufacturing Co. The only part which the subdivision will undertake to standardize at present is the shaft end at the rear of the front shaft of the three-joint propeller shaft assembly.

N. A. C. C. OFFERS $5000 FOR SAFETY ESSAYS BY SCHOOL CHILDREN.

Five thousand dollars in prizes for essays on safety by school children has been voted by the National Automobile Chamber of Commerce as part of a campaign to educate the careless motorist; or, if he cannot learn, to drive him off the streets.

Public opinion is regarded as the best weapon. Interest on the part of school children is calculated to impress the subject of automobile safety on their elders, and to bring up the younger generation with consideration for human life.

Millions of motorists are suffering for the sins of the few. Fatalities in relation to number of cars have been cut in half in five years; but the total number of automobiles is so great that even a small fraction of reckless drivers presents a serious problem.

Pedestrians 78 Per Cent. Responsible.

Added to the harm of the careless driver is the reckless pedestrian. Police Commissioner Enright of New York says that his records show that 78 per cent. of the automobile accidents are the fault of pedestrians, failing to cross at corners, running past the traffic officer, jay-walking. Education can minimize this evil.

Playgrounds are the remedy, however, the car makers believe, for the hazards of children playing in the street. "Children have a right to play" is one of the main principles of this campaign; and any safety programme implies advocacy of adequate play areas.

The National Automobile Chamber of Commerce has, over a long period of years, campaigned for proper brake mechanism, uniform traffic legislation and adequate instruction for new drivers. It believes, however, that proper enforcement of the present laws and stimulation of an active public interest in safety will prove the best means of reducing accidents.

Details of Prize Plan to Be Given Later.

Full details concerning the distribution of these prizes and methods of awards will be announced in the near future. The car makers will work through recognized official, safety and playground agencies so that the benefit of the best experience may make the prizes most effective.

AUTOMOBILE ISSUE OF WRIGHT HOISTS.

So insistent has been the demand on the part of garages and automobile shops throughout the country for more and specific information pertaining to the high speed hoist that the Wright Manufacturing Co., Lisbon, O., has prepared a special book on the particular use of their product. It is just off the press and is captioned, "The Automobile Issue of Wright Hoists." A copy will be gladly forwarded to the readers of this paper on request.

The use of steel tires on motor vehicles is prohibited in Connecticut.

Ninety-Six Per Cent. of Total Revenues from Car Registrations Used on Roads

A TOTAL of 9,211,295 motor cars, including commercial vehicles, were registered last year in the 48 states and the District of Columbia, according to figures compiled by the Bureau of Public Roads of the United States Department of Agriculture in a study of revenue available for road building purposes. There were also registered a total of 238,146 motorcycles. The registration and license fees, including those for chauffeurs, operators and dealers, amounted to $102,034,106.26.

The use made of the revenues has changed with the passing of years. In 1906 the total registrations were approximately 48,000 cars, paying a gross revenue of about $193,000. In 1906 the gross registration revenues were equal to less than three-tenths of one per cent. of the total rural road and bridge expenditures for that year.

The registration revenues in 1920 were equal to about 25 per cent. of the total rural road and bridge expenditures for the calendar year 1919. In 1906 practically none of the motor vehicle revenues was applied to road maintenance or construction while, in 1920, 96 per cent., or a total of $97,997,160.60, was used for this purpose. The remaining four per cent. not applied to road work was expended very largely for number plates and in carrying out the provisions of the motor vehicle registration laws in the several states. Of the total amount applied to road work, 79 per cent., or $77,531,582.57, was expended under the control or supervision of the several state highway departments.

Increasing Amount Spent for Road Work.

For a number of years the general tendency toward devoting an ever increasing portion of the motor vehicle revenues to road work under the control and direct supervision of the state highway departments has been very noticeable. Prior to 1912 only a very small portion of the motor vehicle registration was devoted to this purpose. In 1920 76 per cent. of the revenue, or $77,531,582.57, was applied to road work by counties or other local supervision, but with little or no direct supervision from the state highway departments.

In most states the motor vehicle revenues are devoted to maintenance and repair of the state roads or other improved highways. These states seem to have solved fairly well the difficult problem of securing funds for the maintenance of the more important roads under the ever increasing traffic requirements. As both the traffic and the revenues increase with the number of cars, there apparently exists a possibility of so adjusting the registration rates as to keep pace with the ever growing maintenance changes.

A number of the states, having in general but a small mileage of improved roads, have recently adopted the plan of capitalizing the motor vehicle revenues and devoting these funds to road construction. The states doing this are Illinois, Maine, Minnesota, Missouri, Nevada, Utah and Wyoming. In them bonds have been voted or issued for road construction, and the principal, in some instances also the interest, is to be paid entirely from the motor vehicle revenue.

Highway and County Bond Issues.

In this connection it is interesting to note a summarization of the state and county highway bond issues made by the Portland Cement Association, 111 West Washington street, Chicago, Ill., comprising returns from 42 of the 48 states of the country. This gives the total amount authorized from Jan. 1, 1919, to Jan. 1, 1920, as $594,132,072, this sum including $60,000,000 state bonds authorized in Illinois in 1918 and $50,000,000 state bonds authorized in Pennsylvania in 1918. The total authorized in 1920 was $404,821,068, and this makes a grand total of state and county bond issues for the two years, 1919 and 1920, of $998,953,140, including the $110,000,000 1918 state bonds in Illinois and Pennsylvania.

These figures do not include the states of Connecticut, New Hampshire, North Dakota, Ohio, Rhode Island and South Dakota or the District of Columbia.

Limit Load of Motor Trucks.

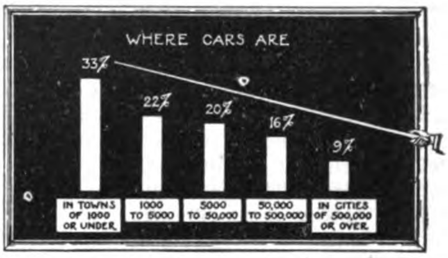
At the beginning of 1921 there were still seven states in which motor trucks were registered at the same rate as passenger cars, but in recent years there has been a very decided tendency in most states to increase the fees required for motor trucks over and above those required for passenger cars. This increase is usually based on the weight of the truck and its carrying capacity, its horsepower, or a combination of these factors. The most general practise seems to be toward definitely limiting the maximum total road weight of the vehicle and basing the registration fee on the capacity of the truck. Some few states have adopted a scale of fees which, in actual practice, serves to make the operation of very heavy trucks impracticable.

In Colorado, New Mexico and Oregon, in addition to the registration fees, a state tax on gasoline or other products used for the propulsion of motor vehicles is also levied. In some states motor cars are taxed as personal property in addition to the required registration fees. In Alabama, Delaware, Idaho, Iowa, Michigan, New Hampshire, New York, North Dakota, Oklahoma, Oregon, South Carolina, Pennsylvania, Tennessee and Vermont the registration fees are in lieu of all personal property taxes.

The first tramp tour on record for a motor vehicle is a truck running from Green Bay, Wis., to the Pacific coast, earning all travelling expenses by picking up a load whenever possible.

FARMERS THE LARGEST BUYERS OF AUTOMOBILES.

More automobiles are owned by farmers than by any other single buying class. Thirty-three per cent. of cars are in districts under 1000 population and 22 per cent. in communities between 1000 and 5000, according to a survey by J. M. Gunn, president of the United States Tire Co.



These figures check up with state registration statistics, which indicate the heaviest use of cars in farming regions, such as Iowa, where there is one car for every six persons.

Figures compiled by the National Automobile Chamber of Commerce show that the 12 largest cities, viz., all over 500,000, have but nine per cent. of the car registration.

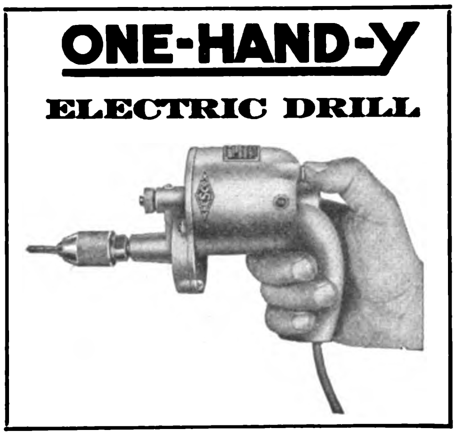
IMPORTS TO MALAGA, SPAIN.

The imports to Malaga, Spain, during the first nine months of 1920, show the following items, the record having been made in terms of kilograms, which are reduced to American pounds:

From the United Staes, 229,440 pounds of automobiles, 15,052 pounds of automobile chassis and parts, 11,343 pounds of motors, electric accumulators, batteries, etc., 11,669 pounds of gasoline and 317,775 pounds of lubricating oils.

The corresponding figures from other countries are as follows: Belgium, 26,840 pounds of automobiles and trucks; from France, 26,763 of automobiles and trucks, 87,848 of motors, etc.; 2273 of rubber and its products; from Germany, 484,799 of agricultural machinery and irrigation pumps, 27,925 of automobiles, 529,362 of auto trucks and chassis, 20,911 of motors, etc.; Great Britain, 44,253 of agricultural machinery and irrigation pumps, 1828 of automobiles, chassis and parts, 2683 of motors, etc., 32,395 of lubricating oils, 12,423 of paraffin in bulk and refined, and 5617 of rubber goods; from Italy, 10,912 of automobiles, 65,978 of auto trucks and chassis, 47,454 of hydraulic and electric motors and dynamos; from Portugal, 171,600 of gasoline.

Deaths from automobile accidents in 1919 were 7969, an increase of 444 over 1918 in the registration area of the Federal Census Bureau which covers about 80 per cent. of the total population.



ONE HAND-Y ELECTRIC DRILL.

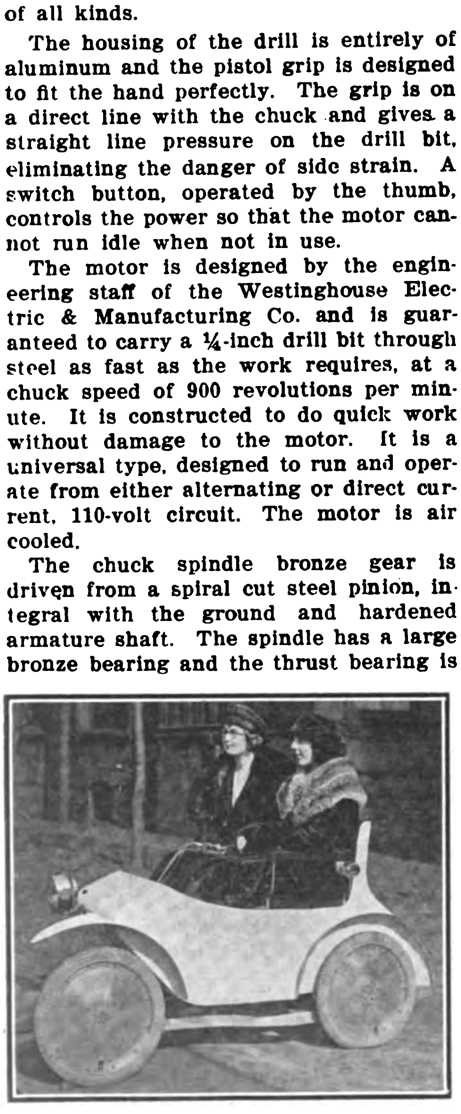
The Knight Engineering & Sales Co., Los Angeles, Cal., has developed and recently placed on the market a one-hand electric drill for drilling small holes in wood or metal. This is claimed to be one of the lightest, most efficient drills ever placed on the market and is especially designed for drilling holes for oil, cotter pins, name plates or any small holes in metal, also for boring holes for wood screws in cabinet work, dowel-pin holes in window sashes and applying hardware of all kinds.

The housing of the drill is entirely of aluminum and the pistol grip is designed to fit the hand perfectly. The grip is on a direct line with the chuck and gives a straight line pressure on the drill bit, eliminating the danger of side strain. A switch button, operated by the thumb, controls the power so that the motor cannot run idle when not in use.

The motor is designed by the engineering staff of the Westinghouse Electric & Manufacturing Co. and is guaranteed to carry a ¼-inch drill bit through steel as fast as the work requires, at a chuck speed of 900 revolutions per minute. It is constructed to do quick work without damage to the motor. It is a universal type, designed to run and operate from either alternating or direct current, 110-volt circuit. The motor is air cooled.

The chuck spindle bronze gear is driven from a spiral cut steel pinion, integral with the ground and hardened armature shaft. The spindle has a large bronze bearing and the thrust bearing is a loose steel ball in bronze bushings. A knurled nut on the extended end of the armature shaft makes a quick and simple method of holding the chuck spindle stationary while removing the drill bit.

The One Hand-Y Drill is regularly equipped with six feet of cord, with separable plug and a three-jaw chuck, and takes a ¼-inch drill bit or smaller.



Unique Small Car to Be Known as the Scootamobile.

SCOOTAMOBILE, WEIGHS 150 POUNDS, SEATS TWO PASSENGERS.

One of the entirely new type of vehicles to make its bow to the public at the Boston Automobile Show was the "Scootamobile," a two-passenger automobile, the total weight of which is under 150 pounds. It is claimed it will have a maximum speed of 30 miles an hour; will travel 75 miles on a gallon of gasoline; will seat two people side by side and will be completely housed in for protection in all weather.

This little car, which is a radical departure from the conventional, was designed by C. H. Martin, president of the Martin Rocking Fifth Wheel Co. of Springfield, Mass., in conjunction with E. R. Gurney, consulting engineer. The designers say the car is made almost entirely of aluminum alloy and magnesium metal; has a five horsepower opposed motor and sliding gear transmission; has no universal joints or differential. Every possible ounce of weight that could be spared has been taken out. Yet it is amply strong to withstand all kinds of road shocks. The wheel arrangement and spring suspension are such that it will ride as comfortably as a heavy, expensive car.

The parking problem and garaging problem are getting serious. This machine is made narrow enough to be pushed through an ordinary doorway and can be parked in the office or in the front hall.

Mr. Martin says: "Although it will not be ready for the market for some time, we are exhibiting it for the purpose of inviting criticism and suggestions from dealers and users. Before offering it to the public we propose subjecting it to months of gruelling tests. We cannot yet determine just what the selling price will be, but because of the cost of the material of which it is made, from 90 cents to $2 a pound, it will probably be the highest priced automobile for its weight in the country."

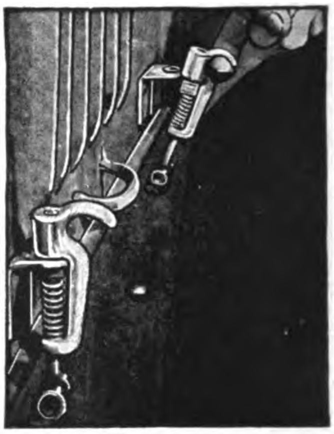
DAVEY SPRING HOOD CLIP FOR FORDS.

The Davey Spring Hood Clip for Ford cars appeals to all Ford owners. It is easily installed in a few minutes without drilling or any alterations other than removing the old clip and installing the Davey Spring Clip in the same hole.

The spring is enclosed inside the cylinder and is adjustable to any desired tension, allowing the hood to be clamped tightly.

The Davey Hood Clip is very neat and compact and adds to the appearance of the car.

It is patented and manufactured by the Holton Hood Clip Co., 513 Shelby street, Detroit, Mich.



Holt-On Hood Clips for Chevrolet Cars.

HOLT-ON HOOD CLIPS FOR CHEVROLET CARS.

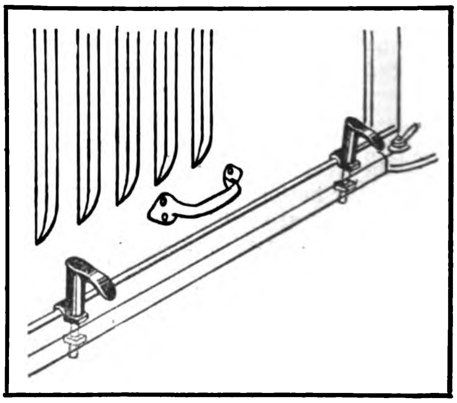
The Holt-On Hood Clips for Chevrolet cars are especially designed to save time and trouble as they are easily installed and no tools are necessary. It is a spring clip that can be put on in a minute's time by removing the thumb screws formerly in use and attaching the Holt-On Spring Clip to the same bolt. It is claimed that they will never slip or rattle and are adjustable to any tension.

They are patented and manufactured by the Holton Hood Clip Co., 513 Shelby street, Detroit, Mich.

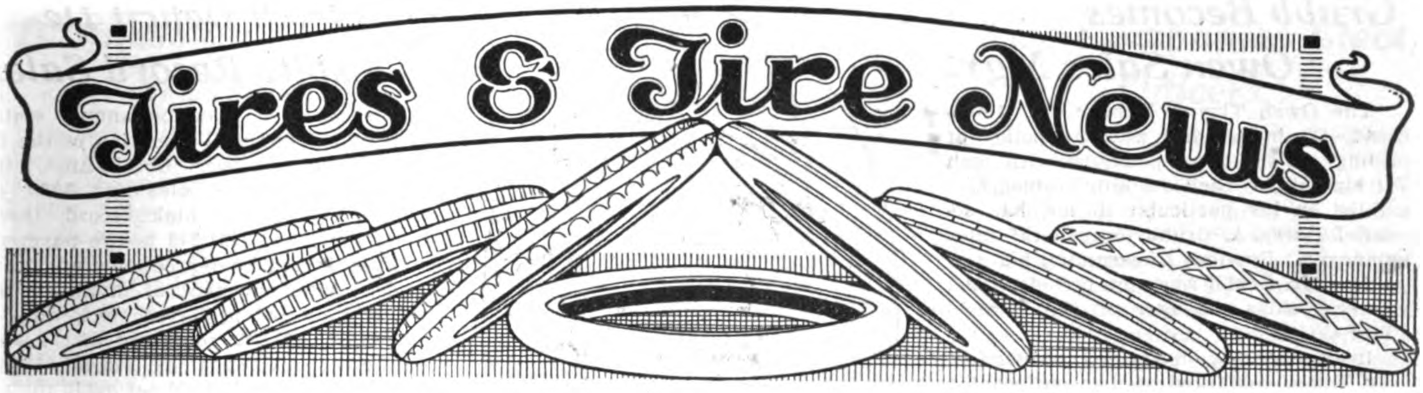
ETCHING HARDENED STEEL.

When it is desired to cut a hole through hardened steel, which turns the edge of ordinary tools, a good method is to etch the hole. Cover the steel with melted bee's wax. When thoroughly coated and cold, make a hole in the bee's wax with a fine pointed needle, or other tool, the size of the hole required. Put strong nitric acid upon it; after an hour rinse off and apply more acid, repeating the process until the hole is cut as desired.

The average cost of automobiles increased 12 per cent. last year, while prices of commodities during the same time rose 165 per cent.



Davey Spring Hood Clip for Fords.



Plant of Bergougnan Rubber Corp.

The home of the Bergougnan Rubber Corporation, is conveniently situated along the main line of the Pennsylvania railroad at Trenton, N. J. In addition to this factory there are also factories located abroad in France, Italy, Russia and Belgium.

The completion of the third unit of this plant during the early part of December permits of a normal production of 500 tires a day.

The Bergougnan products are known throughout the industry as "the tire with a bonded guarantee." The Bergougnan Rubber Corporation stands squarely behind its 8000-mile cord and 6000-mile fabric guarantees and, in addition, the National Surety Co. of New York City, the largest company of its kind in America, issues a bond on every tire sold certifying that the guarantee will be lived up to in every respect. It is needless to say that the National Surety Co. made exhaustive tests before accepting the responsibilities referred to.

The quality and service built into Bergougnan products are stated to have been so satisfactory as to result in a wonderfully increased volume of business, as well as resulting in numerous inquiries from dealers as to the exclusive distributor's proposition.

NET INCOME OF KELLY-SPRINGFIELD.

Kelly-Springfield Tire Co., New York city, reports a net income, before federal income and excess profits taxes, for 1920, equal, after preferred dividends, of $4.01 a share on the 323,370 common shares outstanding, compared with $13.20 a share on 214,479 shares in 1919 and $20.56 a share on 198,288 shares in 1918.

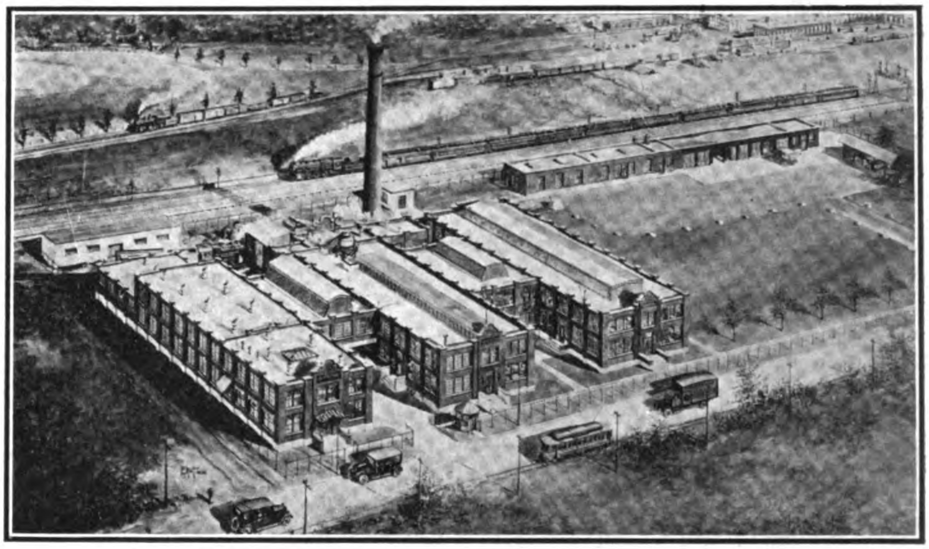
CONTINENTAL ELECTS OFFICERS.

At the annual meeting of the Continental Rubber Works, Erie, Pa., T. R. Palmer was re-elected president and general manager; Alexander Jarecki, vice president; A. E. Caldwell, secretary, and C. S. Coleman, treasurer. J. A. Vey, superintendent of the company, has been elected to the board of directors to succeed F. C. Jarecki, deceased.

H. S. BERLIN HEADS VICTOR RUBBER CO.

The Victor Rubber Co., Springfield, O., announces the election by its board of H. S. Berlin as president and general manager. Mr. Berlin was formerly in an executive capacity with the Firestone Tire & Rubber Co. at Akron, and has been connected with the rubber tire industry for several years. He will be assisted in the management of the Victor Rubber Co. by the following operating personnel: Secretary and treasurer, H. H. Durr; factory manager, Frank R. Talbott; sales manager, C. A. Swinehart; comptroller, J. J. Anzalone; purchasing agent, P. C. Leffel.

The Victor Rubber Co. has for 21 years been a producer of rubber carriage tires and sundry products, and has, for the past seven years, been a manufacturer of high quality automobile tires. The company produces a complete line of black tread cord and fabric in non-skid, ribbed and plain tread designs.



New Factory of Bergougnan Rubber Corporation at Trenton, N. J.

TIRE CONCERNS DISSOLVED.

The Ehman Tire & Rubber Co., 176 N. Michigan avenue, Chicago, Ill., has discontinued the manufacture of tires.

Cortland Tire & Rubber Co., manufacturers of Cortland pneumatic automobile tires, Belleville, N. J., has discontinued the manufacture of tires.

DISTRIBUTORS OF SYRA-CORD TIRES.

The Syracuse Rubber Co., Inc., Syracuse, N. Y., announces that the distribution of Syra-Cord tires in the Chicago territory has been taken over by the National Auto Supply Co. This concern operates three stores in the western metropolis and is well known in tire circles there. W. C. Erkert is its president.

The Reed Motor Supply Co. of St. Paul, Minn., wholesaler of automobile accessories and supplies, has recently taken over distribution of Syra-Cords in Minnesota. Edgar A. Reed is secretary-treasurer and general manager of the St. Paul concern and H. H. Orme is president.

OFFICERS OF OLDFIELD TIRE CO.

On behalf of the Oldfield Tire Co. of Akron, O., of which he is president, Barney Oldfield announces the appointment of J. M. Dine as vice president and general manager.

Mr. Dine has been identified with the rubber industry in various capacities for the past 14 years, first with Goodyear and later with Firestone.

Other officers recently chosen were: Secretary, B. M. Robinson; treasurer, H. L. Allsopp, and assistant treasurer, M. E. Moffett.

Grubb Becomes Owen Sales Mgr.

The Owen Tire & Rubber Co., Cleveland, O., in keeping with its policy of filling its executive positions with men of big caliber, each a highly trained specialist in his particular duties, has secured Harry A. Grubb for general sales manager. Previous to assuming his new duties Mr. Grubb was vice president and general sales manager of the Oldfield Tire Co.

In commenting on his new connection, Mr. Grubb remarked: "The outlook for the year is good. Tire stocks are reduced to a hitherto unheard of minimum, there being less than sufficient tires with dealers over the country to provide one spare tire for each car in service. Granting that buying practises have undergone a change and dealers are much more conservative in anticipating their requirements, yet on a hand-to-mouth basis alone there is good business in sight.

"A great change is taking place in the selling and distributing of tires. Hereto extravagant methods must give way to economy of operation and sound business practises. Quality must be faithfully maintained if the manufacturer would profit by that greatest of all good will builders, 'Enthusiastic Word of Mouth Advertising.'. That is what cuts sales costs and builds solidly for the future."

Harry A. Grubb, New General Sales Manager of Owen Tire & Rubber Co.

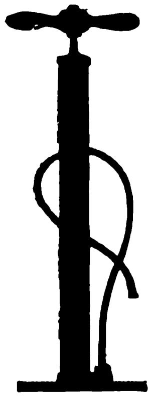
KENTUCKY THOROUGHBRED TIRE PUMP.

The Kentucky Thoroughbred Tire Pump embodies special features in design that are radically different.

First, it is constructed with a hollow piston rod, having the air intake valve on the top end of this rod and directly through the handle. Air is taken in through this valve, passing through piston rod and into the cylinder of the pump, and at the beginning of the downward or compression stroke this valve instantly closes and remains closed until the stroke is completed. The air has direct passage into the cylinder and enters through a hollow piston rod, getting through cup leathers and piston construction in this manner instead of passing in around the rod or through a vent and then by the cup leather to gain entrance to the cylinder.

Second, by this arrangement is eliminated all cause for a leaky piston, as the cup leather is always in shape and position, and is not required to be left loose in order to allow the air to intake or enter the cylinder from above and pass by the cup leathers.

Third, air entering the Kentucky Thoroughbred Tire Pump is pure and clean and enters at a point where no dirt or dust is present to be drawn into the pump, as would be the case where air enters by a valve placed at the bottom of pump.



Fourth, pumps which have their intake around the piston or through a vent in top cap are apt to deliver greasy or dirty air into the tire. This is not so with the Kentucky Thoroughbred, as the air enters through a hollow piston direct to cylinders and into the tire and is not required to pass the greasy cup leather or around the piston.

Fifth, the patent valve is screwed on to the top end of piston and is made of hex steel, turned and counterbored to receive the valve casing, which is secured on top by the valve cap, which contains the valve seat, making a compact and serviceable arrangement.

Sixth, the Kentucky Thoroughbred Tire Pump, immediately on the starting of the downward or compression stroke, begins forcing air into the tire, as the cylinder and hollow piston are both full of air at the end of the upward stroke.

Seventh, a handle of the best quality of hard wood, varnished and polished, securely fastened by special valve arrangement. No small screws to loosen and cause loose handle.

Eighth, the Thoroughbred Tire Pump is constructed of the best material obtainable; cylinder and piston of drawn seamless steel tubing. The valve, valve cap, top cap on the cylinder, guide and cup nut on the piston and bottom hose connection are all machined from solid bar stock, cold rolled steel and machined and fitted by skilled men.

Ninth, the hose is two feet long, four-ply high pressure air hose and is fitted with Schrader standard ferrules and connections.

Tenth, the base or foot piece is cast from best grade gray semi-steel.

Eleventh, the pump is black enamelled and baked, with polished caps, and handle varnished and polished.

The Thoroughbred Tire Pump is made by the Kentucky Tire Pump Co., Inc., Madisonville, Ky. The list price of the No. 1 is $5.

Goodrich Deficit Despite Record Sales

It is reported that the annual statement of the financial condition of the B. F. Goodrich Rubber Co., Akron, O., shows that, despite sales for 1920 of $150,007,345, a new high record, there was a deficit of $921,248 before payment of taxes, inventory depreciation and dividends. After payment of dividends on the common and preferred stock the deficit was $5,371,792, compared with a surplus after dividends of $12,657,813 in 1919. Had the $8,000,000 set aside for inventory depreciation and the $3,057,000 for taxes and $2,000,000 for cost of notes been charged against last year's operations the deficit would have been enlarged by these sums. The items were charged against the profit and loss surplus of previous years, thereby reducing that account from $41,203,046 on Dec. 31, 1919, to $22,706,498. Net profits of $17,304,813 in 1919 were equal to $25.09 a share on the $60,000,000 of common stock outstanding.

B. G. Worth, president of the company, in his remarks to stockholders, said in part:

"In view of the decline in the market values of crude rubber and fabrics, the directors have deemed it advisable to appropriate out of surplus the sum of $8,000,000 which, added to the reserve for contingencies of $2,000,000 provided out of profits in prior years, leaves a total reserve on Dec. 31, 1920, of $10,000,000 to cover possible losses on future commitments and contingencies.

"The directors feel that, taking into consideration the depression in the rubber industry during the last half of 1920, the operating results shown are satisfactory and the financial position of the company is excellent.

"Plants are in a thoroughly efficient working condition, prepared for any emergency, and it should therefore not be necessary to incur any further expenditures during current year for additional expansion of fixed properties."

MOWE FOUND BUSINESS IMPROVING.

John V. Mowe, general sales manager of the Kelly-Springfield Tire Co., New York city, recently completed a trip through the central west, including Chicago, Kansas City, St. Louis and Cincinnati. He held conferences at each point with the branch managers and their forces and found through a series of reports at these meetings that stocks of the dealers were lower than they have been for years. There was an undercurrent of feeling that the tire business was improving.

KELLY-SRINGFIELD TIRE DIVIDEND.

The Kelly-Springfield Tire Co., New York city, has declared a quarterly dividend of $1.50 a share on its six per cent. preferred stock, payable April 1.

Business on Increase at Akron

Business in the tire industry already is showing improvement according to the latest reports from Akron, O., to the Rubber Age.

Each week sees a quickening of the business pulse. Orders for tires are being received in larger numbers. The open winter has been a godsend to the industry, creating a demand for tires greater than in any other year. The effect of this demand is now becoming apparent.

Rubber manufacturers in Akron feel that the depression will ultimately react to the benefit of Akron's industrial life. They believe that the future growth of the rubber industry will be gradual and healthy. They expect no sudden leap back into the "peak" activity of a year ago, nor will there be "overnight" expansions which brought thousands of laborers in the past.

In announcing that the number of employees would undoubtedly be materially increased within the next three months, tire company executives emphasize the point that only Akron men will be taken back first. Men who have homes in Akron will be given first chance at the jobs. Many months will probably elapse before men from other cities can find work.

In commenting on the prospects for the future an official of one of the largest companies said:

"Each week is showing improvement over the week before. How long it will be before a normal status returns is merely a matter of conjecture, and one person's guess is as good as another's. It is certain, however, that spring will bring with it an increased demand for tires. We confidently believe that the last six months of the year will be normal.

"In considering what the future has in store one fact must be taken into consideration. That is that the tire industry differs from other industries in respect to the certainty of the demand for its products. Over a period of time, two years, for instance, the demand can be estimated to a very accurate degree. The number of tires needed during that period will not fluctuate greatly regardless of the business conditions of the country.

"For a time motorists may stop buying tires, using their spares and their old casings until they are worn to ribbons. The cessation of buying, however, cannot exist over a long period of time, simply because without tires passenger cars and motor trucks are useless. Sooner or later new tires must be bought, and the longer the period of non-buying the greater the accumulative demand."

GOODYEAR CALIFORNIA ACTIVITIES.

It is reported by officials that during a period of six months of actual operation since the completion of the new plant of the Goodyear Tire & Rubber Co. of California, the production has averaged over 900 tires a day.

MILLER RUBBER CO. PASSES PREFERRED DIVIDEND.

The Miller Rubber Co., Akron, O., recently passed the quarterly dividend of $2 a share due on preferred stock, the first time this company has omitted a preferred dividend payment. Early in January the common stock dividend was reduced from $2 to $1 a share. The company issued an explanatory statement to the effect that in closing the books it was deemed advisable to give full effect to and charge off the entire shrinkage representing the difference between the cost of raw materials and the market value, and also to the reduction in the value of goods in process and finished merchandise on hand, as well as settlement for cancellation of certain rubber contracts.

Shrinkage in inventories on this basis aggregated $3,193,086, it is stated, and payments in settlement of contracts were $215,951, a total of $3,409,037. The net profit before the charge-off amounted to $2,791,158. After all charge-offs the loss for the year, together with premiums paid on old preferred stock, resulted in a deficit of $735,016.

Sales for 1920 were reported to have been in excess of $31,000,000.

FISK CO. ON FULL TIME AT CHICOPEE.

It is announced that beginning Monday, March 14, the Fisk Rubber Co. resumed a full time schedule at its Chicopee, Mass., plant. It is also stated that a 10 per cent. reduction in wages was made. Since the beginning of the industrial depression the plant has been running on a schedule of three days a week with a reduced number of operators.

TOZIER RESIGNS PRESIDENCY.

On account of the absorption of the Polack Tyre & Rubber Co. of New York city by the Buckeye Rubber Products Co. of Willoughby, O., E. B. Tozier has resigned as president and general manager of the Polack Co. He has made no announcement as to his future plans, but will make his headquarters for the present at the New York office of the Buckeye Co., 527-529 West 23rd street.

CLARK RUBBER CO. ORGANIZED IN MASSACHUSETTS.

The Clark Rubber Co. has been organized to operate a factory at Franklin, Mass., with a capital of $100,000, $70,000 preferred and $30,000 common. The officers are: President and treasurer, Maurice L. Clark; clerk, Herbert L. Metcalfe.

HOOD RUBBER CO. RETIRES STOCK.

The Hood Rubber Co., Watertown, Mass., has notified the Massachusetts commissioner of corporations of the surrender and cancellation of 1500 shares of new preferred stock, having a total par value of $150,000.

Tire Companies Elect Officers

Wilson Rubber Co., Canton, O.—Directors: John S. Willis, Charles Willis, Wendall Herbruck, Henry Bernhard, F. J. Wilson, Harry S. Payer, all of Canton, and Jacob DeKaiser, Louis M. Faber and Dr. Thomas A. Burke of Cleveland. President, John S. Willis; vice president and general manager, F. J. Wilson; secretary and treasurer, Wendall Herbruck.

Announcement is made that this company has begun the construction of a three-story addition, 50 by 100 feet, to its factory, of brick and steel construction, with concrete floors. The plan of construction is such as to permit the ultimate addition of two or more stories when further expansion may demand.

A 10 per cent. dividend was declared to all common stockholders for the year 1920, and announcement was made that the capital had been increased from $150,000 to $500,000.

Kelly-Springfield Tire Co., New York City—A. B. Jones has been elected president to succeed F. A. Seaman, and Mr. Seaman becomes first vice president. The new president is a graduate of Princeton university and was educated for the engineering profession. Following a connection of some length with the Pennsylvania railroad, he became identified with the Diamond Rubber Co., and later with the B. F. Goodrich Rubber Co., having resigned the office of vice president with the latter company several weeks ago.

Black Hawk Tire & Rubber Co., Des Moines, Ia.—Directors re-elected: William Moran, J. J. O'Malley, E. A. Lewis, A. J. McColl, John C. Kirby, Fred German. E. A. Lewis is secretary of the company, H. G. Curtis sales manager, Paul Anderson factory superintendent, and C. E. Riess chemical engineer.

Victor Rubber Co., Springfield, O.—President, H. S. Berlin; vice president, W. L. Timmonds, Cleveland; secretary and treasurer, H. H. Durr; sales manager, C. A. Swinehart, Cleveland; factory manager, Frank Talbott.

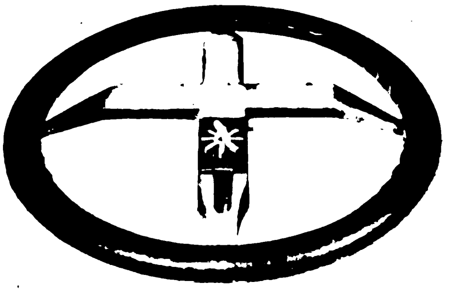
Climax Rubber Co., Columbus, O.—President, Irving S. Hoffman; vice president, Herman A. Longshore; secretary and treasurer, Clyde B. Turner; sales manager, E. W. Pavey.

CANADIAN K. & S. UNDER PRODUCTION.

It is stated that the new tire and tube factory of K. & S. Tire & Rubber Goods, Ltd., Toronto, Ont., Can., is completed and is turning out 200 tires and 300 tubes a day, and that orders are on hand to warrant a 24-hour working day until the end of the tire season.

COLUMBIA MOVES OFFICES TO MANSFIELD, O.

The Columbia Tire & Rubber Co. has moved from Columbiana, O., to its new offices, West Sixth street, Mansfield.



Keeno Keyless Auto Steering Wheel and Lock.

KEENO KEYLESS AUTOMOBILE STEERING WHEEL AND LOCK.

The Keeno Keyless Locking Steering Wheel combines the distinctive and attractive features of an approved keyless lock with a 17-inch steering wheel having an aluminum spider and corrugated mahogany finished rim. The aperture of the spider fits around a double bushing, which rotates on a double row of ball bearings. Between the two rows of bearings is a circular, tapered aperture into which fits a tapered bolt, passing through the outside bushing and extending into the inner bushing, preventing rotation. The retraction of the bolt releases the outer bushing from the inner bushing, leaving the wheel free to rotate on the balls.

This bolt is actuated by four or more discs, one of which is a cam, drawing the bolt against the tension of a spring, and, at the same time, throwing the driven discs out of alignment. These discs are a part of the permutation combination locking device, mounted on one of the spokes of the steering wheel spider, and operated by permitting the locking bolt, carried by a plate which carries the means, to enter the notched discs when the same are in alignment. These discs are operated by means of a spindle carrying an indicator bar set on the outside and top of the locking device. Directly under the indicator bar and fastened to the top of locking device are eight raised radial ribs, numbered 1 to 8. The locking bolt is encased in a steel cover riveted to the spider arm.

The Keeno Keyless Locking Steering Wheel is intended as a theft preventative device for all makes of automobiles, including Fords. On the Ford car the inner bushing is already secured to the wheel in the assembly. The old wheel and steering gear cover are removed, which also removes the inner pinion of the planetary gear.

When in a locked position the steering wheel is disengaged from the steering post, allowing the same to rotate on the ball bearings. In order to unlock the device the indicator bar is turned in such a position as to align the discs with the roller bearing on the angle plate, which allows the bolt to be forced by tension of the spring into the bushing secured to the driving shaft. To lock the car it is necessary to press the button and turn the indicator car, which causes the cam to retract the bolt. The number of combinations and permutations possible is 358,400. Raised, radial ribs permit the operation of the lock with or without a light, also without removal of gloves.

In the Keeno free wheel type the greatest possible security is built into the lock and its driving position. The wheel cannot become disengaged while driving. The lock bolt is bolted into driving position with a safety bolt, which springs to place automatically. The driving position of this wheel is just as solid and secure as any regular factory installed wheel. The wheel cannot become loose through wear or vibration, because the ball race bushings are made in one piece and case hardened and the lock bolt is tapered, automatically taking up all play.

The Keeno Keyless Locking Steering is made by the Keeno Keyless Lock Co., 2037 Wabash Ave., Chcago, Ill. Prices: Ford model, $16,50; Dodge model, $18.50. Special wheels and locks are also made for other types of cars, information in regard to which will be supplied on request.

NEW C-O UNIVERSAL BURNING-IN MACHINE.

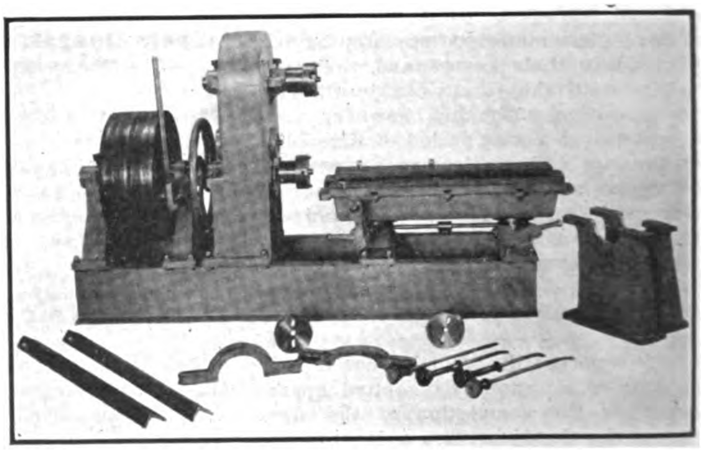
One of the most interesting recent announcements in the automotive trade, especially to jobbers and garage repair men is word of the development of a universal burning-in and running-in machine, designed and built by the Canedy-Otto Manufacturing Co. of Chicago Heights, Ill. This company has pioneered many noteworthy improvements in forges, blowers, drills, motor stands and other repair equipment for garage work. The manufacturer claims for this machine that it will positively burn-in and run-in the bearings of any type motor. Only one attachment is required and this is needed only for burning in valve-in-head V type motors. It is quickly attached and comes as part of the regular equipment. This attachment will also handle motors which do not have detachable heads, an operation which has puzzled the repair man for many years.

For simplicity and flexibility it is stated also to be notable. The table is raised and lowered by a single control. This table is grooved like all high class machine tool tables and the motor clamps can be adjusted to the size of motor. The table also serves as a sump or crankcase for the motor, so that the crankshaft splashes in fresh oil, in every way similar to the actual performance of the motor in operation.

The clutch is an extra heavy toggle type, driving through a silent chain, which is claimed to be so noiseless that the operator can test the timing of the motor or detect noises after the bearings have been run-in.

The machine requires a floor space of only 90 inches over all, with an actual base measurement of 79 inches. Twenty horsepower is sufficient to run the machine to capacity under the most severe conditions with the largest of motors. A single lever controls the raising and lowering of the table with a tension lock. All parts are highly machined to the usual standard of accuracy maintained in all Canedy-Otto equipment.

The price has been established, on a large production basis, at $635 f. o. b. factory, Chicago Heights, Ill. An illustrated bulletin and other literature will be gladly sent to anyone who is interested by an inquiry direct to the manufacturer.



New C-O Universal Burning-In Machine Made by Canedy-Otto Manufacturing Co., Chicago.

THERE IS ONLY ONE VENUS DE MILO.

The recent appearance of an attractive card in garages and service stations emphasizes a point which motorists are quick to appreciate. This card carries a picture of the Venus de Milo and it calls attention to the fact that "There is only one genuine Venus de Milo," despite the fact that it has been copied many times.

The card then urges the use of genuine Delco, Klaxon and Remy parts, which are made and guaranteed by the makers of the original equipments and which are distributed through United Motors Service, Inc., whose general offices are in Detroit.

The use of genuine parts is a protection both for the repair man and motorist and is an indication of genuine service as well.

NEW SELLING PLAN ON RELINERS.

The National Mail Order House, Inc., with offices in the Greenwood building, Sixth and Vine, Cincinnati, O., is about to put into operation an extensive advertising campaign on reliners, which will be sold, exclusively, through agents and distributors through the United States and Canada, all business in this line being done through the mail and goods to be shipped direct from the mill.

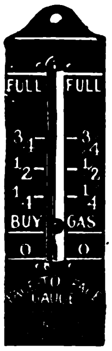
FACE-TO-FACE GAUGE FOR FORD CARS.

Leitch-Nelson & Co., Detroit, Mich., is marketing a gauge that is designed for attachment to the dash board of Ford cars and will show accurately and plainly the amount of gasoline in the fuel tank. This gauge is run on the gravity principle, very much on the order of an indicator on a steam boiler. When the water in the boiler attains a certain height the little glass indicator, which is at a corresponding level, clearly shows the amount of water in the boiler. This gauge works on a very similar principle. Whatever the level of the gasoline in the tank, this same level is maintained in the gauge and, by means of a simple steel float an accurate indication is shown on the face of the gauge.



The Face-to-Face gauge can be attached in a very few minutes and with no possibility of injury to the mechanism or working principle of the car itself. Once put on this gauge will outlast the car.

ALL-WELD RADIATOR GUARDS FOR TRUCKS.

Michaels & Mourre, Inc., 344 Amsterdam avenue, New York city, is offering as "radiator insurance" for trucks, All-Weld Steel Radiator Guards. The accompanying illustration shows one of these installed on a 6½-ton Saurer truck, one of a fleet operated by the Department of Public Works of the city of New York.

The "All-Weld" steel guard is made up of three units, the guard proper, which conforms to the size and shape of the radiator, and two side braces, bolted to the guard and the side members of the frame. The guard is made up of a welded frame of two-inch channel, enclosing a series of vertical flat steel bars, one-quarter to three-eighths inch thickness, and 1¾ inches wide. These vertical bars are spaced close enough to insure protection to the radiator and still to leave ample opening for the proper circulation of the air, giving about a 92 per cent. opening. These vertical bars are welded to the top and bottom of the frame at the back and front. A flat steel bar is welded horizontally across the guard, midway between the top and bottom, both at the front and back of the guard, the welds being made at both ends of the horizontal bars to the side of the frame, and a weld being made to every vertical bar.

All-Weld Radiator Guard Installed on Saurer Truck.

This construction is stated to result in a guard which will not only resist a straight blow, but also an oblique one. The vertical bars being set inside of the channel, insures that the stress will be taken up largely by the lip of the channel of the frame, with the added strength of a welded joint at this point. The horizontally welded bar will resist an oblique one.

The guards are attached in the conventional manner by either angle, round or flat steel side braces, as found advisable to use.

MONARCH AUTO VISOR.

The Monarch Auto Visor offers the following special features: Green under side, which is restful on the eyes; round corners, which improve the appearance; and no side braces to obstruct the view. It affords protection from sun, rain and snow and fits any car. It is attached to the front bow on open cars or the front panel of closed cars. A screwdriver is the only tool needed when putting it on the car. It is adjustable to any angle by screwing two wing nuts. It is made of quarter-inch panel lumber with round corners covered with leather grain rubber material with a steel moulding clamped on all around the edge and three steel braces which make it very rigid.

The Monarch Auto Visor is made by the Monarch Carriage Goods Co., Cincinnati, O., and the retail price is $4.50.

EASY BENDING OF FRONT AXLE.

A pressure of 53 tons was required to bend the Ford axle, shown in the illustration. a job far beyond the capacity of an ordinary arbor press. The pressure required to straighten it again was nearly as great.

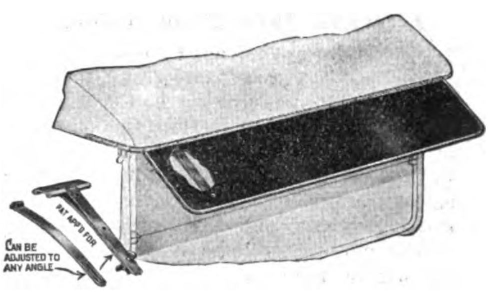
The Detroit Combination Press is stated to be probably the strongest hand power press on the market. The frame is of heavy channel steel; the cross brace is welded—not riveted—to the frame. A gong warns the operator when the travel of screws approaches its limit.

The press is guaranteed to handle any press work in any service station—no matter how heavy. Truing up centers and discs, for crank shafts, cam shafts, etc., can be done in addition to the arbor and straightening features.

It is manufactured by the Detroit Garage Equipment Co., Detroit, Mich.

MOTOR EYE—SEES ALL, TELLS ALL.

The motor is the "life" of every automobile. It is the most expensive unit and is affected by many varying conditions—any one of which may cause trouble and expense. A warning signal is essential to inform the driver of these troubles. The Motor Eye is such a signal, with its mercury charged, metallic thermo, conductor rod in direct contact with the water as it leaves the motor, keeping before the driver an accurate knowledge of the motor temperature at all times.



CAN BE ADJUSTED TO ANY ANGLE
PAT APP'D FOR

Monarch Auto Visor.

A warning is given to the driver whenever the motor becomes too heated, through lack of oil or water, a broken fan belt, or a number of other causes. An occasional glance at the Motor Eye tells the whole story. If the mercury shows a temperature of 150 to 170 degrees the motor is at maximum efficiency. When all is not well under the hood you can see the mercury gradually climb towards 212 degrees. Then it's time to investigate.

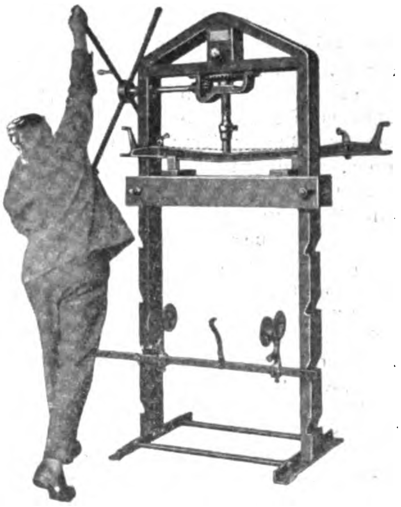
When you can hear the knock the damage is done. Don't depend on your ears—get a Motor Eye, drill a 7/16 inch hole in the radiator cap, insert the instrument, tighten up the nuts and ever after see how the motor feels.

The Motor Eye is installed by drilling a 7/16-inch hole in the radiator cap, inserting the instrument and tightening up the nuts.

The Motor Eye is manufactured by the Metalware Corporation, Chicago, Ill., and its price is $7.50.

BLACK BRONZE FOR BRASS.

Brush the brass with a diluted solution of nitrate of mercury and then several times with a solution of liver of sulphur.



Bending Ford Front Axle in Detroit Combination Press.

Boost Boston Show

(Continued from Page 30.)

There is, however, one thing that the buying public has not yet had thoroughly hammered into them—that the shortage of cars this year is beyond belief. Stocks in the dealers' hands in Boston are a very small fraction of what they have had in previous years, and stocks in the hands of the factory are at a minimum. Once the buying public awakes to the fact we will see a mad scramble for new cars and a very much improved demand for second hand cars. In fact the improvement in second hand cars has already developed. In our own case we are completely sold out of used cars and have orders waiting for anything we may be able to get.

We look for normal business in another two weeks and a steady demand from now on.—ARTHUR P. YOUNG, Treasurer, MOTORS CORPORATION OF NEW ENGLAND, New England Distributor for Case Cars.

Obtained Many Real Prospects

We are very much pleased with the results obtained at the Boston show. While we did not actually close a great number of sales, we obtained many real prospects and requests by agents for the sale of our cars.

We believe that there will be a very good business through New England this year, but it will only come to those concerns who go after it.—C. W. KELSEY, Vice President and General Manager, KELSEY MOTOR CO.

Live Prospects and Orders.

While we have been exhibiting in the Boston Motor Truck Show annually since 1910 (I believe the auto show just closed will make our 12th yearly exhibit), it was the unanimous expression of our several sales managers that they had received more live prospects, more orders and more honest-to-goodness indications of real buying during the show just closed than they had witnessed in years.

As our Mr. White stated during the show, we started in Monday morning taking orders, our dealers did a nice business, and all in all our salesmen received unusual encouragement pointing to a good spring business. Unless all signs fail we shall experience a gradually increased buying from now on. Taking into consideration the strict buyers' market which now exists, the like of which we have not experienced since 1910, we are extremely glad to state that the 1921 Boston Truck Show was a great success and gratifying beyond our expectations.—J. S. HATHAWAY, New England Manager, THE WHITE CO.

Closed Sales at Show.

This year we actually closed definitely some sales at the show which we did not do during the 1920 exhibition.

We believe that the Boston Automobile Show will do a lot toward stimulating the automobile business this spring. —EDWARD G. ACKER, President and Treasurer, EDWARD G. ACKER, INC.

Was a Distinct Success.

The automobile show this year, as far as this company was concerned, was a distinct success. In fact, we made as many sales as we did a year ago when the automobile business was at its crest. Our salesmen secured a number of excellent prospects at the show, which bid fair to be buyers.—F. P. ALLEN, C. E. FAY-ALLEN CO.

The Best Business Getter.

We believe that the recent automobile show held here in Boston was the best business getter that we have ever seen. A tremendous amount of retail business was obtained during the week of the show by the dealers. On our own particular line we sold 33 per cent. more cars than we did at the same show in 1920.

The after results of the show have been very gratifying and a large amount of business has been transacted this week. It looks to us to be simply a question of how many cars we can get from our factory as to the number of cars which we can sell this year.—JOSEPH S. DONOVAN, Treasurer, DONOVAN MOTO CAR CO.

Business Coming Back.

The show opened very favorably and the weather continued favorable throughout the week—it being better than any week since we have been running the Boston shows.

The attendance was a very good average, in fact, the cash receipts were fully larger than they were last year and showed a falling off of the trade tickets. This showed that the automobile dealers were economizing. The crowd seemed to be of a buying nature, and I believe there were more good prospects for the salesmen to work on received at this show than at any one in the past, as the sales department seem to be getting on their toes and going out for business, which seems to be the only way to get it at the present time.

The sales record would rather show that ther was a less falling off on the high priced and medium priced cars than in the more moderate priced ones. This might show that the wage earner was economizing and preparing for what he sees in the future.

The writer believes that the real moneyed values of cars sold in 1921 will far exceed that of 1920. The 1920 sales were very much increased by the feeling that the shortage of cars was going to make it harder to get them later. For 1920 our own sales showed 24 orders; of these the records show only 12 were delivered, showing that the salesmen had taken orders for cars which were impossible for us to deliver. I think this probably is a fair sample of what is being done by others during the show. This year the orders taken were 15 and two of these were rejected for the allowance offered by the salesmen, and not accepted by the used car department, leaving 13 orders, which we have cars to fill, and which will make it about as good as last year.

The only difference between this year and last year is: Last year we were short of cars and felt as though we were doing a rushing business and could do a lot more if we had the cars, and this year we are practically overstocked and, consequently, feel as though there is nothing moving.

There seems to be a feeling among the dealers that there has to be a greater effort made as the time has passed when we do not have to go out and ask for the business.

The writer believes there is a rift in the clouds and that business through New England is slowly coming back.—J. H. MACALMAN, President, BOSTON AUTOMOBILE DEALERS' ASSOCIATION.

Sales Are Above Normal.

Our sales during the recent automobile show were within 10 per cent. of our biggest year and the few days following the show indicate even bigger business. This means that our sales are above normal.

Business in Dodge Brothers cars in our territory is not so markedly seasonal as may be the case with other cars in other places. We aim to do a large volume every month, although at the close of our fiscal year we had over 400 unfilled retail orders for spring delivery on our books and this number has increased considerably since.

But we are dealing in a staple and we look for continually increasing business, which the number of orders for immediate delivery taken at the automobile show seems to forecast with emphasis.—ROBERT S. RICHEY, Sales Promotion Director, HENSHAW MOTOR CO.

Shows Acts as a Stimulus.

During the show we took a great many orders and our local salesmen got a great many new prospects that they were not working on. Furthermore, our dealers throughout New England who attended the show with us were also able to close up some sales and to sum it all up we feel that the show acts as a stimulus and does do a lot of good not only from the standpoint of retail sales, but for the dealers through New England as well, as our prospect list shows that people call on us from all points of New England.

In regard to the future business outlook we feel, and it is already showing, that business is picking up and will continue so for about two months. We look for a very quiet summer, but around the middle of October I believe that things in general will be fairly well settled and that from then on the truck business will be the biggest in its history and will continue so for several years.—H. ROSS MADDOCKS, President, STEWART AUTOMOBILE CORPORATION.

Medium Priced Cars Sold Well.

We consider that the Boston Automobile Show, which has just passed, was practically normal in attendance, maybe slightly under if anything. The sales in some lines were fairly good; in others, poor. It is our opinion that the medium priced car sold fairly well.

So far as the sale of our own car is concerned we might add that the first half of the show week business was very dull. The latter half of the week, however, was fully normal and since the show closed we have had a good increase in retail business. The wholesale end has been slow for several months and is slow now. We hope, however, to see an improvement in the near future and recent indications are to that end—F. H. LUCAS, General Manager, MITCHELL-LUCAS MOTOR CO.

Calendar of Coming Events

March 28-April 2—Annual Automobile Show, Columbia Automobile Trade Association, State Fair Building; J. M. Green, Manager.

March 28-April 2—Greenville, Mass., Automobile Show.

March 30-April 2—Greensburg, Pa., Seventh Annual Show, Passenger Cars and Accessories, Coliseum, Westmoreland Auto Dealers' Association; W. M. Berlin, Manager.

April 2-9—Bridgeton, N. J., Annual Automobile Show, Bridgeton Automotive Association.

April 3-9—Denver, Col., Annual Automobile Show, Auditorium.

April 3-9—Gloversville, N. Y., Annual Gloversville-Johnstown Automobile Show, State Armory. J. J. Callahan, Manager.

April 4-9—Chattanooga, Tenn., Automobile Show.

April 4-9—Seattle, Wash., Annual Automobile Show, Seattle Auto Dealers' Association, Arena-Hippodrome. W. J. Coyle, Manager.

April 6-9—El Paso, Tex., Southwest Auto Show, Liberty Hall, Automobile Trades Department, El Paso Chamber of Commerce.

April 11-16—Fifth Annual Automobile Show, Oklahoma City, Okla., Motor Car Dealers' Association, New Coliseum; Edgar T. Bell, Secretary, 403 Oklahoma Building.

April 11-16—Charlotte, N. C., Passenger Car, Truck and Accessories Show, Charlotte Automotive Trade Association; W. M. Jones, Secretary.

April 11-16—Buffalo, N. Y., First Annual Motors and Sportsmen's Show.

April 16-23—Red Bank, N. J., Automobile Show, Monmouth County Automobile Dealers' Association, Armory.

April 20-May 5—Mexico City, Mex., Automobile Show.

April 20-23—Goldsboro, N. C., Second Annual Show, Passenger Cars, Trucks, Tractors and Accessories, Wayne Warehouse, W. C. Denmark, Secretary, Chamber of Commerce.

April 21-23—Lincoln, Ill., Automobile Show.

April 25—New York City, Eastern Automotive Equipment Association Meeting; R. A. Picard, Secretary, A. J. Picard & Co., New York City.

April 27-29—Atlantic City, N. J., Ninth Annual Meeting, Chamber of Commerce of the United States.

May 4-7—Cleveland, O., Eighth Annual Convention, National Foreign Trade Council, Hotel Hollenden; J. G. Hammond, Secretary of Committee, 207 Chamber of Commerce, Cleveland.

May 9-10—Amarillo, Tex., Convention, Panhandle Hardware & Implement Association. Troy Thompson, Secretary-Treasurer, Delhart, Tex.

May 12-17—Prague, Bohemia, Agricultural Fair, Bohemian Agrcultural Societies.

May 17-19—Buffalo, N. Y., Spring Meeting, Service Managers of the National Automobile Chamber of Commerce, Iroquois Hotel; H. R. Cobleigh, Secretary.

May 24-28—West Baden, Ind., Semi-Annual Meeting, Society of Automotive Engineers, West Baden Springs Hotel.

May 28-June 8—Basle, Switzerland, International Automobile Exhibition.

May 30—Indianapolis, Ind., 500-Mile Race, Speedway.

June—London, England, International Rubber Exhibition.

June 13-16—Detroit, Mich., Annual Convention, National Team & Motor Truck Owners, Inc., to Be Held Aboard Ship During Cruise on the Steamship Naronic; F. L. Henk, Secretary, 92 Fort Street, West Detroit.

June 18—Uniontown Speedway Races.

July-October—Lima, Peru, Peruvian Centennial.

July 4—Tacoma, Wash., Speedway Race.

July 4-9—Mackinac Island, Mich., Summer Meeting, Automotive Equipment Association.

July 4-15—London, England, London Fair and Market, Royal Agricultural Hall. International Trade Exhibitions, Ltd., Broad Street House, New Broad Street, London, E. C., England.

July 23—Strasbourg, France, French Grand Prix.

Aug. 13—Belgium Grand Prix.

September—Bandoeng, Java, Dutch East India, Second Industrial Fair, Automobiles and Trucks, Netherlands-India Industrial Fair Association.

Sept. 4—Italian Grand Prix.

Sept. 5—Pike's Peak Hill Climb.

Sept. 5—Uniontown Speedway, Annual Autumn Classic.

Sept. 6-16—Utrecht, Holland, International Industrial Fair; American Representative, New York Chamber of Commerce for The Netherlands and Netherlands East and West Indies, Inc., 44 Beaver Street, New York City.

Oct. 5-16—Paris, France, Automobile Show, Grand Palais.

Oct. 12-14—Chicago, Ill., Annual Convention National Implement and Vehicle Association. H. J. Sameit, Secretary, 72 West Adams Street.

Nov. 14-19—Chicago, Ill., Annual Convention and Business Exhibit, Automotive Equipment Association, Coliseum.

Nov. 24—Los Angeles, Cal., Speedway Race.

Capital Increases

Indiana.

Indianapolis—Consolidated Garage & Sales Co.; $6000 to $13,465.

Wabash—Service Motor Truck Co.; $8,000,000 to $10,500,000.

Kentucky.

Louisville:

- Dixie Auto Supply Co.; $25,000 to $50,000.
- Detroit Machine Tool Co., maker of automotive parts; $150,000 to $300,000.
- Detroit Steel Products Co.; to $5,250,000.
- Nichol Ford & Co.; $125,000 to $250,000.
- W. Detroit Auto Sales Co.; $25,000 to $100,000.

Hudson—Excel Battery Co.; $5000 to $10,000.

Missouri.

St. Louis—Bolstrom Motors, Inc.; $300,000 to $2,000,000.

New York.

Brooklyn:

- G. & A. Garage Corp.; $7000 to $10,500.
- West End Garage & Auto Co.; $500 to $50,000.

Buffalo—Parent Motors Corp.; $2,500,000 to $10,000,000.

Flushing—Studebaker Sales of Long Island; $10,000 to $25,000.

Jamestown—Jamestown Garage Co.; $10,000 to $50,000.

New York City:

- Automotive Electric Service Corp., Manhattan; $10,000 to $50,000.
- Fowler Spark Plug Mfg. Corp., Manhattan; $8000 to $25,000.
- Keystone Auto Equipment Co.; $25,000 to $250,000.
- Naugatuck Tire & Rubber Co., Manhatton; $10,000 to $50,000.
- N. Y. Central Securities Corp. of N. Y.; $1,500,000 to $2,000,000.
- Tonneau Shield Co., Manhattan; $25,000 to $75,000.

Olean—Olean Motors Corp.; $10,000 to $25,000.

Ohio.

Cleveland—Stearns Motor Sales Co.; $10,000 to $150,000.

N. Baltimore—N. Baltimore Trader & Machine Co.; $50,000 to $100,000.

Rhode Island.

Providence—Pilgrim Auto Stores, Inc.; $15,000 to $100,000.

Texas.

Aco—Central Motor Co., agt. for Dodge Bros. autos; $75,000 to $125,000; pres., J. N. Mitchell.

Brownsville—Dennett Motor Sales Co.; $30,000 to $35,000.

Dallas:

- John H. Dunn Tire Co.; $10,000 to $30,000.
- Packard Dallas Motor Co.; $200,000 to $500,000.
- Texas Battery Co.; $20,000 to $25,000; name changed to Tennant Bros.

El Paso—El Paso Battery & Ignition Co.; $15,000 to $30,000.

Wisconsin.

Menasha—U. S. Tractor & Machinery Co.; $500,000 to $800,000; pres., J. G. Sailer; 1st vice pres., Christian Walters; 2nd vice pres., eo. J. Mayer; treas., Dr. A. B. Jensen; sec. and asst. treas., G. D. Harris; asst. sec., G. E. Lewis; sales mgr., W. O. Otis.

Milwaukee:

- Auto Life Tire Chain Co; $25,000 to $125,000; pre., E. A. Hoya; vice pres., A. L. Wolff; sec., Wm. F. Schad; treas., F. W. Andree.
- Clum Mfg. Co.; $100,000 to $250,000; pres. and gen. mgr., Valentine Fina.
- Overland-Wisconsin, distributor of Overland and Willys-Knight cars in Wisconsin; $50,000 to $250,000.
- Titan Truck Co., 125th St.; $100,000 to $150,000.

NAME CHANGES.

Denver, Col.—American Auto Accessories Co. to Sewell Mfg. Co.

New Haven, Conn.—Kelly Tire & Rubber Corp. to Martin Tire & Rubber Co.

Wilmington, Del.—Springfield Automotive Financing Corp. to Central Ohio Finance Co.; capital increased from $550,000 to $2,750,000.

Macon, Ill.—C. O. Lebo Garage to Macon Garage; owners, W. C. and Ray Chynoweth.

Moline, Ill.—Wright Carriage Body Co. to Moline Body Co., maker of bodies for motor vehicles.

Gary, Ind.—Edwards & Anderson Auto Sales Service Co. to Edwards Garage & Service Co.

Muncie, Ind.—Hoosier Auto Parts Co. to Hoosier Clutch Co., maker of single-plate clutches.

Marion, Ia.—8th Ave. Garage to Anderson & Bailey; owners. Elmer L. Anderson and Fay W. Bailey.

Waterloo, Ia.—Peverill Motor Sales Co. to Harter B. Hull, distributor of Dodge Bros. cars in northeastern Iowa.

Dodge City, Kan.—Godfrey & Yuncker to Godfrey Garage & Machine Shop; owner, Duncan Godfrey, Jr.

Eskridge, Kan.—Willard's Battery Station to United Electric Service Station; mgrs., W. C. Rea, Burt E. Muns.

Grand Rapids, Mich.—Dewey & Conley to Chas. Conley, garage and auto accessories.

Highland Park, Mich.—Highland Auto Sales & Repair Co. to Thos. Brooks, Inc.

Underwood, Minn.—Lund Bros.' Garage to Lund Bros. & Ronning, general garage business and to handle Samson trucks, tractors and machinery; W. O. Ronning, part owner.

St. Louis, Mo.—Skelton Motors Corp. to Traves Motors Co., successor to the Skeltn Motors Corp., northeast cor. 23rd and Locust Sts.; owner, W. F. Traves, Kansas City.

Omaha, Neb.—Blackstone Garage No. 2 to Douglas St. Garage, 1918 Douglas St.

Albany, N. Y.—Norwalk Tire Sales Co. to Surgenor Auto Supply Co.

New York; N. Y.:

- Bennett Auto Sales Co., Manhattan, to Rogers Auto Sales Corp.
- Colt-Stratton Co. to Stratton Bliss Co., Dodge distributor.
- Ford Pulley & Hardware Co., Manhattan, to Ford Hardware Co.
- Nedoma-Najder Motor Syndicate to Nedoma-Najder Patent Syndicate, 299 Broadway.
- Parrett Tractor Co. to Hick Parrett Tractor Co.
- Times Sq. Auto Supply Co., Manhattan, to Consolidated Distributors.
- Wittemann Aircraft & N. Y. Air Terminal Corp. to Wittemann Aircraft Corp.

Oklahoma City—Reed Supply Co. to Southern Motor Supply Co.

Scranton, Pa.—Lansing Hardware Co. to Lansing Bros., Inc.

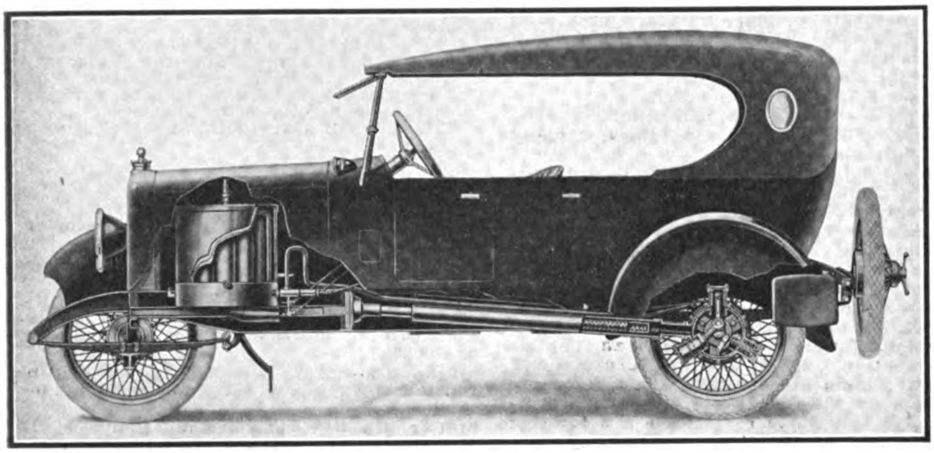
El Paso, Tex.—Universal Tire Co., 402 Myrtle Ave. to LeGros Tire & Vulcanizing plant; moved to 405 Texas St.; owner, S. LeGros.

Orange—Lester Auto Co. to Nash. E. Tex. Co.

Eau Claire—F. J. Marsh Co., 223 S. Barstow St., to Automotive Electric Corp.; to handle electric equipment for autos.

Milwaukee, Wis.—Lochen-Moore Co. to Lochen Motor Co., dealer in Hupmobile, Apperson and Moon cars; owner, Walter Lochen.

The Coats, New Steam Car, Embodies Unique Features



Cut-Away View of Coats Steam Car Showing Boiler, Steam Line and Three-Cylinders of the Six-Cylinder Engine on Rear Axles. There Are Three Fixed Cylinders for the Drive Shaft of Each Wheel—Connecting Rods Are Pivoted to Crank Pin Integral with Each Shaft—This Gives the Coats Direct Power Application, and Also Includes the Differential Function.

ONE of the sensational announcements of the present season is the prospective advent in the market, at an early date, of a new five-passenger, six-cylinder steam touring car, with 110-inch wheelbase and equipped with electric lighting and starting, to retail at about $1000. Rumors that an important enterprise in the steam car field was soon to be launched have been definitely confirmed by George A. Coats, a well known capitalist and representative of large steam interests at 1213 Merchants' Bank building, Indianapolis, Ind., who states that he is engaged in the perfecting of plans for the manufacture and marketing of a steam car along the lines just mentioned and, furthermore, that on the same chassis he will also build a commercial speed wagon for light delivery purposes.

The construction of the Coates car is reported to embody several distinct advances which have interested leading steam engineers, and for many months the experimental shop has been the Mecca of pilgrimages by steam specialists from all parts of the country.

A Glance at the Car.

The boiler is of the combination fire-and-water-tube type, so arranged that it will go under a hood of any shape. The top and bottom welding of the tubes, equalizing expansion, reveals advances especially remarked upon by the experts. The insulated steam line leads directly to the rear axle with divided flow to each half of the axle.

It is in this axle that engineers and laymen alike find one of the most fascinating advances in the Coats car, the direct application of the steam to the wheels, absolutely eliminating the geared differential. The rear axle is the engine, or the engine is the rear axle, whichever way you choose to consider it. It is engine, axle and differential functioning all in one, the engine in its housing being just about the size of the ordinary rear axle gear case.

It is without doubt the most compact engine in automotive practise. The housing of each half of the axle carries three fixed cylinders, set at 120 degrees apart, or one-third the circle. These cylinders are exactly like those of the automobile engine, with poppet valves, pistons and connecting rods. The bore is 2¾ inches, stroke three inches. The three connecting rods in each half are pivoted to a crank pin integral with the drive shaft of each wheel. At a speed of 40 miles an hour the engine is running at the very low speed of 500 revolutions a minute.

It will be observed that an overlapping stroke is obtained. Before one cylinder is entirely off pressure another has begun to take hold, and the third is completing its exhaust. In actual tests the Coats cars are stated to be doing 20 to 40 miles on one gallon of kerosene. With the Coats steam and water cycle, one filling of the water tank runs the car from 300 to 500 miles. The exhaust steam is taken by return pipe to the condenser, which is located in front of the boiler in the position of the ordinary radiator. The initial heating for starting is electrical, controlled by switch on the cowl board.

From Drifting to a Mile a Minute.

The characteristics of steam are too well known to require analysis in terms of ordinary rating when applied to a motor car. As one well known expert said while watching the gauge of the Coats car register 600 pounds boiler pressure—"It has power enough to pull a switch engine."

Yet it is smooth, velvety and flexible to a degree not possible to any other power. Its range in this car is not "three speeds" or "four speeds," but any speed from drifting to 60 miles an hour; and its whole range is controlled by one small lever on the steering wheel. There is not one gear in the power line of the Coats car. The power is never separated from the load to go from one speed to another. Simply move the lever forward and apply more steam—or move the lever back and shut down on the steam. The acceleration, or slowing down, is immediate. The quick getaway of the Coats car is astonishing. From a standstill under power it goes right over a curb.

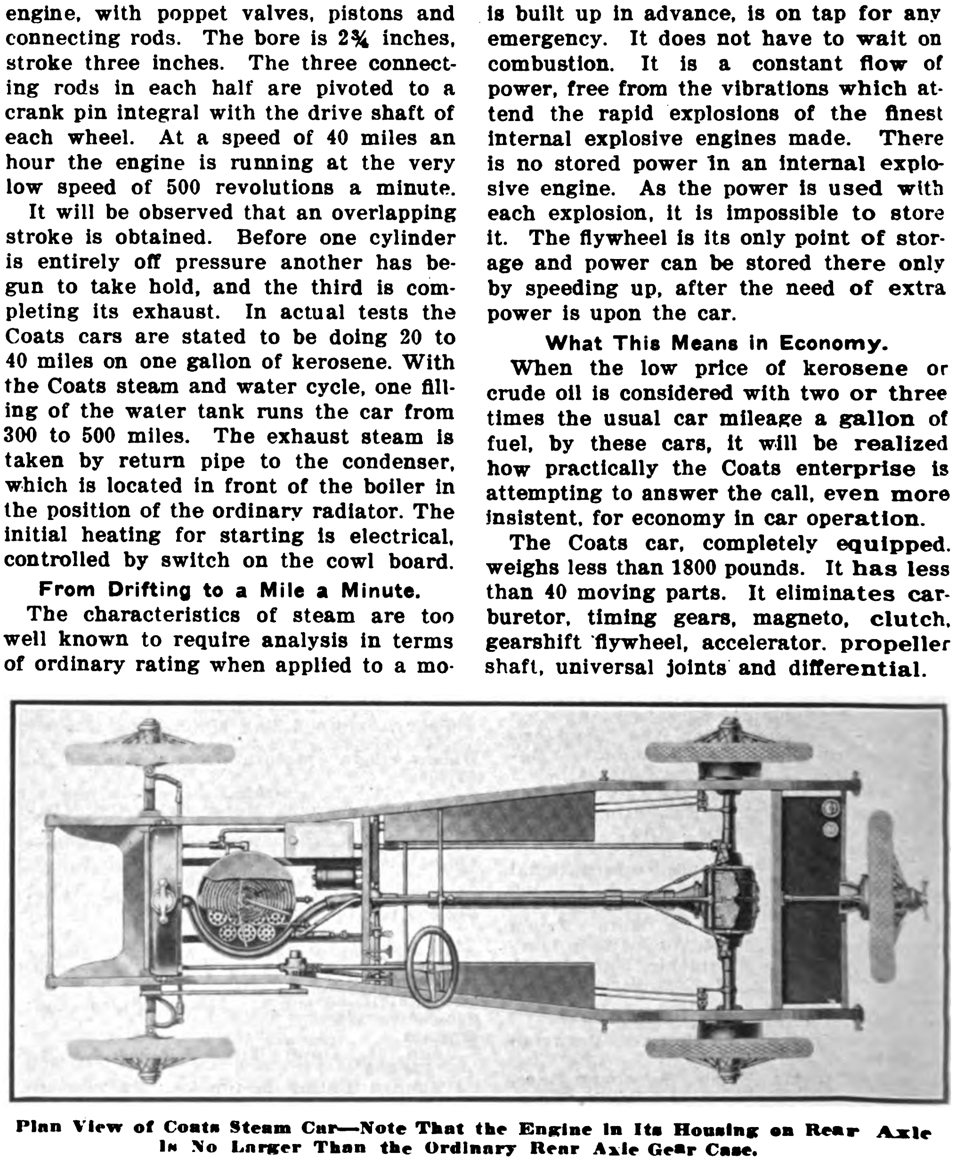
Store of Reserve Power.

The vital point of difference between the steam car and others is stated to be its store of reserve energy. In the Coats car the great energy stored in the boiler is always instantaneously available. It is built up in advance, is on tap for any emergency. It does not have to wait on combustion. It is a constant flow of power, free from the vibrations which attend the rapid explosions of the finest internal explosive engines made. There is no stored power in an internal explosive engine. As the power is used with each explosion, it is impossible to store it. The flywheel is its only point of storage and power can be stored there only by speeding up, after the need of extra power is upon the car.

What This Means in Economy.

When the low price of kerosene or crude oil is considered with two or three times the usual car mileage a gallon of fuel, by these cars, it will be realized how practically the Coats enterprise is attempting to answer the call, even more insistent, for economy in car operation.

The Coats car, completely equipped, weighs less than 1800 pounds. It has less than 40 moving parts. It eliminates carburetor, timing gears, magneto, clutch, gearshift flywheel, accelerator, propeller shaft, universal joints and differential.



Plan View of Coats Steam Car—Note That the Engine in Its Housing on Rear Axle Is No Larger Than the Ordinary Rear Axle Gear Case.

Of the saving of tires due to the equalization of weight, the reduction of vibration and the smoothness of interrupted torque, much might be speculated, but that is a point for demonstration in actual use.

In appearance the Coats car is attractive, but not at all radical in design. It has distinctive lines, for Mr. Coats has not underestimated the advantage of dress; and it provides more than usual five-passenger room for its size.

Although a comparatively young man, Mr. Coats has been identified with the automobile industry from the beginning as a field man and distributor of leading cars. Some years ago he acquired coal mines in Indiana, which in large part have furnished the capital for his steam car experiments.

No stock is offered for sale in the Coats concern, as abundant resources have been furnished for making and marketing the passenger car and speed wagon and plans have been made for an expansion of the application of steam on a scale which is not now ready for the announcement of details. It is realized by Mr. Coats and his associates that steam power and steam economy will be equally vital in truck and tractor use.

Origin of the Enterprise.

The origin of the present enterprise is interesting. At the beginning of the war the Norwegian government sent an engineer to America to study the development of internal combustion engines. He had completed his reports and was preparing to return home when Mr. Coats met him. The modest inventor laid before Mr. Coats plans for steam on which he had been working for years. These plans so interested the Indianapolis man that he promptly employed the engineer and established him in an experimental shop with a free hand.

The American automobile man's 20 years of experience and the Norwegian engineer's science were combined, with the counsel of the most experienced American steam and automotive engineers, and the Coats cars are the result.

The Demand for Steam.

What they presage is an interesting subject. It is certain that in the automotive market something in the way of an epochal advance has been looked for by the motoring public for the last five years, an advance that means more than engineering refinements along present lines, an advance that means more reserve power, more flexible power and especially far greater simplicity of construction and far lower upkeep cost. The Coats car may be the answer Mr. Coats is confident that it will be.

A. L. Jacobs, Lloyd George and Norman E. Stoneburg are recent additions to the sales organization of the Paterson line of cars at Toledo, O. Mr. Jacobs, who has been with Paterson for the past three years, becomes manager of territory sales. Mr. George, who was formerly of the Standard Garage, and Mr. Stoneburg, formerly of the Marmon agency, will attend to city sales.

A Glance at the Gasoline Situation for 1921

The daily average output of petroleum in the United States during the week ending March 19 showed a sharp increase, according to the American Petroleum Institute. Production for the week was 1,259,211 barrels, as compared with 1,241,125 the week before, an increase of 14,090 barrels.

The estimated daily average gross production of the Mid-Continent (light oil) field, including Oklahoma, Kansas, North Texas, Central Texas and North Louisiana, for the week ended March 19, was 649,005 barrels, as compared with 633,815 barrels for the week before, an increase of 15,190 barrels.

The estimated daily average gross production of the gulf coast (heavy oil) field was 109,130 barrels, an increase of 1870 barrels, as compared with the week before.

The combined daily average gross production of the southwest field was 758,135 barrels, an increase of 17,060 barrels.

Oklahoma-Kansas shows a daily average gross production of 372,280 barrels, an increase of 14,315 barrels. North Texas shows an increase of 1850 barrels; Central Texas, an increase of 1430 barrels; North Louisiana shows a decrease of 2405 barrels.

The estimated daily average gross production of Wyoming and Montana was 54,080 barrels, as compared with 56,550 barrels for the week before, a decrease of 2470 barrels.

The Gasoline Situation at a Glance.

The estimated demand for gasoline for 1921 by months is shown in the following table developed by Dr. Joseph E. Pogue, oil analyst and consulting engineer of the editorial staff of National Petroleum News:

	Per Cent. of Year's Total Required Each Month	Number of Gallons Required Each Month
January	5.4	259,000,000
February	5.8	278,000,000
March	6.4	307,000,000
April	7.2	345,000,000
May	8.5	408,000,000
June	9.9	475,000,000
July	11.2	538,000,000
August	11.8	567,000,000
September	10.4	501,000,000
October	8.8	422,000,000
November	7	379,000,000
December	6	321,000,000
Total...........	100	4,800,000,000

The total gasoline made in this country in the past three years is: For 1918, 3,570,000,000 gallons: 1919, 3,957,000,000 gallons; 1920, 4,882,000,000 gallons.

The production of gasoline is steadily increasing. The average per month for 1921 was 406,000,000 gallons, while for December it was 464,000,000.

Stocks of gasoline at refineries indicated this increasing production. For Dec. 31 these stocks totaled 462,000,000 gallons—16,000,000 more than the same time the year before. Yet our stocks at the end of September were 288,000,000 gallons, or 83,000,000 less than the year before, and the low point in several years. Stocks did not exceed that of previous year until the end of December.

Automobile production has been:

		Per Cent. of Increase Over 1916 in Cars.	Per Cent. of Increase Over 1916 in Gasoline Production
1916......	3,584,000		
1917......	4,992,000	39	32
1918......	6,100,000	70	73
1919......	7,096,000	112	92
1920......	8,878,000	146	137

The estimated consumption by trucks and cars for 1921 of 4,800,000,000 gallons, is based on a total of 8,500,000 cars and 1,000,000 trucks with their use discounted 10 per cent. over the previous year.

STUDEBAKER LIGHT-SIX BREAKS FOUR RECORDS.

In two sensational dashes a Studebaker Light Six recently broke all records for speed between San Francisco and Los Angeles, setting a new mark for the round trip, lowering the coast route record by 2 hours, 35 minutes, 20 seconds, beating the best time ever before made over the valley route, and leaving "The Lark," most famous of the fast coast express trains, 3 hours, 47 minutes and 30 seconds in the rear.

On the first trip the drivers, Hart L. Weaver and James C. Gurley, carried U. S. mail both ways between San Francisco and Los Angeles, being sworn in as Federal officials upon authority from Washington. In fact the journey was made for the purpose of showing the possibilities of the motor car in transporting mail quickly.

The round trip, a distance of 864.8 miles, was covered by the Studebaker in 21 hours 23 minutes. The trip down, over the coast route, a distance of 413.7 miles, was made in 10 hours, 12 minutes, 30 seconds, as compared with the previous best record of 12 hours, 47 minutes, 50 seconds, established in 1916.

The car and "The Lark" started their dash to Los Angeles at the same time, and it was on this occasion that the Light Six beat the train's schedule by over 3½ hours.

After hanging up these records the Studebaker drivers went after the fourth and only remaining speed mark—that of lowering the previous best time over the valley route. They succeeded in making the trip from Los Angeles to San Francisco over this route, a distance of 411.1 miles, in 9 hours, 15 minutes, 50 seconds, of which time 35 minutes was spent in crossing the ferry to San Francisco. This record-breaking time was made under difficult weather conditions the pilots being forced to drive through a dense fog 120 miles of the way.

These record breaking trips also prove how an automobile can stand a long continued run without mechanical trouble. In this case the car was ready to start at once on a second trip.

VOL. X. PAWTUCKET, R. I., APRIL, 1921. NO. 12.

A BIG BUSINESS FOR BIG MEN

AUTOMOTIVE INDUSTRY OFFERS GREAT OPPORTUNITIES AND PROMISES SUBSTANTIAL RETURNS FOR PROGRESSIVE AND PERSISTENT ENDEAVOR

(By S. G. SWIFT.)

THE prize pessimist of the world is he who worries about the future of the automotive industry. Such a person could easily bring himself to the point of worrying about the possibilities of a permanent slump in the use of food. People will always eat and they will always buy automotive products. The "luxury" market can never become absolutely stabilized, but there will always be a demand for necessities. Precedent and common sense assure the truth of the foregoing and by so doing guarantee the future of the automotive industry.

The automobile and the truck with their various accessories are actual necessities and there is no question about their future. The term "pleasure car" has long been obsolete and rightly so when one realizes that only two cars out of every 100 sold are used for pleasure. All classes of purchasers buy the automobile and truck in exactly the same manner that they would purchase so much transportation and know beyond a shadow of doubt that such machines pay substantial dividends on the money invested.

The retailing of automobiles, trucks and accessories is a big business for big men and one in which any big man may well feel proud to be engaged. Such men realize that the larger the field the greater is the opportunity, and there surely is no one industry in this country today that offers better promise of substantial return.

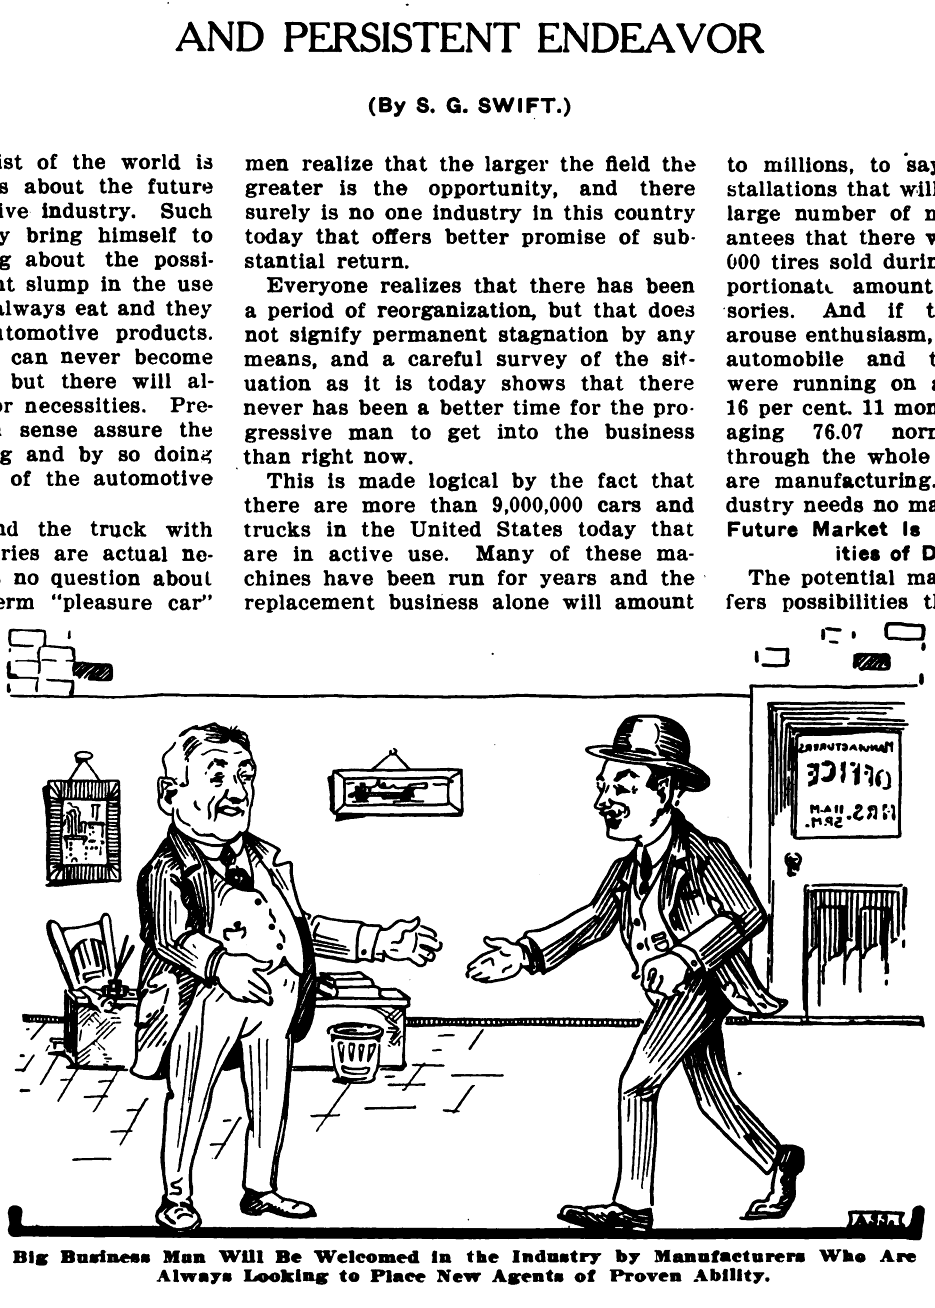
Everyone realizes that there has been a period of reorganization, but that does not signify permanent stagnation by any means, and a careful survey of the situation as it is today shows that there never has been a better time for the progressive man to get into the business than right now.

This is made logical by the fact that there are more than 9,000,000 cars and trucks in the United States today that are in active use. Many of these machines have been run for years and the replacement business alone will amount to millions, to say nothing of new installations that will also bulk large. This large number of machines in use guarantees that there will be at least 36,000,000 tires sold during the year and a proportionate amount of parts and accessories. And if these figures fail to arouse enthusiasm, consider the fact that automobile and truck factories which were running on a production basis of 16 per cent. 11 months ago are now averaging 76.07 normal, right straight through the whole list of the many who are manufacturing. The automotive industry needs no man's sympathy.

Future Market Is Unlimited in Possibilities of Development.

The potential market of the future offers possibilities that are well-nigh unlimited. It shows that almost every grown person in the United States is a prospect for the sale of an automobile or truck, and the greatest factor is the child of today who will be the buyer of tomorrow. He is already sold on the proposition and will not, like his parents, have to be weaned from the horse drawn vehicle.

The present user of the automobile and truck had to be sold away from other forms of transportation. This in itself constituted strong sales resistance, but added to this was the fact that



Big Business Man Will Be Welcomed in the Industry by Manufacturers Who Are Always Looking to Place New Agents of Proven Ability.

The Dealer Should Insist That the Members of His Organization Be Courteous to the Visitor Regardless of Whether He Is a Prospective Buyer or Not.

for many years at start of the industry the mechanical principle of the machine was far from right. Now all this is changed. The present day automobile and truck are as near perfect as the most critical could desire. All of which makes the future sales possibilities of the automotive business greater than almost any other that might be mentioned. The future motor vehicle and accessory salesman will have his prospects already developed.

Automobile Business Is Not a "Game."

The automobile business is a modern merchandising proposition. It is not a "game." The use of the word is odious and suggests the hazardous chance. This might have applied at one time, but that time has passed. Just as the term "pleasure car" has passed into disuse so should the phrase "automobile game" be relegated to the yesterday of time. The automobile business is a dignified industry and a mighty fine one too. Let's think of it that way and forget about the time when it was perhaps rightly characterized as a "game." That's water over the dam, thanks to the development of recent years.

Some substantial business men who would be a credit to the industry have hesitated to go into the retail end of it because of their lack of mechanical knowledge. This idea is rank fallacy. It is analagous to saying that a man could never sell bricks with any success because he had never worked in a brick yard.

To be sure it is desirable for the proprietor of a sales and service station to know the business in all its phases, but it is far from necessary that he know the actual mechanics of the car he sells, and this fact is proven by the many successful retailers who have never learned anything specific about the mechanical end of the car except such as has been gained through intimate association with the work from day to day.

The best truck salesman that the writer knows was for many years the foreman of the small tool department in a large factory. He made nearly $12,000 in 1920. The most successful dealer that can be called to mind at the moment is a man who conducted an undertaking establishment from the time he was 23 until he entered the automobile business at the age of 46. This man shared $48,000 with a partner last year, which wasn't bad on an investment not much larger than the profits of the one year. And there are thousands of dealers who better that figure.

Fundamentals for Success.

Progressive merchandising policies coupled with genuine business ability and salesmanship are the only essentials aside from a proper amount of capital that the retail automobile, truck and accessory business man needs, and the merchandiser who starts with these fundamentals will be bound to succeed. He can't help it. The automotive business is responsive to proper treatment, and many will succeed in it who might find it hard sledding in other lines of endeavor. This last is being proven every day.

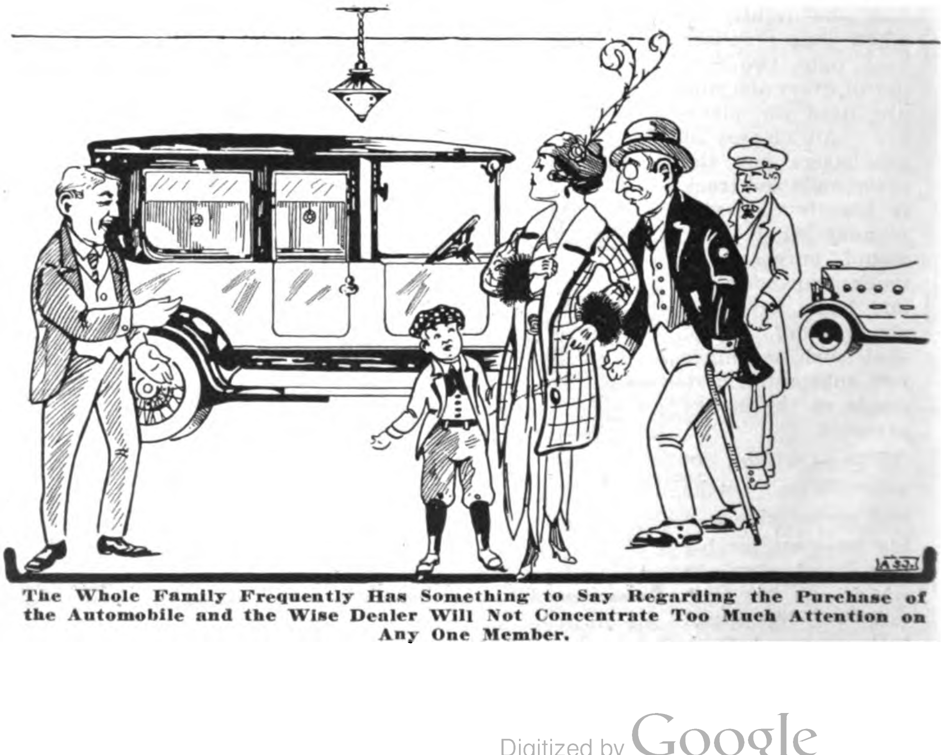
Everyone is a prospect, everyone wants to buy and the automobile dealer who conducts his business in accordance with proper standards has more than an even chance of becoming prosperous. All he has to do is to take advantage of the opportunities offered, and it would seem as though any person of average ability could be counted on to do at least that.

The automotive business is always expanding. Up to within a few years the dealer had only automobiles and a few accessories to offer. Today he has trucks, automobiles, parts and many different kinds of accessories to sell. There is a good profit in all of these, and the market for the motor truck is literally growing by leaps and bounds, more than keeping pace with the demand for the passenger car.

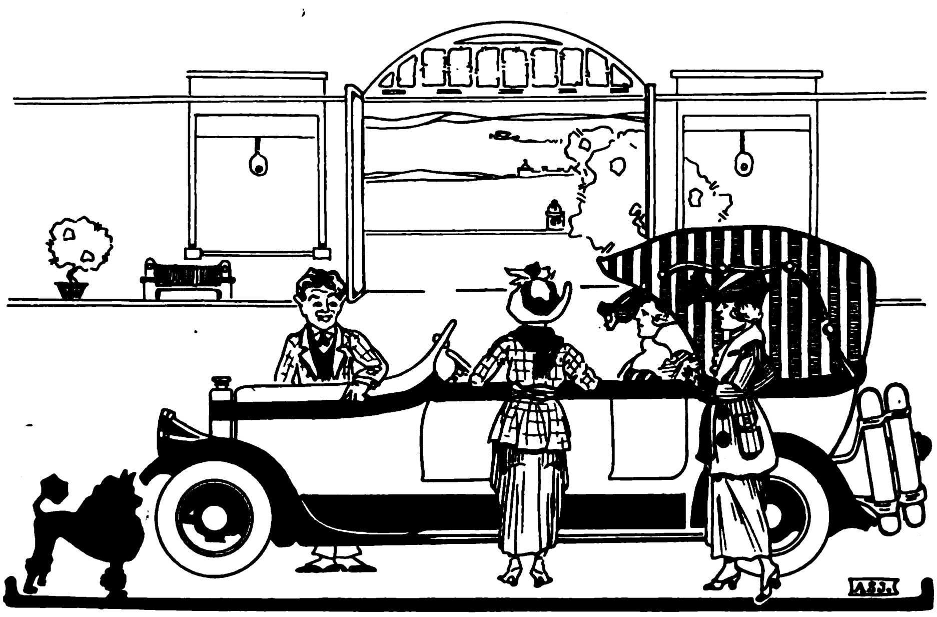
The truly big business man with a fair amount of capital, or ways in which to raise that capital, will have almost no trouble in connecting as an agent with a desirable manufacturer. There is always an opening for a new agency, and the manufacturer is ever willing to cooperate with reliable men who desire to sell his product. In former years it would have been a wise man who thoroughly looked up the manufacturer offering the agency as to his reliability before planning to tie up with him. At the present time there is practically no danger of making a bad connection, as nearly all cars manufactured today are right mechanically in every way. To be sure, the well known car that is properly advertised has great advantages from a sales viewpoint, but there are few manufacturers doing business that have not the financial strength necessary to back up their product, and very few products that are not satisfactory.

Former Unfortunate Features.

One of the unfortunate features of the agency business that in former years has hurt it to an extent is the fact that the sales management of certain automobile manufacturers all too frequently encouraged a man to invest his capital in a ter-



The Whole Family Frequently Has Something to Say Regarding the Purchase of the Automobile and the Wise Dealer Will Not Concentrate Too Much Attention on Any One Member.



Women Are Apt to Judge an Automobile Almost Wholly by Its Appearance and the Dealer Should Bear This in Mind When Selecting the Car to Be Sold.

ritory where reasonable returns on sales were not to be expected, and many a man sunk all of his available cash in what proved to be an unprofitable adventure. Today this is changed, and the sales organizations of practically all manufacturers can tell almost to a car the saturation point for sales in almost any territory.

Methods of buying cars from the manufacturers differ greatly from the usual way of buying merchandise. One marked example of this is the method of determining the number of cars to be purchased during the year.

This is arrived at by the number which the factory sales organization has decided the territory can handle, which the dealer contracts to sell during a 12-month period, the cars to be delivered at certain intervals. There is little credit business done between the two and frequently the plan adopted is to have the factory attach a sight draft to the bill of lading, which the dealer has to meet when the cars reach him.

There is a regular list price for each car and this price is the one which the dealer is expected to get. The price which the dealer pays is the list price minus his gross commission. Automobiles and trucks are usually sold f. o. b. the place of manufacture, which means that the dealer has to pay the freight, which he in turn charges to the customer.

Amount of Commission Varies.

The amount of commission to the dealer varies somewhat. Frequently this is 20 per cent. and there are many manufacturers who have adopted this as a flat rate. It naturally follows that the better a vehicle is known the smaller will be the commission, as sales will be more easily made than would be the case with one that was not well advertised. If an automobile or truck is little known the dealer must spend a certain amount of his commission in missionary work, and as a result must get a larger commission than as though he were handling a better known product.

The local dealer of course is expected to finance and maintain his own establishment, which may consist of merely a salesroom, but which, to be right, should include a service station, as the service station that functions properly is the greatest single asset of the successful automobile and truck dealer. The real service station, using the word in its fullest sense, does more for the good health of the retailer than any other one thing. It is truly a "silent salesman" and the best one that the dealer can have on his staff.

The writer has in mind a small town where there are two service stations. One of these has an ornate brownstone front, a large expanse of plate glass and all the modern improvements. It is everything that a service station should be from an architectural standpoint, but unfortunately it doesn't merit its name, as it gives almost no service.

The other service station is located in what used to be an old foundry. The smoke of ages has stained the interior, the windows have never been washed within the memory of the oldest inhabitant and the wooden building has a dirt floor. But it is a service station in everything that the word means and the man who owns it sold, during a period of 18 months, just seven times as many cars as did the other dealer or, to speak literally, the service this man gave sold the cars.

Actual Service Should Be Given.

It doesn't make so much difference what sort of a looking service station the dealer has, although this is important. The point is that he should give actual service. Too many dealers have treated customers as though they were never to see them again after the first sale and thus, by their short-sightedness, have actually destroyed the foundation of their future market.

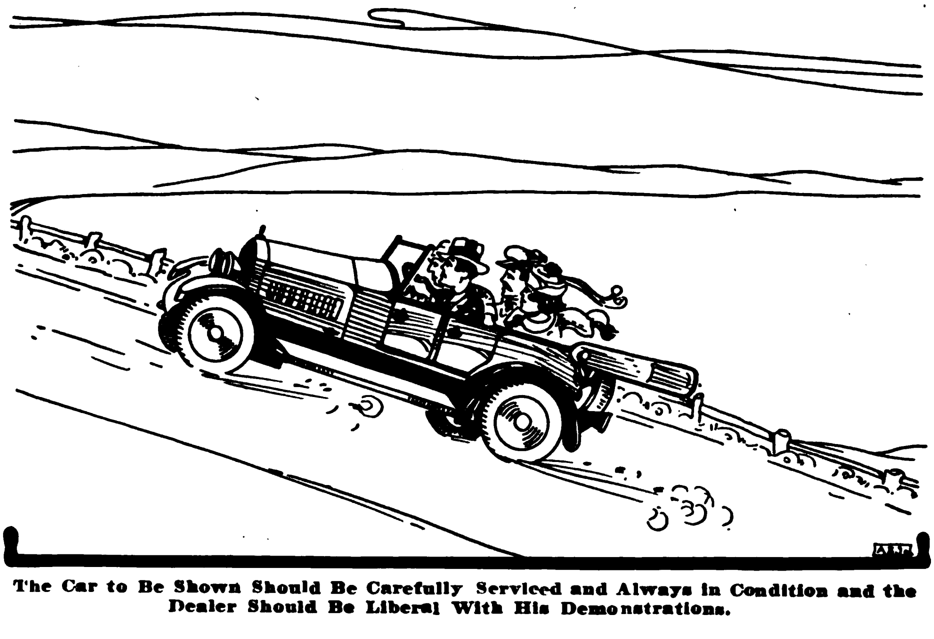
Without seeming to criticise unduly, it almost seems as though anyone could go into certain territories and by the simple expedient of giving service and telling the truth build up a business in almost no time and with little capital. The unscrupulous retail dealer has hurt the business far more than has the unscrupulous manufacturer.

There are many persons who believe that the time is soon coming when automobiles and trucks will be serviced in much the same manner as are typewriters, adding machines and cash registers, and this is perhaps a true forecast, although the question is divided about equally, as others think that all service will eventually be done away with. This phase of the business will adjust itself. At the presest time service is absolutely necessary if one is to do a fair quota of business.

Intensive Advertising a Factor in Success.

All national advertising is of course done by the manufacturer and frequently the local advertising as well, although this last is usually paid for as the result of some agreement between the agent and the factory. In practically every case the advertising copy or layout is furnished by the manufacturer and this means a lot, as the skilled advertising writer can usually set forth the superior points of the car or truck in a manner that is productive of results.

The dealer may be able to make a deal



The Car to Be Shown Should Be Carefully Serviced and Always in Condition and the Dealer Should Be Liberal With His Demonstrations.

A Cheap Mechanic Is the Most Expensive Kind—The Good Mechanic Commands a Fair Wage Because He Is an Economical Asset to the Properly Conducted Station.

with the manufacturer whereby he agrees to allow a certain amount of money for local advertising proportionate to the number of cars sold, and in any event, even though the dealer should be called on to pay for his own advertisements and to write them as well, he should not neglect to keep the people of his territory informed at all times regarding the product he sells. This can only be accomplished in a satisfactory manner through advertising.

All things being equal, a man should locate his agency in his own home town. He knows the people there and probably has their confidence, which is a big factor in the successful retailing of the car or truck. If the agency contemplated is to be situated in another city the prospective dealer should visit that territory and carefully survey conditions there. "Anything worth doing at all is worth doing right," and this expression, trite though it may be, applies aptly to locating the automobile or truck agency.

Many a man has paid too little attention to this important part of the business and has gone ahead and contracted for territory without properly ascertaining the extent of his probable market, with the result that having gone into the thing too heavily and too hastily, he has lost his investment.

Dealer May Sell Several Makes of Cars and Trucks.

A dealer may handle a number of makes of cars or trucks, or he may feel that he can do better work if he confines his attention to a single make. This matter may perhaps be best determined by the dealer before he enters the business, or he can start with some one popular make, provided he can get it and then add others if he feels that conditions warrant. Many of the more successful agencies handle one low priced car or truck and one high priced one, though there seems to be no set rule to go by and one must be governed wholly by conditions in his territory.

For instance, a mill town or city would have two distinct classes of buyers, the one demanding a low priced machine and the other offering a market for an expensive make; whereas a strictly residential suburban territory would probably have a steady demand for a good, serviceable, conservative, middle-price machine. It all depends on the territory and unless one plans to start in business in his home town he should carefully survey his proposed field of operations before signing any contracts.

It is advisable to select the highest quality car or truck having the price to fit the greatest number of prospective purchasers in the territory in which it is to be sold, and it may be that conditions will warrant the successful representation of two or three different makes.

Women Influence Sale of Cars.

Women have much to do in the selection of the car and demand appearance above all else, and the successful dealer will study the looks of the car as well as its mechanical features. Inasmuch as nearly all modern automobiles are very satisfactory from a mechanical standpoint, it will perhaps be well to lay particular stress on the appearance of the machine to be handled, although the riding qualities, comfort, accessibility and equipment should also be considered. Then again one should bear in mind that certain companies are recognized as giving greater value for the money. They lead in improvements and have better service guarantees as a rule. These facts are important and should be carefully considered.

The greatest market from the standpoint of volume is for cars selling between $500 and $1500. This applies to urban as well as agricultural territory, although there is a proportionate demand in the cities for the high priced automobile as well.

Truck sales depend largely on the demand and perhaps the most popular size truck sold is the 1½-ton, although facts carefully compiled by the statistical department of MOTOR TRUCK, the authoritative magazine on motor haulage, show that different conditions prevail in different territories and this feature will have to be determined almost wholly by local dictates.

Dealer Must Not Contract for Too Much Territory.

The old way of grabbing all the territory that could be obtained by a single dealer is rapidly giving way to the idea that the small territory exhaustively worked is better. It is much more satisfactory for the dealer to take on a small territory and carefully comb it, than to contract for a large territory and a correspondingly large quota of cars and have more on his hands than he can get rid of. It has been demonstrated time and again that few large territories are carefully worked, by the fact that good salesmen have come in from other territories, knowing nobody who was a prospect and have been able to make sales to persons whom the dealer had never thought of as buyers.

Location of Sales Room Is Important.

The location of the sales room and service station is nearly as important a factor in the ultimate success of the business as is the choice of the car to be handled. This point should be determined as far as possible by the make and quality of the car that is to be sold, the location being in keeping with the class of trade that will be the logical buyer of the car, although this does not apply so much to the truck end of the business.

If the dealer is handling a high priced car he should have a location that will be such that persons buying the car will be willing to visit it, and it is highly desirable to have an up-to-date building with proper surroundings.

In handling a low priced car one does not have to be too particular as to location and many successful dealers in low priced machines are located in rather undesirable quarters, but it stands to reason that the better the location is the better will be the sales possibilities. In this respect and especially with regard to the interior arrangement of the service station, it will be worth the while of the dealer to visit other agencies to get advantage of ideas that have been worked out in practise.

The sales room should be bright and sunny, with large, full length windows, which will permit the observer to see the car from the sidewalk. A corner location is ideal for efficient service, as it permits of a side entrance to the service station without going through the front entrance to the building, although any location can be attractively arranged if a little thought is given to laying it out.

Organization Should Be Carefully Chosen.

The first step in building up an organization should be to select the man who is to assist the owner. This man should be honest and loyal and should know the automobile and truck business in all its phases. His knowledge of the business should be valuable in guarding against the selection of undesirable salesmen and mechanics.

Enthusiasm is an absolute necessity in automobile and truck distribution, and the most successful assistant manager will be he who is enthusiastic over his proposition. He must not only "be sold" on the automobile business as a whole, but must also have a genuine liking for the machines that he is selling. He must like to meet people and should have certain innate qualities that will enable him to get along with all classes of trade.

And this applies as well to the salesmen who will work under his direction.

The expert mechanic costs more money to hire than the one who has only a limited knowledge of the business. In the end, however, he costs less, and experience has amply proven that there is no such thing as a "cheap mechanic," except as one might use the term in referring to the class of work that such a man does. The best is none too good in this case and the successful dealer will bear witness to the truth of the assertion.

All employees should be trained to follow modern business methods, and the one feature that must be insisted on is courtesy. The person entering the salesroom should be met by a pleasant, courteous salesman, even though the salesman knows that he is not a prospect. One of the most important assets of any business is the telephone operator. This is a fact on which too much stress cannot be laid.

The unpleasant, raucous voiced operator has done more to drive away trade than the average person realizes. The telephone has been called the "front door" of the selling establishment. Stop and think what that means and insist that your telephone be promptly and courteously answered by one who has been thoroughly impressed with the importance of courteous telephone service as a distinct attribute to successful business.

The employees of the sales and service station should reflect the policies, and to an extent the characteristics of the owner, and this means that the grouchy individual will have only himself to blame if his leadership is followed to the extent that his helpers are discourteous and unenthusiastic. Enthusiasm and courtesy play an important part in the running of the sales and service station, as also does the owner's appreciation of those who, having always the best interests of the business at heart, do the very best work they possibly can.

The Pay of the Salesman.

The tendency at the present time seems to be somewhat directed toward paying a salesman by some means other than straight commission. Stipulated salaries have been tried out by some dealers, but the plan most approved of seems to be a combination of salary and commission and this phase of the business will have to be worked out by the dealer himself.

Commission salesmen when business is especially good will perhaps turn in a large amount of good business. The tendency, however, of workers of this class is to slight the really hard buyer and to concentrate on the "cream" of the trade. These men perhaps cannot be blamed for passing up the "tough prospects" as they feel that they are spending their own time and money to little effect. This hurts the dealer's business and is an argument for paying salaries to salesmen. The salaried man will go where he is sent and the eventual result will be more customers. The commission man all too frequently sells machines through rank misrepresentation, and this is especially true in the distribution of trucks. This type of salesman, feeling that he is in the business to get all he can out of it, may excuse his methods, but they have done much to harm the legitimate business such as is done by the salaried man.

One dealer of the writer's acquaintance who has been unusually successful says that he is done with commission salesmen. He figures that he will be ahead of the usual record of profit by hiring good salesmen and paying them a fair salary. In a conversation recently he told of one salesman in his employ who made nearly $9000 last year. Others working in the same territory made anywhere from $4000 to $7500, and a vast majority of the 24 men who "worked" for him who hardly made a living. This man plans to hire three or four good men, pay them around $50 weekly with expenses, and feels that he will be the gainer in the end. He has rather pronounced views on the subject and intimated that "the good commission salesman makes too much, while the inferior one does nothing much except spoil prospects for some one else," and in the experience of the writer his statement is logical.

Regardless of the manner by which the new dealer pays his men, there is one thing he must insist on if he is to build on a firm foundation, and that is that the prospective buyer be told the exact truth. The New York dealer who inserted an advertisement in a daily paper not long ago may have had this in mind, for his copy read:

> "Wanted—Three Motor Truck Salesmen Who Can Tell the Truth for Nine Hours Daily," etc."

The dealer must realize that every clean sale he makes is a substantial asset to the future good health of his business. It means a customer sold for all time, and one who, when he is again in the market, will buy from the same dealer without solicitation. The eventual result of a clientele of satisfied customers must be obvious to the thinking dealer, who must also realize what a dissatisfied "clientele" will mean, especially if he keeps on adding to this latter class. The one spells success, the other failure. There's no secret about that.

Good Cost System Essential.

A good cost system is one of the essentials that the dealer who is about to start in business must have in order to properly determine costs, to use them for a basis of determining charges and to analyze and compare them so that he will know almost exactly on what basis he is operating. The efficient cost system will also aid in making more intelligent statements to the bank and in obtaining a larger line of credit, and this latter fact is especially true.

A cost system will not run itself; neither will it save a man from failure, but it will show him where he stands from day to day, which cannot but aid in the success of the venture.

Of somewhat similar import is the keeping run of overhead charges, which include expense of operating building, insurance, power, light and heat, and general depreciation. The latter item is one of the most important expenses, as it is usually large, and the dealer who slights it is fooling himself, just as is the man who figures the total costs of operating his car and accepts them as final without taking the depreciation into consideration.

Good common sense advertising is one of the greatest sales helps that a dealer can have. The writer has always realized and appreciated this and has recently had it called to his attention in a striking manner by the case of an automobile dealer of his acquaintance. This man had a fine service station and a good reputation. All through the recent period of depression his business was fair, but not as good as he thought should be and in an endeavor to stimulate buying he used a three-inch, double column display advertisement three times a week in his local paper. This advertisement was simply a plain statement of conservative facts in which the dealer's telephone number was set forth in rather large type. Two days after starting to advertise he began to receive telephone calls from people he had never thought of as prospects, and his sales immediately showed a marked increase, thus demonstrating beyond a shadow of doubt the feasibility of advertising to stimulate a dull market.

No Time for "Knocking."

The thoroughbred automobile and truck dealer will put his whole energy into selling his own car, and will have no time to knock the one that is handled by a rival salesman. It is unfortunate that the once abandoned idea of knocking the other fellow's product seems to have come back within the last year or two. One sees a tendency among advertisers to claim that they have the "best" regardless of whether they have any actual right for so characterizing their product. It is needless to say that this doubtful sort of salesman is "boys' play," and puts the prospective buyer in a frame of mind that oftentimes keeps him from buying at all and, in any event, delays the sale. It invites argument, and many times makes the prospect mad. He claims to know as much about cars as the average salesman and, whether he does or not, it is poor policy to insult whatever intelligence he has. Salesmanship should be constructive rather than destructive, and the thoroughbred salesman knows this. He tells what he knows that is good about his car or truck, not what he knows that is bad about the other fellow's and by so doing shows that he has learned the secret of successful constructive salesmanship—and it certainly is a secret to many.

Much might be written about this subject of relative estimates, but aside from the ethical fact the salesman should keep away from comparisons simply because such methods actually lose and delay sales—and sales are what he is concerned with. He can find arguments in his spare time.

California has 500,000 automobiles, or approximately one for every seven people in the state according to announcement by State Purchasing Agent W. G. McMillan.

ACTUAL DEMAND THE MASTER SALESMAN

THE actual census of users of tools and accessories shows that there are today, in this country, nearly 200,000 repair shops, garage, service stations and others in the trade, and nearly 9,500,000 owners of cars, trucks and tractors. This concise statement of fact would seem to indicate that without a doubt there is big business just ahead for the automotive industry—good substantial business that will give it and its auxiliaries a normal tone. But that isn't TODAY, and we can't stand still until that time comes. The immediate market concerns us now, however we may plan for the future. As merchandisers we must get a share of quick business, if there is any. And there is: A careful survey of the situation shows that the market is based on the greatest merchandising principle of the age, the old one of Supply and Demand.

In this connection the manager of the Statistical and Promotive Publicity department of the ACCESSORY AND GARAGE JOURNAL wishes to call attention to a few potent facts about ACTUAL DEMAND, the MASTER SALESMAN of the world. Knowing no theory and disregarding all the conventional and precedented tenets of tact, he FORCES sales and furnishes the money to pay for them.

This Is the Way He Works.

Car and truck owners who have put off replacing equipment and having repairs made must have their machines repaired and must buy accessories if they are to run their machines at all. They are forced to. Repairers to do this work must replace their worn-out tool equipment and must bring their repair shops up to the fullest measure of efficiency by the purchase of other tools, equipment and accessories.

The writer, in a special canvass of garages, service stations and repair shops, has found that the average repair equipment is worn to the extreme and is in poor condition to do satisfactory work. This has mattered little in the last few months, as repair work has been scarce. But these repairers are now busy. More work is coming in every hour, and in six or eight weeks, "Business as usual." A trite remark two years ago. Now—pregnant with possibilities. It means that ACTUAL DEMAND is back on the job.

It means that work must be done regardless of whether owners wish it or not. It also means that repairers must buy equipment, tools, parts and fittings, whether they wish to or not. As a matter of fact, the repairer was always a good spender when he had the money. For the last half year he hasn't had the ready cash. And now that ACTUAL DEMAND has decreed that he must spend money, this MASTER SALESMAN is going to see that a way is provided for the repairer to get this money to spend by sending in the vehicle owners to have their machines overhauled and replacements made.

In every city, town, village, hamlet and cross roads—wherever the wheels of automobiles and trucks turn—is found a potential distributing point for automotive products. This applies to jobbers' and dealers' stocks and includes all lines and all items.

All Should Come in for a Share.

According to the law of averages a share of this business should go to every accessory and equipment manufacturer, jobber and dealer in the country. That must be admitted. How are they going to get it?

In years past the ACCESSORY AND GARAGE JOURNAL has accomplished signal results for advertisers by regular annual merchandising issues early in the season. These numbers were wonderfully effective and built big and dependable business for those who used them. But this year the publication of these special numbers was deferred. The publisher realized that the public was not buying. You cannot get blood out of a stone. Neither service nor quality would move a tired dollar out of the one-way pockets of those who were holding out for lower prices.

Now, however, this condition is changing and it is evident that the time is ripe for special and immediate attention and it has been decided to devote the May and June issues of the ACCESSORY AND GARAGE JOURNAL to this merchandising feature. This decision is based on the following conditions:

The buying public realizes that prices have reached a permanent level, and they must spend money if they are to keep their machines in service.

Stocks are low. Jobbers and dealers have been buying from hand to mouth, cleaning up odds and ends.

Garagemen, service station men and repairers have been buying only as demand forced them to. They have carried no stock, or sold what they had, and money has been tight with them. Their tools and general shop equipment is worn out, and most of it will either have to be repaired, or replacements made. They are just now seeing some real money for the first time in months, but are holding off buying until they are confident that business will continue to be good.

In May and June they will have new life, more business than they can handle and money to spend. In May and June, when the demand is at the peak, they will not, and can not afford to use make-shift and worn out tools and equipment.

They will become tired of buying six plugs, one tire, a barrel of oil, a spring, a bumper, a single gasket and a thousand other things needed, sold and used by them every hour in the day.

They will have the money to spend and the inclination to spend it. Such business cannot be forced. It can be met, however, and the ACCESSORY AND GARAGE JOURNAL is going to help meet it by issuing in May and June business-building numbers that will carry the message to 25,000 trade buyers in all lines of business when actual, not to be denied demand will prompt and must force buying

It is conceded that the ACCESSORY AND GARAGE JOURNAL is one of the few trade mediums actually read by most trade interests. It has a live subscription file of readers of this class. They offer a potential market that is well nigh limitless. In addition to this we have a recently compiled list of 3200 owners of new garages, service stations and repair shops. To all of these prospective buyers the Special Merchandising Numbers of ACCESSORY AND GARAGE JOURNAL will carry a message that they will want to read. It is just as practical and productive for the car and truck manufacturers as it is for those who sell to jobbers and dealers—It offers the same value to makers of parts, fittings, car and shop equipment, as it does to others.

To makers of products for Ford cars, it gives an unequalled service, for it reaches most Ford dealers and 18,000 or more other interests who cater for Ford car business and who repair, care for and house Ford cars.

As previously stated, realizing that it is well nigh impossible to force a dull market, the ACCESSORY AND GARAGE JOURNAL has been waiting to hit the buyers when there is an actual demand and when buying will add to their profits and permit them to do business on a business basis, to give service, to do good work quickly and right and make more money by spending money.

This unprecedented opportunity will be afforded in the big May and June Merchandising issues of the ACCESSORY AND GARAGE JOURNAL.

EXPORT DEPARTMENT
W.

Prominence of American Trade

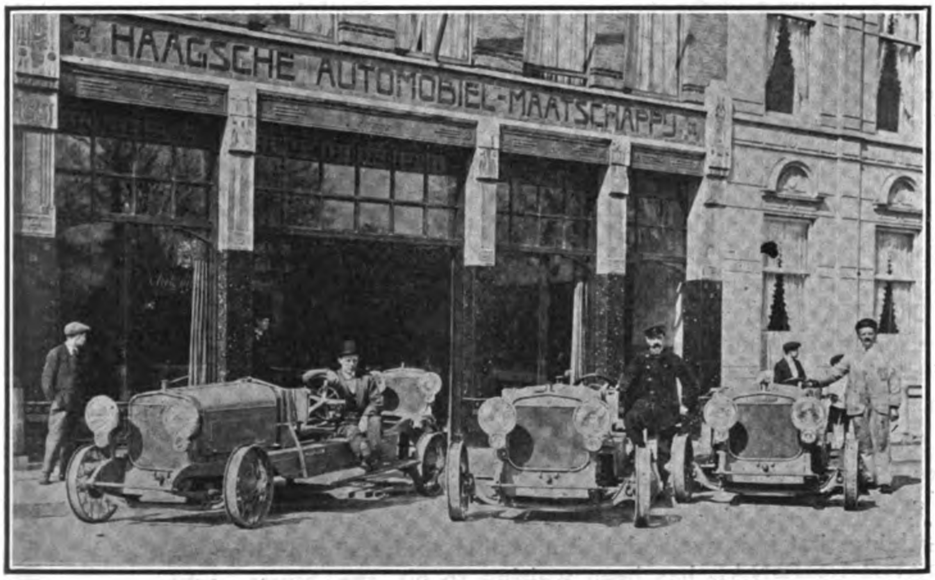
The world-wide prominence of American trade is strikingly illustrated by reports recently received from the two Scandinavian countries, Norway and Sweden. "American automobiles and trucks are so predominant in Norway that they give a distinct American touch to the street traffic," states Trade Commissioner Nels A. Bengtson of the Bureau of Foreign and Domestic Commerce of the Department of Commerce. American agricultural machinery is prominent in Norway. In general the high quality of American tools and mechanisms is conceded, and the expression is frequently heard that American goods rank first in quality but are somewhat higher in price than the same type of goods from the United Kingdom, Sweden or Germany. The United States now ranks first in the trade in metal manufactures as a whole. Before the war Germany ranked first, the United Kingdom second and the United States third.

A good roads' association was recently formed by Argentine, American and British business men of Buenos Aires.

ITALY REMOVES RESTRICTIONS ON GASOLINE SALE.

According to a communication recently received from the Italian Touring club, all restrictions on the sale of gasoline in Italy have been removed. Service stations are being re-established in all the important centers on the Riviera, which will make motoring in Italy very easy.

Roads are in good condition, especially north of Rome, and there is said to be no reason why American owners now should not resume motoring in Italy exactly as they did before the war.



Headquarters of the Haagsche Automobiel Maatschappij at The Hague, Holland. This Firm Has Taken Over the Representation of the Liberty Six Car Made by the Liberty Motor Car Co., Detroit, Mich.

AUTOMOBILES IN FRANCE AND SOUTH AMERICA.

France, with a fine system of roads, has automobiles equal to the combined registration of cars in Mexico, Cuba, Brazil, Uruguay, Australia and New Zealand. The latter countries are, however, stated to be better markets for United States automotive products than France, as is indicated by the fact that even so small a country as Uruguay imported during the last six months from the United States about three times as many cars as the larger European republic. The imports into the other countries have been larger still.

Foreign Trade Opportunities

Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce and its district and co-operative offices upon written request by opportunity number.

34,556—An importing firm in Spain desires to purchase and secure an agency for the sale of industrial machinery of all classes, machine tools, food products, oils, greases, etc., paper pulp, nitrates, chemicals, automobiles and trucks. Quotations should be given c. i. f. Spanish ports. Correspondence should be in French or Spanish. Reference.

34,575—A mercantile company in Spain desires to secure the exclusive local agency for the sale of a low priced automobile. It will open credit in New York for all shipments. References.

34,605—A commercial agent in Belgium desires to secure an agency and consignment of goods for the sale of shoes, machinery for the manufacture of shoes, leather, hides, automobiles, artificial leather, and materials for the manufacture of furniture. Payment to be made against documents. Correspondence should be in French.

34,664—An established importer with offices, show rooms and stock rooms in Australia desires to secure agencies from manufacturers and exporters for the sale of automobiles, motor trucks, motorcycles, as well as automobile accessories and parts. Catalogues and prices are requested. Payments to be arranged in New York. No reference offered.

34.734—A mercantile firm in the Netherlands desires to secure the sole agency for the sale in Holland and Dutch East Indies of agricultural implements especially suited for use in the Dutch East Indies. Quotations should be given c. i. f. Dutch East Indian ports, Amsterdam or Rotterdam. Reference.

34,737—A mercantile firm in India desires to secure the sole agencies for the sale of mill and cotton gin stores, machinery, cimema accessories, motor cars, chemicals, cutlery, leather goods, belting, etc. References.

34,752—An agency is desired by a mercantile company in India for the sale of motor cars and accessories, candles, oils, bicycles and other goods which will find a market in that country. Quotations should be given c. i. f. Indian port. References.

MOTOR VEHICLES IN SOUTH AFRICA.

According to Trade Commissioner Stevensen of Johannesburg, South Africa, official figures for the first 11 months of 1920 show imports of passenger motor cars into South Africa numbering 9150, valued at $18,378,765 at the normal rate of exchange; 239 trucks were imported during this period, valued at $601,205.

Personal News of Industry and Trade

Doty Treasurer of Globe Motors

W. S. Doty, formerly of the Cleveland Tractor Co., has joined the Globe Motors Co. organization, Cleveland, O., according to an announcement just made by President Charles H. Davies. He has acquired a substantial financial interest, will act as treasurer and have charge of operations. Mr. Doty has had a long connection with the automotive industry and an unusually broad executive experience, which fits him well for his new duties. His connection with the Cleveland Tractor Co., covering a period of three years, was in the capacity of auditor, assistant secretary and assistant treasurer in the order named. During that time he was also a member of the informal executive committee of the company. Mr. Doty's automotive experience also includes two years with the Torbensen Axle Co., two years in charge of the general offices of the Denneen Motor Truck Co. of Cleveland and several years as a retailer and distributor. The Globe Motors Co. has acquired a tract of land in the center of Euclid village and is making arrangements to erect a factory building this spring. Railroad sidings are being put in at the present time. Details of its new speed truck will shortly be announced.

W. L. Shaffer, who for the past nine years has been connected with the B. F. Goodrich Rubber Co. in various capacities throughout the country, for the past five years of which he was in the manufacturers' division of the Detroit district, has resigned to become associated with the Acme Motor Truck Co., Cadillac, Mich. He will have charge of the national account division under the direction of C. J. Helm, sales manager.

C. J. Helm, sales manager of the Acme Motor Truck Co., Cadillac, Mich., has returned from a trip through the East, where he presided at conferences of Acme distributors and dealers held in connection with the Boston, Philadelphia and Washington, D. C., automobile shows.

L. E. DeGroat, formerly of the sales staff of the Timken-Detroit Axle Co., is now with the Acme Motor Truck Co., Cadillac, Mich., in charge of dealer promotion work.

George C. McMullen, who has represented both the Timken Roller Bearing Co. and the Timken-Detroit Axle Co. on the Pacific coast for the last three years, will in the future devote his time exclusively to the Roller Bearing Co., with headquarters in the Monadnock building, San Francisco.

C. H. Brooks, who has been Mr. McMullen's assistant, will be in charge of the business of the Timken-Detroit Co. in that territory.

C. A. Woodruff has joined Briscoe Motors, Inc., Detroit, Mich., as director of purchases. He was formerly purchasing agent for the Chalmers, Saxon and Liberty motor car companies.

W. S. Doty, New Treasurer of Globe Motors Co., Cleveland, O.

R. C. Rawley has rejoined the sales staff of the Remy Electric Co., Anderson, Ind., and will work under the supervision of G. B. Stone, general sales manager. About a year ago Mr. Rawley resigned from the Remy sales department to engage in engineering sales work on his own account. Prior to that he had been a member of the Remy organization since 1918, going to that concern from the Mitchell Motor Car Co., where he was engineer in charge of electrical installation.

W. H. Schmelzel, president of the Schmelzel Co., St. Paul, Minn., has sold his interests in that concern to his associates and is in the South for his health.

S. Gordon Hyde resigned his position as advertising manager of the Buda Co., Harvey, Ill., effective April 1. His future plans are not announced.

L. J. Kramer, Veteran Salesman, Now With U. S. Motor Truck Co., Cincinnati, O.

Kramer Joins Sales Force of U.S. Truck

L. J. Kramer has joined the sales force of the United States Motor Truck Co., Cincinnati, O. Mr. Kramer has had extensive truck experience, having been connected with the Master Truck Co. since its organization. He was with Eugene Goldman, general manager and vice president of the United States Motor Truck Co. when Mr. Goldman was Republic distributor in Chicago.

C. M. Bunnell, who for the past 10 years has been in charge of sales of automobile lamps for the Edison Lamp Works of the General Electric Co., has accepted the position of director of branches with the Splitdorf Electrical Co., with headquarters at the general offices of that company, 98 Warren street, Newark, N. J. Mr. Bunnell will, for the present, devote considerable of his time and attention to promoting the sales of Splitdorf spark plugs and other Splitdorf products through automotive equipment jobbers.

E. Hunn, Jr., was recently made general manager of the Enterprise Motor Corporation, New York city, which handles the Kelley-Springfield truck, one of the products of Hare's Motors. Mr. Hunn has been assistant to Emlen H. Hare, president of Hare's Motors. **George H. Hauck** is general sales manager of the Enterprise Co. and **E. H. Dorman** retains his position as service manager.

Frederic N. Dodge, who was recently appointed sales manager of the Cleveland branch of the Baker-Fisk-Hugill Co., Dort distributor in Detroit, was formerly assistant advertising manager of the Dort Motor Car Co. of Flint, Mich. He also previously held the position of sales promotion manager of the automobile and service station equipment division of the Fairbanks Co. of New York.

Charles O'Harrow, who has been connected with the automotive industry in Waterloo, Ia., for a number of years, has become associated with the A. L. Alexander Co. as director of sales. The Alexander Co. distributes Liberty and Chevrolet cars.

Karl W. Volk of Cleveland, O., has been made manager of the service station at Toledo, O., of the Stewart Products Corporation. He was formerly at the Peerless car factory for seven years before he joined the Stewart company at Cleveland two years ago.

J. D. Thompson has sold his interest in the Buick automobile agency at Cedar Falls, Ia., and has taken charge of the agency for the Equitable Life Insurance Co. in northeastern Iowa.

E. P. Grismer is in charge of the Cleveland sales office of the Stewart Manufacturing Corporation, 942 Prospect avenue.

H. I. Bunting has purchased an interest in the Cedar Rapids, Ia., Velie Co.

Utility of Truck Increased by Proper Tire Equipment

(By **C. K. WHIDDEN**, Manager, Truck Tire Sales, United States Tire Co.)

THE truck owner need not go far wrong today in selecting the correct type of tire for the vehicles in his fleet.

East type of motor truck tire is designed and built for service under clearly prescribed conditions and by careful study of a few simple principles it will be possible to decide which type is the one suited to a particular purpose.

The limitations of service which each type gives are bounded generally by the capacity and speed of the truck and the character of the work the truck is called upon to perform.

Solid tires are for general use on trucks hauling loads of non-fragile materials under conditions that do not demand unusual speed, such as short trips in congested traffic where frequent stops are necessary, or on roads that are little affected by weather conditions. Such use is confined generally to large centers of population or between such centers connected by improved roads.

The industries that most use solid truck tires and the classes of work in which such trucks can be most economically used may be listed in general somewhat as follows: General manufacturing; general contracting and excavating: road building; coal and ice retail delivery; lumber retail delivery; packing and flour milling industries; city delivery for wholesale grocers; terminal freight hauling; transfer work in cities and oil and gasoline deliveries in cities.

Solid tires as to type and use are of three kinds—regular, high size and large single. Each is designed according to a certain principle and is built with a view to a certain class of service.

The regular tire is the conventional solid truck tire. It is built to meet conditions that are not exceptional and for that reason follows standard conventional lines. Solid truck tires of this type are most economical and satisfactory for all ordinary trucking purposes where medium sized trucks are used and where prescribed loads and speeds are fairly closely adhered to. The field for the regular tire in the industries listed above is, with certain exceptions, on the front and rear wheels of trucks of 1½ ton capacity and on front wheels of trucks above the 1½-ton class, except as noted hereafter. Circumstances and requirements may arise under which trucks of the classes mentioned may be operated more economically on other types of tires, such circumstances as regularly hauling heavy loads over very rough pavements or making long distance trips and trips over country roads. Under these circumstances it may be preferable to use either the high size solid tire or pneumatic truck tires. Such conditions are exceptions to the general rule and must be so dealt with.

High Size Type of Solids.

There are certain circumstances and conditions of truck hauling which warrant the use of the high size type of solid tire. This differs from the regular tire in that it furnishes greater tire height and cross sectional area, therefore greater cushioning; allows somewhat greater load carrying capacity; gives greater mileage; retains vitality longer and allows less vibration in the truck.

The high size tire costs more and therefore should be recommended only for such uses as will bring a return in proportion to the extra money invested.

The high size truck tire can be used most economically on the front wheels of all trucks above the 1½-gallon capacity operating under the general conditions heretofore enumerated, but where in addition the following requirements are important: (1) A demand for cushioning effect not as great as that furnished by pneumatics, but greater than supplied by regular tires, for example, where a solid truck tire is compelled to run regularly over rough city pavements; (2) whenever it is expedient to carry occasional heavy loads, such as large pieces of machinery; (3) where the user wishes to obtain greater mileage from his solid tires with longer time between periods of replacement; (4) where trucks are operated at long distances from tire application facilities, such as in isolated rural districts; (5) to improve the steering qualities on heavy duty trucks.

When to Use Single Type.

The big single type of solid truck tire has for its best example the mono-twin, which is designed and built to take the place on rear wheels of dual solids, whether high size or regular. The field for this tire is at present on the rear wheels of trucks of capacity above 1½ tons, requiring a tire of seven inches to 14 inches in width. It takes the place of cushion tires and cushion wheels, carries a heavier load than dual tires of the same cross sectional width and maintains this carrying capacity as well as all other features, undiminished throughout its tire life.

C. K. Whidden, Manager, Truck Tire Sales, U. S. Tire Co.

The development and perfection of the pneumatic truck tire—the type of pneumatic that is built especially for trucks and is not merely an enlarged passenger car type—stands out as one of the greatest steps in truck evolution. There is now no question but that its place is established for use on all trucks up to and including two-ton capacity where the elements of traction, speed and cushioning are especially needed in truck operation. This company believes that sizes above eight inch have not yet been developed beyond the experimental stage.

Pneumatics Economical.

Pneumatic truck tires may be used economically on the front and rear wheels of trucks of capacities up to and including two tons, and on the front wheels of trucks above the two-ton capacity, operating in the following classes of haulage work: General farming; dairy, egg and chicken industries; bottling industry; furniture manufacturers and dealers; wholesale produce dealers; department stores; fire trucks of light and medium types; rural transfer companies; rural distribution of gasoline and oil and inter-city single desk passenger busses.

Help Solve Transportation Problem.

Pneumatic truck tires have come into use in helping to solve transportation problems more extensively in the Middle West than in the Middle Atlantic or New England states. The reason is one of road conditions coupled with the fact that smaller capacity pneumatic tire trucks are most useful and economical in farm territory. As an industrial class the farmer is probably the largest user of the pneumatic tire truck. As in farming, so in the other lines of work mentioned, pneumatic truck tires have come into use on lighter trucks because their use is economically sound.

Furniture dealers use pneumatics to save breakage, produce dealers to save their fruit and vegetables, bus operators to give speed and comfort, other industries to save time and secure traction.

Pneumatics Not Cure-Alls.

Pneumatic truck tires are not cure-alls for general transportation evils and should be recommended for use only under circumstances and operating conditions where the higher initial cost will be offset by economies resulting from cushion, speed and superior traction.

Under present conditions of roads, truck design, traffic and load limitations, hard and fast tire requirements cannot be laid down without the knowledge of conditions under which the vehicle will operate.

Pneumatic tired trucks can be linked up with solid tired trucks in the same business, and by the intelligent use of both classes of equipment the transportation work as a whole speeded up.

NOTES OF INDUSTRY AND TRADE

Steel Corporation Cuts Prices

An announcement which is of importance to the automotive industry of the country was the substantial reduction in the base selling prices of the products of the United States Steel Corporation and its subsidiaries which was made public in New York, April 12, by Elbert H. Gary, head of that organization, after consultation with the presidents of the various subsidiary companies.

The new prices became effective April 13 and the reductions are as follows, f. o. b. Pittsburgh, Pa.:

Four by four and heavier billets, from $38.50 to $37 a gross ton; slabs, $42 to $38 a gross ton; sheet bars and small billets, $47 to $39 a gross ton; bars, $2.35 to $2.10 per 100 pounds; plates, $2.65 to $2.25 per 100 pounds; structural, $2.45 to $2.20 per 100 pounds; wire rods, $57 to $48 a gross ton; plain wire, base, $3.35 to $3.00 per 100 pounds; tin plate, $7 to $6.25 per base box.

Mr. Gary would make no comment on the reductions nor reply to questions asking whether cuts in wages paid employees of the corporation were contemplated. The price list from which the changes were made went into effect on March 21, 1919. To give an idea of the size of the reductions it was explained that the cuts on tin plates pare its quotations from $140 to $125 a ton.

NEW YORK ELECTRICAL SHOW, SEPT. 28 TO OCT. 8.

It is announced that the New York Electrical Exposition will be held in the 71st Regiment Armory, Park avenue and 34th street, New York City, during the 10 days beginning Sept. 28, 1921.

With the Grand Central Palace no longer available for exposition purposes, the show management was confronted with the problem of finding a place that combined suitable floor arrangements, facilities for handling the exhibits and accommodations for spectators. The success of other shows that have been held in armories indicates that the requirements of the electrical show will be well met at the 71st armory.

As in former years the 1921 show will feature electric vehicles, electrical equipment for the home, motor driven machinery for industrial purposes and electrically operated material handling machinery.

NEW PAWTUCKET GARAGE OPENED.

The Lafayette Garage has been opened at 435 West avenue, Pawtucket, R. I., under new management and is equipped to do expert electric and other repair work, washing, polishing, etc., affording a day and night service.

The manager is Arthur H. Theroux and the superintendent is Fred Hiscox.

CHAIRMAN ELLIS WILL WELCOME SUGGESTIONS.

George W. Ellis of the Supplee-Biddle Hardware Co., Philadelphia, Pa., who was recently appointed chairman of the Automobile Accessories branch of the National Hardware Association of United States, to succeed A. H. Nichols, resigned, has issued a statement to the active and associate members of the association to the effect that he is exceedingly desirous of having the accessories branch serve the automobile industry in every possible way and asks the hearty cooperation of each and every member. He solicits and states that he will welcome suggestions that will contribute to the success of the association's efforts to place the automobile accessories, supplies and equipment industry on the soundest and most profitable basis.

AFFECTS SALE OF USED CARS.

An act to amend the New York state highway law in relation to the transfer of used motor vehicles will go into effect July 1, 1921. Subdivision 8 of section 282 is amended to provide that upon the sale or transfer of a registered motor vehicle the seller must transfer to the buyer the certificate of registration indorsed to show the name and address of the buyer and the date of delivery, together with a statement of the transfer of ownership, which statement must be executed by the buyer and filed with the secretary of state within 10 days. A motor vehicle so transferred may be operated and driven under the original registration for a period of 10 days from the date on the certificate of registration.

DURANT MOTOR COMPANY OF NEW YORK

Plant of the Durant Motor Co. of New York, $3,000,000 Corporation—First of Chain of Independently Organized Assembly Plants Located at Strategic Distributing Points—These Companies Are to Be Operated Under Contract with Durant Motors, Inc., Which Will Supervise Production.

It is announced that the Paige-Detroit Motor Car Co., Detroit, Mich., is to equip its Big and Little Six Paige models with the Remy starting and lighting system manufactured by the Remy Electric Co., Anderson, Ind.

Ford Production Back to Normal

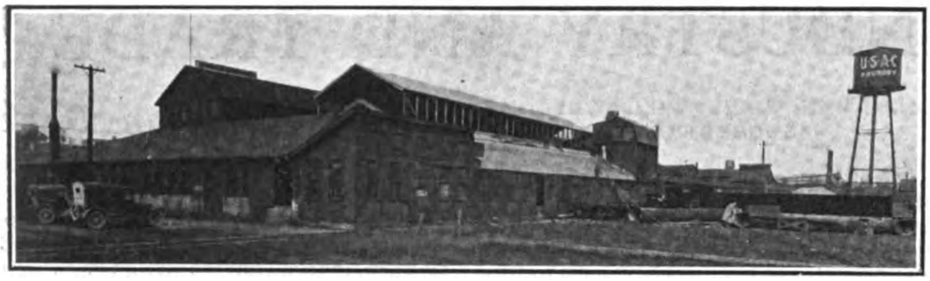
The steady gains both in sales and production which are reported at the Ford plant in Detroit may be accepted as to a degree indicative of the business status in that section. Henry Ford of the Ford Motor Co. stated in this connection that that concern was never in a better position than right now.

The company's actual sales in the domestic market for January were 57,208 automobiles and 1138 tractors, for February 63,603 cars and 1932 tractors, and for March 87,221 cars and 4708 tractors. At present the company has 102,000 unfilled orders for automobiles and production of the present working force is at the rate of 1,000,000 cars a year.

The company's normal production before the plant was closed for inventory on Dec. 23 was about 100,000 cars a month. This required, at that time, a working force of about 52,000 men. At the present time a little more than 32,000 men are employed. It is reported that the difference between this figure and the full working force is largely represented by the increases in help taken on due to expansion of activities during the war.

In the present situation, in building the present forces up to meet full production, an effort is being made to take on only employees who display an intention of remaining with the Ford company. By this means the company sees a way to reduce its "turnover" of help to a minimum, greatly stabilizing production and thus reducing productive costs.

In regard to the financial condition of the Ford company, it is stated that approximately $10,000,000 of the $24,000,000 in bank loans that mature on April 18 will be paid off at that time, and that the concern has been successful in raising funds to make payments on taxes.



Addition to Connersville Foundry Corporation's Plant, Which Will House the Casting, Cleaning and Heat Treating Departments.

Expansion of United States Automotive Corp.

EXPANSION at the present time proves unshakable confidence in the future. Evidently the Connersville Foundry Corporation, a subsidiary of the United States Automotive Corporation of Connersville, Ind., possesses such confidence, for it is now completing an extensive addition to its already large plant.

This new building will measure 60 by 140 feet and will be used for cleaning the castings after they are removed from the moulds.

The Connersville Foundry Corporation has also installed heat treating equipment, which is the latest development in modern foundry work. This heat treating was demanded by the exacting requirements of the Ansted Engineering Co., which produces the recently announced Ansted engine for the exclusive use of the Lexington Motor Co.

All of these plants are subsidiaries of the United States Automotive Corporation and together with the Teetor-Harley Motor Corporation at Hagerstown, Ind., make it possible for the builders of the Lexington Minute Man Six to largely control the principal sources of material supply.

With the completion of the casting cleaning and heat treating departments the Connersville Foundry Corporation will be able to produce 40 tons of castings a day with ease.

"We shall be able, with these increased facilities, to take care of a limited amount of business outside our own large requirements," said Frank B. Ansted, president of the United States Automotive Corporation, in commenting on the expansion of the Connersville Foundry Corporation's plant.

Standard Parts Plant Also Taken Over.

Announcement of the organization of the Ansted Spring & Axle Co., with an authorized capital of $500,000 of common stock, under the laws of the State of Indiana, has been made by President Ansted of the United States Automotive Corporation and the Lexington Motor Co., its chief subsidiary. This is another link in the great chain of plants with which the United States Automotive Corporaton is acquiring, and supplies the Lexington Motor Co. with another parts making source.

The Ansted Spring & Axle Co. has taken over the property in Connersville formerly owned by the Standard Parts Co. of Cleveland, O. The buildings are of thoroughly modern brick and steel construction and are equipped with the very latest appliances and machinery for economical production on a large scale.

Originally the plant, which has just been taken over by the newly organized Ansted Spring & Axle Co., was owned by a company of identically the same name and headed by the late Edward W. Ansted, one of Indiana's pioneer manufacturers. Frank B., Arthur A. and George W. Ansted were engaged with their father in this and other large enterprises. The new spring plant when running to capacity, employs between 300 and 400 skilled workmen.

All springs for the Lexington car will be made in this plant, in addition to a considerable volume of business for other large motor car producers.

BOOKS RECENTLY RECEIVED.

Gasoline Automobiles, Moyer—This is a clear, brief and interesting presentation of the essential principles of automobile construction and operation by James E. Moyer, director of university extension, Massachusetts Department of Education. It is especially designed to furnish help in a practical form to motor vehicle drivers who, when faced by ordinary operating troubles, want to know how to locate the cause and apply the remedy. It is divided into 10 sections, with the following captions, which indicate the scope of the work: 1. Automobile Types and Parts. 2. Automobile Engines. 3. Gasoline and Substitutes. 4. Gasoline Carburetors. 5. Automobile Ignition. 6. Magnetos and Ignition Testing. 7. Electric Starters. 8. Clutches, Transmissions and Differentials. 9. Lubrication and Cooling Systems. 10. Automobile Troubles and Noises.

Published by McGraw-Hill Book Co., Inc., 370 Seventh Avenue, New York City. Price, $2.

Automobile Questions and Answers, Page—This is a revised 1921 edition of this work which has been considerably enlarged and brought up to date. It is a practical treatise, by Victor W. Page, M. E., in the form of a series of 39 lessons covering, with over 2000 questions and answers, the automobile, its construction, operation and repair. It is superbly illustrated by 387 cuts and plates and the subject matter is couched in simple, understandable language. Among the topics considered are: Parts of the modern automobile, two and four-cycle motors, fuels, carburetion, ignition systems, lubrication, cooling, transmission, differential gear construction and operation, frames and springs, steering gear and axles, wheels, rims and tires, bearings, brakes, driving instructions, oiling, road troubles, equipment and accessories and electric starting systems.

Published by the Norman W. Henley Publishing Co., 2 West 45th Street, New York City. Price, $2.50.

The Modern Motor Truck, Page—This work considers all types of motor trucks and industrial tractors and trailers, their design, construction, commercial application, operation and repair, and lays particular stress on the outstanding features of all types of gasoline and electric commercial vehicles and all varieties of truck bodies.

This is stated to be a companion volume to a previous book by the same author, Victor W. Page, M. S. A. E., entitled the Modern Gasoline Automobile, which has enjoyed a considerable vogue in its field, and the Modern Motor Truck is designed to fill a similar place in the truck field that the former did in that of passenger cars.

Mr. Page has had the cooperation of the engineering and service departments of the leading motor truck manufacturers and the material presented is distinctive and of unusual value. The work is copiously illustrated, showing the essential features of commercial vehicle construction in numerous sectional, disassembled and phantom views, and these are accompanied by simple explanations that cannot fail to be understood by even the casual reader. In brief, it is stated to be not a technical treatise, but a book for the practical business man and mechanic.

Published by the Norman W. Henley Publishing Co., 2 West 45th Street, New York City. 1000 pages, 6 by 9 inches; 750 illustrations. Price, $5.

Spring and Axle Plant Formerly Owned by the Standard Parts Co., Cleveland, O., Now the Property of the Newly Organized Ansted Spring & Axle Co. of Connersville, Ind., Newest Subsidiary of the United States Automotive Corporation.

Old Timers' Directors Meet

"Good laws, good roads, good fellowship," the slogan of the Old Timers' club, was formally adopted at the first meeting of the board of directors. This meeting was held at Flint, Mich., April 2-3, when all but three of the directors were present. At this meeting there were added to the directorate W. C. Rands of the Motor Products Co., who will be treasurer of the organization; Harvey S. Firestone of the Firestone Tire & Rubber Co., vice president of the tire section; Amos G. Batchelder, chairman of the executive committee, and secretary of the American Automobile association, vice president of the Good Roads and Highway section. The directors shown in the accompanying cut are:

Front row, left to right, W. C. Rands, Motor Products Co., treasurer, Wm. L. Hughson, San Francisco, Los Angeles, Portland, Oakland, San Diego, Seattle, vice president, Distributors' Section; Albert Champion, president Champion Ignition Co., Flint; Gregory Flynn, vice president Jobbers' section, vice president Edward A. Cassidy Co., New York; Lloyd Maxwell, Erwin, Wasey & Co., Chicago, vice president advertising section.

Second row, left to right, John Younger, Standard Parts Co., Cleveland, vice president Parts and Accessory section; F. Ed. Spooner of the Detroit Motor Times, vice president and advertising manager Motor West, secretary; Richard Kennerdell, chairman Contest Board A. A. A., vice president Contest section; Walter Bermingham, automobile editor Evening Post, Chicago, vice president Newspaper section; W. S. Gilbreath, manager Detroit Automobile club, chairman Constitution and By-Laws Committee; C. G. Sinsabaugh, editor Motor Life, vice president Automobile section; Martin L. Pulcher, Federal Motor Truck Co., vice president Trucks and Tractor division.

Directors absent—Alfred Reeves, general manager National Automobile Chamber of Commerce, vice president Organization section; Thomas J. Hay, automobile distributor Chicago, vice president Dealers' section; Howard Marmon, Nordyke & Marmon Co., Indianapolis, Passenger Car and Airplane section; Harvey J. Firestone, Firestone Tire & Rubber Co., Akron, O., vice president Tire section; A. G. Batchelder, chairman Executive Committee, American Automobile association, vice president Good Roads and Highway section; J. Ed. Schipper, technical editor Class Journal Co., chairman Membership Committee.

TRASK INAUGURATES CLASS FOR STUDY OF STEAM CAR.

O. C. Trask, president of the Trask-Kennedy Co., Detroit, Michigan distributor for the Stanley Steamer, addressed a class of 800 Michigan State Auto school students Tuesday night, April 12, on the principles and operation of the Stanley Steamer.

The cooperation of A. G. Zeller, president and principal of the Michigan State Auto school, has been secured to establish a regular class to study the steam car, in connection with the school's automobile course. Mr. Trask has furnished the school a completely equipped chassis of the Stanley, which is used to illustrate his lecture, as well as his own Stanley touring car.

It is planned to have members of the Stanley service organization work with the school faculty in the carrying on of this class. Instruction on the steam car will be made a part of the regular course and all students will receive this. The Michigan State Auto school is planning other extensions of its work during the summer season—one being an increase in the welding plant to about four times the present size.

MILES PISTON RING COMPANY MOVES INTO NEW FACTORY.

The Miles Piston Ring Co., Chicago, has recently moved into its new factory at 5353 South State street. In this new plant, which is one of the most modern of its kind, the company is adding additional equipment which will enable it to increase their output.

Increased business has forced the company to move into larger quarters three times since 1918.

The Miles Piston Ring Co. manufactures the Miles One-Piece Triple Seal Piston Ring.

SALES COMPANY OPENS OFFICE.

The Miles Piston Ring Sales Co. has opened a distributing office at 437 Fifth avenue, New York City. The company is a subsidiary of the North American Truck Co., Inc., of which George B. Godfrey is manager.

The Miles Piston Ring Sales Co. is organized for the purpose of distributing the Miles One-Piece Triple Seal Piston Ring in New York state and New Jersey. Irving Miller is in charge of sales of piston rings.

Akron Agency Buys Building

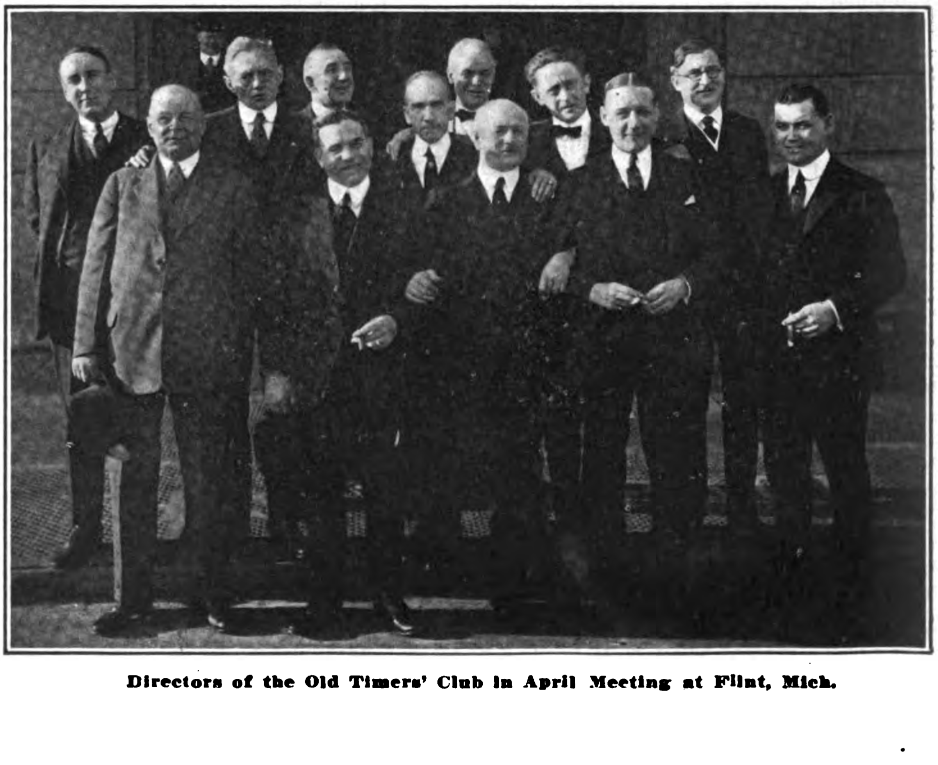
Improved business conditions have made necessary several additions to the staff of the Akron Advertising Agency Co., Akron, O., with a resultant demand for larger quarters. In common with other leading agencies the company has accordingly taken a step ahead by acquiring its own building at 115 South Union street, in the residence section of Akron. At the time this residence was built it was the finest and largest home in the city, and is surrounded by spacious lawns and well kept shrubbery. Built along old fashioned lines, with numerous windows and large, high ceilinged rooms, it was ideal for the purpose of its new occupants with but few alterations.

On the first floor is the private office of President Gordon Cook, the space buyer's office and the administrative and production offices, including the accounting, mechanical and checking, filing and forwarding departments. A large conference room is also located on this floor.

The entire second floor is given over to the creative branches of the agency's work, including the private office of Vice President Edward S. Babcox, and the service and copy departments. The arrangement is such that each account supervisor has his own private office.

Exceptionaly good lighting on the third floor places the art director and his department there as a matter of course. The former ball room is utilized as a recreation room for the members of the organization and as a meeting place for various advertising and allied associations.

Located close to the center of activity in the city, and still away from the noise and distractions of a busy office building, the new quarters are particularly well adapted to the needs of the agency, and to improve the service rendered its clients.



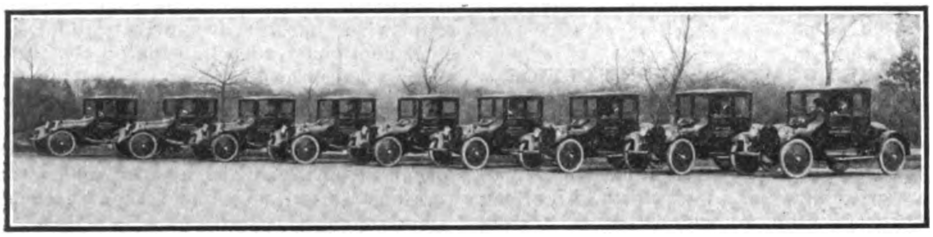
Directors of the Old Timers' Club in April Meeting at Flint, Mich.

PATTERSON-WARNER ACQUIRES INTEREST IN AUTO INDICATOR.

It is announced that E. C. Patterson, president of the Patterson-Warner Co. of Chicago has acquired an interest in the Auto Indicator Co. of Grand Rapids, Mich., and has been made a director in the company. Mr. Patterson is a national figure in the automobile field. He has been one of the foremost automobile racing patrons of America, his cars having been piloted to victory by De Palma, Chevrolet and other noted drivers. He holds individually the long distance return trip record for a run between New York and Chicago.

About four years ago he organized the Patterson-Warner Co., associating with himself A. P. Warner of Beloit, Wis., originator of the Warner Speedometer, in the manufacture and sale of the Warner-Lenz.

Mr. Patterson has been investigating a rear signalling device for automobiles for some time, realizing that there was a tremendous potential demand for a device that would be adequate. His investigating finally led to a connection with the Auto Indicator Co. of this city, and this implies the recapitalization of the company on a basis that twill provide for a world wide business.



Fleet of Dodge Coupes Used by Salesmen of Waitt & Bond, Inc., Newark, N. J., Maker of Blackstone Cigars. Photograph Was Taken During Formal Parade of Salesmen from Newark to Boston, March 21-25. Cars Are Conspicuous on Account of Their Equipment of Orange-Colored Disc Wheels and Gold Bands on Doors.

The increase in the capital stock to $1,500,000 has already been provided for.

The present Auto Indicator is a development of the signal originally manufactured by the Auto Indicator company, of which about 35,000 have been sold. The present device, however, is a very great improvement over any previous models. The action of the Auto Indicator is purely mechanical, the stop signal being flashed automatically upon the pressure being applied to the foot brake; the right and left turns being indicated by a lever conveniently situated on the steering wheel. All three operations giving notice of intended change of speed or direction; and being as automatic with the driver as the steering of the car.

The company will continue to manufacture in Grand Rapids. The board of directors has been increased from five to seven, the other new director besides Mr. Patterson being C. B. Hamilton of the Brearly-Hamilton Co. of Grand Rapids.

The officers of the company are: President. Joseph Renihen; vice president. R. W. Brown; secretary-treasurer, V. T. Cilley.

A shrinkage of $67,700,000 in American exports took place in January.

Protective Committee for Willys Corp.

The Willys Corporation, which has been known as a holding corporation, having 27 per cent. of the stock of the Willys-Overland Co., as well as stock of the Fisk Rubber and Federal Rubber companies. has been placed in the hands of a protective committee in the interests of the first preferred stockholders. The Columbia Trust Co. is the chief depository and the sub-depositories are the First National bank of Boston, the Central Trust Co. of Illinois and the Girard Trust Co. of Philadelphia.

The members of the protective committee are Howard Bayne, chairman; U. N. Bethell, Stedman Butterick, Thomas B. Gannett, Robert E. Hunter, Leclanche Moen, Robert L. Montgomery, Joseph P. Cotton, counsel, and Willard C. Mason, secretary.

The Willys Corporation was incorporated July 24, 1917, in Delaware as the Electric Auto-Lite Corporation and its present name was adopted in September, 1919. In that year the company acquired the capital stock of the New Process Gear Corporation and the Duesenberg Motors Corporation.

It is stated that there are outstanding 4,450,000 shares of common stock of no par value. $15,000,000 first preferred and $10,000,000 second preferred.

WATER IN CARBURETOR.

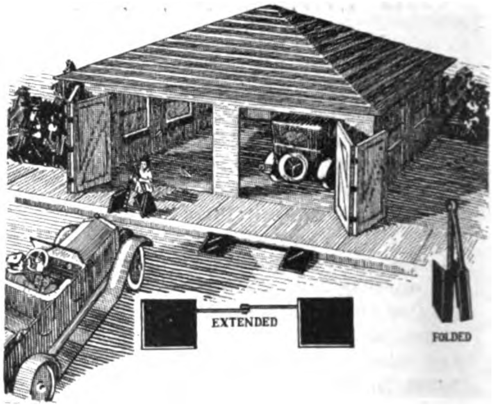
A common, yet at the same time baffling cause of an engine missing explosions is water in the carburetor. When testing other causes of skipping, try draining the carburetor. Catch some of the fuel in the palm of the hand and note if globules form on top. They reveal the presence of water.

KURB-KUMFORT PORTABLE RUNWAY.

The Kurb-Kumfort is a portable runway designed to eliminate the expense of grading and recurbing. It is strong enough to hold the heaviest automobile, but light enough for a child to carry. It consists of two wooden runs connected so as to fold together when not in use. When folded it is easy to carry and to store; when extended the runs are just the right distance apart for the wheels of the automobile; there is no adjusting afterwards.

The Kurb-Kumfort fills the need of many who, because of municipal laws or from fear of theft, wish to keep their runways out of the gutter and safe in the garage. The Kurb-Kumfort is much easier to handle than wooden blocks or built up runs. It is clean in muddy weather and one trip places both runs in the street.

Kurb-Kumforts are made in all sizes to fit any height of curbing. They sell for $3.50 a pair and can be obtained from most dealers, or by writing Arnold & Co., 11 Arch street, Providence, R. I. The height at the curb should be stated when ordering.

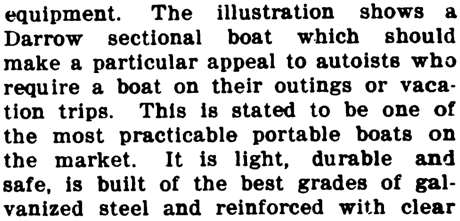


Kurb-Kumfort Portable Runway.

DARROW'S SECTIONAL BOATS.

As the outing season is at hand it is timely to call attention to the products of the F. H. Darrow Steel Boat Co., Albion, Mich., which specializes in the manufacture of steel boats, boat patterns, plans for construction and sportsmen's equipment. The illustration shows a Darrow sectional boat which should make a particular appeal to autoists who require a boat on their outings or vacation trips. This is stated to be one of the most practicable portable boats on the market. It is light, durable and safe, is built of the best grades of galvanized steel and reinforced with clear oak or cypress. It is of the float bottom, flaring side style and is stated to be very steady in the water.

Each section is a complete boat in itself and the sections nest together when the boat is being transported. A 12-foot boat thus nests in a space 50 inches long and 40 inches wide. It can be carried with safety and convenience on the running board of any make of automobile. The sections may be joined in five minutes without the aid of special tools.



Darrow's Sectional Boat for Autoists, Showing Method of Nesting to Save Space in Transportation.

The Elmco Universal Test Stand

THE Elmco Unversal Test Stand is designed to test various makes of generators and starting motors used in the automobile for either electrical or mechanical faults. The simplicity of construction of all the adjustable parts, the fact that they remain rigid and free from vibration at the first setting reduces materially the time required in preparing for an inspection. In addition, an unlimited amount of repair work can be accomplished on the stand through the use of the lathe feature embodied in it.

A repulsion induction type General Electric motor is supplied to operate the machine. This motor will withstand 50 per cent. overload and can be readily connected to a 110 or 220-volt alternating current, single or three-phase circuit. When so specified these machines will also be equipped with motors for either 110 or 220-volt direct current. The motor has a reversing handle, making it a very simple operation to reverse the rotation.

Friction Transmission Used.

The friction transmission used on the Elmco Universal Stand has been designed to deliver to the driving chuck more than the maximum torque of the motor without injury to the working parts. Three Weston meters are supplied for reading generator and battery voltage, generator amperage, charge and discharge and amperage discharge of the battery when the starting motor is tested. For reading revolutions a minute a tachometer of the centrifugal type is used, which registers speeds of from five to 3000 revolutions a minute in either rotation.

The instrument board is of steel construction and finished in baked enamel, thus insuring durability.

Wiring Arrangement.

The wiring is arranged in such a manner so as to make possible the proper connections for testing the units of the various voltage systems in use. The operating switch is connected in the circuit for the purpose of: 1, Obtaining battery voltage at any time during the test, insuring to the operator that all adjustments are made under proper conditions. 2. Running the generator as a motor for the purpose of locating open armature coils and undue load shown by ammeter readings. 3. Enabling operator to short circuit the cut-out furnished with the machine so as to make the test without the same. A pair of removable leads connected to brass prods are furnished for testing armature segments, field coils, etc. Contact is indicated by a red light on the instrument board.

Universal Chuck.

A three-inch union chuck, supplied with both external contracting and internal expanding jaws, is mounted on the driving shaft so as to operate universally when testing electrical equipment. This chuck can be centered and rigidly fixed to the driving shaft through a very simple operation when it is desired to use the machine as a lathe.

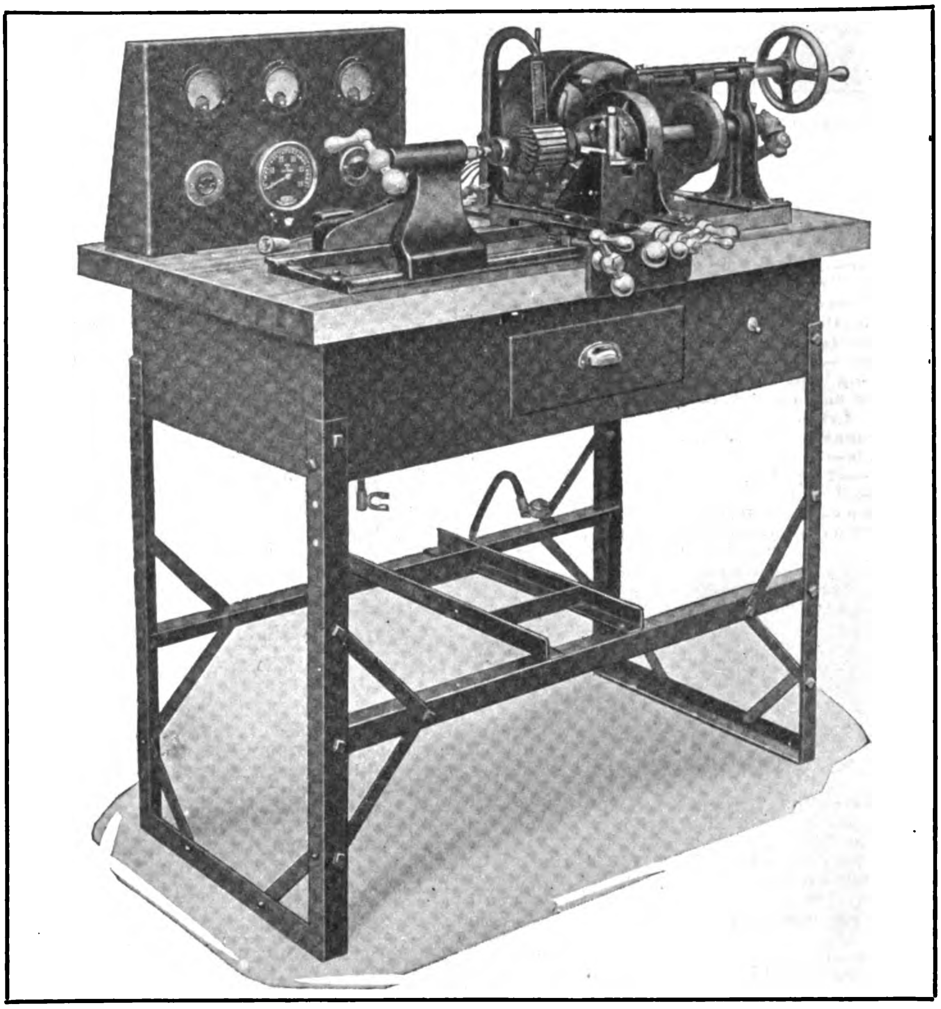
A scale standard is mounted on the stand which is attached to operate from a brake drum mounted on the driving shaft for use in brake horsepower and stall torque tests for starting motors. When this device is put into operation the main motor is released from the friction wheel and the starting motor drives the shaft, thereby making it possible to read the revolutions per minute of the same.

Universal Holding Carriage.

One of the outstanding features of the Elmco Universal stand is the universal holding carriage, designed so that any type of generator or starting motor can be rigidly held and the shaft accurately centered with the driving chuck. This device is sturdily built upon the principles used in lathe construction and all motions necessary to properly set the unit to be tested are controlled through the medium of three ball cranks. The necessity of using any kind of metal blocks to support a generator of unsymmetrical proportions is eliminated. The steadying arm can be easily turned back out of the way when setting or removing the unit.

When it is desired to use the machine as a lathe, one of the V-blocks on the holding carriage is removed by turning the ball crank and a tool rest supplied with the machine is fixed to the remaining block, which can be controlled through the use of the cranks to take an even cut. The driving chuck is made rigid by tightening a centering sleeve over the same and a tail stock is mounted on the bed of the machine for centering the part to be turned or straightened.

The accompanying illustration shows the Elmco Universal Stand in use as a lathe cutting commutator. This equipment is built to stand the hardest usage. As will be noted in the cut, the frame work is of angle iron adequately braced to insure absolute rigidity. Holes are provided at the base through which the stand may be bolted to the floor when advisable. The top of the stand is of laminated hard maple, which is varnished in the natural color. This top is smooth and practically as durable as steel and is vastly superior for electrical devices due to its non conductivity.

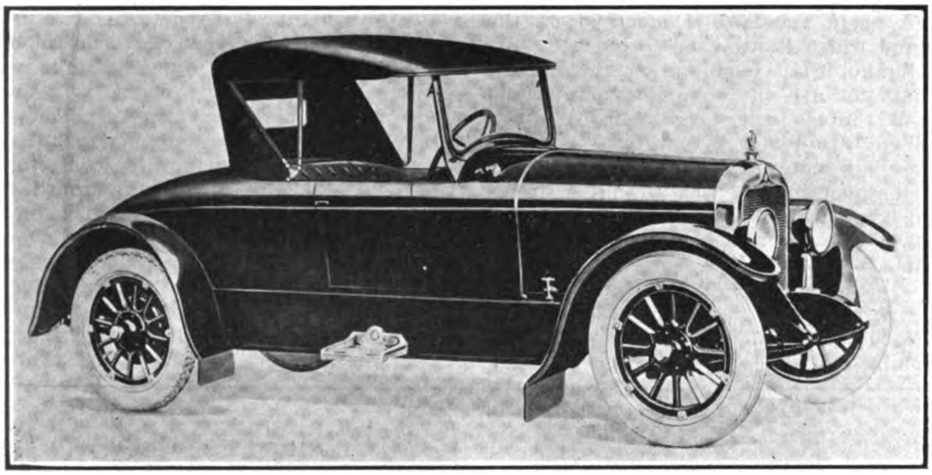


Elmco Universal Test Stand in Use as Lathe Cutting Commutator.

The Elmco Universal Stand is supplied with a growler for armature testing and a battery, at an additional cost, only when specified, as many service stations already have this equipment.

The Elmco automotive equipment is manufactured by the Electric Machine Co., Indianapolis, Ind. Distributed by Detroit Consolidated Sales Co., Inc., 10 Warren avenue, west, Detroit, Mich.

New Models of 1921 Cars, Trucks and



Ace Six Two-Passenger Roadster, Made by Apex Motor Corporation, Ypsilanti, Mich.

ACE MODEL G.

Engine—Guy Disc Valve, Six-Cylinder, 3¼ by 5, En Bloc.

Lubrication—Own Oil Gauge.

Cooling—Pump.

Carburetor—Special.

Ignition—Atwater Kent.

Starting and Lighting—Auto-Lite.

Transmission and Clutch—Gear Set, Unit Forward with Motor; Disc Clutch.

Wheels—Artillery. **Tires**—Firestone, 32 by 4. **Rims**—Firestone.

Wheelbase—123 Inches.

Bodies—Touring, Roadster, Brougham and Sedan.

Finish—Colors Optional.

Equipment—Complete; Individual Side Steps.

MERCER SERIES FIVE.

Engine—Mercer, 3¾ by 6¾, 22.5 horsepower, N. A. C. C. Rating.

Fuel Feed—Vacuum.

Lubrication—Force Feed and Splash.

Carburetor—Ball & Ball.

Ignition—Berling High-Tension Magneto.

Starting and Lighting—Westinghouse.

Clutch and Gear Set—Mercer, Disc Type.

Rear Axle—Mercer, Full-Floating.

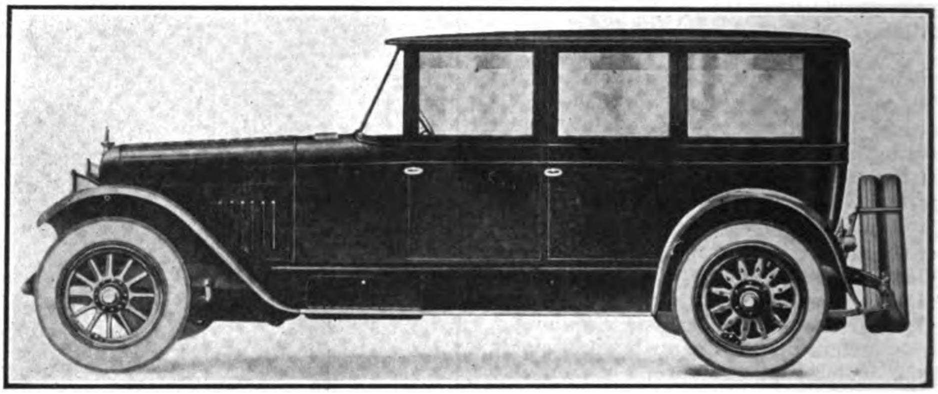
Wheelbase—132 Inches.

Wheels—Wood.

Tires—32 by 4½.

Rims—Standard.

Prices—Two-Passenger Raceabout, $3675; Two-Passenger Runabout, $3950; Six-Passenger Touring, $3950; Four-Passenger Sporting, $3950; Four-Passenger Coupe, $5150; Six-Passenger Touring Limousine, $5650.



Mercer Sedan Model, Manufactured by Hare's Motors, Inc., New York City.

NEW NATIONAL SEXTET PHAETON.

Engine—Own, 3½ by 5¼, 29.4 Horsepower, N. A. C. C. Rating; 6 Cylinders, Overhead Valve.

Fuel Feed—Vacuum, 20-Gal. Tank.

Carburetor—Rayfield. **Ignition**—Delco.

Starting and Lighting—Westinghouse.

Clutch—Borg & Beck; Three Speeds. Ratio, 4.08.

Wheelbase—130 inches.

Wheels—Wood. **Tires**—32 by 4½.

Rime—Firestone.

Seating Capacity—Four.

Price—$3750.

In the Cut Below Is Shown, at the Left, the New National Sextet Phaeton; in the Center the Essex Two-Passenger Cabriolet, While at the Right Is a Late Model Ford Car Chassis, Equipped with a Model Universal Body Made by the Universal Body Co., Mishawaka, Wis., with Disc Wheels—This Lengthens the Wheelbase 20 Inches.

ESSEX TWO-PASSENGER CABRIOLET.

Engine—Own, Four Cylinders; 3⅜ by 5, 18.2 Horsepower, N. A. C. C. Rating.

Fuel Feed—Vacuum, 12-Gal. Tank.

Carburetor—Own. **Ignition**—Delco.

Starting and Lighting—Delco.

Transmission—Three Speeds. Ratio, 5.09.

Wheelbase—108½ Inches.

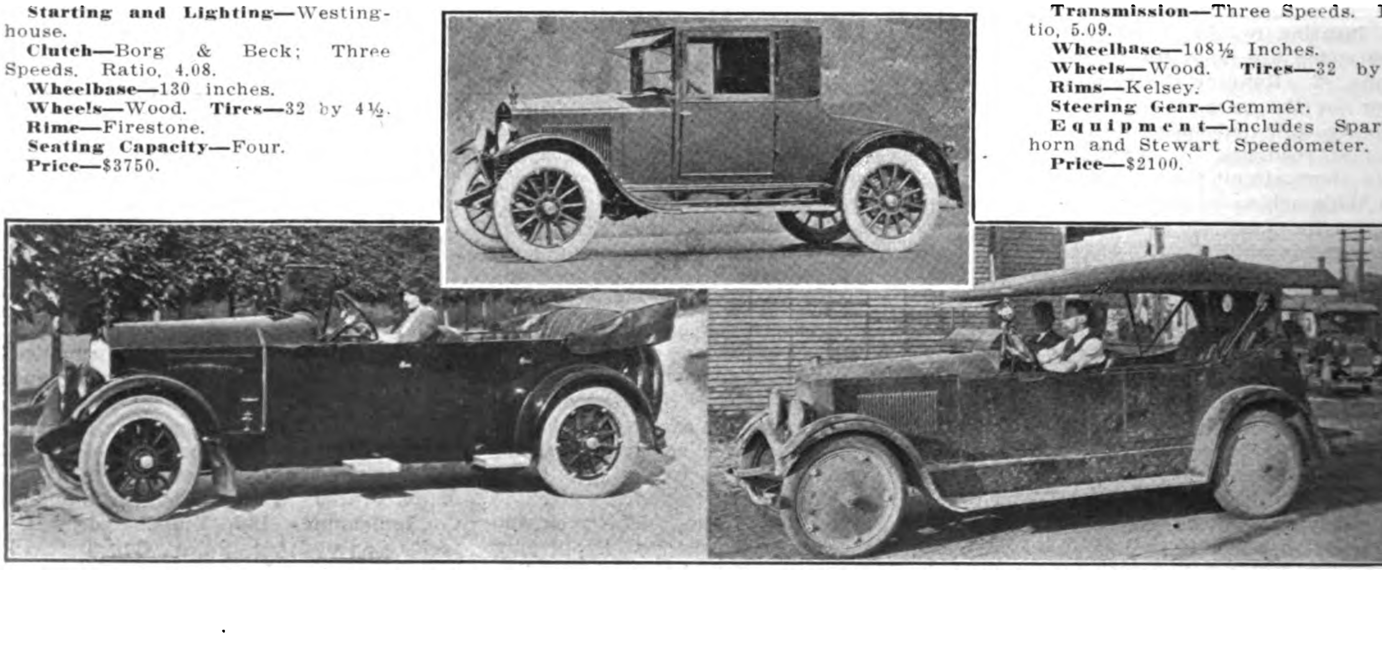
Wheels—Wood. **Tires**—32 by 4.

Rims—Kelsey.

Steering Gear—Gemmer.

Equipment—Includes Spartan horn and Stewart Speedometer.

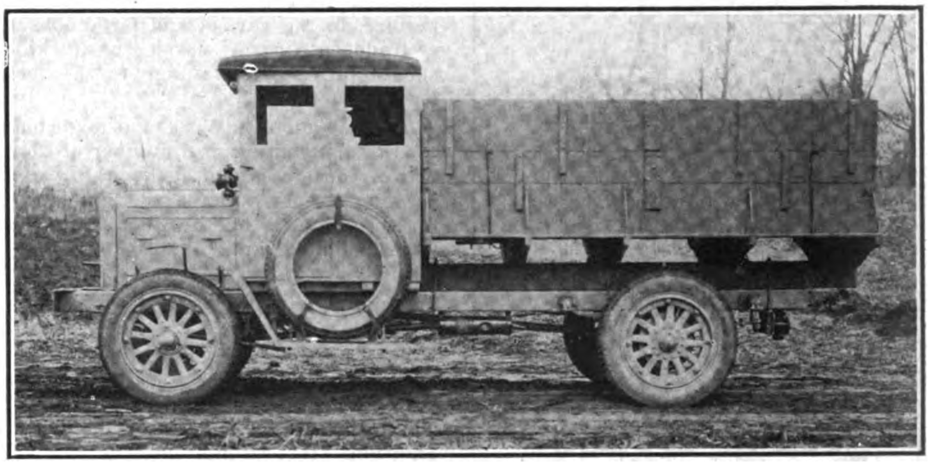
Price—$2100.

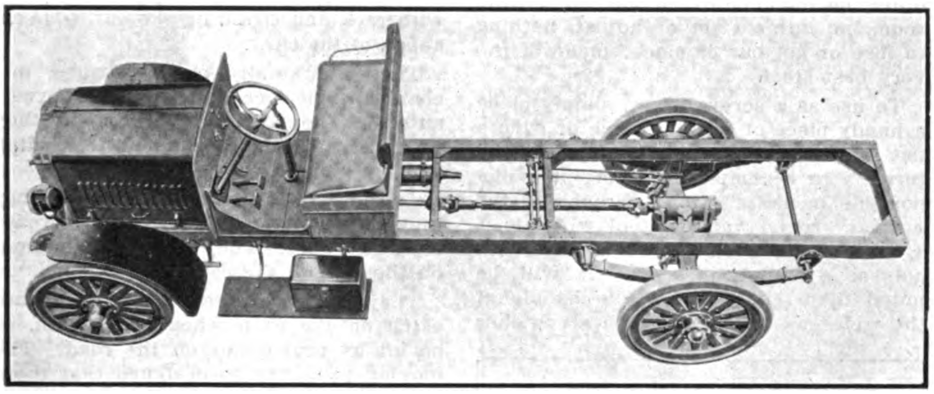


Tractors Now Being Offered to Trade

MOLINE 1½-TONNER WITH FARM BODY.

Engine—Moline Model NT, 4 En Bloc, I-Head, 3½ by 5, 19.6 Horsepower, N. A. C. C. Rating.
Ignition—Splitdorf High-Tension, Impulse Starter.
Cooling—Thermo-Syphon.
Carburetor—Tillotson.
Steering Gear—Ross.
Clutch—Moline Dry Disc.
Transmission—Moline, Three Speeds Forward, One Reverse, Unit with Engine.
Rear Axle—Torbensen Internal Gear.
Gear Ratio—8 to 1 on High.
Wheelbase—130 Inches.
Tires—34 by 5-Inch Front, 36 by 6-Inch Rear, Firestone Cord.
Tread—56 Inches.
Price—$2250 f. o. b.



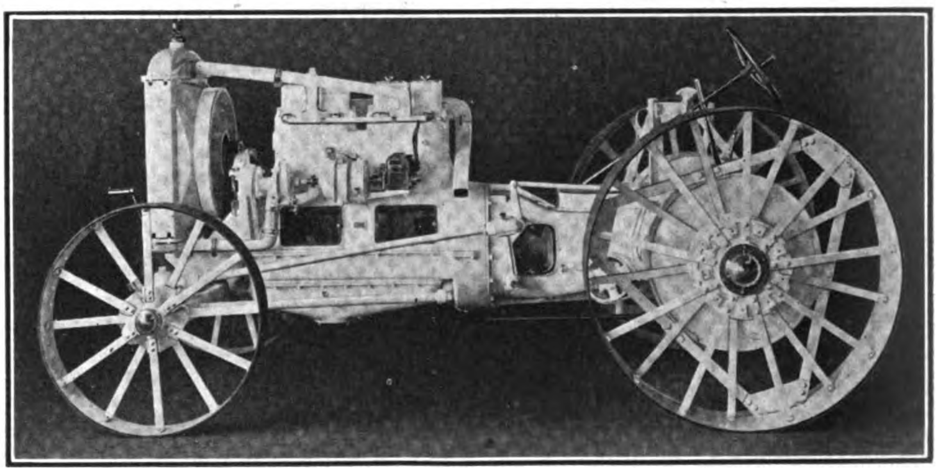


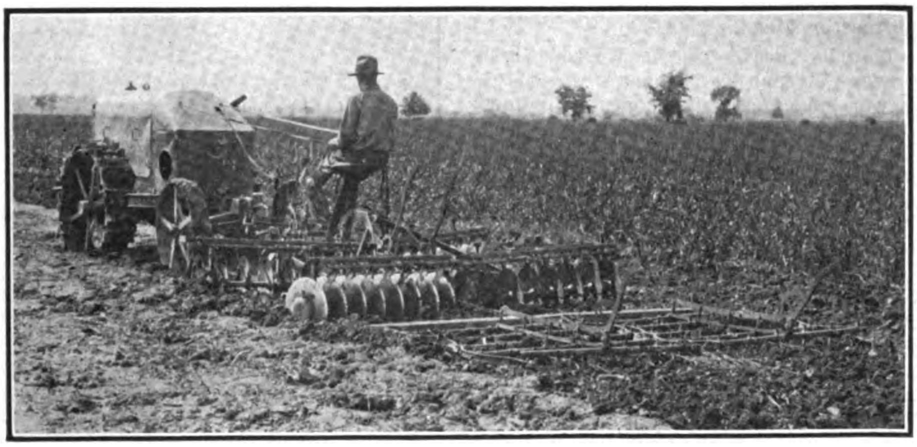
ADVANCE-RUMELY 1½-TON FARM TRUCK.

Engine—Buda CTU; 3¾ by 5¼; 25.5 Horsepower, N. A. C. C. Rating.
Cylinders—Four Vertical, L-Head Type.
Ignition—Splitdorf.
Cooling—Geared Circulation Pump.
Carburetor—Stromberg, Gravity Feed.
Lubrication—Force Feed.
Steering Gear—Gemmer.
Clutch—Fuller Dry Plate.
Transmission—Fuller, Three Speeds Forward, One Reverse, in Unit with Engine.
Rear Axle—Sheldon, Semi-Floating.
Gear Ratio—7.8 to 1 on High.
Wheelbase—144 Inches.
Tires—36 by 3½ Front, 36 by 5 Rear; Goodyear Cords, Front and Rear.
Tread—56 Inches.
Price—Chassis, $2720, f. o. b., Equipped with Combination Farm Body.

IMPROVED ALLIS-CHALMERS 18-30 TRACTOR.

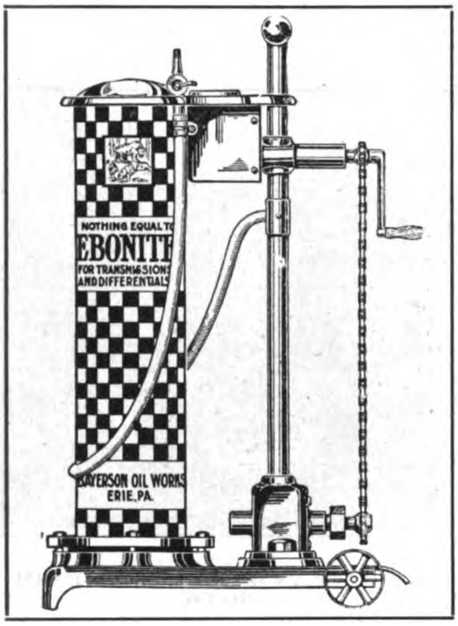
Engine—Allis-Chalmers, Four Cylinders Vertical, 4¾ by 6½.
Engine Speed—830 Revolutions a Minute.
Horsepower—18 Horsepower at Drawbar, 30 Horsepower at Belt.
Lubrication—Combination Force and Splash.
Fuel—Gasoline to Start, Kerosene to Run.
Cooling—Pump Circulation.
Carburetor—Kingston, Bennet Air Cleaner.
Ignition—Eisemann High-Tension Magneto.
Clutch—Expanding Shoe.
Transmission—Allis-Chalmers, with Hyatt Roller Bearings.
Final Drive—Spur Gears.
Rear Axle—Allis-Chalmers, with Hyatt Roller Bearings.
Length—132 Inches Overall.
Width—66 Inches Overall.
Turning Radius—14 Feet.
Weight—6000 Pounds.





AUTOMOTIVE LINE CONTROLLED TRACTOR.

Engine—Hercules, Four Cylinders, Vertical, En Bloc, 4 by 5⅛.
Engine Speed—1000 Revolutions a Minute.
Horsepower—Belt, 29 Horsepower, 13 Horsepower on Draw Bar.
Lubrication—Pressure Through Drilled Crankshaft.
Cooling—Pump Circulation.
Carburetor—Kingston, with Bennet Air Cleaner.
Ignition—High-Tension Magneto with Impulse Starter.
Clutch—Dry Disc.
Transmission—Automotive, Two Speeds Forward, One Reverse; Automatic Gearshift from Line Control.
Final Drive—Internal Gears Operating on Timken Bearings.
Length—123 Inches Overall.
Width—62 Inches Overall.



Ebonite Cabinet or Pump for Transmission Grease.

CABINET FOR EBONITE TRANSMISSION GREASE.

The Bayerson Oil Works, Erie, Pa., is making and distributing with its Ebonite grease product an efficient and practical cabinet or pump for the filling of differential or transmission cases with lubricant. This cabinet, which has the reservoir lithographed on heavy iron in the Bayerson black and white checkerboard trade mark design, has a striking effect and calls attention to the Ebonite product.

The base of the cabinet is heavy cast iron equipped with two large, strong wheels, which serve for rapid and easy conveyance to any part of the garage or street by simply inclining the cabinet and using the wheels as those of a truck. The measuring device is extremely simple and accurate and is so placed that adjustment can be made almost instantly if any adjustment is required. This cabinet is equipped with a gear pump, which removes the menace of mechanical disorder and interruption in operation. Every part is well made of the strongest material available and is stated to have been chosen with the special idea of providing against the defects in this regard. There is no leakage and the operator need not muss hands or clothing, and what usually was conceded to be about the dirtiest job about a garage can now be performed with this cabinet in a clean and rapid manner.

This cabinet was made specially for the Bayerson Oil Works for the handling of Ebonite, and a patent has been applied for.

Ebonite has been on the market for some years and the Bayerson company is reported to be enjoying a large and growing trade for this product, which is claimed to be due to its lasting and lubricating qualities and physical make-up, which prevents the rubbing of any metal at points of contacts, the lubricant being the nature of a ribbon film or cushion of sufficient density to act as a buffer.

Ebonite is being sold in connection with these cabinets on a plan which assures a wide distribution, inasmuch as they are supplied, regardless of the cost of manufacture, to the garage and large consumer trade on a purely service basis, which should prove of advantage to the recipient.

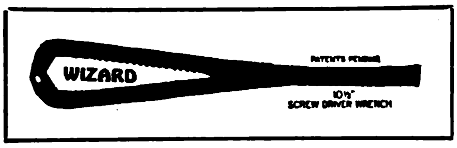
The Bayerson Oil Works has made plans for the distribution of a number of thousand of these cabinets during the present season, and has increased its facilities for the manufacture of Ebonite to conform to the demand.

WIZARD SCREW DRIVER WRENCH.

The very latest Wakefield Wizard Wrench achievement is a screw driver and wrench drop forged in one piece. This is a true one-piece unit, not a combination. It presents no complications, has no ratchet or set screws to get out of order, no bit handles to take up turning room, no nuts to set or adjust, nothing to lose or get out of place; made of the very best steel.

To use as a screw driver, simply place a handy piece of iron or wood, or even a flat stone, in the handle opening and turn. Can be employed where it is impossible to use a ratchet wrench or the ordinary round handled tool will slip.

Used as a wrench the screw driver end acts as a handle or lever. It will be noted that the inside of the handle at the wide end is notched. These notches are made so that any nut up to 1 1/16 inch inclusive can be tightened and set. Since larger nuts are seldom used in general mechanics, automobile or household appliances, the handiness of this tool will be readily appreciated. The notches grip as tightly and hold as securely, it is claimed, as any wrench made; slipping is impossible.



The Wakefield line of patented all-steel adjustable wrenches covers every need in the garage, repair and machine shop field and their value and satisfaction are guaranteed. They are made by the manufacturer of the first adjustable bicycle wrench ever produced, 33 years ago, Wakefield Wizard Wrenches. Worcester, Mass.

The list price of the Wizard Screw Driver Wrench is $1 each; it is 10½ inches long and weighs only 10 ounces; packed one dozen in a box.

STEEL WINGS SHOCK ABSORBER.

It is stated that much thought has been given by the manufacturer of the Steel Wings Shock Absorber to the development of a shock absorbing device that would be free from faults existing in some types of equipment now on the market. It is agreed by automotive engineers that a recoil spring or cushion, suspended to the shackle point of the upper spring or frame of the car, acts practically as a pneumatic tire; i. e., it absorbs the shock, allows for the greatest spring elasticity and yet supplies rigidity so as to afford an elastic poise for the body of the car. It is claimed for the Steel Wings Absorber that it provides the proper type of coil spring in the proper place. This spring is a helical, flat type which should it be compressed to its extremity, is in no way weakened or exposed to breakage by such compression. At the same time this flat spring is stated to offer the maximum in elasticity affording a resilient cushion for the protection of the mechanical parts of the car.

The principal points of excellence cited for the Steel Springs Absorber are as follows: They are self-contained; no adjustment is required; they are of entirely open construction; they are protected with a hard-baked enamel so as not to rust; they absorb the jar and jolt of road shock, thereby saving tires, and do away with rack and strain on the entire mechanism of the car.

They are sightly in appearance, mechanically perfect and absolutely guaranteed. They facilitate driving as they practically eliminate danger of skidding and swaying.

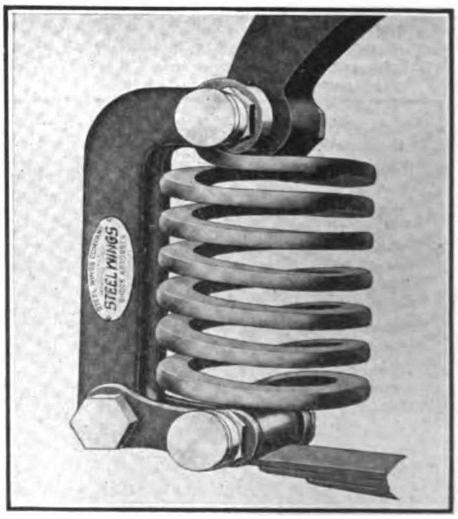
As they are placed between the springs they do not extend below and decrease road clearance. They serve as a bumper on the rear of the car.

They are so situated that they cannot catch on the curb when backing in, or be hit by projections on the road. The moving parts are so designed that there are no pieces to wear, with the result they cannot get noisy and squeak.

The supporting parts are steel forgings of carefully selected alloy steel and the springs themselves are oil tempered of the highest grade of steel. They may be applied to all well known makes of cars.

Steel Wings Shock Absorbers are manufactured and distributed by the Steel Wings Co., 417 South Dearborn street, Chicago, Ill.

Brass is cleansed by rubbing it with spirits of ammonia and vinegar, and then with blotting paper soaked in spirit of wine.



Steel Wings Shock Absorber.

BOE REPEATER BARREL OIL PUMP.

By the attachment of a Boe Repeater Barrel Oil Pump any oil barrel is stated to become a high grade oil pump outfit. It can be attached to the original oil barrel ready for service in a few seconds. The wing nut D, shown in the illustration, locks the entire pump rigidly to the barrel. The pump fits any ordinary 30 to 50-gallon, upright or lay-down wood or steel barrel. It is attached to the latter in the same manner as the lever action barrel grease pump made by this company.

The pump has the Boe exclusive patented leak-proof pump plunger construction. It is equipped with expanding spring pumps, which are claimed to increase the life and efficiency of the piston plunger 10-fold, and to insure perfect suction until the piston cups are entirely worn out. It can be adjusted to measure accurately either one quart or one pint to each stroke. The ringed hook C, engaging stop B, governs the pint stroke. It has three 1⅛-inch steel ball valves perfectly seated. It can be almost instantly adjusted at A and B for imperial or other foreign measuring standards if desired. The overflow drains back into the barrel from the large drain pan.

The pump can be securely locked by the aid of an ordinary padlock around the pump handle and through the ringed C on the pump barrel head. It is stated to be as simple as a cistern pump and easily operated. It is shipped complete with nine by 17-inch heavy galvanized iron drip tray with wire mesh top, and the regular finish is green and black enamel. Shipping weight about 50 pounds.

The Boe Repeater Barrel Oil Pump is made by the Boe Manufacturing Co., Minneapolis, Minn.

WONDER ROTARY PUMP TESTED.

The Houston Manufacturing Co., South Houston, Tex., recently held a successful demonstration of its new Wonder Rotary Pump before a committee of experts at its plant. This is a vacuum rotary pump the chief advantages of which are claimed to be as follows: Efficiency, simplicity, compactness and elimination of maintenance cost. It has only three moving parts, no valves and no packing, the principle sources of trouble in pumps. It can be used for all purposes where a pump is used and has particular advantages in practically every case, it is claimed.

In the test it pumped crude oil 500 feet through a ¾-inch pipe with a 30-inch vacuum. It pumped one barrel of oil in 10 minutes under 100 pounds pressure, with a ½ horsepower motor.

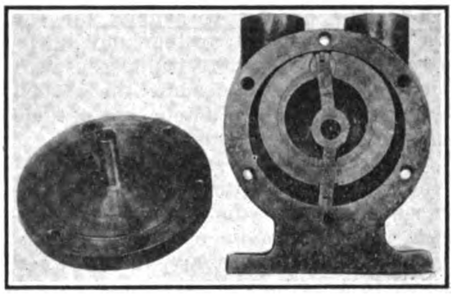
The pump was invented by J. F. Smith, a mechanic living in Houston and now in the employ of the Houston Manufacturing Co. It was the result of 10 years' experimentation in which he was trying to answer the need for this particular type of pump.

The first order was placed by the firm of Clayton, Anderson & Co. of Houston, Tex., who will use it for handling both water and oil and a number of other prominent concerns are investigating its merits.

A joint stock association has been formed at Houston for the manufacture of the Wonder pump, with the following officers: President, O. P. Spilman; vice president, C. C. Young; secretary-treasurer, H. W. Hyde; trustees, L. F. Smith, B. A. Killson, T. J. Baker, I. W. Clark. The authorized capital is $100,000, and it is understood that a factory is to be located in South Houston.

PROTEX-A CAP PREVENTS THEFT.

The rapidly growing thefts of motometers and radiator caps has caused a demand for a lock cap that is both protective and ornamental. In answer to this call the Zinke company is putting on the market a new Protex-A-Cap that is designed to meet every demand of the most fastidious.



Houston Wonder Rotary Pump.

From the protection standpoint it is claimed to be 100 per cent. efficient, being locked in place by an eight-tumbler lock with over 1000 key changes and no master key, precluding the possibility of professional thieves being provided with one or a set of keys to fit.

The action of the lock forces a hardened steel bolt into a slot in the adapter ring, which is secured to the radiator neck by three cup point set screws, seated from inside the ring. These screws are forced tightly into the inside of the neck by means of an L wrench, furnished with each cap and, when seated, it fits into the neck, so that twisting off is utterly impossible. The adapter is stated to be to the utmost degree universal, fitting all radiators with screw caps except a very few special models with caps of abnormal size. This should appeal to the dealer who needs to carry but one style of cap and no extra parts.

From the ornamental viewpoint the graceful design, with long diamond section arms tapering from the cap to the ball ends, make the Protex-A-Cap one of the most attractive radiator trimmings. The cap and adapter ring are made of rust proof white metal highly polished and nickel plated.

A feature of the Protex-A-Cap valuable to owners of cars kept or occasionally placed in public garages is that it prevents unauthorized persons from interfering with any freeze solution or filling the radiator with greasy or dirty water that will clog the radiator passages.

The price of the Protex-A-Cap, complete, with adapter and two keys, is $4.75. As the screw threads of the removal cap fit the Ford radiator the adapter may be omitted and, for Ford cars, the cap only is supplied at $3.75.

The Protex-A-Cap, as delivered, is closed at the top so that it may be used without a heat meter or other ornament, but an indented ring on the inside allows the center to be easily removed, giving the proper opening for the meter.

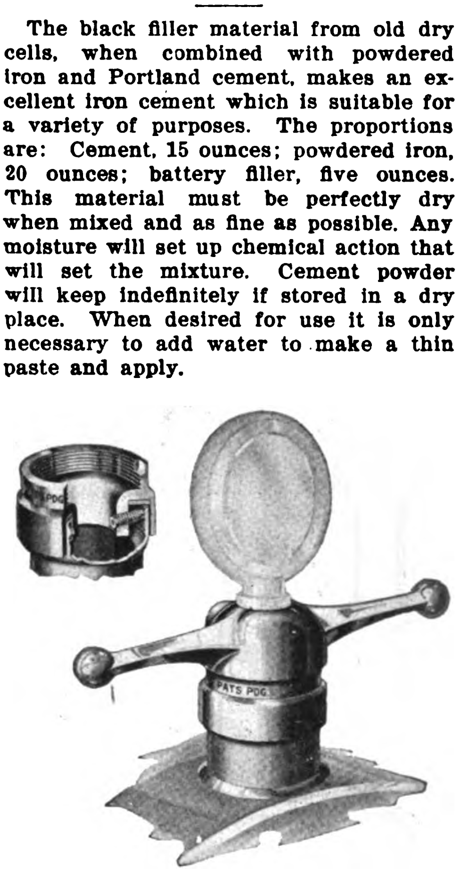
Protex-A-Cap sales are handled through recognized jobbers only by the Zinke Co., 1335 Michigan Avenue, Chicago, Ill.

PASTE FOR DIFFICULT SOLDERING.

A paste, prepared as follows, will flux whatever it touches at once; will stick to cast iron, and work in out-of-the-way places: Take half-and-half bar solder and reduce it to coarse filling. Figuring this as 100 parts weight, add to it 10 per cent. of zinc chloride in dry powder form, and three per cent. of powdered sulphate of copper. Wet the mixture with water and glycerine, sufficient to mix it thoroughly. Add about five per cent. of common vaseline to give it a paste form. Apply in any convenient way and it will be found that the paste will keep the iron in good condition.

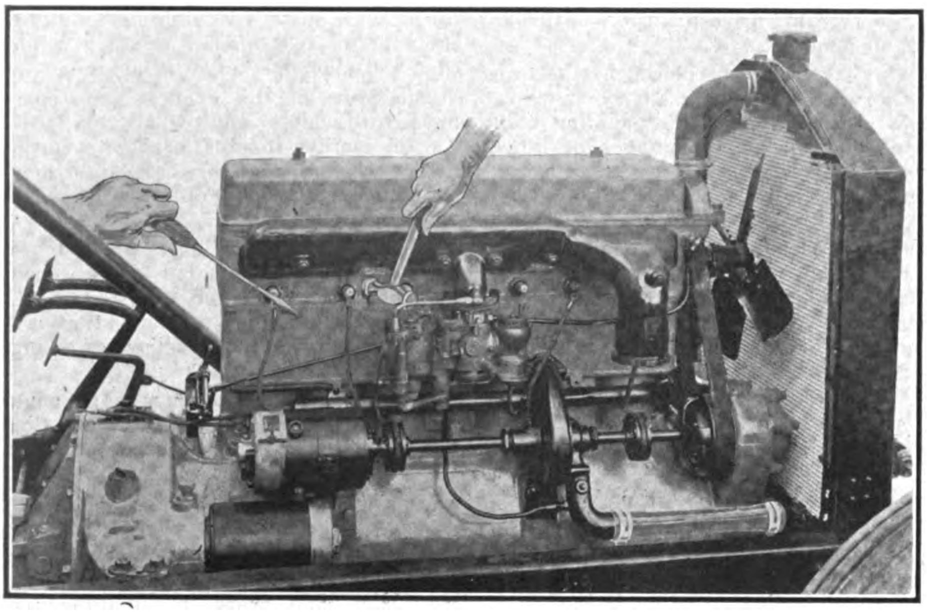
IRON CEMENT DRY CELL FILLER.

The black filler material from old dry cells, when combined with powdered iron and Portland cement, makes an excellent iron cement which is suitable for a variety of purposes. The proportions are: Cement, 15 ounces; powdered iron, 20 ounces; battery filler, five ounces. This material must be perfectly dry when mixed and as fine as possible. Any moisture will set up chemical action that will set the mixture. Cement powder will keep indefinitely if stored in a dry place. When desired for use it is only necessary to add water to make a thin paste and apply.



Protex-A-Cap Being Marketed by Zinke Co., Chicago, Ill.

Tracing Electrical Troubles by Process of Elimination



Short-Circuiting Plugs to Detect Missing Cylinders.

IT HAS been estimated that about nine-tenths of the troubles that occur in gasoline engines can be traced directly to some defect in the electrical system of the car. The other one-tenth is traceable to carburetor defects, a plugged fuel line, poor valve action, or weak compression.

Often a car is brought to the service station with practically nothing wrong with it except a slight skip in one or more of the cylinders. What is the result? The car is turned over to a repair man and, in many cases, considerable time is taken to locate the skip. The trouble may then not be found and the engine still skips when the owner takes it away. He naturally becomes dissatisfied and may try another service station, where the repairers are perhaps better posted, and the skip is located and eliminated in short order. The question naturally arises, why did the first repair man fail to find the trouble, while the second located it almost at once? The answer is simple, for the first worked without system and apparently looked everywhere but in the right place for the trouble, while the second soon found it by the simple and systematic process of elimination.

Systematic Search Necessary.

In tracing trouble in either a passenger car or a truck, the repairer who proceeds in a systematic manner, eliminating the units which are found, when tested, to be all right, will have no difficulty, while the mechanic who wanders aimlessly from one unit to another without any definite plan in mind will have difficulty in locating the trouble.

In the case of a skip in the engine three things may cause the trouble. The first and foremost is the electric ignition system; the second the fuel line, and the third the carburetor. The carburetor is considered last for the reason that this unit should not be disturbed until the other two have been tested and eliminated. The adjustment of the carburetor cannot change through the vibration of the engine unless the locking nuts have carelessly been left loose. Again, if it has been working properly up to the time that the skip started, it is probable that the adjustments are correct.

Test Ignition First.

The mechanic should first test the ignition of the engine cylinders, two at a time, either with a screw driver having an insulated handle or a screw driver and hammer, short-circuiting the plugs to cut out the cylinders and noting from the sound of the engine if the other two cylinders are firing regularly. This method should be followed with the other cylinders and if the engine is a six, the third set in the same manner. If there is any doubt, the doubtful cylinders should be tested again, or the plugs should be removed. Carbon deposits may be found inside the shell of the plug, the porcelain may be cracked or the points may not be properly spaced. The carbon accumulation should be cleaned out with a sharp knife or, if the plug is of the separable type, it should be disassembled, cleaned with a cloth and soaked in gasoline or kerosene. The porcelain should never be sandpapered or scraped with a jackknife, as it is glazed and the knife or rough paper will cut the glazing, causing it to collect carbon faster the next time. The plug again should then be reassembled, the points set to 1/32 inch and the plug screwed into the cylinder. Testing with screw driver and hammer again will determine whether the plug is firing or not. If the porcelain is cracked or otherwise damaged, it will be necessary to fit a new plug. If, after testing and examing the plugs of the cylinder or cylinders that are not firing, you are sure they are correct, the trouble will have to be sought for elsewhere.

Disassembling Breaker Box and Showing Correct Method of Adjusting Points.

Examine the high-tension wire terminals leading from the distributor case to the plugs that are not working. Possibly a leak may occur between the inner wire through the insulation to a metal conduit which carries the wires to the engine. This is rather difficult to locate in the day time but, by pulling the wires from the tube and allowing them to lay apart on the outside, tests can be made which will show if they are causing the trouble. If the engine runs on all cylinders after this is done the repairer can be sure that he has located the trouble, and all that will be necessary then will be to supply a new high-tension wire in place of the one found defective.

If, however, the trouble is not located here, the next step is to remove the distributor cover and examine the breaker points under the rotor arm. The rotor arm slips off the top of the shaft easily and allows easy access to the breaker box. Oil in the interior of the distributor may cause a skip in the engine. If the points are dirty, burned or pitted, they require cleaning, truing up and adjusting. Clean distributor cover inside with soft cloth to remove oil. If the lower point is burned excessively a new one should be soldered to the arm to make the contact perfect. Oftentimes a skip that is difficult to locate will be found here. The points should be set to clear about .020 to .025 of an inch, or about the thickness of a piece of writing paper.

Examine Fuel Line.

If the trouble is still present after testing by running the engine and noting how the cylinders are firing, the next step is to examine the fuel line, as dust or lint may have worked through the main tank and fouled the screen which is placed in the fuel pipe to prevent its passage into the carburetor.

If a vacuum tank is used in the line, remove the pipe which connects the tank at the top. This pipe leads to the main tank in the rear and draws the gasoline from the main tank into the vacuum tank by the operation of the engine.

Remove the small screen under the pipe connection and clean. Replace the screen and connect the fuel pipe, taking care not to strip the threads of the connection. Where the fuel pipe which leads from the vacuum tank connects to the carburetor, on some cars will be found another screen as an additional safeguard to prevent sediment from entering the carburetor. This screen is found more particularly on eights and 12s, but may also be found on sixes. Loosen the connection remove the screen and clean with gasoline or kerosene. Replace again and tighten the connection.

It is a good plan to blow back through the connecting pipe to see if the pipe is clear. If this cannot be done readily, disconnect the opposite end and blowing

or running a wire through will remove any accumulation in the pipe.

Testing Carburetor Adjustments.

After the connections are remade, test the engine by running and note if the skip is still present. If it is noticeable, it is safe to assume that the trouble is probably due to the improper adjustment of the carburetor. Up to this point it has not been necessary to race the engine to eliminate the skip. To test the carburetor adjustments this may be necessary, but the repairer is cautioned that racing of the engine should be avoided whenever possible, as it will eventually lead to troubles of greater consequence, such as loose bearings, noisy engine, etc.

Carburetors vary as to the number of adjustments found upon them. Simple puddle type carburetors, such as are used with the Ford engine, are fitted with only one adjustment, the needle valve, which gauges the amount of gasoline admitted to the venturi tube, where the gasoline mixes with the air and passes on through the intake manifold to the combustion chambers of the engine.

Still other types, such as the Marvel, Schebler, etc., use an air adjustment which gauges the amount of air taken in through the air inlet, while a third type, such as the Rayfield, uses three adjustments.

Such carburetor as the Zenith, Stromberg and several of foreign make do not use a needle, but fit spray nozzles having fixed openings, which allow a certain amount of gasoline to flow at certain speeds. Two or more jets are supplied, the extra jets coming into operation as the speed of the engine increases.

Carburetors of the puddle type may be tested by screwing in the needle valve until the valve seats and the engine stops. Unscrew the needle valve 1½ turns, start the engine and gradually turn the valve until the engine idles properly and seems to accelerate slightly as the mixture reaches the correct density. Allow sufficient time for the engine to take the gas from the intake manifold before noting the difference in the speed of the engine. Test the engine and set the carburetor only when the engine is warm, for if the carburetor is set with the engine cold, the operation will not be the same when the engine warms up.

Carburetors similar to the Marvel, used on the Buick car, have two adjustments, one for the needle valve and the second for adjusting the tension on the air shutter in the air inlet. The needle valve adjustment is used for low or idling speeds and the air adjustment for acceleration and high speeds. To adjust the needle valve, if there is doubt as to its setting, turn the valve down to the right till it seats and the engine comes to a stop. Open the needle valve about 1½ turns, start the engine and turn the valve first to the right and then to the left until the engine runs smoothly without skipping and the engine seems to accelerate slightly or pick up. This is the correct point for setting the valve and to prove whether it is right for idling, fully retard the spark and throttle. The engine should idle smoothly without skipping or showing indications of stalling.

Marvel Carburetor Indicating Adjustments and Connection

If the engine runs too slowly for idling, adjust the butterfly opening of the throttle by screwing in the adjusting screw on the butterfly arm till correct idling speed is obtained; the engine should not race, neither should it run so slowly that it will stall.

When the engine is found to idle properly, the next step is to set the second adjustment for acceleration. This is accomplished by advancing the spark from one-half to two-thirds the distance on the quadrant and grasping the accelerator rod with the hand, opening and closing quickly the throttle or butterfly valve in the carburetor intake. If the engine accelerates freely without backfiring, the high-speed adjustment is correct. This may be determined after three or four trials in succession. If, on the other hand, the engine back-fires into the carburetor, the high-speed adjustment will have to be changed and this is done by tightening the tension on the spring by means of the knurled nut at one side of the carburetor above the bowl of the spring. The adjusting nut mentioned connects with one end of this spring while the other end fits a coned point on the top center of the hinged cover. Additional tension applied to the coil spring cuts down the flow of air through the air intake at high speeds, preventing the popping back into the carburetor when the engine is accelerated. This adjustment can be made to a fine point by means of the adjusting screw mention above.

Carburetors of the type of the Zenith, Stromberg and several others of foreign make, instead of using a needle valve to govern the flow of gasoline, have spray nozzles or tubes with fixed openings. One is used for idling speeds while the second comes into action when the speed of the engine reaches a certain point. Several sizes of nozzles are made by the manufacturers of these carburetors in millimeter sizes, and if it is found necessary to change to a smaller or larger size, this can be accomplished by unscrewing the nozzle and replacing with another size. This is usually unnecessary as the correct sized nozzles are fitted to the carburetor when the engine is tested at the factory.

Troubles that occur with this type of carburetor are generally those caused from particles of dust working up into the small end of the nozzles, plugging the openings and preventing the passage of gasoline. Below the nozzle in the casting of the carburetor will be found two small hexagonal bronze studs; removing either of these will allow the repairer to run a wire up through the nozzles, forcing out any particles that may have lodged at this point. As the gasoline is pretty thoroughly strained through fine screens in the fuel line, the possibility of these particles finding their way into the nozzles is a remote contingency.

Careful attention to details in making the systematic search will in the end result in the definite location and repair of the trouble. Considerable time will be saved for other work and the car owner will be satisfied, as his car will again be running properly.

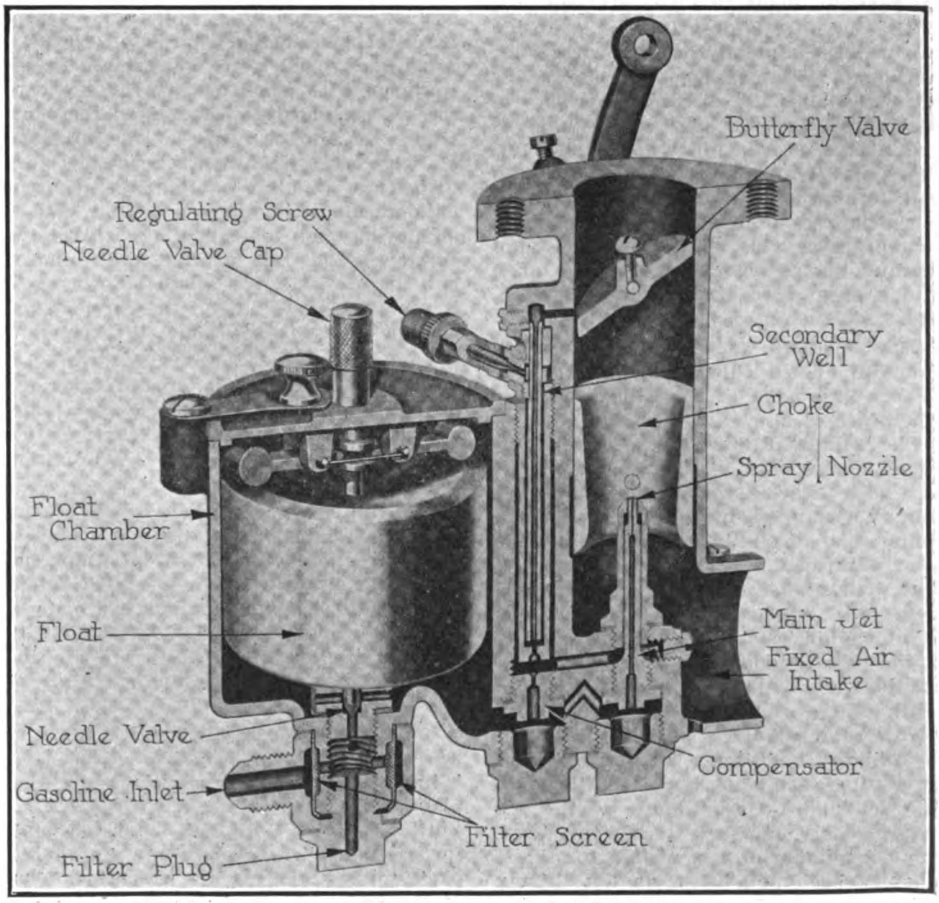
TO REPAIR BATTERED THREADS ON AXLES.

In removing the wheels from semi-floating type axles the repairer will sometimes hammer the end of the axle in loosening the wheel, battering the end of the axle to such an extent that the castellated nut will not readily go on. To remedy this turn the castellated nut and screw it to the axle with the castellated end first. The threads of the nut will act as a die and will cut the threads of the axle, the chips falling out through the castellated openings at the side. Reversing the nut again it will be found that the nut fits the thread easily.

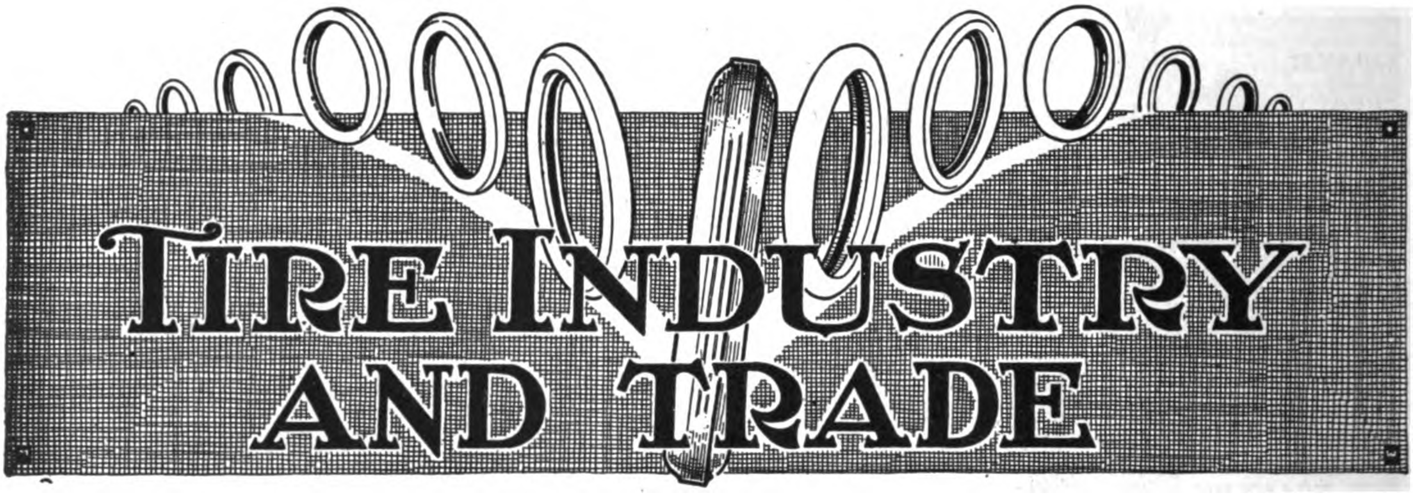
HOME-MADE TOWING DEVICE.

In case of accident where it is necessary to tow the car, procure a 10-foot length of pipe, one inch in diameter. Thread a 14-foot length of chain through the pipe and attach two snap catches at each end of the chain. Slip a section of rubber hose over the chain and snap hook, nearly to the end of the pipe. The hose is to prevent the chain from marring the part of the car to which the towing device is attached, while the pipe will keep the towed car from running up too close to the towing car and damaging it.

Often the brakes of the towed car become inoperative. This device will allow such a car to be towed to the garage with safety to the operator and the towing car.



Zenith Model "L" Carburetor Equipped with Fixed Spray Nozzle and Secondary Idling Well.



TIRE INDUSTRY AND TRADE

K W Co. Taken Over by Climax

The Climax Rubber Co., Columbus, O., with factory at Delaware, O., has recently merged or taken over the business heretofore operating under the name of the K & W Rubber Co., which business was established in 1908 at Ashland, O.

The K & W Rubber Co. is stated to have been a pioneer inner liner and blow-out patch manufacturer in this country and, about three years ago, moved its plant to Delaware, O., where the manufacture was began on a larger scale of the Maxotire, which had started at Ashland about two years previously.

The Maxotire is described as an inside tire which completely encircles the inner tube and, by a locking effect secured by the embedding of a circular steel wire in the outer flap of the inner tube, is claimed to prevent blow outs and further, the Maxotire is of such strength and, by reason of its rubber tread which is vulcanized to the tire by means of a cement, it is able to hold the air and permits the use of the tire proper until it has been worn through to the Maxotire.

This business was established by Ora and Guy V. Krichbaum, who are still largely interested in the Climax Rubber Co., which is now carrying it on.

The Climax Rubber Co. recently perfected a new form of mould whereby it is now successfully manufacturing Climax Compression inner tubes on a commercial basis. This product has been described in the Accessory & Garage Journal heretofore as the compression tube constructed with numerous "dimples" or "pockets," which disappear as the tube is inflated, thereby compressing the excess rubber represented by the depth of the various "pockets."

New representatives for the Maxotire, as well as the Climax standard line of inner tubes, are being appointed throughout the country as rapidly as the enlarged sales staff can reach the territory. A number of new distributors have recently been appointed, as the Climax Rubber Co. is offering a very attractive proposition to dealers and especially to accessory and garage men throughout the country.

OAKES ACQUIRES PATENT ON MATHER TIRE CARRIER.

The Oakes Co., Indianapolis, Ind., a manufacturer of radiator cooling fans and other automobile parts, is reported to have acquired the sole license to manufacture and market automobile tire carriers under the Mather patent, No. 1,324,461.

The Mather patent covers the demountable feature of a tire carrier on a standard type of support bracket and has already been adopted by the builders and designers of several well known makes of high grade cars. The chief advantage claimed for this type of carrier is the interchangeable feature of the bracket, which permits the motor car builder to mount a standard carrier bracket on each car frame in regular production. Then if the car is to be equipped with wood wheels, the tire carrier as produced by the Oakes company is attached to the face of the bracket. If wire or steel disc wheels are furnished as regular equipment the car builder simply mounts a dummy wheel on the bracket, instead of the spare rim carrier. The rim carrier and dummy hub are easily interchangeable, as each is secured to the face of the carrier supporting arm with the same three bolts.

This interchangeable equipment is a great convenience to motor car makers, dealers and users, because it gives one convertible carrier bracket instead of the three different types formerly required for wood, wire or disc wheels.

The Oakes company has started quantity production on this tire carrier to take care of substantial orders now on hand. It states that the acquisition of this tire carrier patent is one of its steps in the development of a plan which will broaden its manufacturing scope to include a wide range of equipment.

EXPANSION OF LEE TIRE CO.

Improvements and additions to the plant of the Lee Rubber & Tire Co., New York City, have been completed and paid for, so that the company now has a capacity of 2000 tires a day, as against 1000 at the end of 1919. Sales for 1920 were the highest on record, amounting to $6,705,929, an increase of 45 per cent. over 1919, the best previous year.

Plans for Goodyear Refinancing

While the special meeting of stockholders of the Goodyear Tire & Rubber Co., Akron, O., to ratify a plan of reorganization has been postponed from time to time pending the completion of the preliminary details, it is stated that negotiations for refinancing have been definitely consummated. It is understood that Goldman, Sachs & Co. of New York will head a syndicate which will offer $25,000,000 in 20-year eight per cent. first mortgage bonds, while Blair & Co. will head a syndicate to offer $25,000,000 in 10-year eight per cent. debentures.

The company has filed with the secretary of State of Ohio articles reducing its common capital stock from $100,000,000 to $1,000,000.

It is also reported that a bill was recently introduced in the General Assembly of Ohio by Senator W. H. Chatfield which will permit any corporation to borrow money without regard to the rate of interest. Ohio at present limits this to eight per cent. It is claimed that the passage of some such act will be necessary in order that the Goodyear plan of refinancing may be completed.

STERLING RESUMES DIRECT SALES.

The Sterling Tire Corporation of Rutherford, N. J., announces the termination of its arrangement whereby Sterling tires and tubes during the past year have been sold exclusively through the Rubber Corporation of America, which also was the selling agent for products of the Empire Tire & Rubber Corporation of Trenton, N. J. It is further stated that there has never been any connection between the Sterling and Empire organizations except that both employed the same selling agent.

The Sterling Tire Corporation has never been financially interested in Empire and no one connected with Empire has been interested in Sterling.

Since resuming the direct sale of its product the Sterling Tire Corporation reports a distinct revival of business. Its plant is now running at about 70 per cent. of its capacity and production is being increased daily.

Durant Buys Goodyear Plant

According to an announcement recently made the Long Island, N. Y., plant of the Goodyear Tire & Rubber Co. has been purchased by William C. Durant, who formed Durant Motors, Inc., following his retirement from the General Motors Corporation. The price paid was said to be $2,000,000.

The plant will be used by the Durant Motor Co. of New York as first of a chain of assembling plants which will be scattered about the country at important points.

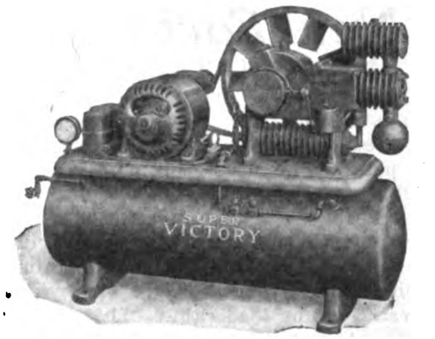
The building, one of the largest of its type in the metropolitan district, has an area of about 500,000 square feet. It covers a plot having a frontage of 406 feet on Jackson avenue and 238 feet on Honeywell street, and was originally built and used by the Ford Motor Co. as an assembly plant. It is of reinforced concrete and steel construction and fronts on the Long Island and Pennsylvania railroad tracks, having side track accommodations for 34 cars.

GLOBE SUPER VICTORY MODEL S 448 TRUCK TIRE INFLATOR.

The Globe Manufacturing Co., Battle Creek, Mich., is in production with the Super Victory Model S-448 stationary compressor, which is especially adapted to motor truck service stations, in which it is customary to inflate many large sized giant pneumatic cord tires daily. This compressor is fitted with a four by four-inch cylinder, 21 by two-inch driving pulley, and runs at a speed of 350 revolutions per minute.

The compressor has a capacity of 10 cubic feet per minute and is suitable for a large garage vulcanizing shop, repair shop or filling station. The air tank is of large size and carries a working pressure of 250 pounds. A three-horsepower electric motor supplies the power which is delivered to the compressor pulley through a two-inch belt. The pressure gauge is calibrated to 300 pounds, more than sufficient for average needs.

The equipment includes 25 feet of best air hose with air chuck, brass taper connection and needle valve attached. Shipping weight 950 pounds and floor space needed for installing 19 inches by 50 inches.



Globe Super Victory Tire Inflator.

EXCELSIOR 225-TON TIRE PRESS NO. 34.

The Excelsior Tool & Machine Co. 30th to 32nd streets, Ridge to Jefferson avenue, East St. Louis, Ill., announces a new hydraulic press, especially designed for forcing all sizes of solid rubber truck rims on and off the wheels of commercial vehicles. The operating principle of the press is such that no skill, experience or special attention is necessary to install, operate and maintain this press, other than the accompanying instructions.

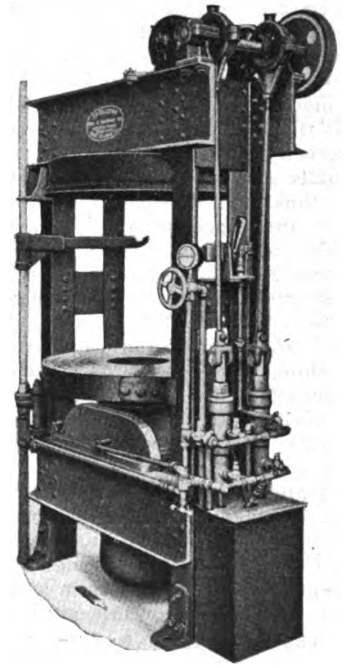
The frame is of structural steel, consisting of four six by six by ⅝-inch angles, hot riveted to four 15 by ¾-inch channels, with ⅞-inch rivets, and reinforced by eight additional angles and steel plates, making a combination having equal stress to withstand the strain.

The cylinders, ram, platens and pump castings are of a special mixture of semi-steel. The valves are phosphor bronze of the company's own make and design, easily reground or replaced.

The pump plungers are of forged steel and all packing is the best obtainable for the purpose. The pump packing is easily replaced by releasing a set screw on the plunger casting, lifting out the plunger and using a special wrench furnished for the removal of the inside packing.

A 25-gallon oil tank is located directly under the pumps fitted with cover plates to protect the oil from dust.

Each press is operated and tested to 250 tons capacity, shipped assembled and ready for use, bolted to skids and crated. A special feature of the Excelsior press is the hydraulic swinging hoist, which will raise the largest truck wheel from the floor and locate the wheel centrally on the forcing rims between the platens.



Excelsior 225-Ton Tire Press.

More than 1000 men will be re-employed by the Firestone Tire & Rubber Co. during April according to an announcement made recently. Production will be increased nearly 50 per cent.

Record Sales for U. S. Rubber Co.

Net sales of the United States Rubber Co. for 1920 established a new high record, the amount being $256,150,130, compared with $225,589,465 for the preceding year. In 1913, the year before the war, net sales amounted to only $87,349,692. Net profits for 1920 after interest were $21,220,983, compared with $17,730,237 in 1919. The balance for the common stock was $16,002,265, which was equivalent to $19.75 a share on the $81,000,000 of common stock outstanding, compared with $24.18 a share earned in 1919.

The general balance sheet as of Dec. 31, 1920, showed net current assets of $187,128,201, as compared with $161,875,058 at the close of 1919. Cash on hand at the end of last year was $14,534,846, against $20,037,646, and inventory was valued at $123,403,029, against $87,633,699. Accounts receivable were $46,329,738, as compared with $40,770,428 the year before. Net current liabilities were $67,373,547, against $26,971,737.

The board of directors declared the regular quarterly dividend of $2 a share on the common stock, payable April 30 to stockholders of record April 15. The regular dividend on the preferred stock was also declared.

It was stated that there has been expended upon the plants and fixed properties of the company during the year 1920 $28,316,616, notably in the enlargement of tire plants at Detroit, Hartford, Providence and Indianapolis.

Ex-Ambassador Davis Elected a Director.

John W. Davis, former United States ambassador to England, was elected a member of the board of directors of the United States Rubber Co. at the annual meeting.

Samuel P. Colt, chairman of the board of directors, declared earnings for 1920 were about $10,000,000 over all dividend requirements and that all regular eight per cent. dividends on common and preferred stock had been paid.

"Notwithstanding the sudden change in the times," he said, "I feel we have perhaps more satisfaction in the conduct of the business of our company during the past year than of any previous year."

The tire trade has reached normal, he said, and declared his belief the worst of commercial depression has passed and that business for this year would be greater than in any other.

FISK EARNINGS FALL.

The annual report of the Fisk Rubber Co. shows surplus earnings, following inventory adjustments and federal taxes of $2,130,133. After payment of preferred dividends this was equal to $1.68 a share on the $15,494,000 common stock of $25 par value. In 1919 the company reported earnings of $3,994,657, equal to $5.99 a share on the $12,254,500 stock in that year.

Net profits for the year were $5,034,950; inventory adjustments called for $2,669,117 and federal taxes $235,700,

Kelly-Springfield's New Factory at Cumberland, Md.

LIMITED production facilities with increasing demand for Kelly-Springfield products made it necessary for the Kelly-Springfield Tire Co. to seek a site for another factory, and it was decided to construct a model tire manufacturing plant especially designed in every way for the most economical and efficient production on a site as advantageously located geographically as it was possible to obtain. After months spent in an intensive study of the most desirable situations by two firms of engineers especially expert along these lines, a 100-acre plot along the Potomac river about a mile from the heart of the thriving city of Cumberland, Md., was selected. The plant is here served by three trunk line railroads, one of which skirts the property.

The main factory building is two stories high with mezzanine and basement, and consists of a main wing, 760 by 120 feet, to which are connected five wings, each 405 by 60 feet, and each wing is connected to the other. The arrangement of departments is such that from the receipt of raw materials, through the various processes of manufacture to the shipping of finished goods there is one continuous progressive movement.

The building contains all of the most modern rubber machinery, as well as electric travelling cranes, and the piping is placed in an accessible trench under the basement floor. At both ends of each wing stair towers and toilet rooms are located. Each tower is equipped with a high speed heavy duty eight by 17-foot elevator with a capacity of 10,000 pounds.

The floor construction is of two by 10-inch yellow pine on edge, covered with a one-inch maple flooring. The entire building and its foundations are of extra heavy construction and have been designed to carry additional stories.

Power Plant Most Modern.

The power plant is equipped with the most modern apparatus and has ready for operation six 750 horsepower boilers capable of developing a total of from 9000 to 12,000 horsepower. All coal and ashes are handled by automatic machinery. There are also installed and ready for operation mammoth turbines, as well as condensers, motor generator sets, pumps and all other apparatus necessary for the proper and efficient operation of the plant. The circulating pumps are capable of pumping 30,000,000 gallons of water each day. The electric current is carried into the main factory distributing stations by large copper bars through tunnels, and from there to the various sub-stations by lead cable. There is also a complete fire alarm and watchmen's system throughout the entire factory, with several alarm boxes in each building, and the central station is located in the power house.

Pump House Completely Equipped.

In the pump house is found a most complete equipment of modern standard and special pumps ranging from a 500-gallon to a 6,000,000-gallon compound pump, together with accumulators, air compressors, tanks, etc. Water is taken from the river through seven-foot tunnels into a pit in the pump house, all of which is constructed below the river bed. The water intake house, located on the bank of the river, is a large building containing four screens, each 30 feet long, through which the water is screened before flowing into the pump house.

The machine shop or mechanical building was the first unit of the development to be erected and has been in operation continually since completion. Great saving in time and expense was thus effected in the expeditious handling of innumerable machining jobs incidental to the construction of the main factory. It is a U-shaped building of two wings, 160 by 46 feet, connected by a wing 40 by 34 feet, and contains all modern machine shop, blacksmith and carpenter shop equipment, as well as a large number of boring mills for the manufacture of moulds and cores essential to the building and vulcanizing of tires.

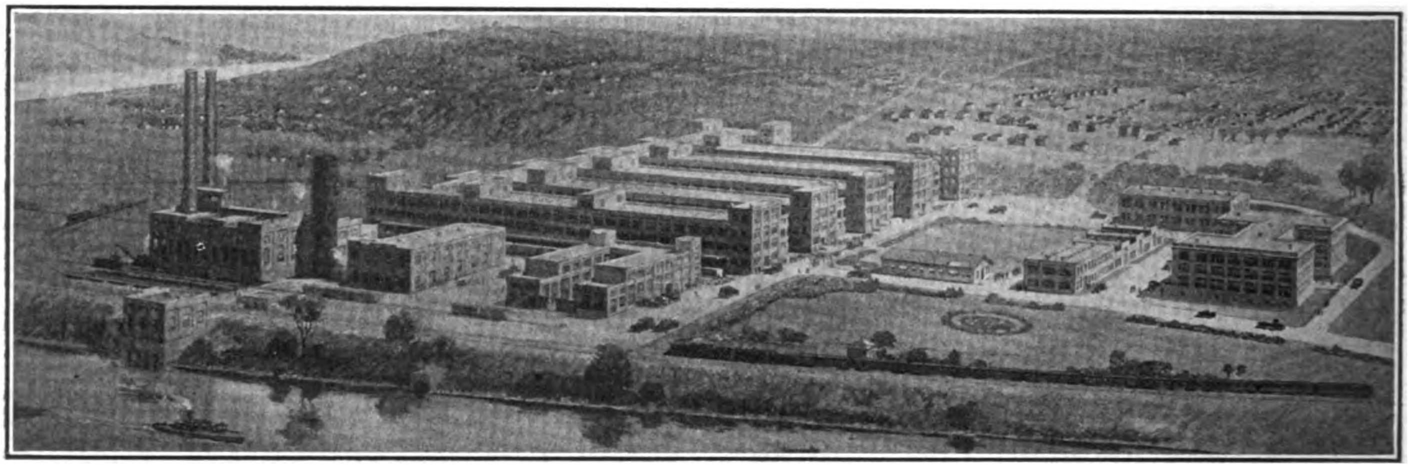
The manufacturing departments have all been designed to secure the maximum of day light, and the milling, calendering and vulcanizing departments have been especially equipped with monitors and saw tooth roofs for this purpose.

The Laboratory Building.

As the tire industry is largely dependent on chemical and mechanical development, most careful thought was given to the construction, arrangement and equipment of the laboratory building. This unit is about 300 feet long and 55 feet wide and the greater portion two stories high, and contains complete apparatus for every conceivable character of rubber industry experimental work. Two large general laboratory rooms are provided, as well as a number of special rooms for research work. Complete equipment for experimental tire making on full sized scale is also installed in this building.

In addition to the buildings mentioned a temporary hospital is being erected, as well as a large fireproof garage and several smaller auxiliary buildings, all of the finest modern design and construction and properly equipped for their purpose.

The entire plant is completely protected by an automatic sprinkler system, fire hydrants, hose and necessary apparatus of this character.



Kelly-Springfield Tire Co.'s New $1,000,000 Plant at Cambridge, Md.—First Tire Turned Out April 2.

Summarization Showing Extent of Plant.

The following memoranda of amount of material used in construction and other data will give a graphical idea of the extent of this new Kelly-Springfield Cumberland plant:

Five thousand eight hundred car loads, or 270,000 tons, of constructive material; 15,000,000 bricks, 8500 tons of structural steel, 100,000 yards of concrete, 6,000,000 feet of lumber, two by 10 inches, in floor of main building.

All foundations and steel installed so as to permit erection of additional stories when required, and the entire plant is laid out to permit economical expansion in all directions.

Main building floor area, approximately 2 acres. Walls of buildings, placed end to end, would extend over 1½ miles. Coal pockets will store 10,000 tons of coal. Two boiler stacks, each 14 feet inside diameter, 275 feet high.

One and a half years were consumed in the building of this plant. The engineers were S. Diescher & Sons, Pittsburgh, Pa., and the architect was Edward Necarsulmer of New York City.

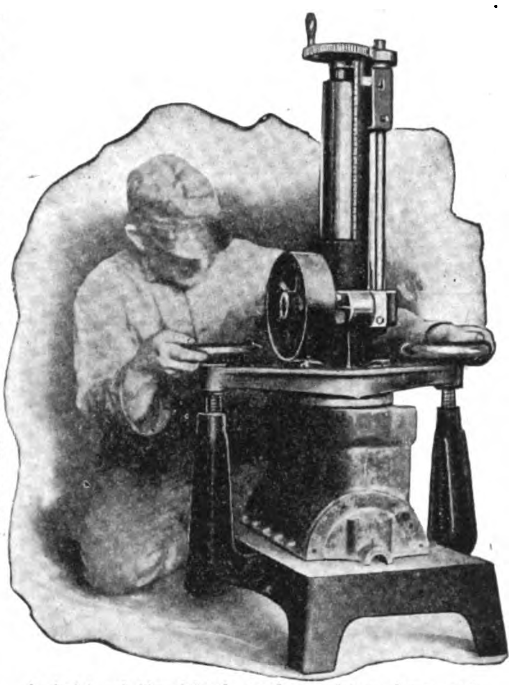
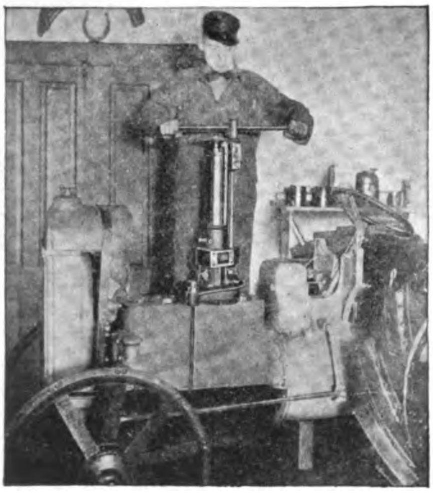
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Storm "Type M" Reboring Machine, which is now being offered to the trade, possesses a number of unique features and advantages, making it admirably adapted to the needs of shops doing cylinder reboring of all kinds.

The main body is a one-piece, heavy casting and supports the boring bar, feeding and driving mechanism. The construction provides two heavy, adjustable bearings in which the boring bar operates. The boring bar is of hollow, carbon steel, hardened and ground, and having a travel of 14 inches. It is actuated by means of cut spiral gears and the feed is obtained through heavy, internal screw and upper feed gear, as shown in cut. The bar supports the cutter heads, which are not shown.

The cutter heads are of the well known Storm Patented Six-Cutter type, which have universal adjustment by means of a center cutter adjuster, so that they cut to any desired size within the capacity of the machine. The machine is supported by a heavy base provided with a clamp yoke and clamping screws. It rides or floats free in this clamp and is self-centering.





A valuable feature of this tool is its adaptability to different methods of drive. It is regularly furnished with a connection for a drill press, but can also be furnished with a pulley for belt or for motor drive. It will be noted that the machine does not set directly in front of or over the drill press base, but instead sets to one side, so that it does not interfere with the use of the drill press for other work. Furthermore, it is back geared so that it may be used with any ordinary 20-inch drill press.

On other types where the boring bar is driven directly from the drill press spindle, a back geared drill press only could be used, otherwise proper speed could not be obtained. Then, too, the combined height of the block and machine does not interfere with its use under any ordinary drill press.

Each machine is also provided with a double-end wrench for operating by hand so that it may be removed from the base and used as illustrated for reboring motors without removing them from the chassis, by merely withdrawing two small pins in the clamping device.

The cut shows a Fordson block being rebored in this manner. Users find this very convenient not only for tractors, but for marine engines, trucks and passenger cars. The total capacity of the machine is from 3⅝ to 6½ inches, and its weight is approximately 300 pounds.

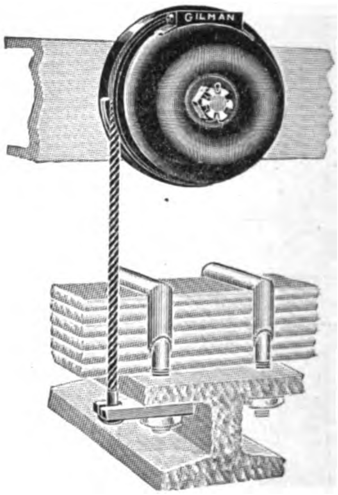
Manufactured by the Storm Manufacturing Co., Minneapolis, Minn. Prices and literature on application.

The Gilman Shock Absorber, in principle and operation, is claimed to afford the ideal method of shock absorption for motor vehicles, for it controls the spring's recoil the full distance of its travel. While permitting the springs to perform their intended function to the limit of their efficiency under normal road conditions, it prevents abrupt or violent movement when road conditions change from normal. Like the spring itself, it is placed between the body and the axle. It offers no restraint to the downward or contracting movement of the spring, but when road variations tend to provoke violent recoil, it smoothly checks such recoil at every stage.

When the Gilman shock absorber is in action, its friction belt band is adjusted to engage the circumference of the stationary friction drum. Any tendency of the body and the axle of the car to suddenly separate, because of the upward thrust of the vehicle springs, causes a sufficient tightening of the friction belt band upon the drum to counteract and retard this upward thrust. This result is accomplished by the frictional contact between the free end of the band and the drum and to the forward movement of the opposite end of the band by the rotation of the drum.

On the other hand, when body and axle approach each other, the tension of the flexible cable is released and the spring is permitted to exert its force in returning the body. Accompanying this action the friction between the free end of the friction belt and the stationary drum, cooperating with the reverse movement of the opposite end of the band, loosens the band sufficiently to allow the drum to be returned by the spring.

The tightening and release of the friction belt band are entirely automatic and instantaneous at the beginning of each forward or reverse movement of the drum.



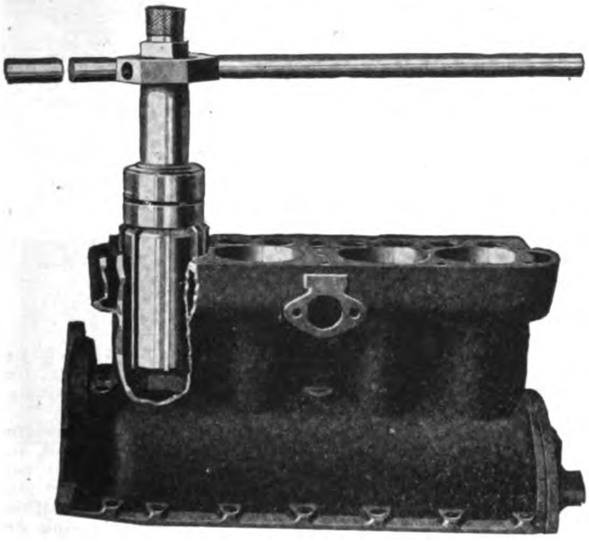
The gripping effect of the band on the drum can be increased or decreased as desired by means of a simple adjusting device near the top of the absorber. A few turns to the right of the small screw with a screw driver increases the tension; a few to the left decreases it. The main bearing of the device is self-oiling, as it is made of a wood impregnated with lubricant. It thus requires no attention.

The Gilman shock absorber is guaranteed by the maker to give absolute satisfaction or the purchase price will be refunded.

Manufactured by the Gilman-Davis Manufacturing Co., 224 South Michigan Avenue, Chicago, Ill. Literature and prices on application.

The F-J Adjustable Reamer presents as one of its outstanding features, the ease with which it can be adjusted to any size within its range by simply turning the knurled head screw at the shank end of the reamer. The blades, which move absolutely parallel, can be expanded or contracted in the same manner as a micrometer is adjusted. For sizing a hole this feature is invaluable.

The F-J reamer is stated to be a pioneer in that it introduces a new method of hand reaming. The reamer is contracted to a size slightly smaller than the hole, is inserted in the same and expanded gradually as the hole is reamed. By means of the graduations on the knurled screw the amount of expansion can be read off very accurately.



The cut shows the cylinder reamer in place in the first cylinder of a block. The reamer is inserted in the cylinder far enough to leave the top end of the blades about an inch above the top of the block. The blades are expanded until the edges just take hold in the cylinder walls and then about .0015 to .002 of an inch more for the cut. The cylinder is then reamed through by using the wrench as shown in the illustration. The blades are contracted, the reamer brought back to the starting position, expanded for the second cut and the former operation repeated. For the final finishing and sizing cuts the feed should only be about .0005 or .001 of an inch.

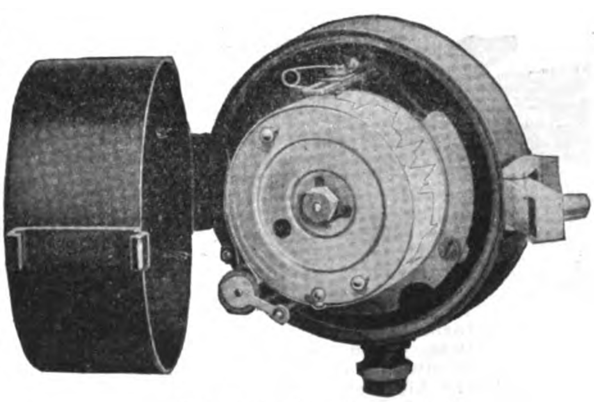
Complete instructions as to the use of the reamer and method of sharpening the blades, etc., are furnished with the tool, or the maker of the equipment will regrind the blades at a small cost.

Manufactured by the Foster-Johnson Reamer Co., 1002 Beardsley Avenue, Elkhart, Ind. Prices on request.

The Recordograf, an instrument giving forth on a paper tape a graphic record showing all the time, distance, speed and stops of the motor vehicle to which it is attached, is presented in its refined form after 15 years constant and successful operation on diversified motor equipment ranging from light runabouts to huge motor trucks.

It is simple, accurate and tamper proof and the indelible record it writes of each movement or stop of the car permits of a detailed analysis of the vehicle's operation.

The instrument consists of three essential parts, the clock, the recording device and the pencil mechanism. The clock, the manufacturer's own design, is of unusually heavy construction and is not in any way affected by vibration. The recording mechanism, which is driven by the flexible shaft, is merely a worm shaft driving a worm wheel; this in turn rotates an eccentric cam. The pencil mechanism is actuated by the eccentric cam and travels in a guide way.



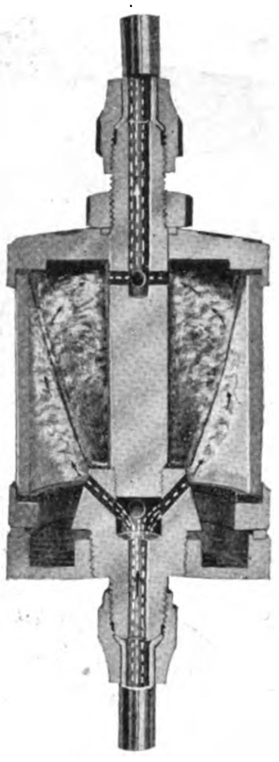
The tape is run from the tape holder and threaded into the clock drum. The combination of clock, recording mechanism and pencil mechanism produces on the tape a clear, mechanically accurate record of time, distance, speed and stops. Each tape is 36 hours long, divided and marked in hourly periods beginning at 4 p. m. and running 36 hours to 4 a. m. The a. m. hours are denoted by a light margin at the top and bottom of the tape. The hour is sub-divided into five-minute periods by small squares. A horizontal line marked by the pencil denotes that the vehicle remained stationary five minutes for each square through which it travelled. When the vehicle moves the pencil travels obliquely on the tape. The tape is eight squares wide, representing two miles of travel; each square thus stands for a one-quarter of a mile. It will be evident, therefore, that the speed of the vehicle is graphically shown by the angle of the oblique line. For example, if the oblique line entirely crosses the tape eight squares in 10 minutes, it would indicate that the vehicle had travelled two miles in that time, or at a rate of 12 miles an hour.

The transmission consists of a simple but effective collar fastened to the inside front spokes. This rotates a star wheel, which in turn operates the flexible shaft. The speed of this shaft ranges from only 58 to 62 revolutions a mile as against 1000 or 1500 revolutions of an ordinary speedometer.

The company also manufactures the Ford and Dreadnaught types of hubodometer which record the accumulated mileage covered, both backwards and forwards. These require no mechanical work for their installation, being simply screwed or bolted on to the hub like a hub cap.

Manufactured by the American Taximeter Co., home office, Broadway at 61st street, New York city, with branches in all principal cities. Prices:, Recordograf, complete with 100 tapes and speed scale to ascertain rate of speed, $65 f. o. b. New York. Installation will be made at any of the company's service stations at small additional cost. Ford type Hubodometer, $17; Dreadnaught type, $20.

The Ro-Gas-Fi'ter is claimed to be one of the most effective devices of its type on the market in that it positively removes all the dirt and water from the gasoline. It is a small instrument, made from brass, with a glass cylinder, inside of which is a chamois filter held taut and in shape by a wire frame. The flow of gas is from the bottom up, the refuse remaining outside and below the cone shaped chamois.



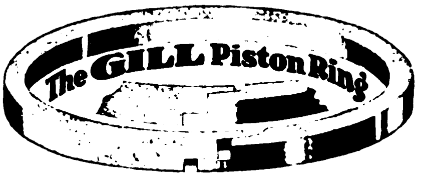
It may be attached anywhere on the gasoline feed line between the tank and the carburetor. This is easily done in a few minutes time without special tools and it is adaptable for use on any car whatever feed system may be employed.

Directions for attaching: Cut about four inches from the feed line, slide the compression nuts on to each end of the tube and, with any convenient instrument, roll the end of the tube into a slight bell shape. This should give a tight connection without the use of solder or other device. The Ro-Gas-Filter is simply put into place and the compression nuts tightened. Care should be taken that the filter is in an upright position. If by chance the nuts furnished should not fit the tubing they may be returned to the manufacturer together with the name of the car and they will be replaced with a set that will fit.

Manufactured by the Roll Manufacturing Co., Fond du Lac, Wis. Price, $6.

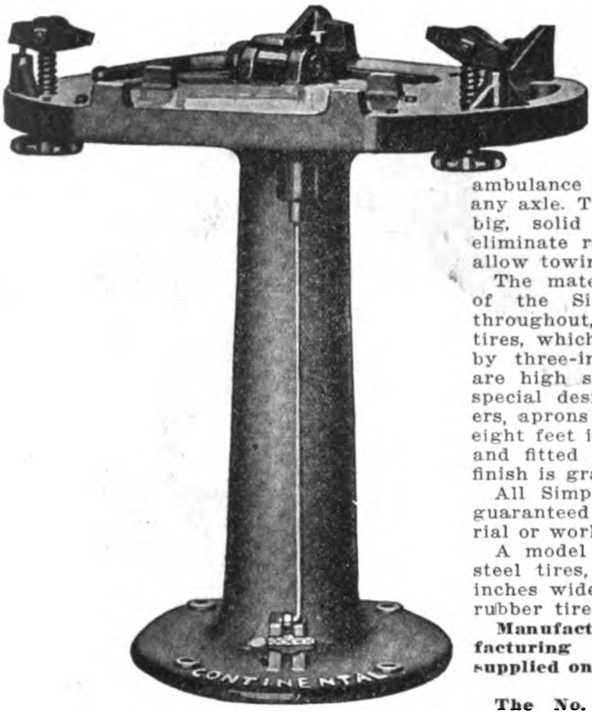
Gill Piston Rings are made from single piece castings of special grey iron and machined accurately. They are self-fitting, one-piece rings of sturdy construction, having a distinctive joint which forms a seal that prevents the passage of gas or the pumping of oil from the cylinder walls into the combustion chamber.

Gill rings are guaranteed to increase power, prevent smoking resulting from oil suction, to overcome excessive carbon trouble, and to reduce gasoline and oil consumption. When the engine is fully equipped with Gill Piston Rings the company states that it will refund the full purchase price upon return of the rings if they fail to meet this guarantee. This guarantee does not cover rings used in scored or out-of-round cylinders until they have been reground.



They are made in all sizes to replace the rings in all types of motor trucks and tractor engines.

Manufactured by the Gill Manufacturing Co., 83rd Street and Jeffery Avenue, Chicago, Ill. Literature on request.



The Ford Assembly Table is a combination of the Continental assembly table and Ford bench clamps. The clamps on the 32-inch diameter top hold the motor in the upside-down position and with the cylinders horizontal. It handles two motors at the same time and brings any part instantly at hand. It is stated to be a real money maker and time saver in Ford work.

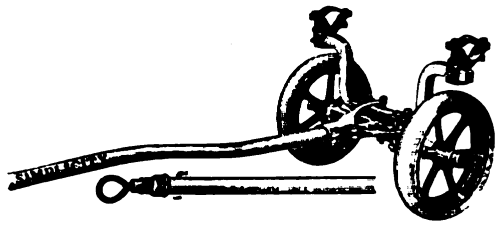
Two slots are placed in the table for hanging wrenches and ample space is provided for additional tools.

The value of the Ford Assembly Table is claimed to lie in the fact that it does away with sloppy, mussy bench work and speeds up Ford repairing and rebuilding.

Manufactured by the Continental Auto Parts Co., 125 East 17th Street, Columbus, Ind. Prices and detailed description on request.

The Simplicity Ambulance is stated to represent a distinct departure in construction and application from devices of this nature. As its name would seem to indicate, it is simple in design, attachment and operation. It is complete in itself and the manufacturer claims that there is nothing to break or wear out, no small parts to fall off, mislay or lose.

It comprises simply a block and jack. To use, remove one bolt from each saddle, run the ambulance under the axle of the car to be towed, either front or rear, pull the pole down, the car slides into place and the outfit is ready to travel after the bolts are replaced in the saddles. Only one man is required, there is no time lost and no chance for accidents. The saddles are adjustable as to width.



Features that are claimed to be exclusive with the Simplicity ambulance are its wide tread, 32 inches; that it tracks absolutely, holds to the road no matter how high crowned, and cannot buckle under the disabled car. The Simplicity swivel with which the ambulance is equipped provides easy turning without binding or wrenching, and there is no danger of the towed car overturning. The swivel has a locking device to be used when under the rear end of a car. The yoke of the ambulance effectively cradles the differential housing of the car, affording plenty of room no matter how large the differential may be. The car is always securely fastened to ambulance by adjustable clamps which fit any axle. The ambulance is equipped with big, solid rubber tired wheels, which, eliminate rattle, vibration and noise and allow towing safely at increased speed.

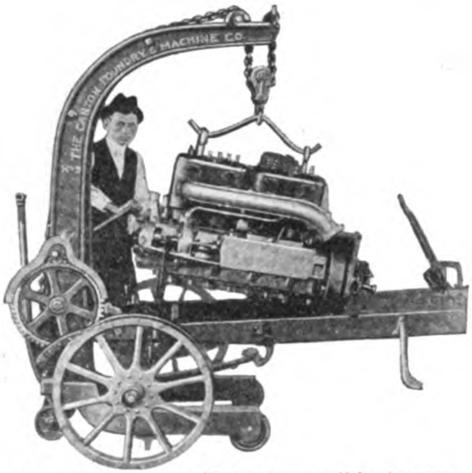
The material used in the construction of the Simplicity ambulance is steel throughout, with the exception of the tires, which are standard solid rubber, 16 by three-inch, and the bearings, which are high speed bronze. The pole is of special design, bent to avoid the bumpers, aprons or truss rods of the car; it is eight feet in length, adjustable to 12 feet and fitted with a strong eye bolt. The finish is gray and black enamel.

All Simplicity products are absolutely guaranteed against all defects in material or workmanship.

A model is also made, furnished with steel tires, 15 inches in diameter, three inches wide, but otherwise similar to the rubber tired model.

Manufactured by the Interstate Manufacturing Co., Milwaukee, Wis. Prices supplied on request.

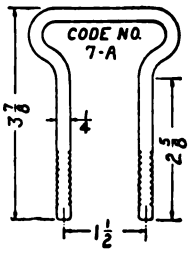
The No. 3 Low-Bed Canton Portable Crane is shown in the accompanying cut, being utilized in lifting a motor out of an automobile chassis. This is stated by the manufacturer to be the size best suited for general garage work, as it can be quickly transported to parts of the garage where it would be impossible to use other equipment. It is claimed that with this outfit the handling of motor car repair work may be speeded up so that seven or eight men may be displaced.

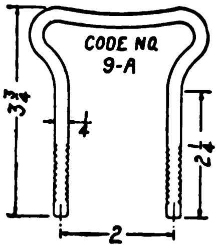


The Canton cranes are made of semi-steel throughout, all the intricate parts are of high quality drop forgings and they are equipped with hand forged, tested and guaranteed BBB chain and Hyatt roller bearings, a feature which increases their ease of operation to a great degree.

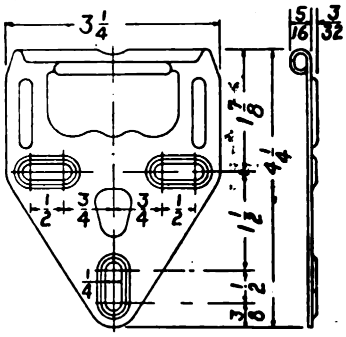
Manufactured by the Canton Foundry & Machine Co., Canton, O. Literature and prices on request.

Mueller Battery Handles are produced automatically in quantity lots and therefore can be sold at a very low price. The No. 6-A handle, illustrated in the largest cut, is of the narrow stamped type and offers the manufacturer an opportunity to standardize on one handle only for use on all batteries. What is stated to be a new feature is that slots are used instead of holes, which make possible the fitting of this handle on boxes drilled for practically any other design of handle. The slots also allow compensation for any inaccuracies in the drilling of the boxes and thus assembly is speeded up. This No. 6-A handle is lead coated by the maker's special dipping process; is deeply ribbed for strength and the grip is smoothly formed and well rounded. The screw holes are upset, which strengthen where countersinking might weaken.



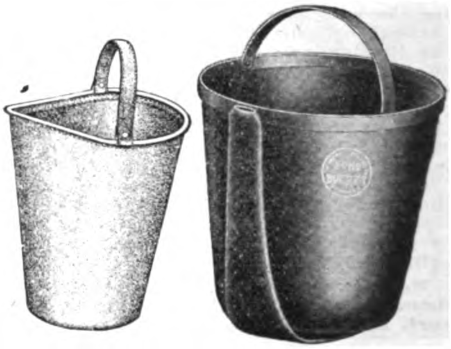


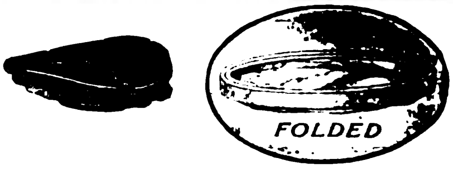
The No. 7-A and 9-A, shown, are of the wire type and are just being placed on the market. It will be noted that they have deep serrations on the legs for taking the lead, which holds the handles in position in the side of the box.



Manufactured by the Mueller Electric Co., 2535-43 Fairmount road, Cleveland, O. Literature and prices on request.

Boko Bucket No. 1500, with funnel, is adapted for conveying either gasoline or water. It is constructed of gasoline proof fabric, double-sewed and tightly cemented. It may be used as a bucket or filler. When not in use as a funnel the flexible tube fastens over the top. A slight pressure of the finger gives perfect control of the flow. There is no spilling or waste.



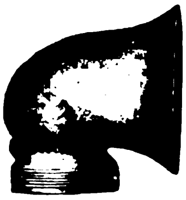


Boko buckets have a capacity of two gallons and may be folded and placed in the tool kit or under the seat.

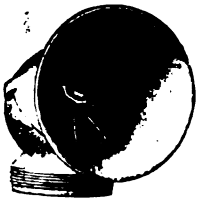
The same concern also makes the Boko bucket, No. 1507, without funnel. This bucket is made of the same gasoline proof fabric as the No. 1500 but, instead of the funnel, it has a specially designed spout top, which gives the user full control of the stream at all times. This bucket folds up to a size, seven by nine by one-half inch, and will fit into the door pocket of any car.

Manufactured by the Defiance Welding Co., Defiance, O. Sales department: The Bailey-Drake Co., Inc., 1120 Michigan Avenue, Chicago, Ill. Prices: No. 1500, list, $1.75; No. 1507, $1.

The Radiator Funnel Cap is one of the latest radiator ornaments combining beauty and utility. It is constructed of highly polished cast aluminum and is claimed to include in one simple, sturdy and sightly device the following essentially valuable features: A stationary filler cap; 2, a reliable overheat indicator; 3, a radiator cooler; 4, a practical funnel; 5, an ornament of beauty. It consists of two principal members, a funnel and a base upon which the funnel swivels. The funnel terminates along the diagonal parting line in a web pierced with seven triangular radial holes. In an annular recess in the base, also along the parting line, rests a round brass disc having holes identical with those in the funnel web, but placed in such a fixed position with relation to the same that the two form a register which is closed when the funnel is in normal position facing forward, partially open when it is in the cooling position and fully open when it is rotated 180 degrees to the filling position.



NORMAL POSITION
FACING FORWARD



COOLING POSITION
PARTIALLY OPEN

FILLING POSITION
SWUNG 180°

A bronze bolt, having a spring under its head, passes through the funnel web and is screwed into the base and there firmly locked with a jam nut. The two members are thus held firmly together, though still permitting the funnel to be freely rotated on the base, as desired.

The whole forms a combination which is substantial, rust proof, always in adjustment and practically indestructible.

Manufactured by the Radiator Funnel Cap Co., 3852 Grand Boulevard, Chicago, Ill. List price, $3.75 postpaid.

Ray Socket Wrench Sets are packed in pressed steel boxes and are so compact that they can be carried in the side pocket, under the seat, or in the tool box of any car, even in the largest size.

All parts are finished in the Packer rust-proof finish, and are furnished with either the tubular ratchet handle or flat ratchet handle. The socket wrench sets are furnished in different sizes, so that the sockets in some sizes will fit any nut or bolt on any car.

The Packer automobile specialties are sold exclusively through the jobbing trade, but if anyone cannot obtain them at his nearest dealer he is invited to take the matter up direct with the manufacturer.

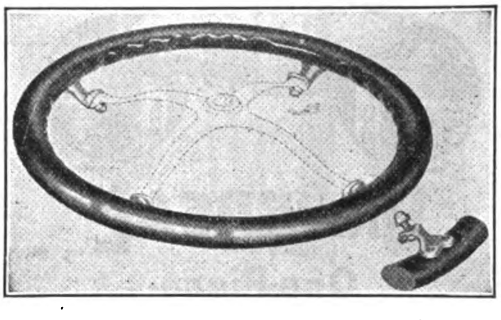
Manufactured by the Packer Auto Specialty Co., 1420 South Michigan Avenue, Chicago, Ill.

The P. C. Line of Radiator Caps is designed to meet the need for good, low priced, attractive equipment of this character. The first size made was for Fords and even on such a small article it is stated that a great deal of thought was put into it. According to the reasoning of Robert F. Miller, designer of this product, first of all it should be practical, and if anyone has ever tried to take off a Ford radiator cap when the radiator is steaming, the practicality of the design of the P. C., with its non-heat conducting wings, will be realized. Again, Mr. Miller affirms that even a practical article of this nature does not make an appeal unless it is at the same time pleasing to the eye. This point was also incorporated in the P. C. design.

The P. C. caps are made from a special alloy by a secret process which combines small diameter with great strength.

Manufactured by the Parts Corporation, 733–735 Virginia Avenue, Indianapolis, Ind. Jobbers and dealers are invited to write for special proposition.

The W-A Extension Wheel is designed to replace the regular Ford steering wheel rim, making a 17-inch wheel by utilizing the regular spider. The rims are of two-piece, high-grade maple, walnut or ebony finish, corrugated or plain. The extensions are of aluminum highly polished, fastened to the rim by two screws and fit firmly to the ends of the original spider by means of nickel plated bolts and nuts, and can be easily installed without removing the spider from the steering column.



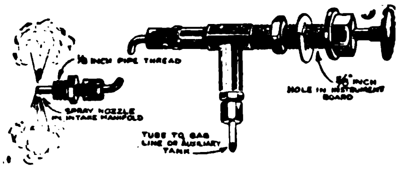
To install: Remove the regular rim from the spider and replace with the W-A extension. This operation requires only a few minutes time.

The W-A extension is also made for Chevrolet and Dort cars.

Manufactured by J. H. Whetstone & Co., Lapeer, Mich. List price, $4.

The Carleton Master Primer is a powerful force pump mounted on the instrument board of the car. It draws gasoline from a small auxiliary tank or direct from the fuel line and sprays it into the intake manifold of the engine. Then when the engine is turned over, whether by hand or starter, the gas is right there waiting to be sucked into the engine and it starts at once.

The Carleton Master Primer is made of a heavy brass casting, accurately machined, heavily nickel plated and polished. The piston is made of cork discs, impregnated with graphite and not affected by gasoline. It has a screw adjustment to provide for possible wear. The check valves are of brass and of the ball type. The needle valve on the piston stem is seated by spring pressure, thus cuts off automatically. As an additional safeguard the piston itself covers the gasoline inlet.



⅛ INCH PIPE THREAD
SPRAY NOZZLE IN INTAKE MANIFOLD
TUBE TO GAS LINE OR AUXILIARY TANK
⅝" INCH HOLE IN INSTRUMENT BOARD

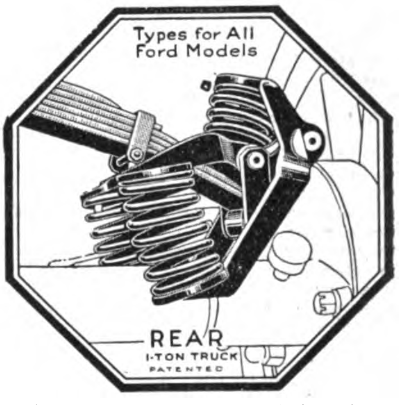
The Carleton Master Primer is furnished either with or without an auxiliary gasoline tank. If the auxiliary tank is used it affords independence of the regular gasoline system, high test gasoline may be used or ether mixed with gasoline or any desired liquid for cold weather priming and, in case of trouble with the carburetor, vacuum system or fuel line, the car can be run by the primer alone.

The Carleton Master Primer is stated to require no care except an occasional oiling and can be used on any car.

Manufactured by the Carleton Co., 170 Summer Street, Boston, Mass. Price list: Complete with tank, tubing and all necessary fittings, $6.50; with gasoline fitting instead of tank, $6. In ordering without tank the outside diameter of gasoline tubing shoud be given.

The FloatAforD Ford Shock Absorber is built on the complete suspension principle, forming a spring cushion. It is claimed that it positively will not break the Ford spring or in any way interfere with the original Ford mechanism. It is scientifically designed so as to meet the rebound after the first shock is absorbed by the large springs. The third spring, which forms an essential part of the construction of the FloatAforD, takes care of this rebound and is claimed to be an exclusive feature of its design.

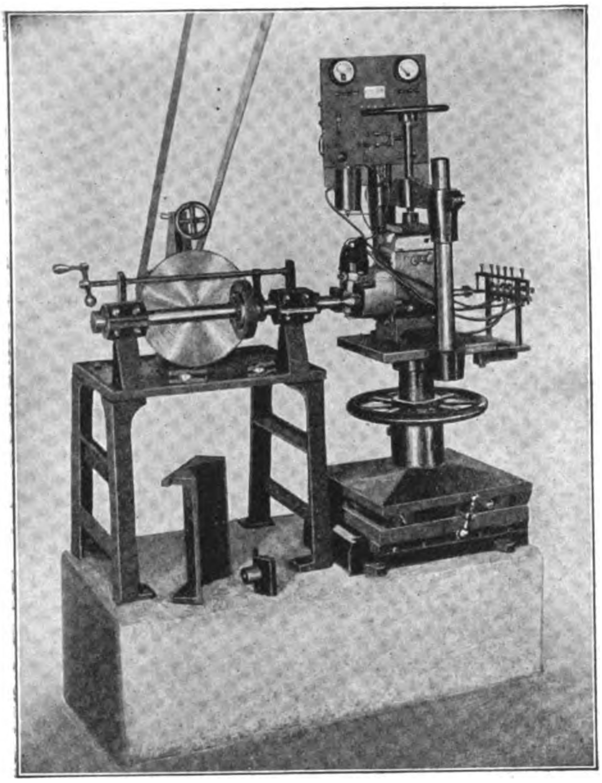
The FloatAforD absorber is stated to be made of the very best grade of malleable iron and high carbon steel, and is guaranteed for one year against defect in material or workmanship.



Claims made for the FloatAforD are that it will cut down repair bills, save tires and gasoline, give added cushioning effect to the springs and increased riding comfort.

The FloatAforD is made in four types, for touring car or coupe, sedan or commercial car, roadster and one-ton truck.

Manufactured by the Burpee-Johnson Co., Indianapolis, Ind. Literature and prices on request.



The M. G. S. Testing Device for magnetos, electrical generators, electrical engines, starters and other dynamo machines is stated to be a proven success as, before applying for a patent, it was given severe tests on all kinds of work for which it is designed.

The machine is adapted to drive and test all kinds of electrical units which have been removed from their original driving means, making it possible to properly install new parts and know that they will give satisfactory service before installing them with the motor or other driving power from which they were originally removed. It is built with adjustable features to enable it to run from any permanent line shaft.

It will be noted that the entire machine is not complicated and any man familiar with automobile work should find it an easy matter to test any magneto, generator or starter with this equipment. There is no guess work, as the entire output of the generator is shown on the ampere meter on the switchboard facing the operator.

It is stated that the required time for testing the average generator with this machine should not exceed 15 minutes, and that a magneto can be satisfactorily tried out in less than 10 minutes. If any one of the leads is defective it will be shown in the sparking gap, and as a plurality of sparking gaps are provided, it enables a number of cylinders to be tested just as rapidly as one.

The machine is equipped with a V-shape clamping arrangement, which insures a positive holding position for any style of generator or magneto, and it is unnecessary to remove the drive gear or other couplings from the electrical units being tested. It is also provided with a set of flexible drive couplings, which adjust themselves to any shaft or driven coupling, as they have a long range of adjustments.

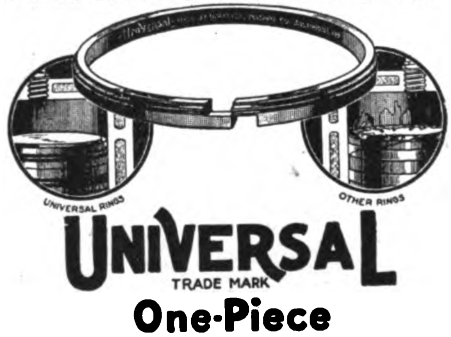
When operated according to instructions furnished, this device is guaranteed for a lifetime against poor workmanship and material.

The illustration shows the testing generator coil and distributor, with a Delco generator with distributor and coil being tested, all in one operation.

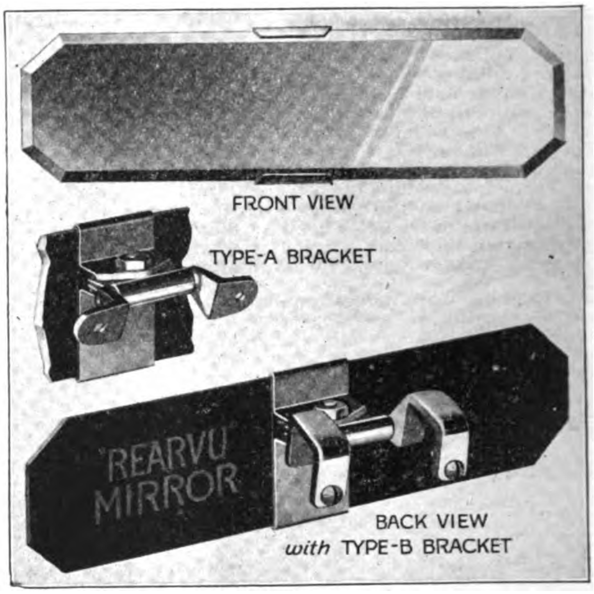
Manufactured by Klemmer Brothers & Co., 128 West Bridge Street, Owatonna, Minn. Particulars and prices at request.

The Universal One-Piece Piston Ring is stated to have unusual merit for keeping down oil, minimizing carbon troubles, giving increased power, which in turn gives decreased gasoline and oil consumption per mile, and it was recently placed on a popular price basis.

Universal One-Piece Piston Rings have an outer and inner circumferential groove which gives a forced lubricating feature to the cylinder walls. All rings are placed on the piston with the grooves up, and the excess oil is collected on top and when compression starts this excess oil is started downward by being collected in the upper groove, and as compression increases it is forced on into the inner groove, giving a perfect seal to the motor; when firing takes place the excess oil is down and away from the firing chamber and, as the piston goes down after firing, the oil that is packed in the inner groove lubricates the side walls of the cylinders, which gives a forced lubrication at all times to the cylinder walls. The oil sealing feature of the ring is claimed to give as near perfect compression as is possible and, by starting the oil downward on the compression stroke, the oil is kept away from the firing chamber, which practically eliminates carbon trouble and gives a minimum amount of engine trouble from this source, with increased mileage per gallon of gasoline and a decreased consumption of gasoline and oil per mile.



Manufactured by the Universal Machine Co., Industrial building, Baltimore, Md. Literature and prices on request.



The Auto Rearvu Mirror reflects clearly road conditions in the rear, enabling the driver to keep his eyes ahead. It can be instantly adjusted to the position most convenient for the individual driver with the windshield open or closed.

The assembly of the Rearvu mirror is very simple. But one nut and screw is used. Along with this simplicity is a construction that is claimed to positively eliminate vibration, and there is no undue strain on the glass. The metal assembly is of spring brass and bronze, which will retain their original luster and will not rust. The mirror is of the highest grade of beveled French plate, size 2½ by 10 inches. The brackets are of heavy brass, nickel plated, and sufficiently rigid to avoid vibration. The windshield may be opened for ventilation and other purposes without changing the position of the mirror.

Made in two types: A for closed cars; B, for open.

Manufactured by Automotive Accessories, Inc., Kokomo, Ind. Exclusive sales representative, Fulton Co., Milwaukee, Wis. Price, each, $3.50. Packed in individual cartons, 25 to the standard shipping package.

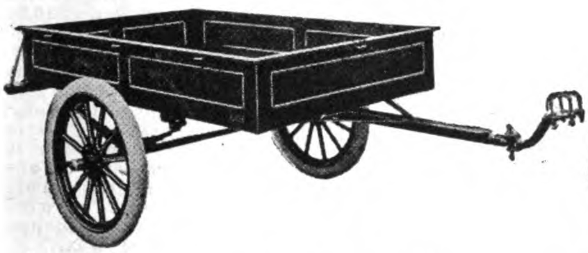
The Prest-O-Grip All Unit Chain has been designed especially for steel spoke wheels and this type of chain and fastening device is especially adapted for steel spoke wheels that cannot be fitted with a regular spoke clamp, particularly on the dual tire type.

Particular stress is laid upon the fact that they can fit practically any type of motor truck wheel equipped with either solid or giant pneumatic cord tires.

Special fasteners are used which hold the chains securely on the wheel and allow plenty of slack to prevent them from cutting into the tires.

Manufactured by the Rowe Calk & Chain Co., Plantsville, Conn. Literature and prices on request.

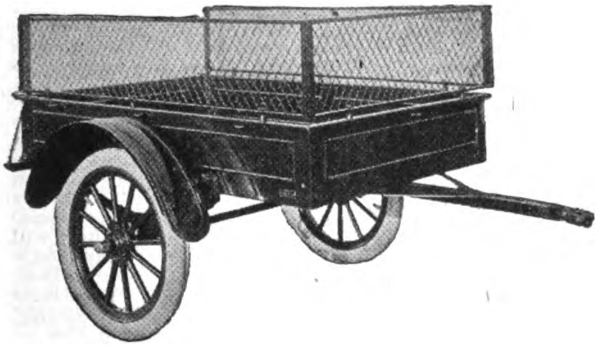
The Lyons Steel Trailer is illustrated herewith in two models, the A, the Lyons Thrifty, which is a simple type without top or side boards and the Model D, Lyons Favorite, which is equipped with wire side boards, giving it a finished effect and adding to its utility. They are designed for any kind of a load and to run on any kind of a road, and may be utilized for business, pleasure or sport. With it goods of all kinds may be delivered, its capacity being the same as that of a light delivery car. A contractor or workman can carry his tools or material to the field of operations. Baggage and camping outfits may be carried on the summer tour and a special type of bungalow camp trailer is made.



The Lyons trailer may be easily and quickly attached to any make of touring or passenger car without injury or disfigurement. It is stated to be sturdily built and beautifully finished; is strong enough to haul a piano or heavy express load.

The Lyons loading racks are made for all purposes.

The specifications are as follows: Steel body, 72-inch by 46-inch body, 12 inches deep, 30 by 3 wooden automobile wheels, ball bearings; 1¼-inch axle; 30 by 3 non-skid pneumatic tires, standard American make. Wood flooring with steel protecting strips. High grade auto springs. 750 pounds capacity. Color, dark green body, black wheels and trimming.



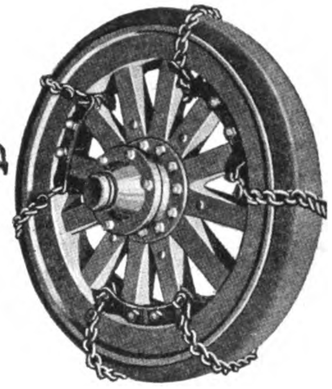
Manufactured by F. P. Lyons, Inc., Manchester, N. H. Literature and prices on request.

Giant Grip Traction Equipment for motor trucks includes a standardized twin clamp that is stated to insure the vehicle against time lost through tie-ups due to mud, sand, snow or other bad going.

The device is extremely simple and consists of a twin hook and eye clamp of drop forged special analysis steel and a back plate bolted to the spokes at the felloe. Each clamp anchors two chains. The chains are carried in the tool box and when needed are hooked on in two minutes time. A patented connecting hook engages in the eyelet of the clamp, locking the chain securely.

The truck operator is enabled to attach the chain without tools and without jacking up the wheels—the clamps being left on permanently. The simplicity of the device saves time and makes removal of the chains so quick and easy that the driver is not tempted to leave the chains on when not needed.

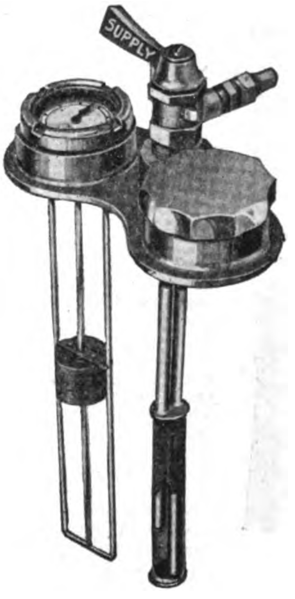
Giant grip twin clamps are made in three sizes, graduated according to tonnage to equip all trucks with wood wheels and solid tires.



Giant Grip Traction Equipment is proving particularly interesting to service stations, as they do not have to carry a large assortment. One size fits over 400 different makes of trucks. The company also manufactures equipment for all types of steel wheels.

Manufactured by the Giant Grip Manufacturing Co., Oshkosh, Wis. Prices and literature on request.

The Ideal Reserve Valve and Filler Neck is a new device assembled in one piece for use in connection with the vacuum system. When being supplied by a full tank of fuel this reserve valve feeds through the short tube, as shown in the cut, until the supply has been consumed on this tube (regular supply), which will then refuse to feed the engine, but will leave a supply of gasoline in the tank to carry the car to a gasoline supply station by operating the reserve valve from supply to reserve, which permits the reserve fuel to be consumed. The reserve valve now being in operation the filler cap cannot be removed from the filler neck until the valve has been reversed to the regular supply.

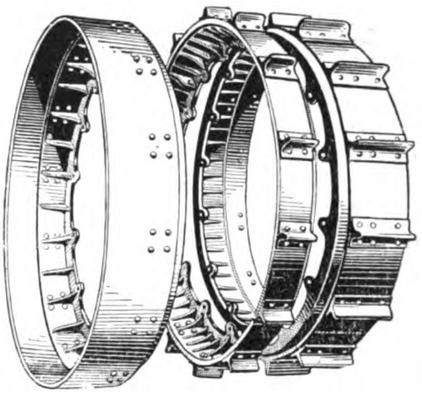


The valve is made in such a manner that it is leak proof. It will be noted that it is so embodied in the assembly with the filler neck and gasoline gauge as to make an artistic assembly of three parts in one. This automatically eliminates a large portion of the expense in applying the device to the gasoline tank by making one opening in the tank instead of three, and the final operation of sweating or soldering one piece rather than three pieces.

The Ideal reserve valve is made entirely of brass, highly polished and nickel plated.

Manufactured by the Ideal Brass Works, Indianapolis, Ind. Price, complete, $5.50.

Foley Traction Rims are being made in sizes and types adapted for quick attachment to or detachment from the rear or traction wheels of all motor trucks and tractors regardless of the make or type. The line includes traction rims for wheels using 32 by 4½ inch and 33 by 5 inch pneumatic tires (which are intended for Ford trucks rear wheels using pneumatic tires), also the 35 by 5 inch pneumatic tire rim, and traction rims of different designs and types for use on truck wheels equipped with solid rubber tires. The standard type of rim is made so that the width conforms with the size tire on the wheel. For instance, the 32-inch rim is 2¼ inches wide overall, and the 36-inch rim is 3½ inch wide overall. Special rims are also made in various widths up to and including eight inches and are of double reinforced construction, made up from a combination of electric steel casting and boiler plate steel. This latter rim is designed in particular for the heavy duty trucks engaged in road building and similar work having to negotiate unusual unstable road conditions.



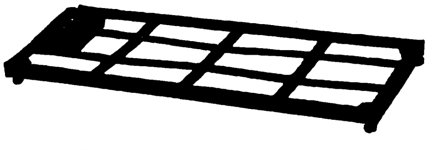
The Foley rims are guaranteed as to their construction and practicability and the many thousand now in use is unquestionable evidence of their merit. They are guaranteed to increase the traction efficiency of motor trucks anywhere from 200 to 300 per cent. when negotiating soft roads. They automatically come into action when a soft road is reached.

The maker is prepared to ship in quantities of one set of rims or in car load lots as the occasion requires.

Foley Traction Rims are fully covered by United States and foreign patents.

Manufactured by Foley Traction Rim Co., Inc., 1311 Hennepin Avenue, Minneapolis, Minn. Prices and literature on request.

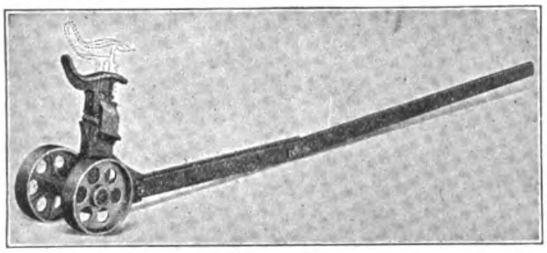
W-A All-Steel Creepers are designed to afford the most service at the least cost in repair shops and garages. They are stated to be well constructed of angle steel and steel bands so as not to fill with dirt, thus assuring a clean creeper at all times. They are tested to 400 pounds capacity and will stand the roughest usage.



W-A creepers are 36 inches long, 15 inches wide and two inches high, have leatherette covered head rests and roller bearing casters. The shipping weight is 10 pounds.

Manufactured by J. H. Whetstone & Co., Lapeer, Mich. Price, $4.

The No. 3 Hovey Jack is designed to combine the principles of durability, strength and speed, as well as appearance, at a low price. It is so constructed that it can be used under a rear axle equipped with a truss rod without any interference. It has an improved locking principle, overcoming any possible danger of the handle flying up until lifted by the operator. The handle is so designed that it clears the floor at its extreme end sufficiently to allow plenty of hand room. There are no spring or delicate parts to get out of order.



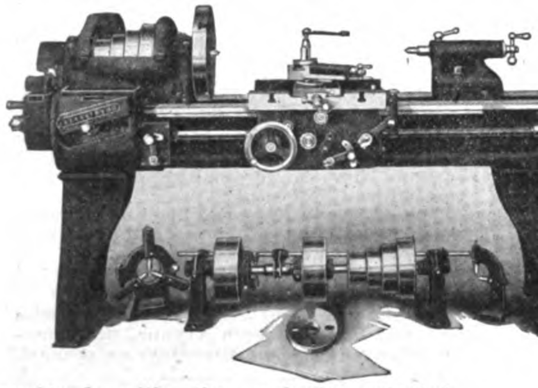
Method of operation: To raise the car, merely kick up the movable head to the desired height, roll under the car and push down on the handle. To lower the car, raise the handle.

The No. 3 Hovey jack has six-inch malleable wheels with 1½-inch faces, and a 60-inch round-edge bar stock handle. All the working parts are steel. It can be adjusted to pick up a load three inches from the floor, or high enough to reach the axle of any car.

Hovey jacks are guaranteed against defective material and workmanship. The weight is 35 pounds.

Manufactured by J. H. Whetstone & Co., Lapeer, Mich. List price, $15; west of Rockies, $16.50.

The Carroll-Jamieson New 14-Inch Quick Change Gear Lathe, with either single or double back gear, is shown in the accompanying illustration. It has a 15½-inch swing and is guaranteed to meet all the requirements of the up-to-date garage, service station or tool room, and will manufacture parts up to the full capacity of any 14-inch lathe. It is equipped with the maker's patented quick-change gear box, cutting threads from three to 64 per inch. One handle and knob does it all.



Convenience and durability combined with accuracy and simplicity are some of the good points claimed for the Carroll-Jamieson lathe.

All standard and odd threads can be cut up to 64 per inch, including 11½ inch pipe threads, right or left hand. The gearing in gear box is made from bar steel running on hard studs and supported by two walls.

The apron has a reverse for feeds and is provided with an interlocking device--preventing any two feeds being engaged at the same time. The power cross feed and longitude feed are friction, the most approved design for engine lathes. The new clamping device which secures the carriage to the bed when facing off work, maintains the accuracy of the lathe and no strain is applied to the corners of the carriage.

The head is massive and well proportioned and fitted with reverse or right and left hand screw cutting. The bearings are phosphor bronze hand scraped to fit the spindle. The spindle is made from a high carbon special spindle steel ground on the most improved grinding machinery, having a 1¼-inch hole its entire length. Taper center bush reamed to No. 3 Morse taper.

The face gear and cone pulleys are locked with a spring pin, which is adjusted when using the back gear without the use of a wrench. The cross feed and compound rest screw are graduated to read into thousandths. The compound rest swivel is graduated to 360 degrees and as will be noticed the tail stock is cut away, allowing same to be swung around to 90 degrees.

Taper gibs are used in both the cross slide as well as compound rest. The carriage is gibbed both front and back. Each machine is furnished with large and small face plate follow rest, steady rest, compound rest, centers, wrenches and double friction countershafts and thread indicator.

Attachments that can be had with this lathe include milling and keyway cutting attachment, taper attachment, patented increase swing attachment, draw-in chuck attachment. Special garage equipment, including lathe tool holders, cutting off tools, boring tool, chucks, lathe dogs, etc., furnished at small additional cost.

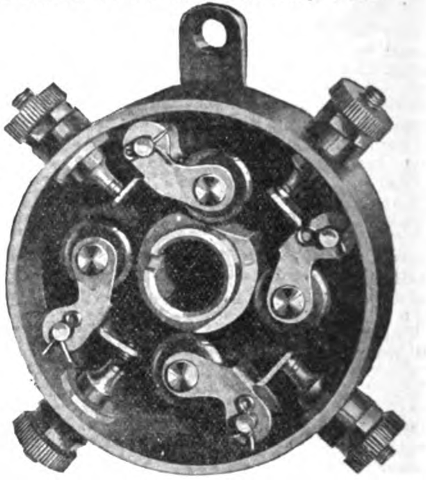
Manufactured by the Carroll & Jamieson Machine Tool Co., Batavia, O., who will supply full details, prices, etc., on request. Special propositions from dealers are also solicited.

The Eveready Standard Lunch Kit offers, in compact, convenient and inexpensive form, a complete automobile and outing lunch set, which is especially constructed with regard to service and durability to please the most discriminating taste. The case is of three-ply veneer basswood and the frame is covered with wear resisting black enamelled cloth. It is 18 inches long, 12½ inches wide and 5½ inches deep; is reinforced with metal corners, has a Corbin spring lock with two strong spring catches and a hand turned leather handle fastened securely with steel loops. It is lined throughout with washable Sanitas fabric. On the inside of the lid of the case are loops, for holding knives, forks and spoons, made of Fabrikoid, firmly sewed to the cover. The partitions of the compartment of the case itself are grooved into the walls. There are special compartments for a quarter size vacuum bottle, lunch box, drinking cups and salt and pepper shakers.

Each kit affords a complete service for six people and contains six nickel plated, steel knives, six solid cast, pure aluminum forks, six solid cast, pure aluminum tea spoons, two solid cast, pure aluminum serving spoons, six white enamelled drinking cups, one pair of aluminum salt and pepper shakers and one lunch box.

Manufactured by the Ben S. Loeb Co., 200 Fifth Avenue, New York City. Price for basswood case (shown in cut), $16.50 complete; black fiber case, $11.50.

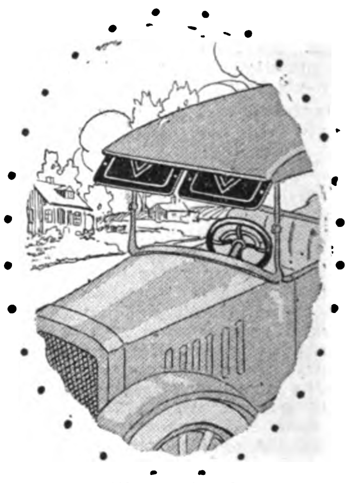
The Fansteel Magneto Break Timer is designed for use on Ford cars, trucks and tractors. It has heavy tungsten points; is of rust-proof construction, as the parts are heavily coppered and the housing is covered with shellac; is designed to obviate oiling, as contact is not made through a rotating part; there are no wipe contacts to wear out the timer and change the timing of the spark as they wear.



The maker guarantees that any difficulty which may arise, due to defective workmanship or material, will be adjusted at his expense.

Manufactured by W. J. Walsh, 528 Monadnock block, 53 West Jackson Boulevard, Chicago, Ill. Price, $5.

The Code Twin Visor is especially designed to protect the car driver from sun and glare, rain and snow and, as will be noted from the illustration, they add an element of ornament to utility. They are made of pressed steel, black enamel finish, with nickel trimmings. They will fit any car, are adjustable to any angle and their installation is very simple. They are absolutely guaranteed not to rattle or buckle. Made only in one size, but are adaptable to any open or closed car.



The maker will supply, free, to dealers, an effective counter display equipment.

Manufactured by the Code Manufacturing Co., Ltd., 1329 West Lake Street, Chicago, Ill. List prices: Double set, $5; single, $2.50 each.

Signa-Lite Safety Signal.

SIGNA-LITE SAFETY SIGNAL.

A safety signal device that is creating considerable interest and enthusiasm wherever exhibited is the Signa-Lite Safety Signal, manufactured by the Auto Safety Signal Co. of 197 State street, Rochester, N. Y.

This device is stated to be practically the first automatic signal to be placed on the market, and is particularly interesting because it works automatically, instinctively and naturally. In other words, the driver of the machine may completely dismiss from his mind the matter of signalling to the car behind. He can forget all about buttons, levers and the usual contraptions of the average safety signal. When he operates the foot brake of his car, this operation automatically flashes the stop sign on the Signa-Lite Signal. The turning of the steering wheel to guide the car left, automatically flashes the left-pointed arrow; for a right turn, the right-pointed arrow.

The Signa-Lite is connected with the car storage batteries and operates also from the magneto. It requires a very small current, yet produces a large voltage. It is illuminated at night and is visible in the daytime without the necessity of lighting.

The simplicity of the operation of this safety signal device commends itself. The signal is a small, compact, neat metal box of black enamel with glass front. It is placed on the rear of the automobile immediately over the number plate, and attached to it.

Special reenforced models for trucks and heavy vehicles are also produced by the Auto Safety Signal Co.

DAYTON DISCWOOD WHEELS, A UNIQUE PRODUCT.

A wood disc wheel for motor vehicles constructed on somewhat unique principles is the Dayton Discwood. These wheels are thin, rotary cut slices of wood glued together under great pressure, the grain of each piece running in a different direction from that of the piece next to it. This process of lamination is stated to make the complete disc into a very strong, non-warpable, but resilient whole, which is guaranteed by the manufacturer against any fault and is backed by over 60 years' experience in wheel building. The veneer is made by a special process and is rigidly inspected through every step of fabrication.

The Dayton Discwood Wheel is stated to combine all the qualities of wood wheels on which vehicle users have learned to rely through many years of service, lightness, strength and economy. Its weight is approximately the same as the regular wood spoke wheel, so it adds nothing to the unsprung weight of the car.

The inflation problem has been eliminated through the use of the patent angle valve connection, thereby enabling the tire to be inflated from the outside face of the wheel. The point of attaching the air line and the construction and mechanism of the wheel itself are indicated in the accompanying illustrations.

In laboratory and road tests the Dayton Discwood is stated to show almost 100 per cent. more resistance to side strains than the spoked wheel. Road shocks are distributed evenly throughout the wheel instead of being localized on the felloe, the action of this shock distribution being stated to be similar to that accomplished by the air in the pneumatic tire.

On account of the method of construction of the Discwood wheel any standard type of steel equipment, rims, felloe bands, hubs, bearings, brake drums assembly or spare tire outfit may be used, so that there is no additional outlay in equipping with Discwood.

Dayton Discwood Wheels are manufactured by the Dayton Automotive Wheel Co., Dayton, O.

STEEL WINGS TRIPLE PURPOSE SPRINGS.

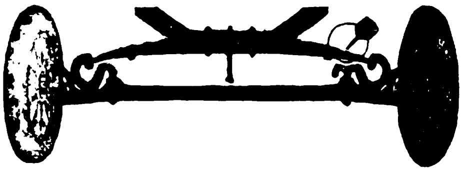
Steel Wings Triple Purpose Springs for Ford fronts are designed to eliminate the necessity for shock absorbers on these cars. The spring contains two more leaves than the Ford front spring and is 10 inches longer. It is made of alloy steel, oil tempered.

This spring may be installed on a Ford without changing the construction—that is, without drilling any holes. It is the work of a few moments only.

The Steel Wings Spring gives additional strength through its boltless center feature, which eliminates liability of breakage at the center bolt. The Steel Wings Spring is locked together with a patented corrugated center lock. The hangers are extra heavy drop forgings.

Additional stability is obtained by the extra long spring which carries the load of the car to the extreme end of the axle, preventing side sway, making steering easier and obviating the necessity for stabilizers.

Steel Wings Springs are equipped with the Stanley self-oiling feature, which not only makes the upkeep easier, but keeps the spring constantly lubricated, thus insuring its perfect resiliency at all times.



Steel Wings Triple-Purpose Springs.

Steel Wings Triple Purpose Springs for Ford fronts are guaranteed for the life of a car.

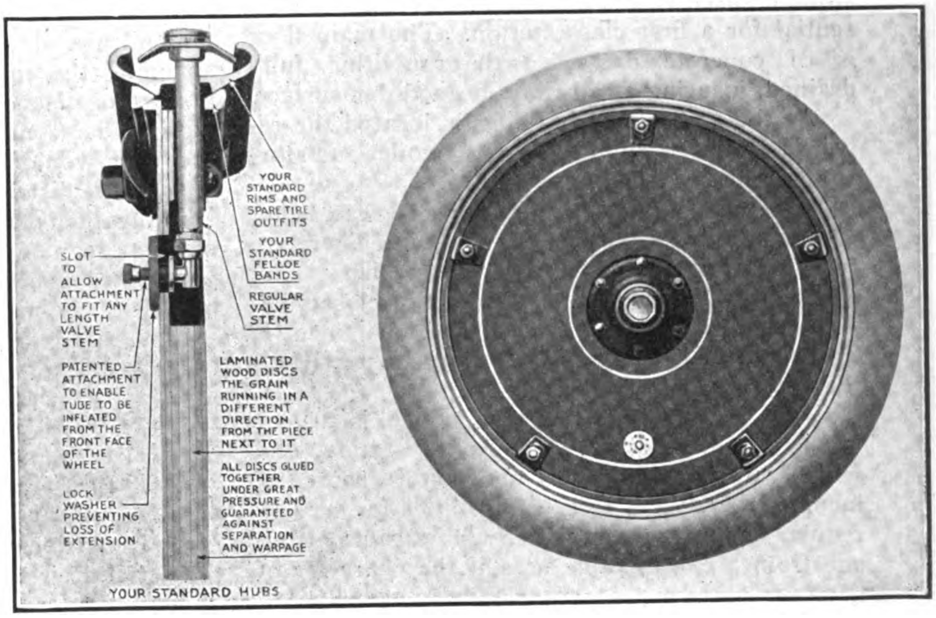
Manufactured and sold by the Steel Wings Co., 417 South Dearborn street, Chicago, Ill.

OLD PLATINUM CONTACTS.

Formerly when platinum was not quite as expensive as it is now, in the screws of old magnetos and contact coils there was often inserted a good size piece of the metal. By using a file carefully it is possible to remove the brass and reclaim the platinum, when it can be soldered upon the end of a new screw.

HEAVY DUTY SCREW DRIVER.

The ordinary screw driver is not adapted to all classes of work. By making a heavy screw driver with the center portion in the form of a heavy square of metal, a socket wrench may be placed on top of the square so that all the leverage necessary may be applied to move the screw.



YOUR STANDARD RIMS AND SPARE TIRE OUTFITS
YOUR STANDARD FELLOE BANDS
REGULAR VALVE STEM
SLOT TO ALLOW ATTACHMENT TO FIT ANY LENGTH VALVE STEM
PATENTED ATTACHMENT TO ENABLE TUBE TO BE INFLATED FROM THE FRONT FACE OF THE WHEEL
LAMINATED WOOD DISCS THE GRAIN RUNNING IN A DIFFERENT DIRECTION FROM THE PIECE NEXT TO IT
ALL DISCS GLUED TOGETHER UNDER GREAT PRESSURE AND GUARANTEED AGAINST SEPARATION AND WARPAGE
LOCK WASHER PREVENTING LOSS OF EXTENSION
YOUR STANDARD HUBS

Dayton Discwood Wheels Constructed on Somewhat Unique Principles.

GENERAL SERVICE STATION

Designed to Meet the Needs of an Average Combination Sales, Storage and Repair Business with Every Necessary Facility.

THE accompanying sketch illustrates a medium sized station, designed to have sufficient space and the convenient arrangements that will meet the demands of the average dealer who is desirous of establishing a suitable home for the sales and general service of one or two cars. It is thoroughly modern and equipped with all conveniences for the efficient handling of repairs of any nature at short notice.

As to the general nature of the structure it is one story high, measuring 50 feet in width by 100 feet in length, fireproof construction with the exception of the roof, which is of the slow burning mill type. If fire laws in certain vicinities call for an absolute fireproof structure a cinder roof may be installed at a slight additional cost.

In the front of the structure is located the office, about 20 by 20 feet, and this is divided by a driveway or entrance from the show room, which is located just opposite the office. The office has an entrance from the street flanked by two windows, as can be seen from plan, while the show room entrance is from the inside, and this has a large light area unbroken except for the mullion bars of the window.

The entrance to the garage proper is through a driveway at the center, having swing type doors, that are 10 feet high. Next is the garage proper, which is designed for the storage of customers' or transient cars, and this is 50 by 60 feet, an area ample to house 15 to 18 cars. This space is lighted and ventilated by three large skylights, as shown on the plan, and these should be of good quality galvanized metal, having wired glass throughout. At the rear and at the left of the storage space is a wash stand, this being an essential for a first class station. The main floor is of concrete dressed with granolithic, fully drained, insuring at all times a good dry surface.

At the rear of the building is located the repair shop and machine shop, and a toilet and storage area have also been provided.

The repair department is 18 by 23 feet, being equipped to handle work of any nature. There are two large work benches as shown, also a sink and plenty of space for installation of closets beneath or above the benches. This department is lighted by a large skylight taking in nearly all the roof area.

Next is the machine shop, which is a very important division of any service station, and which can be made a very satisfactory source of income if equipped with the facilities for serving regular customers, and which will attract patronage from a considerable area if the character of the work is good. If such a department is to be operated it ought to be made as profitable as is possible, and obviously much depends upon the arrangement of the benches and machine tools. There should be no congestion that will retard work and sufficient space to handle any reasonable volume of business that may be offered.

The machine shop shown in the plan is 12 by 18 feet, having room for a lathe or two, power drill, a small shaper and emery wheel, also a forge and anvil. This is lighted by a large skylight as shown covering the entire roof. Access is from main garage directly opposite the entrance to the repair department.

Provision has been made for a toilet and wash room at the rear, this leading off of the repair department. Directly in front of the toilet is a storage closet, where grease, oil, etc., may be kept.

Owing to the general construction being fireproof, only materials that are non-combustible can be used and as these must have a first class fire resistance the following stock is suggested:

A foundation of concrete, suitable in size to carry all load placed upon it, and a spread footing is suggested to insure against uneven settlement. (See section.) A good mixture for this type of work is a 1:3:5 formula, which gives first class results for mass concrete structure. The size here shown is a 16-inch foundation, with 16-inch piers and a 12-inch wall; the piers and walls are of brick or its equivalent. The front or facade is of terra cotta with ornamental treatment as shown. This can be so tinted that a marked individuality is obtained which will help in the advertisement of one's business.

The roof construction is plank covered with tar and gravel, supported by steel girder beams spanning the entire width. If required by law in certain districts, these beams can be covered with cinder concrete, the same composition that the roof would be composed of under the fire laws in fire districts.

A heating plant can be placed in the compartment at rear of building beneath machine shop, which is reached by a stairway as shown just outside of the machine shop wall.

The approximtae cost of the station, considering average prices for labor and material and where the excavation is all earth, will be from $7000 to $8000, but will differ somewhat according to location, cost of transportation, etc.

Any further information concerning this design can be obtained by addressing the Architectural Department of this publication, specifying the detail desired.

RECORD OF BUILDING OPERATIONS FOR APRIL

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Arkansas.

Little Rock—Gibson Oil Co., Ft. Smith; 1-story filling station, 50x130; warehouse for storage of oil and two 15,000-gallon tanks; $7000.

Connecticut.

Stratford—S. Sherman, 425 State St.; 2-story garage, 22x40; $14,000.

District of Columbia.

Washington:

J. E. Chapman; 1-story garage; $10,000.
Milburn Heister Co., 710 14th St., N. W.; 4-story reinforced concrete public garage; $150,000.

Florida.

Jacksonville:

R. B. Parri; 1-story garage and repair shop; $12,000.
B. E. Collie; 1-story brick garage, 75x125. Lessee, Murwell Motor Co.

Illinois.

Chicago:

S. Altman, 6426 S. Lincoln St.; 1-story frame garage, 18x20.
John Arkus, 5502 May St.; 1-story garage, 12x18.
R. G. Becker. 5100 N. Western Ave.; 1-story frame garage, 13x18.
K. S. Berry, 6128 Kenmore Ave.; 1-story stucco garage, 15x20.
H. A. Bishop, 7638 Paxton Ave.; 1-story garage, 20x20.
John Blair, 5415 Augusta St.; 1-story frame garage.
Samuel Bloom, 1523 S. Central Park Ave.; 1-story frame garage, 16x18.
J. Borgstrom, 1438 Highland Ave.; 1-story frame garage, 12x18.
Brenna & Cummins, 4233 W. Harrison St.; 1-story brick and stone trim public garage, 25x120; $10,000.
H. G. Callahan, 3928 N. Sacramento St.; 1-story frame garage, 16x18.

Pennsylvania.

Harrisburg—Penn Motor Accessory Co., Inc., 316 N. 2nd St.; Wm. F. Mower, D. P. Young.

Philadelphia—Mac Sales Corp. of Philadelphia, auto parts; $25,000; Jos. H. Skelley, Geo. B. Loughery, John MacArthur.

South Dakota.

Aberdeen—Mitchell Co., Hoisington Dry Goods Co. Bldg., hardware store.

Tennessee.

Columbia—Consumers' Tire & Supply Co., east side of square, auto tires and accessories, gasoline and oils, sales and service depot for U. S. tires and tubes; Chas. Albert, Montreal, Can.; Leon Sternberg, Nashville.

Texas.

Abilene—Giant Motor Supply Co., Radford-Oldham Bldg., 932 N. 2nd St.; accessories.

Amarillo—Auto Store; $23,000; D. W. Mays, Frank Adkisson, B. S. Stone.

Claude—Magnolia Battery & Electrical Co., Magnolia Garage Bldg.; mgr., R. M. Aleander.

Dallas:

Motor Products Co.; $500; J. W. Davis, Geo. Soutter, Jr., A. E. Soutter.

Uneeda Tire Co., 2006 Commerce St.; branch of Great Northern Auto Supply Co., Goodyear seconds; H. Alexander, San Antonio.

Union Auto Supply Co.; $16,000; Sam Reback, Jos. Kurtz, A. M. Warner.

Ft. Worth—Globe Auto Supply Co.; $5000; S. B. Franklin, H. F. Lynn, J. S. Shell.

Houston:

Lundell Parts Co.; $7000; A. E. Lundell, J. A. Myers, O. F. Yeary.

Morrow Co., Inc.; $10,000; J. D. and T. C. Morrow, A. M. Armand.

Vistol Sales Co.; $5000; W. W., Mrs. O. A. and Clarence Johnston.

Virginia.

Richmond—Elba Supply Co.; auto accessory business; $15,000; E. L. Jones, H. Deitrick.

Washington.

Spokane—Frank R. Nelson Tire Co. to succede Brennan Tire Co., W. 1112 1st Ave.; Miller and Firestone tires; Frank R. Nelson.

Wiscons'n.

Fond du Lac—Fond du Lac Tire Shop; Rudolph Grebe, Sylvester Shorr.

Marshfield—Brooks Tire Shop; A. L. Brooks.

Mt. Clements—Hart & Cooklin, Fountain Hotel Bldk.; auto accessories.

MISCELLANEOUS.

Dover, Del.:

California Rapid Transit Co.; motor transporation in Los Angeles, Cal.; $1,000,000.

Montgomery Bus. Co.; $100,000; F. H. Moran, F. H. Dugan, Wm. Clark, Oliver Dyson, Bryn Mawr, Pa.

Beardstown, Ill.—Beardstown Rushville Motor Bus & Truck Co., operate line for carrying passengers and freight.

Benld, Ill.—Benld-Wilsonville Motor Transportation Co., operate motor busses.

Chicago, Ill.—Arrow Line, Inc.; general motor express; $3000; Edgar C. and Ernest A. Stowell, Fred D. Gardner, Harold H. Hepple.

Gillespie, Ill.—Gillespie-Wilsonville Motor Bus Co.; operate motor busses.

Roanoke, Ill.—Woodford County Automotive Trade Assn.; pres., J. R. Gray; 1st vice pres., T. E. Boyd; 2nd vice pres., H. Waldschmidt; 3rd vice pres., B. Goodwin; treas., D. C. Diers; sec., F. J. Darnell; director at large, V. F. Bower.

Staunton, Ill.—Staunton-Livingston Motor Transportation Co.; operate motor vehicles.

Anderson, Ind.—Ryan Mutual Motor Co.; $115,000; John H. Ryan, E. B. Newhouse, Robt. E. Brown.

Kansas City, Kan.—Kansas City, Kan., Auto club, Chamber of Commerce Bldg., 727 Minn. Ave.

Strong City, Kan.—Chase County Auto Machine Co.; $40,000; Clyde and W. J. Wilson, John Hanson.

Springfield, Mass. — Boston-Philadelphia Dispatch Corp.; trucking; $1,000,000; G. M. Burke.

Duluth, Minn.:

Duluth-Virginia White Bus Line; general bus and transfer business; $50,000; pres. and treas., H. A. Spearin; vice pres., Z. C. Hinkley; sec., L. A. Spearin.

North Shore White Bus Line; general transfer and bus business; $50,000; pres., Grace Olon; vice pres., Borghild Dahl; sec. and treas., Wm. E. Tracy.

Spearin Transfer Line; general transfer and bus business; $50,000; pres. and treas., L. A. Spearin; vice pres., H. A. Spearin; sec., Wm. E. Tracy.

Motordale, Minn.—New Germany Hardware Co., Mielke and Daily Bldg.; retail business; vice pres., Alfred Anderson.

Kansas City, Mo.; Westport Auto Livery Co.; $4000.

St. Louis, Mo.:

National Vulcanizing School, Inc.; $15,000; atty., Blodgett & Fisher, 706 Chestnut St.

Universal Auto Title Deed Co.; $100,000; atty., Hugh K. Wagner, 212 Calumet Bldg.

Newark, N. J.—Midmon Bus Co.; auto bus transportation business; $100,000.

Paterson, N. J.—N. Jersey Bus Co.; $50,000; Frank Riley, Donald and Jas. Ross.

Brooklyn, N. Y.:

Long Distance Trucking Co.; $20,000; C. E. Wesslon, C. Spicer; atty., C. H. Ludder, 161 Meserole Ave.

Samson Trucking Co.; $10,000; W. Gollhofer, B. J. Quinn, L. H. Heberlein; atty., E. H. Lockwood, 66 Broadway.

New York, N. Y.:

Air Transport Equipment, Manhattan, $31,000 and 12,000 shares of preferred stock, $25 each, and 300 common, no par value.

Central Park West Motor Co., Manhattan; taxicabs; $10,000; C. Ennis, C. Simmons, H. Parker; atty., C. M. Norden, 274 W. 125th St.

Delancey Concrete Buildings Corp., Manhattan; storage houses and garages; $10,000; H. Aghamalian, S. and M. Thompson, 189 Montague St., Brooklyn.

G. D. T. Auto Renting Co., Manhattan; $6000; H. Golden, C. R. Dann, H. Taffer, 94 Montrose Ave., Brooklyn.

Mutual Motor Freight Corp., Manhattan; $50,000; S. Pincus, E. F. Duby, M. H. Israel; atty., Israel & Schuhmann, 51 Chambers St.

Parkway Used Car Co., Manhattan; $12,000; J. S. Nathanson, C. J. Gilbaun, Bert C. Rudy; atty., M. Monfried, 299 Broadway.

Rebuilt Motor Car Export Corp.; $30,000; M. and D. Paris, R. Coughlan.

Renton Auto Recovery Service; $100,000; W. C. Ackley, J. H. Phontez, W. B. Renton.

Syracuse, N. Y.—United Used Car Corp. of Del.; representative, S. W. Roberts, Syracuse.

Cincinnati, O.:

Checkered Cab Co.; $5000; W. Hodge, B. E. Pace, F. C. Busching, J. W. Matthews, E. R. Donogue.

Commercial Aviation Co.; erect hanger, construct flying field and furnish instructions in operating machines, as well as for commercial purposes; $100,000.

Motors Investment Co.; $100,000.

Surety Motor Bonding Co.; $10,000; W. R. McEuen, A. Miller, M. C. Ripple, W. Coale, F. Milley.

Toledo, O.—Black & White Cab Co.; $10,000; B. J. Ford, R. J. Moorehead, E. J. Lynch, J. W. Hackett, S. A. Crzezinski.

Ardmore, Okla.—Auto Dealers' Assn., Inc.; $1000; Tom Cooper, R. L. Beede, J. P. Brawley.

Lansdale, Pa.—Bucks-Montgomery Motor Trade Assn., auto dealers.

Providence, R. I.—Rhode Island Motor club; Henry Salomon, Jerome B. Farnum, Danl. McIver, Walter P. Pierce, Edward L. Singsen.

El Paso, Tex.—Auto Mortgage Co.; $100,000; I. D. Walters, O. C. Youngblood, R. G. Martin.

San Antonio, Tex.—American Motorist Protective League; $500; W. A. Hogan, M. D. Crawford, D. E. Wolfe.

Waco, Tex.—Waco Auto Wrecking Co., 713 Franklin St.; W. N. Rose, J. T. Luther.

Alexandria, Va.—Colonial Auto Bus Line, Inc., operate trucks and autos for transportation of freight and passengers; $25,000; Leonard E. Sheads, Wm. M. Garman.

Spokane, Wash.—Okanogan County Auto Dealers' Assn.; pres., Maurice Bowen, Tonasket; vice pres., R. J. Frank, Oroville; sec.-treas., B. A. Thayer, Okanogan

Specifications and Prices of Pneumatic Tires and Tubes

(These data have been compiled from reports received from manufacturers within the last 30 days, and while care has been taken as to their reliability, the publisher assumes no responsibility for any error. Prices do not include government excise tax unless so stated.)

Waukon—J. G. Minert Auto Co. purchased Markley Garage.

Waverley:
- Buick Garage moved to W. Bremer Ave
- W. W. Clark and A. Burns, garage and repair shop, W. Bremer Ave.

Kansas.

Arkansas City—Geo. Kidwell, service station and repair shop.

Coffeyville—H. J. Burger and S. B. Adams purchased filling station and accessory shop, 729 Union St.

Hutchinson—S. E. Roberts and J. M. Layman purchased garage, 118 S. Main St.

Iola—H. J. Malen and S. Monroe purchased Paterson Garage and Repair Shop.

Lawrence—Standard Oil Co., garage and filling station, 9th and Indiana Sts.

McPherson—J. H. Myers and Chas. Larson purchased interest of Ernest Sellberg in repair shop.

Topeka—Topeka Battery Service Co. moved to 126 Kansas Ave.

Washington—P. C. Swan sold garage and repair shop to Bert Reims, Munden.

Wichita—Jas. Moon taken over repair shop, College Hill Garage, 3108 E. Douglas Ave.

Kentucky.

Bardstown—J. F. Conway Motor Co. moved to W. Market St.

Bowling Green—Robert Crump & Son sold garage, 1020 State St., to M. F. Hagerman & Co.

Winchester:
- Bluegrass Garage, rebuild.
- T. M. Swope purchased Highland Garage.

Louisiana.

New Orleans—Crescent Battery Mfg. Co., 113 Howard St., rebuild burned service station.

Michigan.

Baraga—Baraga Garage, garage and accessory shop.

Battle Creek:
- Queen City Tire & Vulcanizing shop moved to 35 S. Jefferson Ave.; garage and tire service business.
- Jas. Arnold, garage and service station, Wills and E. Main Sts.
- Cushman Auto Sales Co. move into new quarters, W. Main St.

Cadillac—Cadillac Battery Co., garage and repair shop, N. Mitchell St.

Charlotte—Cox Spice purchased Geo. Spaull's garage and repair shop.

Detroit—Detroit Motor Bus Co., 1701 Dime Bank Bldg., garage and repair shop, Connor's Creek and Jefferson Ave.

Fremont—Fremont Auto Co., rebuild garage and accessory shop.

Grand Rapids—L. J. Van Hammen and R. D. Van Tassal purchased Wyoming Park Garage.

Jackson—Excel Battery Co., 114 E. Pearl St., taken over Battery Service Co., 118 Liberty St.

Lake Linden—Turner garage and repair shop, rebuild.

Muskegon—Auto Sales & Service Co., garage and repair shop, 197-203 W. Western Ave.

Olivet—Krieg Auto Co., garage and service station.

Saginaw—Hubbell Auto Sales Co., sold garage and service station, Court and Niagara Sts., to E. E. Fernette.

Ypsilanti—L. E. Hagel and Glyn Holmes, owners Ysilanti Cartage Co., taken over garage and accessory shop, 303 E. Michigan Ave.

Minnesota.

Barnesville—Ira B. Eding purchased Broadway garage and repair shop.

Bowlus—Auto Service Co., rebuild garage and repair shop.

Mankato—Graves Bros. purchased Spencer Garage.

Minneiska—Lloyd Gentzkow sold interest in garage to partner, Michael Heaser.

St. Paul:
- St. Paul Automobile Spring Co., garage and repair shop, W. 4th St., between Franklin and Exchange.
- Twin City Motor Bus Co., garage and repair shop, W. 5th St.

Springfield—Henry F. Weber purchased P. J. Pint garage and repair shop.

Missouri.

Jefferson City—J. Q. Taylor and L. F. Griffin, garage and repair shop.

Kirksville—Emery and Milton Keller, garage and repair shop.

Montgomery City—Smith Automobile Co., garage and service station.

Morgan—Chas. Atkinson and Burl Hough, garage and repair shop, North St.

St. Joseph—John R. Hopkins, garage and repair shop, 9th St.

St. Louis:
- Compton Height Garage, enlarged.
- Vesper Buick Auto Co., service station, Vanderenter Ave. and W. Pine St.

Savannah—Fred Helsby sold garage and repair shop to Hardin Bros.

Trenton—Crane Auto Co., tire repair and vulcanizing shop.

Montana.

Ennis—Claude Coomer and Jacob Linthacum, garage and repair shop.

Great Falls—L. A. Enebee purchased Auto Electric Shop, 707 Central Ave.

Hobsin—Ted and Max Wurmlee purchased Buffalo Trail Garage.

Lavina—Philips & Roach purchased White City garage and repair shop.

Missoula—L. J. Croonenberg sold garage and filling station, Pine and Stephens Sts., to McKenzie Wallace Service Co.

Nebraska.

Central City—G. L. Mills & Son taken over McDonald Garage.

Fairfield—John Wall sold garage and repair shop to Rich. Parpart.

Madison—John Walters sold interest in Alley Garage to Chas. Pinney and Edward Clarsen.

Nehawka—Wm. Hodge purchased St. John garage and repair shop.

North Carolina.

Asheville—J. W. Cambus, garage and repair shop, 24 N. Market St.

Greensboro—Coble Starr Garage, rebuild.

North Dakota.

Fargo—Motor Supply Co., 92-96 Front St., purchased by A. J. Matheson.

Sheldon:
- M. C. Adams purchased interest of partner, P. J. Foster, in Motor Service Garage.
- Currence & Peterson, Newark, S. D., purchased Speikermeir Bros.' Garage.

Bellaire—R. A. Johnson rebuild garage and repair shop.

Ohio.

Bowling Green—Russell & Patterson purchased Court St. Garage.

Cambridge—J. C. Purkey and others, garage and repair shop, S. 10th St.

Cincinnati—Wm. H. Hodge rebuild garage and accessory shop, 2543 Moorman Ave.

Columbus—B. John Buell purchased Main-Oakwood garage and service station, E. Main St. and Oakwood Ave.

Delphos—A. Husman purchased Delphos battery station, First and Canal St.

Eaton—Eaton Tire Service Co., rebuild garage and repair shop.

Gomer—Richard Humphreys sold interest in Gomer garage and repair shop to Harry Kiracofe.

Lima:
- Kindler & Eirtman, branch garage and battery station, Webb Bldg., W. Eureka St.
- Newell & Norman O'Brien taken over Bybee Tire & Service Co.
- John Stipp, garage and accessory shop Water St.

Lorain—Rathwell Garage, enlarged.

Marion:
- Philip Bauer, garage and service station.
- Hoch Bros. Garage, rebuild.
- Maxwell Garage, 176-82 N. State St., rebuild.

Middletown—D. Snider, garage and servce station, 2nd and Main Sts.

Mt. Gilead—Cecil Hopkins, rebuild garage and repair shop.

Springfield—Dayton Auto Sales & Parts Co., Dayton, O., two branches at Springfield and one at Richmond, Ind.

Warren—D. E. Miller Co., garage and repair shop, W. Market St.

Oklahoma.

Forgan—W. J. Harlow purchased interest of John Lawson in Ford garage.

Jet—B. H. Bodenheimer purchased Albert Pike Garage.

Oregon.

Adams—Adams Garage, rebuild.

Pennsylvania.

Harrisburg:
- Shaffner Garage, 88 S. Cameron St., rebuild public garage.
- Herman A. Early taken over Federal Square Garage, Court and Cranberry Sts.

Indiana—Jas. Hileman Garage, rebuild.

Sanataga—Pleasant View garage and repair shop, rebuild.

Fitersville—United Auto Stores, Inc., branch store, 118 N. Franklin St.

Uniontown:
- Frank Santo purchased Springer garage, E. Church St.
- Thos. L. Howard and Robt. Sample, convert brewing plant into garage.

Waynesboro—John B. Stoner, garage and repair shop.

Lebanon—Whitman Garage, 15th and Washington Sts., rebuild.

South Dakota.

Aberdeen—Otto Reidle purchased Springer & Ohls garage and repair shop, 119 Second Ave., S. E.

Wakpala—S. A. Severson sold garage and service station to A. H. Hall.

Willow Lake—John M. Schmid, garage and repair shop.

Tennessee.

Johnson City—Harold E. Wood purchased Lewis Battery Co., E. Main St.

Knoxville—B. H. Sprangle, garage and repair shop, Union Ave.

Memphis—Liberty Auto Sales & Storage Co.'s plant and W. H. Daniels' battery service station, 3rd and Monroe Ave., rebuild.

St. Bethlehem—John Cobb, Jr., and Wm. Woodard, garage and repair shop.

Union City—T. R. Massey, garage and service station, 2nd St.

Texas.

Gainesville—T. L. Gaston sold New Highway Garage to Degan Phillips.

Virginia.

Lynchburg—National Tire & Rubber Co., tire and accessory shop, filling station, etc.

West Virginia.

Clarksburg—Geo. A. Deuhan, garage and service station, E. Main St.

Wisconsin.

Beaver Dam—Bernard Krueger, garage and repair shop.

Burlington—Hoppe & Rueter, filling station, Pine and Jefferson Sts.

De Pere—Geman Bros., convert California hotel into garage and repair shop.

Evansville—Millard Winn, garage, W. Main St.

Fond du Lac:
- Jos. Kopf, garage and repair shop, Brooke and Johnson Sts.
- C. A. Rossey, garage and repair shop, Forest Ave.
- A. L. Wilson, garage and battery service station.

Honey Creek—Archie Fraser leased building from W. E. Babcock for garage and service station.

Manitowoc—W. C. Kicke, garage and repair shop, 11th and Franklin Sts.

Marinette—Robt. Schultz sold vulcanizing shop and garage, Main St., to Walter Kopplin.

Mellen—Walter Willoughby, garage and accessory shop.

Oshkosh—Hudson Garage, S. Main St., rebuild.

Potosi—Leo Keehner purchased Duvc garage and service station.

Sheboygan—Fred H. Poethig purchased half interest in North Side Garage.

Two Rivers—Langer Bros., garage and service station, adjacent to shop, Jefferson St.

Wanderoos—O. Christensen sold garage and repair shop to O. Erickson.

Watertown—Edgar Kuntz and Frank Zabel, garage and repair shop, 108 Jefferson St.

Waukesha—A. T. Breecher moves battery service station to 363 W. Main St.

Wausan—R. H. Smock Sales Co. enlarge garage and battery station, 311-13 S. 3rd Ave.

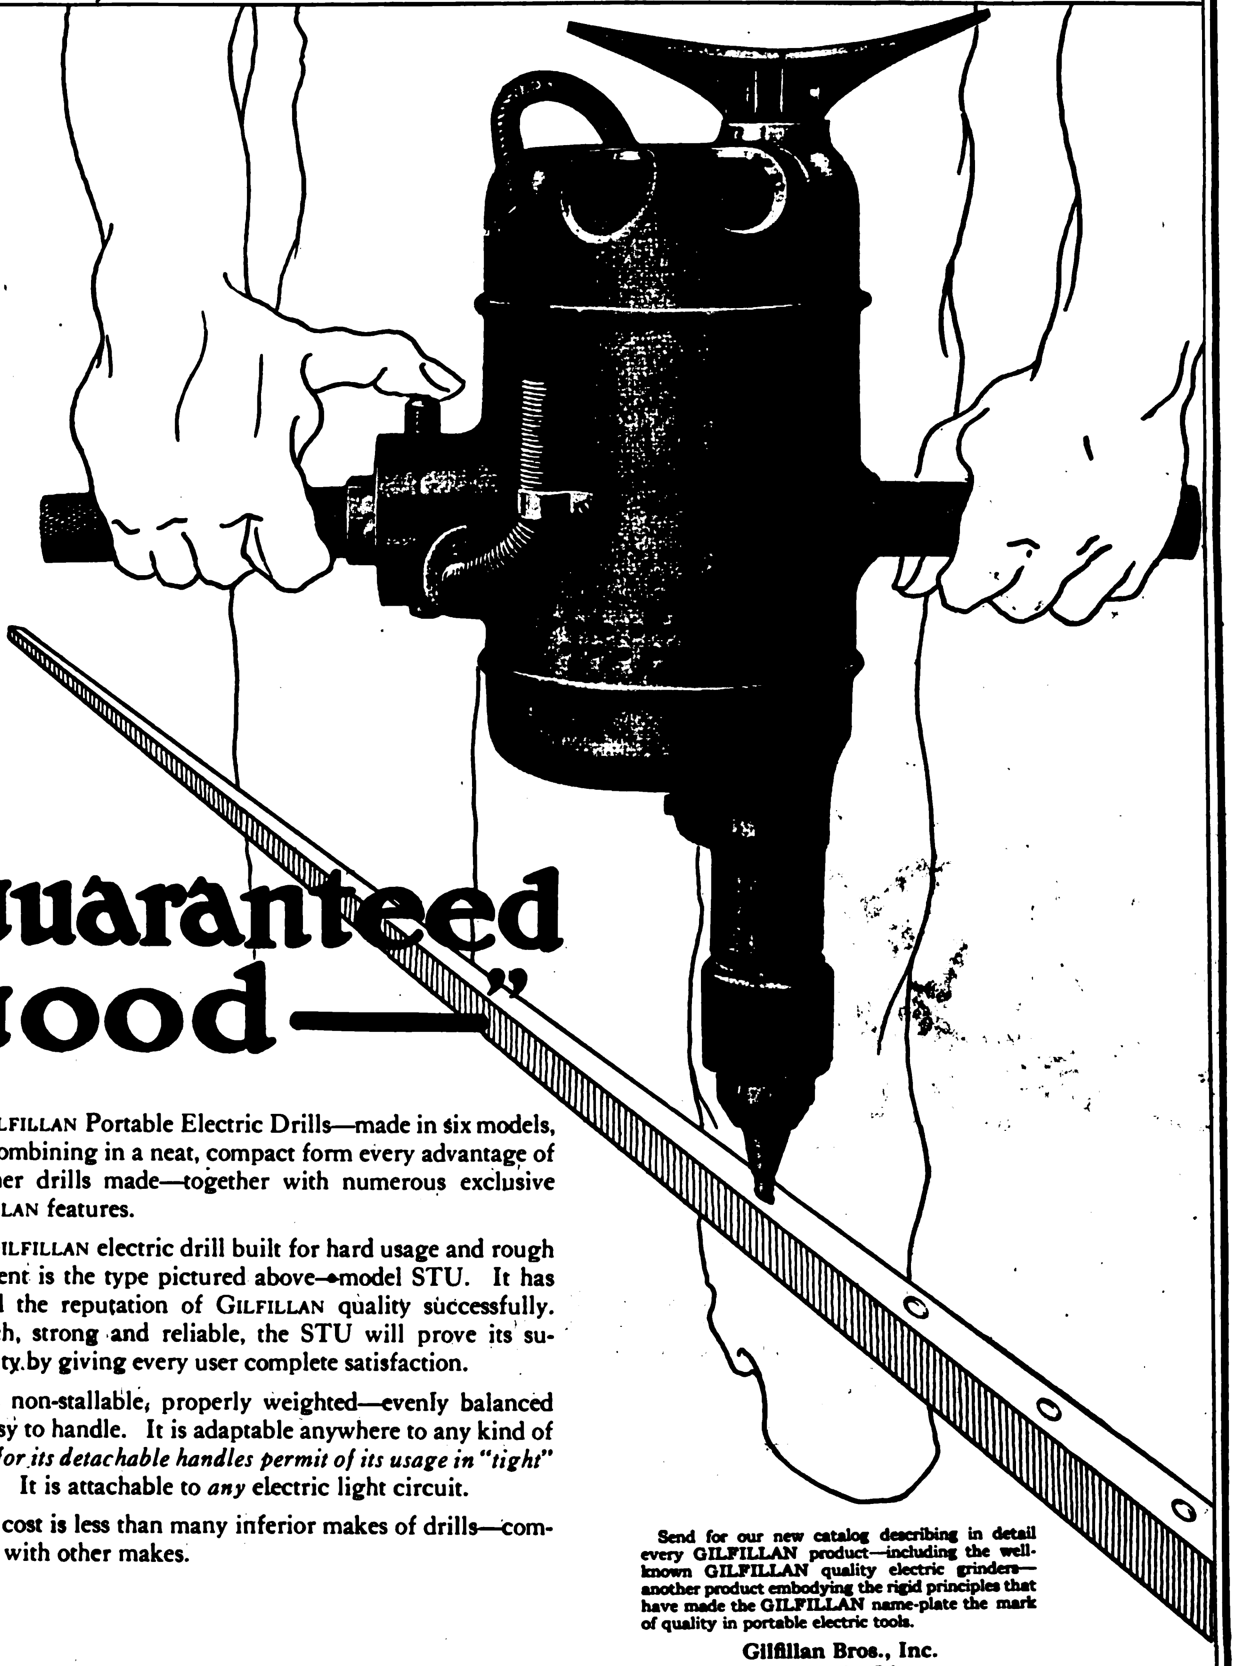
Weyanwega—Weyanga Auto Sales Co., garage and sales room.

Wyoming.

Lowell—Coliseum Motor Co., garage and sales room, Main St.

Sheridan—Herbert Fleischer purchased Wyoming Electric Supply Co. and Willard battery service.

Gilfillan Electric Drills



"Guaranteed Good—"

are GILFILLAN Portable Electric Drills—made in six models, each combining in a neat, compact form every advantage of *all* other drills made—together with numerous exclusive GILFILLAN features.

A GILFILLAN electric drill built for hard usage and rough treatment is the type pictured above—model STU. It has carried the reputation of GILFILLAN quality successfully. Staunch, strong and reliable, the STU will prove its superiority by giving every user complete satisfaction.

It is non-stallable, properly weighted—evenly balanced and easy to handle. It is adaptable anywhere to any kind of work, *for its detachable handles permit of its usage in "tight" places.* It is attachable to *any* electric light circuit.

The cost is less than many inferior makes of drills—compare it with other makes.

Send for our new catalog describing in detail every GILFILLAN product—including the well-known GILFILLAN quality electric grinders—another product embodying the rigid principles that have made the GILFILLAN name-plate the mark of quality in portable electric tools.

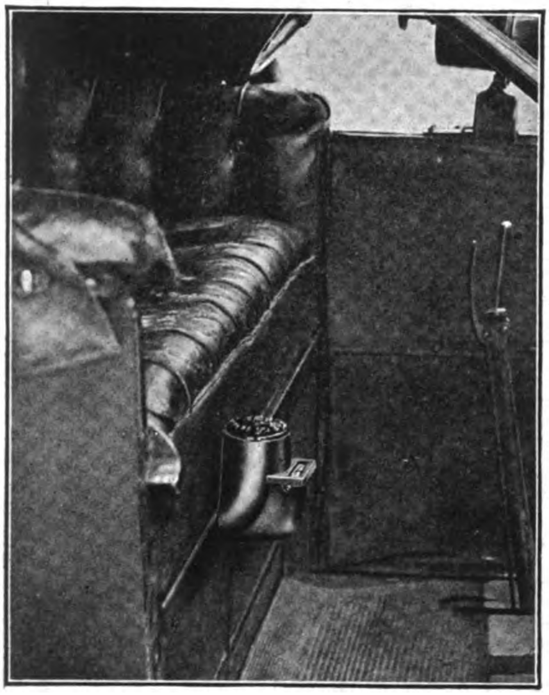
A Gilfillan Quality Product

GO-ITE GASOMETER FOR FORDS AND CHEVROLETS.

An accessory for Ford and Chevrolet automobiles that is attracting widespread attention both among dealers and car owners is the Go-Ite Gasometer, a combined gasoline filler and gauge. This device fits snugly under the cushion of the front seat of either of these makes of automobiles.

It eliminates the necessity of getting out of the car, lifting the seat cushion and measuring the gasoline. The special air vent prevents flooding while the tank is being filled. It is said to be the only combined gasoline filler and gauge on the market for these cars. It tells the driver just the amount of gasoline in the tank at all times and allows the tank to be filled in a half minute with no inconvenience to any passenger in the car.

The Go-Ite Sales Co., Kokomo, Ind., has been formed to handle the distribution and sales of the Go-Ite Gasometer.



Go-Ite Gasometer, a Combined Filler and Gauge.

Included in the personnel of the organization are the following: President, D. T. Hersey; vice president and sales manager, T. P. Nickell. Mr. Hersey was formerly sales manager of the Vulcan Spring Co., Richmond, Ind., and assistant general sales manager of the Splitdorf Co., Newark, N. J. Mr. Nickell was also formerly connected with the Vulcan Spring Co. in the capacity of sales manager and New England manager for the Splitdorf company.

The Go-Ite Gasometer is manufactured by the Go-Ite Manufacturing Co., Kokomo, Ind. Jobbers and dealers' proposition will be furnished on request.

LANE ROCKER ARM SILENCERS.

The function of the Lane Rocker Arm Silencers is to stop the tapping noises caused by the contact of the rocker arm with the valve stem in overhead valve engines, and to eliminate the play of the rocker arm on its bearings by keeping it under constant tension. Numerous letters received by the manufacturer from service stations and owners indicate that they perform this function most satsfactorily.

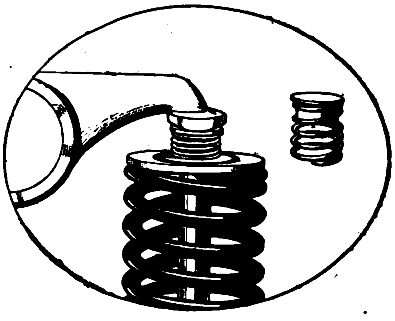
The silencers are composed of a metal cap, a fiber disc which is set inside the cap, and a spring made of piano wire. They are attached by placing the spring down over the valve stem with the cap pressed up against the rocker arm. The valve stem thus comes in contact with the fiber disc at the top of the cap instead of with the rocker arm itself, thus eliminating the noisy tapping of the rocker arm against the valve stem.

The spring keeps the rocker arm under constant tension by taking up the lost motion in the moving parts between the valve stem and the camshaft, and thus eliminates several additional irritating noises. The spring is of sufficient strength only to hold the cap firmly against the rocker arm and is not strong enough to interfere in any way with the operation of the valve. The silencers are easy to attach and once attached can be forgotten.

The accompanying cut illustrates the principle of construction and application.

These silencers are made in two sizes. One size fits the older Buick, the Chevrolet, Oakland, Oldsmobile, Franklin and other cars having a 5/16-inch valve stem, and the other size fits the newer Buick, the Nash, Templar, Premier and other cars having a ⅜ inch valve stem. Practically all engines of the overhead valve type have stems of one or the other of these diameters.

The silencers are sold in complete sets of 12 for any overhead valve car at a retail price of $2 a set. They are manufactured by Charles E. Ellis, 115 Broadway, New York city.



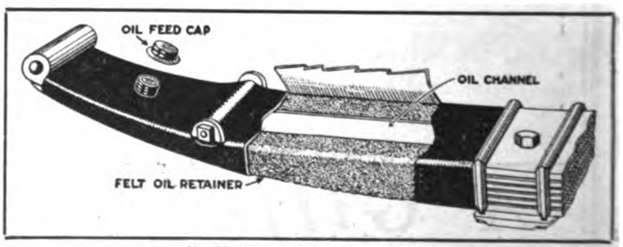
Lane Rocker Arm Silencer.

RELIABLE SPRING OILERS.

Automobile manufacturers are careful to see that all springs are properly lubricated before the cars leave the factory, thus insuring flexible springs that absorb road shocks and jars. This quality should be retained throughout the life of the car if the springs are given proper attention, but owing to their exposed position they are subjected to deposits of water and mud in wet weather and dust and road grit in dry, with the result that they become rusty and stiff, throwing extra burdens on the tires and shortening the life of this equipment.

Reliable spring oilers are designed to keep the car springs properly and perpetually lubricated and sell at a price that will appeal to automobile owners. As will be noted from the accompanying cut, each Reliable oiler has an oil channel down the center, which carries sufficient lubricant for three months' driving. The oilers are put on dry and then filled with oil. All that is necessary to do thereafter is to replenish the lubricant at intervals of two or three months.

Reliable spring oilers are made for all makes and models of cars. Manufactured by the Reliable Spring Oiler Co., 446 Miller avenue, Columbus, O., who will send full information in regard to this product on request.



Reliable Spring Oiler.

THE AERO-CAP FOR AUTOMOBILE RADIATORS.

The Aero-Cap, which is manufactured by F. Wolkow & Sons, Louisville, Ky., is an all-metal cap for motor car radiators, which, it is claimed, combines beauty, durability and utility. It was especially designed to do away with the inconvenience of handling the round type of radiator cap. As it is made of one piece of bronze, heavily nickelled, or of aluminum, there is nothing about it to crack or break. Only a slight pressure against the handy propeller arms is necessary to tighten or loosen the Aero-Cap.

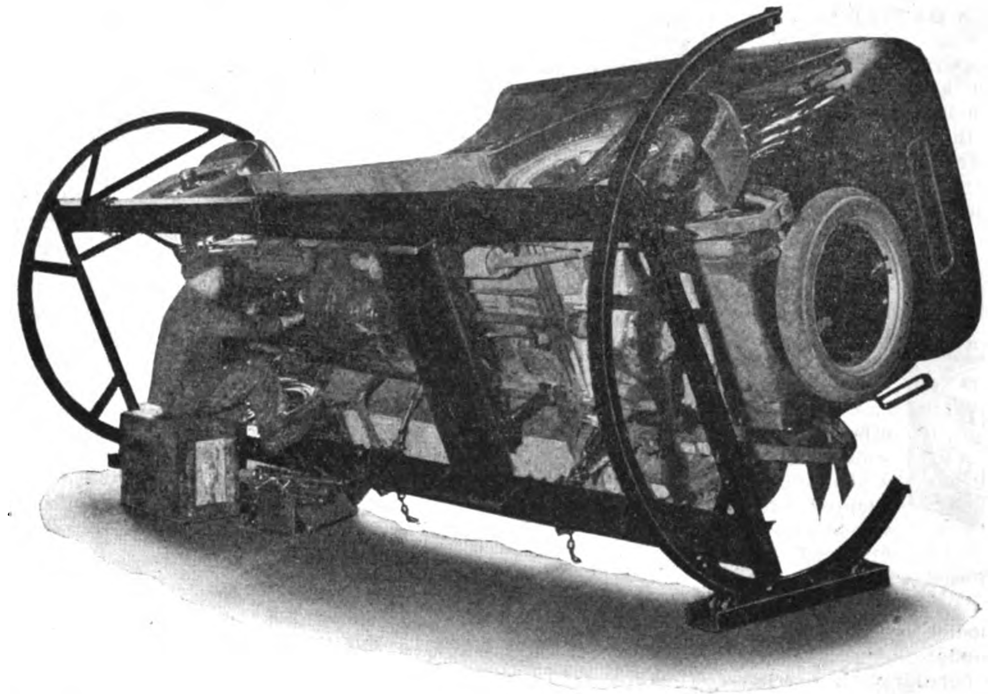
It is made in sizes to fit all types of radiators and the list price is $5 each. When ordering the name and model of car should be specified, also whether or not the cap is to be drilled for a motometer and the type used.

OFFICERS OF KELSEY MOTOR CO.

At the recent annual stockholders' meeting of the Kelsey Motor Co., Newark, N. J., the following officers and directors were elected:

Directors: E. J. Churchill, A. E. Jennings, John R. Thomas, Charles W. Hoyt, Charles Abbott, E. I. R. Cadmus and L. S. Tyler.

Officers: President, Ernest B. Slade; vice president, C. W. Kelsey; treasurer, Thomas J. Stewart; secretary and assistant treasurer, F. D. Dorman.



BETTER Work MORE Work

At Less Than Half the Time and Cost

That in a nutshell, sums up the results being obtained by garages, repair and paint shops which have installed the

TURN-AUTO

No more dark pits, inclines and creepers! No more working in unnatural positions! No more half-finished jobs! Just run the automobile—any size, any kind—on The Turn-Auto and in a moment all the underneath parts are in plain view. Working on them, then, is as easy as if they were on the bench in the lightest part of your shop.

PAYS FOR ITSELF IN TWO MONTHS

Improved working conditions and the ability to work on all mechanism with both hands and in a natural position will enable you to get twice as much work out of your mechanics. And their work will be twice as efficient.

AUTO SALES AGENCIES

are finding The Turn-Auto invaluable in showing prospective buyers the advantages of the underneath mechanism of their cars.

ALCO DELUX BATTERY.

Realizing the necessity and appreciating the demand for a Ford battery to retail at $25, the Cincinnati Storage Battery Co., maker of the well known Cincinnati storage batteries, are now putting on the market a battery which is called the Alco Delux.

The Alco Delux is a six-volt, full strength battery for Ford cars and may be used for Buick, Chevrolet, Overland and other cars as well. It is especially adapted for wireless outfits and for various other purposes where a small battery is required.

ALCO
FORDTYPE
SPECIAL
DELUX
PAT. AUG. 5, 1919

This battery embodies the same principles which have made other Cincinnati storage batteries so popular with distributors, dealers and car owners. A feature of the Alco Delux is the remarkably insulation qualities of the wood separators, which are manufactured by a special process. It is a well known fact that the life and usefulness of a storage battery is dependent on its insulation. The manufacturer is ready to attest by actual comparative figures the unusual life of the separators used in the Alco.

The advent of this special battery will be good news to all dealers who have done so much to promote the sale of Cincinati storage batteries, as it will allow them to complete the Cincinnati line and to be prepared to meet all classes of battery trade.

Full information regarding the Alco Delux battery, prices, shipping dates and allotment of desirable territory still open may be had by writing or wiring the Cincinnati Storage Battery Co., Moorman avenue, Cincinnati, O.

LANE'S UNIQUE TOOLS ASSORTMENT.

The Will B. Lane Unique Tool Co., 170 West Randolph street, Chicago, Ill., has prepared an assortment of Lane's Unique tools for live dealers who wish to give their trade a guaranteed wear-resisting outfit. This assortment is especially suited for quick sales by automobile supply and hardware dealers, as nearly every car owner and mechanic needs one or more.

This assortment includes such ready sellers as styles A, B and C Universal socket wrench sets, styles F and S ratchet socket wrench sets, style K angle socket wrench sets, Super-Unique ratchet socket wrench sets and Lane's Offset Reversible ratchet screw driver.

No castings nor drawn work are used in the manufacture of Lane's Unique tools. They are made from solid steel throughout and all wearing parts are heat treated. It is claimed for the Lane wrenches that they were the first to be supplied with broached sockets, turned from solid, round-bar steel, which insures a strong and accurate type of socket.

If dealers cannot obtain Lane's Unique tools from their jobbers they are invited to write direct to the manufacturer.

A DELUXE ACHIEVEMENT.

Some seven or eight years ago Edward W. Clark, an engineer and inventor of 30 years' experience, decided to give a portion of his time to research work in connection with internal combustion motors, particularly automobile motors. Being thoroughly practical, Mr. Clark quickly decided that to make the motor efficient something must be done to reduce the weight of the reciprocating parts.

After about two years of experimenting he produced what was up to that time stated to be the most nearly perfect piston, consisting of an aluminum head and cast iron skirt, united in an unique and original manner, very light in weght and wonderfully successful and on which basic patents were granted. But its inventor felt that it could still be improved upon.

For instance: There was considerable wear on the ring grooves cut in the aluminum head. Mr. Clark overcame this by inventing a piston having a steel head with cast iron skirt, obtaining patents on this piston also.

In the several years that followed Mr. Clark continued to devote much time and attention to the further development of his piston. Many radical changes were made and finally came the beginnning of the braced or ribbed piston. Mr. Clark at once stopped the manufacture of other kinds and devoted his attention to the further development of his latest design, until the organization of the Clark-Turner Piston Co., Aug. 1, 1919, when the ribbed or reinforced piston was placed on the market nationally. Since then there has been constant improvement and today every detail—every step in production, from the daily analysis, through our electric furnace, through plant down to final inspection and shipment is carefully guarded, checked and rechecked.

Deluxe pistons are now made in standard and oversize for more than 800 makes of automobile, truck, tractor, motor boat, motorcycle and airplane engines.

Deluxe pistons are not an experiment —they are scientifically designed, light weight gray iron pistons, proved through actual use.

They are patented and manufactured by the Clark-Turner Piston Co., Los Angeles, Cal.

MARCH CAR SHIPMENTS ARE LARGE.

Reports to the traffic department of the National Automobile Chamber of Commerce for March from automobile factories producing two-thirds of the total volume indicate that figures for that month will be 16,500 car loads and 10,000 drive-aways. Figuring the drive-aways into car load equivalents, the March shipping was 63 per cent. greater than in February. Last year this increase was 20 per cent. In March, 1920, shipments amounted to 29,326 car loads and 57,273 drive-aways, the largest single month's shipping; shipments for March this year will be 42 per cent. of that record month.

Complete figures for February are 9920 car loads, 7491 drive-aways and 99 boat shipments. This is an increase of 58 per cent. over January. Last year this increase was 13 per cent.

A. E. A. CONVENTION AT MACKINAC ISLAND.

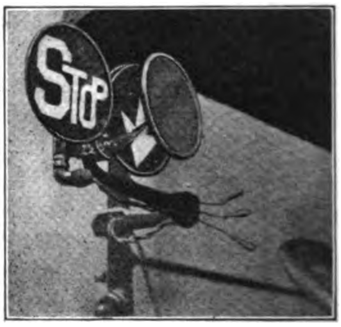
The next convention of the Automotive Equipment association will be held at the Grand hotel, Mackinac Island, Mich., the week of June 30. Meeting of the board of directors and committees will be held on Monday and Tuesday and the general meetings Wednesday, Thursday and Friday.

THE FOW-TOOR VEHICLE SIGNAL.

It is reported that evidence gathered in regard to casualties in which 10,000 lives were lost last year through automobile accidents, brought out the significant fact that by far the greater proportion were due not to reckless driving, but to lack of means whereby drivers could give timely, positive and conspicuous warning of their intention to turn to the right, to the left or to stop.

In the Fow-Toor vehicle signal, which has been developed after years of labor and experimentation, and subjected for many months to rigorous tests under every conceivable situation, the motor vehicle driver has at his disposal the means of giving such a warning. This device not only signals the driver's intention to other cars, front and rear, but also to traffic officers and pedestrians as well.

It is more than a day and night signal; it also embodies features which enable it to function as a rear view mirror, a parking light, a trouble lamp socket and a spot lamp bracket, making a combination of six necessary accessories in one.



The Fow-Toor signal is simple in construction, with all its parts standardized. It is positive in its operation and there is nothing to get out of order. It is readily attachable to any type of car, open or closed.

It is manufactured by the Toor Products, Inc., 29 West 34th street, New York city.

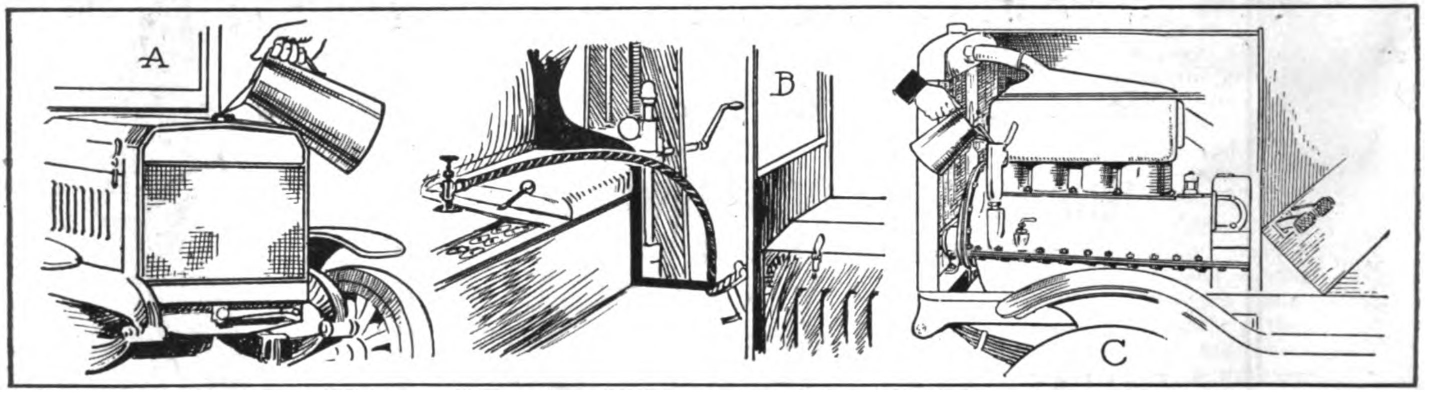
Heavy Duty Engines, Their Operation and Care

IT CANNOT be impressed too strongly upon the mind of the motor vehicle owner that no matter how well the engine of the power plant is made that it requires a reasonable amount of care and attention and this must be contributed by the owner or operator if the engine is to function successfully.

A few minutes of concentrated abuse will perceptibly shorten the life of the finest engine made and this is best demonstrated when an operator races the engine for several minutes just after starting the engine on a cold morning, laboring under the impression that by racing the engine he is warming it up quickly and getting the engine to a point where it will develop its full power. The temperature must be raised to a sufficient point before the engine will develop its rated horsepower, but this is properly done by allowing the engine to idle for several minutes before starting work. Idling speed, if practised moderately, will not harm a heavy duty engine, but racing the engine will do untold damage to the bearings and internal parts, especially when it is raced without a load.



A, the Radiator Should Receive First Attention; B, Next Fill the Gasoline Tank; C, the Oil Reservoir Should Be Filled with a Good Oil.

Many a trouble may be traced to some simple thing, like a carelessly made connection, dirt in the gasoline, a broken wire, a broken spark plug, etc., and drivers who understand the operation of an engine never condemn it for slips which are due to carelessness.

Preparing the Engine for Operation.

A little care used in preparing the engine for operation may save a great deal of trouble and possibly repairs at a later time.

The radiator should be the first unit to receive attention. See that all drain cocks in the water system are closed and fill the radiator with clean water. Make sure each morning before starting the car that the radiator is full and always keep it supplied with plenty of water, to prevent the engine overheating.

In an engine with thermo-syphon cooling this point is absolutely necessary, because the water will not circulate freely unless the top tank is filled above the inlet. In pump circulation systems it is not quite as important to carry the water high in the tank as the pump will circulate water even though it be low. Water will, however, tend to lower as it is heated and will be found low even after a few minutes driving. Do not let this fact worry you as no harm will come to the engine under normal conditions.

Never fill the radiator with cold water while the engine is running nor when the engine is hot, especially if the amount of water in the radiator is low. A sudden change of temperature in the cooling system is liable to cause the cylinder castings to crack.

Always make a practise of using clean water as free from lime, rust and impurities as possible. Clean rain water, when it can be obtained, is best, as it will keep the water jackets of the engine and the core of the radiator free from lime. Water spaces coated with lime or other impurities reduce the conductivity of the water, causing the engine to overheat, increasing oil consumption and reducing the life of the engine.

Filling Gasoline Tank.

Next fill the gasoline tank. Use nothing but the best grade, as it gives the most power and does not carbonize the cylinders as rapidly as low grade gasoline, which also spoils the lubricating qualities of oil.

Always strain the gasoline to remove any water or other impurities that may be present. The use of chamois skin placed over the top of a funnel is particularly good for removing water and sediment. Care should be taken, however, to see that the funnel sets on the top of the tank when filling, as many fires have resulted from leaving a small space between tank and funnel, the gasoline passing through the chamois causing frictional electricity, which causes a spark to jump between the funnel and tank.

Clean the chamois at frequent intervals to remove sediment and it will be found that gasoline will flow more freely.

Supplying Lubricant to the Engine.

After the radiator and gasoline tanks have been filled the oil reservoir should be filled with a good oil of the correct body as recommended by the engine manufacturer.

Much trouble and expense will be saved if close attention is given to the lubrication of your engine. If lubrication is neglected but once it can cause any amount of damage and expense.

There are usually three or four places that require lubrication on the modern heavy duty engine and these are usually the fan, water pump, magneto and oil reservoir in the engine pan. The pump and fan require a good grade of grease, while the magneto requires only a few drops of very fine grade oil about once in every 1000 miles of use. The oil reservoir in the engine base requires oil daily as the engine in heavy duty work uses oil more rapidly than in passenger car use. The lubricant is put into the reservoir through the breather and filler tube and in the grease cups by removing the caps.

Many engines are provided with a combined breather and oil filler tube, which acts as a ventilator for the crank case to prevent crank case pressure and increased temperature.

Never fill the engine too full of oil, as it will cause carbon to form and foul the spark plugs. A careful driver will soon learn how much oil an engine is needed for each 100-mile trip.

It is essential that the oil in the reservoir register half way between the two lines shown on the oil level indicator, if an oil indicator is fitted to the engine, or half way on the oil gauge if gauge is used. Therefore you should replenish the supply as soon as the oil level falls below this point. The oil indicator or gauge should always show that you have oil above the half full mark. The grease cups in water pump and fan should always be kept full.

When first starting a new engine do not go above a medium speed until the bearings, pistons and cylinders are running perfectly free. Controlling or governing the speed of the engine is vastly important.

A cold engine should be warmed up slowly, as it is dangerous and detrimental to race or accelerate a cold engine. This does more harm than constant service under full load at correct engine speed. Never race a cold engine, as when this instruction is disregarded and the engine is speeded up beyond the speeds which are indicated by the manufacturer as safe running speeds, you are inviting trouble, repairs and expense, which will soon take your car to the repair shop and may mean heavy expense.
